FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

UNITED STATES OFFERS AID TO THIRD WORLD FOR EXPANSIONARY PURPOSES

Minsk SOVETSKAYA BELORUSSIYA in Russian 13 Nov 81 p 3

[Article by V. Pozdnyak: "The Other Side of 'Unselfish' Aid"]

> [Text] American aid to the developed countries, which is publicized by bourgeois propaganda, has always served the purposes of U.S. imperialist policy and is one of the most frequently used instruments for economic expansion and the exertion of pressure on governments which displease Washington.

It is easy to see that the majority of reactionary coups in the liberated countries, accomplished with the covert or overt assistance of the United States, began with the creation of economic difficulties for progressive governments, the destablization of the economy and, finally, the destabilization of political structures, which paved the way for the usurpation of authority by ultra-rightist groups with profascist leanings. Chile is a vivid example of this.

The significance and scales of American economic aid to the developing countries are not in any way as great as U.S. propaganda organs depict them. According to the calculations of American economist William Cline, the United States spends only around 0.2 percent of its gross national product on economic aid and ranks 15th among the leading capitalist states offering this kind of aid. The lion's share of the aid is sent to such pro-American countries as Israel, Egypt and South Korea and to anti-people dictatorships in Latin America.

It would hard to determine where "pure" economic aid ends and military aid begins. It is certainly obvious that the latter's position is far from negligible. In any case, no one could convince the people of El Salvador that the United States is giving them "economic aid" by assisting a "government friendly to the United States."

As the world's foremost exporter of weapons, the United States annually increases its direct military support of official pro-American regimes and illegal terrorist groups. In fiscal year 1982, for example, the United States plans to give 213 million dollars in military aid to countries in Latin America. Of course, the bloody fascist dictatorships in El Salvador, Guatemala, Chile and Paraguay head the list of "clients."

At the same time, U.S. aid intended directly for the economic development of young states is constantly decreasing. In comparison to the 1960's, again according to

Cline, U.S. aid to foreign states has decreased 40 percent in real prices. The Reagan Administration, which is economizing on everything that offers American monopolies no economic or political advantages, intends to continue this reduction. A cut of 26 percent in U.S. aid to foreign states has been announced, meaning that it will decrease from 8 billion dollars a year to approximately 6 billion. Under the conditions of the mass militarization of the American economy, cuts in various domestic social programs and a number of international programs are expected to provide more opportunities for the dramatic augmentation of military spending.

American financial and economic aid to the young states is nothing other than one of the channels for the export of capital. It takes two forms--the form of government subsidies, loans and credit, and the form of financing by private monopolistic capital (so-called "private" aid). The second form far outweighs the first, essentially because of its overtly exploitative nature. It is also indicative that nonprivileged forms of capital export have been developing at a rapid rate in recent years. According to OECD data, these account for more than half of all the funds offered to the developing countries. Statements by American officials indicate that this tendency will continue. In other words, preference will be given to ordinary credit, particularly by monopolistic capital. American Vice-President G. Bush acknowledged in a recent speech that "the investments of American capital are growing dramatically again." Therefore, philanthropy and sentiment are being tossed aside and--long live profit! This is a concise description of the present U.S. position in this sphere.

The American press has reported that the United States is 50-percent dependent on imports of 24 out of 32 "strategic" raw materials. This is the reason for its constant interest in preserving its influence in the developing countries, many of which are rich in mineral resources. It is to these countries that most state and private capital is sent in the form of various types of aid.

The experience of recent years testifies that U.S. aid to the liberated states is not having a positive effect on their economic development and is serving the purposes of neocolonial enslavement and the economic expansion of imperialism. Inflation, the rising prices of industrial commodities and the fact that a large portion of the funds allocated to the developing countries must be returned in the form of repayment for credit and loans virtually nullify this "aid." It is also significant that much of the "aid" is of a "conditional" nature, meaning that credit is made conditional on purchases of equipment and commodities from the United States, which gives monopolies a chance to raise their prices to above the world average. The combination of all this seems more like covert robbery.

In general, American economic "aid" to foreign states is actually intended to, in addition to serving economic purposes, support existing pro-American regimes, regardless of how inhumane they might be, finance circles which might seize power with the assistance of the United States, and organize and reinforce reactionary forces, which are also expected to nullify the gains of the people in the liberated countries in the future. As we can see, the goal is the same--to keep the developing countries within the sphere of imperialist domination.

The main feature of the Reagan Administration's foreign policy from the very first days of its existence has been the examination of world problems through the prism of East-West relations. Here, as we know, Washington views everything simply as a "total Soviet threat" and nothing more. In accordance with strategic aims, the specific principles governing U.S. relations with groups of countries and entire regions emphasize struggle against the "communist menace."

The global crusade against communism, declared by the United States, is reflected in Washington's approach to its relations with the developing countries. A WASHINGTON POST article related the views of U.S. Secretary of State A. Haig, according to whom the United States and its allies "must show the countries of the Third World that their hopes for development can best be realized if they cooperate with the Western countries, and not with the Soviet Union." Apparently, we can expect the opinion of this high-level spokesman for the American administration to influence the motives for the allocation of American aid. At the same time, Washington has made the ridiculous demand that the USSR "modify its behavior" with regard to the developing countries.

Obviously, the United States is gambling with the wrong card. The USSR has demonstrated numerous times that it is futile to speak to it in the language of threats. As for Washington's proposed "rules of conduct" with regard to the young states, Comrade L. I. Brezhnev, general secretary of the CPSU Central Committee and chairman of the USSR Supreme Soviet Presidium, unequivocally said: "If these are some kind of 'rules' which will perpetuate the imperialist robbery and authoritarian treatment of these states, the creation of 'spheres of influence' and so forth, we will certainly never agree to them." As for the United States' futile attempts to preserve its economic dominion in the developing countries by all means available, as the accountability report of the CPSU Central Committee to the 26th congress noted, "the reorganization of international economic relations on a democratic basis and on the principles of equality is historically justified.... We are prepared to assist, and are now assisting, in the establishment of fair international economic relations."

The position of the USSR and other socialist states on this matter is clear and unequivocal; it is truly an example of mutually beneficial cooperation with the developing countries, which are beginning to realize who their real friends are. No "unselfish" U.S. aid can replace the establishment of a just international economic order, which is dictated by the realities of our time, or guarantee the thorough and balanced development of the liberated countries on the road to progress. In the same way, this "aid" cannot camouflage the actual essence of imperialist policy toward the developing countries or slow down the objective processes of their economic and social development.

UNITED STATES CHARGES OF SOVIET USE OF CHEMICAL WEAPONS UNFOUNDED

Kiev RABOCHAYA GAZETA in Russian 24 Nov 81 p 3

[Article by V. Sednev: "The Pentagon's Poisonous Lie; Imperialism Unmasked"]

> [Text] The campaign connected with the "Soviet military threat" invented by bourgeois propaganda is still going on in the West, especially in the United States. Members of the top echelons of power in Washington recently joined this campaign. One forgery after another has been produced. A prominent place among these is occupied by the "authentic reports" of "the use of toxic substances by the Soviet Union and Vietnam" in Afghanistan and Kampuchea. This slanderous campaign is supposed to make the world forget about the American aggressors' monstrous crimes in Southeast Asia.

Uncontrollable vomiting, paralysis, severe headaches, a lack of coordination, liver and gastrointestinal disorders, the appearance of a rash and malignant skin lesions--they will experience all of this later, much later. But at that time, at the height of the Vietnam War, when the American ultra-reactionaries were demanding "Return Vietnam to the stone age" and "Drop the atom bomb on the gooks," people in the United States were not overly concerned with what was later to be called, in the language of legal documents, "the devastating effect of chemical substances on people and the environment."

The poisonous boomerang hurled by the strong hand of the unknowing and the slight suspicions of the GI's turned into a real tragedy years later for many Americans who are paying today with their health and the health of their children for the crimes of the Pentagon generals.

According to the U.S. Department of Health and Human Services, during the years since the end of the war in Vietnam, 1,200 former flyers who flew combat missions to disperse various toxic substances and 60,000 people who were then fighting in the contaminated area have informed the Veterans' Administration of various health complaints.

American medical specialists have confirmed that the illnesses, including cancer and neuropsychological disorders, of participants in the dirty war in Vietnam are directly related to the harmful effects of toxic chemical substances.

The chief element of the chemical warfare in Vietnam was dioxin. Studies by American, Vietnamese, Australian and Swiss physicians and by chemists from other countries have established that a minimum dose of dioxin can have a pernicious effect on the health of the individual and his future children. According to a TIMES survey of American veterans, 538 of the soldiers who came into contact with chemicals in Vietnam have 77 crippled children. The children of many veterans were born deaf, blind or with other defects. Each day the number of victims rises.

In a recent statement, U.S. Secretary of Health and Human Services R. Schweiker had to admit that the United States had used chemical weapons in Vietnam. This was the first acknowledgement on the government level that more than 45 million liters of chemical substances had been dropped on the territory of Vietnam by planes during the war. Although these data are obviously understated, even they attest to the grand scales of the chemical warfare.

History has rarely seen barbarism of these proportions. Only the fascists resorted to this kind of fanatical cruelty. The American misanthropes resolved to annihilate all life in Vietnam. According to far from complete data, the SRV memorandum distributed to the Disarmament Commission on 20 March 1980 notes, more than 100,000 tons of chemical substances were "used" by the United States just in South Vietnam during the war. As a result, 43 percent of the cultivated land and 44 percent of the forests suffered. Around 70 percent of the coconut groves and 150,000 hectares of vegetation were destroyed. As the document points out, "many huge, previously cultivated fields and forested areas turned into semidesert zones.... The specific makeup and number of animals have changed, and the most harmful insects and animals are thriving, as a result of which dangerous tropical diseases are widespread." More than 2 million Vietnamese were victims of the chemical warfare; 3,500 of them died immediately and the rest have already been suffering the effects of the poison for many years.

The poisoners' victims included not only thousands of Vietnamese old people, women and children, but also a large number of American Army personnel, who had no idea of the pernicious effects of contact with these chemicals.

The authorities' forced admissions literally shocked the 2.5 million soldiers who had fought in Vietnam. They demanded thorough and free medical examinations for all former servicemen who exhibit the symptoms of these disorders. Legal and justified claims for damages to compensate the victims of these inhuman actions for their losses are being submitted to the U.S. Government.

There is no doubt that the American leaders were kept quite well informed of the investigations and findings of the special task force set up by the U.S. Department of Health and Human Services to study the effects of the toxic chemicals used in Vietnam, as well as of the incidence of "chemical" diseases in American veterans of this war. There is also no doubt that the Pentagon knew that the news of the unscrupulous actions of the American military establishment would evoke a negative reaction in the country and intense indignation throughout the world. This is why people in Washington quickly found a scapegoat and presented the world public with a veritable flood of slanderous and irresponsible statements about some kind of Soviet "involvement" in the use of chemical and biological weapons in Southeast Asia and Afghanistan.

American officials are obviously spreading this unfounded lie about the Soviet Union in an attempt to whitewash the American military establishment and its filthy activity. In this way, they are trying to make the average American forget about the threat posed by the use of chemical weapons. By lulling the American public with talk about the possibility of "limited" nuclear war with the extensive use of chemical and neutron weapons, the irresponsible politicians hope to deflect the wave of protest, which is growing with each day, against the criminal preparations for a new world war.

Some facts about the Pentagon's active preparations for chemical warfare were recently divulged by the weekly UNITY. According to its data, the United States has accumulated 50,000 tons of VZ, a strong toxic gas. Around 1 million barrels of another toxic substance, zarine, can be found on a military base in Utah. This is also where the VH nerve gas, three times as strong as zarine, is stored. Besides this, the weekly reported, around 1,000 so-called "wet-eye" bombs, filled with zarine, have already been produced in the United States.

Even if a lie is elevated to the status of government policy, it is still a lie. Washington's propaganda bubble burst when it came into contact with reality. But Washington's criminal intrigues are already capable of extinguishing hundreds of millions of human lives, evoking global catastrophe and ending the very existence of human civilization. All people of good will are demanding that these obsessive maniacs be stopped and that their criminal plans be frustrated. They have been joined in their loud protests by the Americans who became the victims of these inhuman weapons and have felt the horrifying aftereffects of their use literally on their own skin. Now they have gained awareness. But the price of this awareness is too high. More and more people in the West are beginning to realize this. The powerful current of the movement for a ban on chemical weapons is now joining the mainstream of struggle against the danger of a new world war.

EXCERPTS FROM ARBATOV'S BOOK 'THE SOVIET POINT OF VIEW'

Vilnius KOMMUNIST in Russian No 9, Sep 81 pp 77-87

[Interview with Academician Georgiy Arkad'yevich Arbatov, director of the Institute of U.S. and Canada Studies of the USSR Academy of Sciences, member of the CPSU Central Committee and deputy of the USSR Supreme Soviet, by Dutch journalist W. Oltmans; at various times during 1979 and 1980, place of interview not specified; excerpted from interview in book form, published in the FRG and Holland in 1981]

> [Text] A book of interviews with prominent Soviet expert on international affairs and public spokesman, Academician Georgiy Arkad'yevich Arbatov, director of the Institute of U.S. and Canada Studies of the USSR Academy of Sciences, member of the CPSU Central Committee and deputy of the USSR Supreme Soviet, was published in the FRG and Holland in March 1981. The book contains transcripts of his talks with Dutch journalist W. Oltmans throughout 1979 and 1980. Excerpts from the book are printed below with the author's permission.

[Question] The 1970's were the decade of detente. Will the 1980's be the decade of the second cold war?

[Answer] We must not be such fatalists that we immediately give up on an entire decade. It is true, however, that the international situation as a whole has deteriorated seriously. It seemed just recently that the world had found an escape from the cold war impasse and that the policy of detente had become the normal state of affairs. Now, however, some view detente as only a temporary deviation, to be followed by an unavoidable return to tension, hostility and confrontation--in short, to what was considered the normal state of affairs during the cold war era.

[Question] What do you consider the normal state of affairs to be?

[Answer] I would very much like to say with absolute certainty that the relaxation of international tension, the continuous development of cooperation and progress in arms control constitute the normal state of affairs and that we are now experiencing a deviation from this norm. But before we talk about this, let us agree on what we mean by "normal."

If we use the term "normal" to mean the natural state--for example, when we speak of "normal" body temperature, we mean that the body is healthy and that there is no threat to this health--then there is no question that the normal state of affairs is detente, and not cold war.

But the "normal" could also be the "usual"--the state that can be maintained without any special effort.

For example, it is "normal" for a cork to float. It takes effort to submerge it or lift it up in the air; as soon as this effort is discontinued, the cork returns to its normal initial state. In this sense, detente, unfortunately, is still not the normal state of international relations. Its maintenance still requires special effort, whereas tension can already be engendered by mere inactivity.

[Question] In other words, detente ran into trouble when the efforts that had been made to maintain it turned out to be inadequate?

[Answer] No, not entirely. It is true that some people did more for detente than others, but the difficulties here were engendered by more than just someone's failure to act. A truly decisive role was played by the desperate opposition of forces which regarded detente as a dangerous and hostile heresy from the very beginning. The radical change in U.S. foreign policy at the end of the 1970's and the beginning of the 1980's dealt a particularly severe blow to detente.

[Question] That statement would make the Americans indignant because they are convinced that Afghanistan was the main reason for the present deterioration of relations.

[Answer] It is no secret that the West responded to our policy toward Afghanistan with an entire hurricane of slander. But political opinions must be based on facts.

The official American argument that the events in Afghanistan were the reason for the present deterioration of relations will not stand up to criticism because the fundamental decisions which constitute the basis of the new U.S. policy and which are regarded in the USSR as a colossal step backward, in the direction of cold war, were made long before the events in Afghanistan.

[Question] To which decisions are you referring?

[Answer] The NATO decision, adopted in Washington in May 1978, about the annual increase in military budgets for the next 15 years, the U.S. President's decision of November 1979 on the "five-year plan" for the unprecedented buildup of U.S. military potential and the extremely dangerous NATO decision adopted in Brussels in December 1979 regarding the production and deployment of new American medium-range missiles in Europe. Besides this, the Americans had virtually stopped the arms limitation talks even before the events in Afghanistan. The ratification of the SALT II Treaty was already in question in September and October 1979.

In addition, there was the extremely hasty rapprochement with China on an obviously anti-Soviet basis. On top of all this, the United States sent many warships, planes and nuclear weapons to the Persian Gulf at the end of 1979. We could not believe that all of this was being done just to free the hostages in Tehran and that it was not part of the radical change in U.S. foreign and military policy.

This is why people in Moscow already believed in the middle of December 1979 that the United States had begun to modify its policy dramatically.

[Question] In other words, American policy influenced the Soviet Union's behavior in Afghanistan?

[Answer] It was one of the important factors....

[Question] If the normal development of detente had continued and the problems you mentioned had not come up, would the Soviet Union not have sent troops to Afghanistan?

[Answer] This possibility cannot be excluded. Please understand what I am saying: The assistance of Afghanistan was not "punishment" for the poor conduct of the United States or the West. But it was connected with our assessment of the new situation created by the United States and NATO.

As General Secretary of the CPSU Central Committee L. I. Brezhnev remarked in January 1980 in a PRAVDA interview, the decision to send a limited military contingent to Afghanistan was not an easy decision to make. Long before the end of 1979 the Afghan Government made several requests for this kind of assistance. At the end of 1979 the situation in Afghanistan had to be assessed within the context of the escalation of international tension throughout the world, and particularly in this region. The threat to the revolutionary order in Afghanistan and the threat to our own security were of much greater proportions in this atmosphere than they would have been in an atmosphere of detente.

[Question] The events in Afghanistan gave rise to this kind of intervention by the Americans and their allies primarily because they were not sure of the Soviet Union's intentions. President Carter announced unequivocally that he could not take any risk as far as the Soviet Union's intentions were concerned. It is possible that America resolved to radically change its foreign policy long before the events in Afghanistan in the belief that the Soviet threat was growing, and that it regarded these events merely as confirmation of its fears.

[Answer] Frankly, when I hear the "Soviet threat" discussed by responsible politicians and specialists, and not simply by the average citizen who has been deceived by propaganda, I get the feeling that these people are not talking about the Soviet Union and its influence and intentions as much as about the United States, about American policy and about America's role in the world.

It is simply more convenient for America to announce fantastic claims and demands in the sphere of foreign and military policy, implying that they have been "provoked" by the Soviet Union and that it is precisely to the Soviet Union's actions that the Americans have had to respond. We believe, however, that no one provoked America to take a tougher foreign policy stance. The United States has systematically been working on the modification of its goals for a long time, and this has led it to its current assessment of its relations with the Soviet Union and the entire world.

[Question] But you will not deny that the Soviet Union has considerably strengthened its military power in recent years.

[Answer] Yes, our strength has increased. We had every reason to worry about our defense. I think that even those who complain so loudly about the Soviet military threat know that our weapons serve defensive, and not aggressive, purposes.

[Question] But NATO maintains that the weapons of the Soviet Union exceed "valid defense requirements."

[Answer] So what? These are people who notice a tiny speck of dust in someone else's eye but overlook an entire log in their own. I often ask myself: How would the American generals and politicians define their own "valid defense requirements" if approximately a million Warsaw Pact soldiers and around 700 nuclear weapons were deployed north of Michigan and if Texas were not across the border from Mexico, but from a country which had a population of a billion, possessed nuclear weapons, raved about its special destiny and laid claim to a large part of the American South?

One sign of the hypocrisy of American officials regarding the strategic position of the Soviet Union is the politically fashionable talk about the so-called "crescent of crisis." This term, coined by Brzezinski, refers to Southwest Asia and the Middle East. This region was declared a "sphere of American vital interests." But have any of those who accepted this concept given any thought to the fact that almost the entire length of the "crescent" stretches along our border and the borders of our southern neighbors and that, consequently, this is a region of tremendous significance to the security of the Soviet Union, or, in other words, that it is truly a zone of Soviet vital interests?

[Question] When I spoke with Paul Nitze, he expressed the opinion that the Soviet Union does not want a nuclear war. He does believe, however, that the Soviet Union is preparing to fight and win this kind of war.

[Answer] Perhaps I should thank Nitze for saying that we do not want a nuclear war, even if he only admitted it in a private conversation. This is not exactly a customary statement for him. But all the rest is a variation on an old theme.

[Question] You probably know that it is not only the "hawks" who express this view. There are others who believe that the Soviet Union is not excluding the possibility of this kind of war as a means of attaining political objectives.

[Answer] When they allege that we are prepared to fight and win a nuclear war, they usually cite remarks that were not made by the political leadership of the country, authorized to make decisions in regard to war and peace, or by the present military leadership. They take quotations from articles, statements and books by some Soviet military authors who examine, from their strictly professional vantage point, the question of how we should fight if we are forced to go to war, and I do not see anything abnormal or alarming in this. It is precisely the military leaders who should consider the actions they should take if war should break out. This does not necessarily mean that they regard nuclear war as a useful foreign policy instrument.

At the beginning of the 1960's I was in London at the time of the international crisis. In a cafe there, I saw a sign which read: "In the event of a nuclear attack, remain calm, pay your bill and proceed to the nearest cemetery." I am afraid that if a military leader in any country had issued these orders, no one would have rewarded him for his sense of humor. He would have had to resign, and without any hope of a pension.

Let the accusers of the Soviet Union listen to what people are saying about this matter in the United States. And these people are not isolated military authors, but high-level military leaders. Let me give you a few examples. General Curtis LeMay, U.S. strategic aviation commander, insisted that the Americans be constantly prepared to "fight any war to the point of victory, including general war" (when he spoke of general war, he was not referring simply to a war commanded by generals). Former U.S. Secretary of Defense Melvin Laird wrote that American "strategy must be aimed at fighting wars, winning victories and achieving reconstruction" and that the United States should prepare for "total nuclear war" and convince the enemy "that we will take the initiative into our own hands and deliver the first strike." Another example is a statement by the chairman of the Joint Chiefs of Staff in 1977: "American nuclear strategy presupposes the maintenance of sufficient military strength for the purpose of intimidating an opponent, but if intimidation should not have the desired effect, we must have the necessary striking force to control the escalation of any conflict and end a war on terms acceptable to the United States." I assure you that you will find nothing comparable to this in the verbal or written statements of Soviet military leaders or anyone else in the Soviet Union.

[Question] When these matters are discussed in the West, Soviet military doctrine as a whole, and not isolated quotations, is taken into account.

[Answer] Nevertheless, in the final analysis, conclusions about our foreign policy are drawn precisely from these quotations. Without going into detail, I would like to again emphasize the most significant aspect of this matter: Soviet military doctrine is of an indisputably defensive nature. This is quite clearly reflected in the Soviet stand on the question of nuclear weapons. Allow me to quote the most authoritative source. This is a statement made by Marshal L. I. Brezhnev, supreme commander in chief of the USSR Armed Forces: "We are against the use of nuclear weapons; only extraordinary circumstances, aggression against our country or its allies, would force us to resort to this extreme form of self-defense" ("Leninskim kursom" [Following the Leninist Course], vol VII, p 300).

I would like to cite another quotation about the possibility of the first use of nuclear weapons. When General Secretary L. I. Brezhnev spoke in Tula in the beginning of 1977, he said: "Our efforts are aimed precisely at keeping the matter from reaching the point of the first strike or the second strike, at preventing nuclear war in general" (KOMMUNIST, Moscow, 1977, No 2, p 28).

I could also cite other similar statements by L. I. Brezhnev, Soviet Defense Minister D. F. Ustinov and other Soviet leaders.

The quintessence of these statements is that we see the prevention of war as the function of our strategic armed forces. The Soviet Union believes that it is senseless to strive for military superiority. As Comrade L. I. Brezhnev stressed, the very concept of this kind of superiority "loses meaning in the presence of today's huge arsenals of nuclear weapons and the means of their delivery" ("Leninskim kursom," vol VII, p 312). Soviet military doctrine, which has been explained on numerous occasions by the Soviet leadership, unequivocally testifies that we view nuclear war as the most terrible misfortune that could ever befall mankind; that our strategy is of a defensive nature; that we are against the concept of the "first strike"; that the function of our strategic forces consists in intimidating a possible aggressor and that they are intended for retaliatory strikes.

All of this has been said numerous times by the most authoritative individuals. This is the gist of our military doctrine, and it would be impossible to discern any other, "secret" doctrine behind this one, simply because no other doctrine exists. As for all the various official statements by the American side, we feel that they express the opposite view.

[Question] To which American statements are you referring?

[Answer] What about, for example, when Brzezinski was interviewed by English journalist Jonathan Power. Brzezinski said that nuclear war should not be regarded as a terrible catastrophe in the final analysis because "only" 10 percent of the world population would die. Incidentally, "only" 10 percent would amount to 400 million people.

In essence, this is a variation on the old Maoist themes: "The nuclear bomb is only a paper tiger," "In the event of a nuclear war, only half the Chinese will die, and the rest will then begin a new and happy life" and so forth. Apparently, the rapprochement with Beijing and the game of chance with the Chinese card have had some effect.

After making this reassuring observation, Brzezinski added that "if the need arose," he would not hesitate--he would push the button and launch the missiles. It would be interesting to see the size of the headlines in the NEW YORK TIMES and WASHINGTON POST if a high-level Soviet spokesman were to make similar statements.

And this is not just idle talk. After all, it is precisely in the United States that theoretical and technological projects are being carried out energetically to guarantee the possibility of fighting and winning a nuclear war.

[Question] Are you exaggerating?

[Answer] Not at all. Carter's Directive 59 is only the latest offspring of an entire school of strategic thought that preaches "limited" nuclear war as a "flexible" method of using nuclear weapons. All of this is far from simple speculation. The appropriate military equipment is being developed--for example, smaller warheads with heightened targeting accuracy, neutron weapons, special delivery systems that are to be situated near the Soviet border, etc. Some feel that all of these measures are merely intended to give greater weight to American political threats. Even in this event, however, the danger of war is sharply increased because nuclear weapons can evade control if a conflict should escalate, regardless of the original intention. The constant attempts to erase the distinctions between conventional and nuclear wars are extremely dangerous.

[Question] Why?

[Answer] Because they tend to eliminate such impediments to nuclear war as the widespread aversion to this kind of war, the realization of its catastrophic consequences and, consequently, the conviction that it cannot be regarded as an acceptable political instrument. If people begin to believe in the possibility of resorting to nuclear war, the probability and possibility of this kind of war will increase considerably.

[Question] You apparently believe that the possibility of nuclear war cannot be excluded, and that this danger is increasing. Does this not imply that attempts must be made to minimize its consequences?

[Answer] This conclusion might seem logical, but the realities of the nuclear age demand a totally different way of thinking. I have already said that the very belief in the possibility of a "minor, neat and tidy nuclear war" undermines the resistance to nuclear conflagration. But this is not all. If the price that must be paid for this kind of war starts to seem more or less acceptable, this will unavoidably heighten the adventurism of the persons seated closest to the nuclear buttons. Their policy would be much less carefully considered and less balanced because they would believe that a miscalculation would give rise only to a small war without any particularly frightening consequences. If a truly crucial situation should arise, it would be easier to decide to push the button.

[Question] Nevertheless, the losses and destruction of "limited war" would be much less significant.

[Answer] No, we could hardly expect this. In my opinion, it is difficult to even imagine a "neat and tidy minor nuclear war." You see, any attempt to limit possible losses, by means of anti-missile or civil defense, would cause the other side to retaliate. It would increase the number of its warheads, enhance their ability to penetrate as far as possible into the depths of enemy territory and compound their destructive power. It is hardly likely that any side would make any special effort to prevent enemy losses from becoming too great. Nuclear war would not in the least resemble the aristocratic duel according to all the rules. If mankind were civilized enough for this, it would be easy to prevent nuclear war and to achieve universal and total disarmament.

No, we have no right to think of nuclear war as some kind of chivalric duel. There is no such thing as limited war or limited nuclear strikes. If nuclear war should break out, it could never remain limited. Escalation is particularly inevitable just by virtue of the very fact that neither side will want to admit its defeat. Besides this, imagine if nuclear bombs were exploding all around you. Would you be able to coldbloodedly calculate the particular enemy strike that would justify proper retaliation so that the "rules of the game" would be in no way violated? Escalation will be simply impossible to prevent.

It seems to me that the best description of the concept of limited war was given by John Culver, former Democratic senator from the state of Iowa, who was once a member of the Senate Foreign Relations Committee. He compared this concept to the "limited effect of a match thrown into a powder-keg."

[Question] How did the Soviet Union react to Directive 59, in which President Carter set forth the new nuclear strategic doctrine?

[Answer] First of all, it is worth noting that the actual wording of Directive 59 has been kept secret by the United States; therefore, we in the Soviet Union can judge this document only by what the White House deemed necessary to announce to leading American press organs, and by some official statements--for example, the speech presented by former Secretary of Defense H. Brown at the naval academy on 20 August 1980.

There is sufficient indication, however, that the U.S. Government officially approved the concept of limited nuclear war. The assumption that it was inclined toward this concept had existed long before this time. Washington has chosen to deliberately clarify neither the specific circumstances in which it would start such a war nor other decisive aspects of the matter. This uncertain situation was most probably created on purpose to heighten the psychological impact of the new doctrine and simultaneously retain the right of maximum freedom of action for the United States.

[Question] What aspects of this doctrine do you find dangerous?

[Answer] Despite the constant allegations of this strategy's authors that it is only an amplification of the intimidation theory adhered to by previous secretaries of defense, from Robert McNamara to James Schlesinger, this is actually a qualitative change. The new strategy is intended to lower the nuclear threshold and increase the number of situations in which the United States would justified to use nuclear weapons. It provides a pretext for a new round in the arms race, for an unbridled arms race. In addition to all this, the doctrine reinforces the tendencies leading to total destabilization in the sphere of military equipment and in the sphere of military strategic thinking. To justify this new strategy, the Americans speak of their fear of becoming the victims of a first strike, but they are actually striving to ensure the first-strike potential of U.S. strategic armed forces.

[Question] In view of the fact, however, that the only safeguard against nuclear war is the so-called "balance of fear," or the realization by both sides of the suicidal nature of nuclear war, is it possible that the new strategy is not so different from the old one?

[Answer] No, they are quite different. Directive 59 is not intended to alleviate the general fear of nuclear war, but to fuel the enemy's fear and simultaneously increase America's own power. Nuclear weapons will lie untouched in arsenals only as long as both sides feel equally threatened and are equally able to destroy one another. The greatest caution must be observed. There can be no silly games with the "balance of fear" that has prevented so many conflicts from escalating to the level of nuclear war.

On the other hand, it is quite obvious that a peace based on mutual intimidation is far from ideal and cannot last. The maintenance of intimidation potential calls for a sufficiently impressive arsenal, and this results in an arms race. Furthermore, it is also necessary to maintain the enemy's belief that he is threatened; in other words, the willingness to destroy the enemy, and to incinerate half the planet and commit national suicide at the same time, must be demonstrated. In addition to threats, saber-rattling and blackmail, this also requires periodic actions which attest to a capability for irresponsible behavior, adventuristic undertakings and impulsive conduct. The dangers inherent in this need no explanation.

[Question] Rosalyn Carter told Gail Sheehy of the NEW YORK TIMES: "Oh, I could imagine how a war could start. Jimmy would not be afraid to start a war to defend the honor of my country." But different people interpret honor in different ways.

[Answer] You are right, but it is even more important that nuclear war cannot be compared to a chivalric duel, unless we are speaking of an honorable suicide, of course.

Let us disregard the moral aspects, however. We are dealing here with an example of the unnatural logic engendered by the balance of fear. This logic requires constant recognition of the ability to commit mass murder on an extreme scale, or what might be termed megamurder. There is an insoluble dilemma here. On the one hand, we must agree that war is senseless. On the other hand, we must constantly prepare for war and stress our willingness to start a war. Regardless of our original intentions, this logic eventually leads us to the verge of catastrophe.

[Question] Is there any solution?

[Answer] In general, mutual intimidation can still be regarded as a lesser evil than preparations for "acceptable nuclear war." But it is impossible to live forever in an atmosphere of intimidation; sooner or later, it loses its effect. For this reason, we must find an alternative to intimidation. The question now concerns the direction we should take in our search for this alternative. It would be a catastrophe if we moved in the direction of "acceptable nuclear war." There is only one reasonable path, and this is the path to peace based on arms control and subsequent disarmament, the path of stronger trust and cooperation. There is no question that this is an extremely difficult path, requiring tremendous effort, great wisdom, patience and political courage. But there is most probably no other path to strong and lasting peace.

[Question] Kissinger once said: "Absolute security for only one of the superpowers is unattainable and, what is more, undesirable, because it would mean absolute insecurity for the other side." Is this not also one of the new realities of the nuclear age?

[Answer] Perhaps. I only doubt whether a member of the U.S. Government could rise so far above common sense as to call his own absolute security undesirable. And there is not even any need for this. The realization that absolute security is unattainable is enough. It is precisely this fact that must be acknowledged so that the arms race can stop. This reality of our time is closely related to another: So many means of destruction have been accumulated that their further accumulation would not strengthen national security. The exact opposite is true: The more weapons there are, the less security there will be. Farsighted Americans began to realize this more than 15 years ago. Jerome Wiesner and Herbert York wrote, for example: "The arms race has created a situation in which the reinforcement of military strength does not increase national security, but diminishes it. Judging by our professional experience, we are certain that there is no technical way of resolving this contradiction.... The arms race is like a spiral which rotates faster and faster and leads to oblivion."

[Question] When was this written?

[Answer] In 1964. And I would like to stress that when it comes to professional qualifications, experience and knowledge, it would be difficult to find two other Americans whose opinions would warrant more attention. Wiesner was President Kennedy's adviser on scientific affairs and York is an equally prominent scientist, who was connected directly with military production when he headed the Pentagon's research and development department.

I repeat, this was written in 1964. If people had listened to these words then, imagine how many billions could have been saved and how much the cause of peace could have benefited.

[Question] After many hours of discussion and many weeks of work on this book, I want to repeat the question with which I began: Will the 1980's be the decade of the second cold war?

[Answer] I would not retract a single word of my original answer. But I would like to add something.

[Question] This is precisely why I repeated the question.

[Answer] I want to add to my previous answer that the second cold war would also differ from the first in the sense that it would be, in some respects, a false cold war, or what the French might call a "strange cold war." It would be false because, in contrast to the first cold war, it could hardly rest on convictions. The convictions which lay at the basis of the first cold war were false, stemming from unjustified fears, biases and ignorance, but they did exist and did represent an important psychological factor.

We would have to have a very low opinion of the mental capabilities of people to believe that the Europeans of the 1980's could once again fall for the myths that were used to frighten them at the end of the 1940's. I think that even the Americans now know too much to return to the state in which they existed in the late 1940's and early 1950's. It is difficult to believe that they would again follow prophets like Senator Joseph McCarthy or Congressman Parnell Thomas--these apostles of the first cold war who, as it later turned out, were nothing more than swindlers (and swindlers, one could say, who rose to the status of apostles with the aid of the cold war). In fact, the second cold war would be artificial and only a few would find any meaning and purpose in it. And here is something even more significant: Now that people have learned what detente is like from their own experience, there are few who would see this kind of cold war as the only alternative to "hot" war. This would also be an artificial cold war in the sense that the United States would try to fuel it without having what it takes to win it.

It was unable to win the first cold war, when its position in the world was much stronger than it is today. It would be absolutely impossible for the United States to win this kind of war in the last quarter of our century. It is nevertheless a fact that it is precisely the United States that is trying to start this war, and this attests to a serious threat to peace and stability throughout the world.

[Question] Is it possible that East-West relations could improve if our entire civilization is threatened by mortal dangers?

[Answer] What can I say, one of these dangers is the danger of war, and we have already talked about this enough.

Another danger is the exacerbation of global problems, such as the supply of energy and raw materials, the food crisis and the problems of environmental protection and poverty in the Third World. The accuracy of the appraisals of the Club of Rome and other specialists could be disputed, but I feel that they reflect some real problems. The population of the world is expected to increase from the present 4.5 billion to 6 billion by the year 2000. This means that we will have to solve problems in the next two decades that once took centuries to solve. Our need for raw materials, especially sources of energy, is increasing to unprecedented proportions. The problem of providing mankind with food is an extremely urgent one. If present tendencies continue, the number of unemployed will rise to 1 billion by the end of the century.

[Question] Do you expect the vital need for solutions to these problems to stimulate detente and cooperation?

[Answer] Yes, I do. If I might borrow Carter's famous metaphor (although he used it in another context), these dangers can be regarded as the "moral equivalent of war" in the sense that they will require maximum effort and will necessitate cooperation by all states, particularly cooperation by the Soviet Union and United States.

[Question] I would like to ask you a personal question. In our discussions, we have touched upon a broad spectrum of problems. What is your personal view, your view as a man, as Citizen Arbatov?

[Answer] I think it would be worth repeating what I already wrote once in an article for NEWSWEEK, the American magazine. I am convinced that this view is shared by the majority of my generation in the Soviet Union.

My father went to war when he was 18. I also went to war when I was only 18. We were both lucky: We came back home. And I am very happy that my son, who is 30 now, did not have to fight. No one will return from the war that now threatens mankind. There will be no victors.

[Question] Do you sympathize with today's young people who are pessimistic about the future and have lost all hope of a more sane world with no danger of war?

[Answer] Antonio Gramsci believed that the best combination of pessimism and optimism in the human being was a pessimistic mind and an optimistic will. I think he was saying that people should see and recognize all dangers and negative tendencies but should also resolve to overcome them and build a better world. Unfortunately, we often encounter the opposite, in which case people are afraid to make truly realistic and discerning assessments of reality and feel helpless in times of crisis.

I personally would be afraid to entrust the fate of the world to a generation which had lost all hope. It is true that some of today's difficulties are unique in terms of the scales of the threat they pose to mankind. But after all that the people of my generation had to go through, I am certain that mankind has what it takes to overcome existing difficulties. The deciding factor is the will to combat these difficulties.

I do not think that all of today's young people are pessimistically inclined. To some degree, I can understand those who are filled with pessimism. They have encountered serious problems and are deeply disillusioned. This is more their misfortune than their fault. I think that the older generation bears a greater responsibility. We must preserve, for the younger generation, not only the hope of a better life on the planet, but also the planet itself.

GEORGIAN COMMENTATOR PRAISES SADAT'S DESTRUCTION BY 'PATRIOTS'

[Editorial Report] Tbilisi KOMUNISTI in Georgian on 22 October page 2 carries a 1600-word commentary by Dr of History Sh. Kurdgelashvili on the destruction of President Sadat by Egyptian army patriots. It reflected the will of the people, who were finally fed up with Sadat's autocratic rule, his betrayal of Nasser's legacy, his turning away from the Soviet Union and toward the imperialist camp, the disgrace of the Camp David "deal," and so on. Throughout, the commentator implies that Sadat's "anti-communist" and "anti-Soviet" acts fed the Egyptian people's justified rage.

The author then dwells on the significance of the Egyptian Patriotic Front, founded in March 1980 in Beirut by representatives of Moslem, Christian, and communist groups. Unanimously elected as general secretary was Lt Gen Saad ad-Din ash-Shazli, a faithful follower of Nasser who received his military training in Egypt and in the Moscow Military Academy. In his own statement in praise of Sadat's assassination, ash-Shazli warns that if Sadat-type rule should resume, Egypt's patriots will not hesitate to use "revolutionary violence" to restore the people's rights. The commentator hints that the national army, which threw out Farouk in 1952, could again head up the struggle against imperialism. He then quotes the Soviet government's condemnation of joint U.S.-Egyptian military maneuvers in Egypt, which "cannot but affect the Soviet Union's security interests."

PARAMETERS FOR SOVIET SOCIOCULTURAL DEVELOPMENT DEFINED

Moscow OBSHCHESTVENNYYE NAUKI in Russian No 6, 1981 pp 96-109

[Article by Yuriy V. Arutyunyan, doctor of historical sciences, professor, head of the sector of specific sociological studies of the Ethnographic Institute imeni N. N. Miklukho-Maklay, USSR Academy of Sciences. Author of monographs on "Mechanizers in USSR Agriculture," "The Soviet Peasantry During the Great Patriotic War," "Experience in Village Sociological Studies," "Social Structure of the Rural Population in the USSR," "The Social and the National" (as co-author), "Experience in Ethnosociological Studies of the Way of Life," and others. The present article is based on a chapter in the collective monograph "Aktual'nyye Problemy Natsional'nykh Otnosheniy v Svete Konstitutsii SSSR" [Topical Problems of National Relations in the Light of the USSR Constitution] (Nauka, Moscow, 1981), published in the "National Relations in the Contemporary Age" series: "Ethnosociological Study of Culture in the USSR"]

[Text] Social (in the broad meaning of the term) and purely ethnic processes can and must be subjected to effective studies on an interrelated basis. It is no accident that at the 26th CPSU Congress problems of development of national relations in the USSR were considered in a state of organic unity with those related to improvements in the socioclass structure of Soviet society.

The ethnosociological direction in the study of nations, which has been actively developed in the USSR during the past decade, was started at the crossing point of sociology and ethnography. On the one hand, the study of general social phenomena and processes in contemporary society calls for a determination of the national-specific features of their manifestation. On the other, ethnic characteristics (in particular language, national self-awareness, and elements of traditional national culture) are in themselves socially multivariant, i.e., they accumulate in varying amounts among sociodemographic population groups.

The need to take the national feature of social phenomena into consideration has been broadly confirmed. It would be no exaggeration to say that the entire system of social indicators applied in the USSR requires that national diversity be taken into consideration. Summarized indicators are usually applied in the discussion of basic social processes characteristic of the socialist society (elimination of disparities between town and country, surmounting major disparities between mental and physical labor, etc). This is natural in the case of the development of the socialist society as a whole (particularly when compared with the society of the opposite social system) or in assessing the broad historical changes which are taking place within it.

However, the regional-national variety of manifestation of social processes common to the entire country must be taken into consideration if we are to understand in detail the social phenomena typical of a multinational socialist state.

We shall illustrate the range of this variety of extreme indicators, ranging from the large-scale "community" (urban or rural) to the social microcell (the family). Whereas according to the all-union 1970 population census, 56 percent of the USSR population lived in cities, the share of urban residents in the main native national groups of union republics ranged from 65-68 percent among Russians and Armenians to 15-20 percent among Kirghiz and Moldavians.[1] Such fluctuations will retain their real social meaning as long as substantial disparities remain between rural and urban living conditions.

Equally noticeable are differences in another range of indicators--family size. According to the 1970 census, the average family in the USSR had 3.9 members. Among the different nationalities the family size ranged from 3.1 among Estonians to 5.8-6 among Uzbeks and Turkmens. It is self-evident that these differences affect many aspects of human life, especially important social behavior indicators such as migration and social mobility. Although behavior is determined by economic factors, the influence of the latter is not isolated from other determinants. It is no accident that with an essentially identical size of disparities between urban and rural living conditions, the attractiveness of the city is felt in Central Asian republics far less sharply than in many other republics in the USSR. Here, on an average, no more than 1-2 percent of the rural population migrate to the city, compared with up to 8 percent in the RSFSR. This conflicts with real manpower needs: in areas where the rural population is sufficient, the outflow hardly exhausts the natural growth, whereas wherever there is an obvious need for manpower resources such outflow leads to an absolute loss of manpower. The processes related to social mobility are affected by other, strictly ethnic, features as well. In particular, insufficient knowledge of the language of international communication, widespread in many cities in this area because of their ethnic structure, may be having a restraining influence on migration from rural areas in Central Asia. All of this proves quite eloquently the need to study general socioeconomic phenomena and mandatorily take into consideration their regional and ethnic specifics.

The topical nature of the other aspect of ethnosociology--the social base and multivariance of ethnic phenomena and processes--is even more obvious. The broadening of the cultural range, the internationalization of culture and way of life, the mastery and use of languages, the language of international communication above all, and so on, are largely based on social requirements and vary according to socioprofessional activity and environment. The ethnosociological study of these aspects--ethnosocial and socioethnic (i.e., "the ethnic in the social" and "the social in the ethnic")--has developed in a number of republics. In the first half of the 1960's, sociological studies of national problems were undertaken in Estonia, Latvia, Georgia and Kirghizia. Subsequently, such studies were undertaken in other union (Belorussian, Ukrainian, Armenian, Azerbaijani) and autonomous (Udmurtskaya, Bashkirskaya, Karel'skaya, Dagestanskaya, Kabardino-Balkarskaya, Severo-Osetinskaya, Checheno-Ingushskaya and other) republics in the USSR.

At the same time, an interrepublic study on "Optimizing Sociocultural Development Conditions and Rapprochement Among Nations in the USSR" (OSU) was undertaken by the sector of specific sociological studies of the USSR Academy of Sciences Institute of Ethnography together with republic scientific centers.

Today the ethnosociological study of processes of development and reciprocal enrichment of national cultures becomes particularly important.

The ethnosociological approach to the study of cultural problems is not isolated from other scientific directions. It tends to rely on specific data and to use the experience of various disciplines (sociology, ethnography, statistics, history, psychology). The ethnosociological approach is combined with the comprehensive study of the history of culture as suggested by Academician M. Kim.[2] However, if in a historical approach the researcher is interested mainly in the study of the stages of development of culture and their characteristics, in an ethnosociological study the main attention is focused on determining the mechanism itself of sociocultural contemporary processes. This mandatorily requires the study of ethnic parameters of social processes and phenomena. Specific ethnosociological studies of culture may provide data for the further development of the theory of national culture on which philosophers have been long and actively at work.

In our view, the socioethnic norm of human self-expression is the most important object of ethnosociological studies of national culture. The range of cultures and their "boundaries" are widening in the course of historical progress. Culture does not stop at the borders of a settlement, ethnic environment or state. The range of cultural perception by the individual is broadening steadily. At the same time, the means for the production and consumption of culture are becoming standardized.

Within this broad understanding of culture we can single out within it interrelated subsystems. To a certain extent, this is reflected in the following structure of its components: cultural fund, cultural dissemination mechanism, cultural consumption and mastery, which determine actual behavior.

The cultural fund may be material, ranging from primitive labor tools to a cosmodrome; spiritual, from early folklore to contemporary art; moral, from ordinary law to constitutional norms. We must distinguish between a historical and an operative fund, either of which has its own scale of operation, ranging from the family and settlement to the nation, the social system and all mankind.

The mechanism for the dissemination (transmission) of culture ranges from mass communication media to informal communications. Depending on the scale of the system, the role, functions and share of one or another cultural dissemination medium change. The bigger the system the more important becomes the dissemination of culture through mass information media and, respectively, the lesser the role of informal communications becomes. In the course of time, the scale of the institutional diffusion of culture becomes greater and informal contacts are reduced.

The ethnosociologists are concentrating on the consumption and mastery of culture. The following subsystems for the functioning of culture have been singled out:

Sociopolitical (specifically ideology);

Production--attitude toward labor, vocational guidance and others;

Spiritual, with two basic aspects: rational-emotional (primarily science) and emotional-rational--artistic culture. Spiritual culture obtains its physical manifestations in architecture, household use objects, technical equipment and others;

Social, including societal and family culture.

All of these subsystems "find their outlet" in the overall interrelated subsystem of moral culture.

The fact that culture in all such subsystems may be manifested in its active or passive form must be taken into consideration in making a study. The active aspect is manifested in actual behavior. Creativity is the culminating point of the active manifestation in culture, for it is precisely creativity that expands the cultural stock.

As a socioethnic normed self-expression of man, we have considered culture within the OSU program on various scales and levels--from the microgroup, the family above all, to the nation. Specific empirical data enable us to provide a relatively complete characterization of ethnic groups in the studied republics with a view to determining the common and specific features and development patterns and prospects. Such studies can help us to explain the inner mechanism of the process of rapprochement among nations and their scientific guidance.

A comparative study of the cultural interaction among nations makes it possible to formulate and resolve a number of basic and specific problems, as follows:

1. Determine the way the specific features of their cultural past, level of development of their own national culture, and nature of the historical experience in the areas of cultural, social and political relations among nations influence the development and rapprochement among them.

2. Determine the correlation between the development of national culture and the level of urbanization and industrialization of national republics.

3. Determine the patterns of change in the inner structure of national cultures (the infrastructure)--the correlation among material culture, language, artistic culture, value orientations, etc; determine the characteristics and pace of internationalization in various cultural areas (different in terms of type and level of development).

4. Determine the general and specific features of the cultural aspect of different nations, which makes possible a more profound cultural-ethnic characterization of contemporary nations.

Furthermore, a number of "traditional" problems must be resolved on the basis of broader and essentially new comparative data: the social structure of nations must be characterized; the role of national affiliation and other national factors (language, behavior) in the social mobility process must be determined; the variety of cultural characteristics of social groups of nations and their social mobility must be determined; the ratio between international and traditional-national features in social groups must be brought to light; the extent and depth of their mastery of contemporary national culture must be defined; the laws which affect processes of cultural exchange among nations must be found; and the link between the development of national culture and national relations governed by a system of national concepts, must be established.

The theoretical definition of the criteria of optimum development of sociocultural processes assumes an essential significance. Three criteria may be singled out: the first is related to strictly cultural development. We know that in the course of the "Westernizing" and urbanization of culture, national culture may wither away. In such a case, one cultural orientation is entirely replaced by another. From our viewpoint, this cannot be considered an optimum variant of sociocultural development. The latter is characterized by the absolute broadening of the cultural range of the individual and a mastering of world culture without losing the progressive element of one's own culture.

The other optimality criteria are found in correlated cultural areas, above all on the level of the interrelationship between culture and economics. We know that the development of culture, on the one hand, and of the production process, on the other, does not take place evenly. The role which the individual plays as a member of the production collective is narrower than the one he plays as a citizen.[3]

However, relations between production and culture may be optimized not only as a result of the comprehensive development of production in accordance with the requirements of the individual but also by optimizing the processes of sociocultural development, mainly through a certain reorientation in cultural development. Culture can be not only a means for production growth but a self-seeking aim, i.e., it can be not only strictly utilitarian but a direct source of spiritual enjoyment and creativity in a harmoniously developed individual. This increases the compensatory functions of culture and culture and economics interact as a self-regulating system within which the contradictions created by development disproportions are naturally abated. The next criterion in optimizing sociocultural processes is found on the sociopsychological level. Language, awareness of common origin and historical destinies, customs, and so on are the consolidating factors of this criterion in a nation. However, an egocentric tendency may develop on this basis. This auxiliary product of sociocultural development may become a factor which hinders the progress of national culture and, in the final account, leads to a feeling of exclusivity. The optimum development of sociocultural processes, therefore, presumes the elimination of the threat of deformation of the national feelings by increasing cultural contacts and reciprocal enrichment among nations. The internationalization of national culture is a characteristic of its healthy development. It is precisely nations which can absorb the achievements of world culture and transform it in accordance with their own historically developed cutural forms that have the most powerful cultural potential.

The process of rapprochement among nations becomes exceptionally topical today. We invest the term "rapprochement among nations" with a double meaning. On the one hand, it implies the "equalization" of their social and cultural standards and the creation of basically similar socioprofessional structures and actual identical access to and measure of consumption by all nations of the spiritual wealth of mankind and, on this basis, the development of common features. On the other hand, this implies interrelationship among nations as such. As we know, similarity does not always mean solidarity. Sometimes it intensifies rivalry, for it equalizes the competitive opportunities of nations. That is why the internationalization of cultures must be mandatorily accompanied by the assertion of internationalist principles in relations among nations.

The general hypothesis of the OSU is based on the idea that cultural development of nations is determined by social factors. Consequently, national relations are considered on the level of class and socioprofessional population groups. The studies focused on determining the interrelationship between changes in the social structure of nations and the process of further rapprochement between the levels of their economic and cultural development and among the specific historical destinies of nations. The theme of the study is not individual specific phenomena but their system, their totality of interrelated processes. Essentially, this is a set of different studies, some of which are specifically sociological, conducted on the basis of the same system and subordinated to the overall objectives of optimal social planning.

The purpose of such planning in this area is the creation of a maximally favorable regimen for the sociocultural growth of the individual (essentially, the level of his sociocultural growth represents the level of the progressiveness of a society). The final objective of the OSU is to determine this growth and define its parameters and factors. The solution of this problem depends on three subordinate operations: defining the level of the social growth of the individual, his cultural growth (standard) and improvement of international orientations. Development of each of these qualities is not always harmonious and their optimum combination is a most important management problem. In the final account, the study is based on a system of operations aimed at determining the conditions which govern the development of human capabilities and the realization of developed capabilities.

Both abilities and their realization are determined by the interaction between the individual and the microenvironment (specific living conditions) and macroenvironment (social situation at large). Speaking of the development of capabilities, we must particularly emphasize operations which reflect channels or factors of primary, of early socialization of the personality. The decisive ones among them are the family, the school and the settlement in which the individual develops (village, small, average or big city, and so on). As to the realization of capabilities, the essential features here are the contemporary levels of socialization. The determination of the "conditions for the materialization of capabilities" is broken down into operations which bring to light the level of labor, sociopolitical and sociocultural activities and activities in daily life.[5]

The functioning of these channels largely depends on the sociocultural stock, whose classification into two areas is essential (material-production and spiritual, which is particularly important in terms of our objective). The study of the individual elements of the cultural stock of a nation, therefore, is mandatory in rounding out the research system. As to international upbringing, it follows the same channels as cultural development. Its study calls for a consideration of the ethnic aspect (for example, the language in which training is provided at school, the ethnic situation in production collectives, the ratio between the international and the national in the value stock of national culture, ideology, etc). The effect of these factors varies from one republic, city and rayon to another, depending on the specific and the general social situation.

In order to understand the OSU system it is necessary to discuss several concepts used in the analysis and the means for their "instrumental expression."

The social growth of the individual represents the changed positions of the individual in the social structure. These positions are two-dimensional. They are defined by the quality of labor and the area of its application. We can single out areas such as city-village, state and kolkhoz-cooperative sector, and block sectors such as industry, transportation, construction, communications, services and agriculture, as well as nonproduction areas such as household work and school attendance.

Based on work quality, the intelligentsia groups may be classified as follows: administrative, including party-governmental and departmental-economic; scientific and technical and scientific-humanitarian; artistic-creative; finally, mass, including physicians and teachers. Among workers and peasants, the groups are classified on the basis of skill. We shall not provide here a theoretical substantiation of this classification, for such information may be found in several publications.[5] Let us merely point out that the classification takes into consideration not only differences in the social organization of labor and the ways and means of acquisition of the social product but the related social interests, which is particularly essential in the study of national interests.

Social growth is described through the concept of social mobility--vertical, horizontal, intergeneration and intrageneration. We shall not analyze these concepts, for their definition has been universally accepted. Let us single out in particular the concept of "social mobility," which describes the physical act of a change of status.[6] Mobility is a broader and sociologically deeper concept, for it presume a study not only of changes but of the sociopsychological aspects of mobility. The mobility process is analyzed at various points. The positions of the parents, of the subjects of the study and of adult children at the start of their labor careers and at the time of the investigation (city or village, area of activity, etc) are compared. Furthermore, the planned preferred mobility is determined (conventionally speaking, social plans and social dreams). This is important in forecasting the social growth of a person and in establishing the psychological climate to which national orientations are related.

The person's career, data on the parents' employment and educational level, the children's occupation, preferred type of employment and so on are reflected in the questionnaire. Data corrections are accomplished with the help of special procedures which take into consideration manpower demand and supply, the individual's situation when enrolling in a higher educational institution, his situation when filling vacancies, etc. These procedures are based on statistical data, personal files, labor records, expert surveys, etc. The overall system is such that the elimination of one or another procedure (as in the absence of specialists, for example) does not determine its fate or prevent the study of the basic topics. Although many procedures are optional, their implementation could make the study particularly effective.

Cultural growth is determined not only by the educational level of the individual but the extent to which he has mastered the cultural stock and cultural orientations and requirements. Several scales (so-called "thermometers") are used in determining the individual's exposure to culture and requirements. The most important among them are "national-international cultural orientation," "national-professional," and "traditional (archaic)--contemporary."

In the national scale the variables are language, national and international types of artistic creativity (music, dance, poetry) and some national elements of so-called traditional culture, including types of material culture such as food and interiors. In each separate case we single out in pairs value (orientation) and actual behavior or remainder of one or another cultural element. An orientation on the national alone is interpreted as narrow-national, while an orientation which involves no national forms is considered "international." In our understanding, coinciding international and national orientations are a syndrome of the international and the national in culture. The proper organization of the scales will enable us to formulate the syndrome of generalizing indicators, which will help us to quantify the collected data.

Since one of the important purposes of the OSU is to show value orientations, it pays great attention to spiritual culture. We proceed from the assumption that ethnic choices (i.e., the possibility of giving preference to national elements) in material culture in modern urbanized society, particularly under Soviet conditions, where a unified economy and an all-union division of labor prevail, are extremely limited. As a rule, the choice is based not on orientation but on the level of consumption and accessibility. The material culture of the individual is determined not by his orientation but by both his present and past situation. This is directly related to the level of his material well-being. The possibilities of following ethnic orientations in various areas of material culture vary. For example, the most frequently mentioned item is housing, followed by furnishings and food, etc. Therefore, in order to determine the ethnic orientations (choices) in material culture, the researcher must develop an ideal situation. The expressed preferences are compared with the actual behavior or, more accurately, the inherited physical environment. Choices in material culture are considered an element of the national and international syndrome.

The other procedure in the continua of cultural development is indirectly related to internationalization processes. The purpose of the most important among them is to determine the orientation as it shifts from traditional to contemporary culture. Furthermore, based on the nature of the research, we may introduce a system which establishes the strictly utilitarian and the broader orientations (culture as a means of social mobility and culture as a self-seeking aim, a source of spiritual pleasure), etc. In this case the variables are the different types of cultures and values, including moral ones. For example, the attitude toward the woman in the family and in social life is an indicator of traditional or contemporary orientation. The entire system of value orientations at different levels is determined--sociomoral (understanding of "individual happiness"), local (system of urban and rural orientation), and family.

However, the purpose of the study is not to re-create the entire system of orientations consistent with the various human role functions. The task is to find for each level and area the dominating value and to re-create in a way a system of dominating values representing the various areas of human activity. Indirectly, the purpose of this search is to understand ethnic processes, for we assume that disparities and differences among nations are manifested in the value orientation system as well.

In addition to cultural tendencies, the national-psychological tendencies which develop through contacts with people of other nationalities are clarified, for otherwise we are dealing with tendencies in the area of national relations. One of the most important tasks of the study is to define the level of coordination between sociocultural and sociopsychological orientations.

As to the channels and factors of sociocultural growth, these are concepts which need no particular clarification. The OSU has channels of direct contact influence such as family, neighbors and production collective, studied in accordance with a "time factor" (such as parental family and one's own family). Particular attention is paid to communicating facilities between town and country within and outside the republic. Furthermore, factors of indirect influence are studied, mainly mass information media. The purpose of our questionnaire is to determine the influence of the various information channels on shaping the individual and their intensiveness and frequency with which they influence the individual. Clearly, social procedures may be applied in the study of individual influence channels.

In order to complete the work on the OSU, a number of individual problems in the systems analysis of obtained data must be solved with a computer. Some additional studies will be required based not on mass population surveys but on a set of objective documentary information obtained from archives and current files. However, the existing data as well will make it possible to determine some dominating trends in the development of the nations in the USSR.[7]

The materials from the study prove that the old religious and other ideological barriers which separated one nation from another have been outlived in the USSR on the basis of economic and ideological cultural unity. Intensive contacts among nations and a single socialist ideology and outlook create the foundations for the development of integration processes in the spiritual culture of the peoples. They develop a single value fund and joint moral concepts. This indicates the moral unity of the new historical community--the Soviet people.

It has been established that in the course of the interpenetration among national cultures it is precisely professional rather than folklore-popular funds which play an active role. Nations with a developed professional culture have a better opportunity to influence other peoples. On the other hand, with a less developed professional cultural base, the nations frequently accept nonnational information more actively. Consequently, the historical logic of the development of culture leads to the fact that previously culturally backward nations develop at a particularly fast pace.

As the data indicate, internationalization processes develop in a descending order from material to spiritual culture. Under socialism, material culture is an area of maximal cultural comity, related to the development of the economy, total elimination of "market boundaries" of the past and the establishment of a single economic system. Nevertheless, in some areas of material culture some national characteristics remain under the influence of the historical past socioethnic environment and religious characteristics. As our study indicates, this applies mostly to food. Thus, national dishes are preferred by a very insignificant percentage of native nationalities inhabiting RSFSR and Estonian cities--2-6 percent; other respective figures are 39 percent for Moldavia, 65 percent for Georgia and 87 percent for Uzbekistan. However, this food orientation is more regional than national. It is no accident that members of other nonnative nationalities who live in a given republic are far more oriented toward national food traditional in such republics rather than their own cuisine. The choice here is dictated by natural conditions and, to a certain extent, customs which are rational in a given environment rather than merely by national orientation and national specifics.

Internationalization processes in the area of spiritual culture are far more complex and varied. In this area, the internationalization of the content of culture is perfectly clear. This is reflected, among others, in the uniform social concepts of the nation. Naturally, this does not eliminate the preservation of national specifics in the forms and specific manifestation of the various cultural aspects. Whereas in material culture residual phenomena are not exclusively ethnic but are related to regional characteristics, in spiritual culture we note a preservation of national forms.

As to the culture of daily life, family culture in particular, this is an area of relatively deep national specific background. Intimate interpersonal relations--an area of human life which is the least subject to social influence-- concentrate here. It is no accident that the study indicates the stability of intrafamily national values and great differences among nationalities in family behavior. Statistical data as well show differences in the degree of stability of family relation traditions. The share of women doing skilled work in agriculture (intellectual and physical) varies among the individual republics in the USSR and is stably correlated with the size of the family, whose size is inversely proportional to women's employment. Naturally, all of this frequently predetermines the real behavior reflected, among others, not only on family parameters (stability of marriages, share of divorces, and others), but many other nonfamily indicators such as, for example, orientation toward social mobility and migration. Nevertheless, available data show that this area as well is being subjected to active changes consistent with overall development trends. Independence in private and public life is being increasingly valued and obsolete behavioral forms dictated by the old patriarchal system are being rejected. This is manifested in family life, the set of moral values and the system of sociomoral guidelines.

OSU data prove that as a system national culture is gradually changing--some forms are eliminated while others develop and adapt to new production and consumption conditions. As a whole, some national forms of culture not only endure but actively develop in their most progressive areas which, as a rule, have an international expression and, consequently, a "common language" with other nations.

Cultural changes influence the psychology of national relations. However, as our study indicates, we should not expect any automatic change of psychological national concepts under the influence of culture alone. Unquestionably, the expanded range of orientations in culture, familiarity with the culture, behavioral norms, language, and so on of other nations contribute to the elimination of national prejudices among that segment of the population which, by virtue of a low educational level and low mobility in the way of life may show conservatism in contacts with people of other nationalities whose way of life is different from their own traditional concepts. As to the educated segment of the population doing skilled labor, its national-psychological orientations may be influenced mainly by a specific directed cultural influence and by a system of measures which directly affect socioprofessional interests.

Within the overall trend of internationalization of culture, a variety of specific ways followed by this process are apparent in ethnic and social environments. These differences are related to specific historical premises, specific situations (such as intensive local international contacts) and differences in the degree of the need to be exposed to one or another element of a different culture. Nations with a developed culture can draw more from their own sources. Both trends of internationalization--exposure to a different culture and broadening of one's own culture--are integrative. They combine with each other and are mutually supplementary. The general process of development and transformation of culture and the broadening of its range in accordance with the requirements of the international consolidation of nations follow a variety of channels.

2. See M. P. Kim. "O Kul'ture kak Predmete Istoricheskogo Izucheniya" [On Culture as a Topic of Historical Study]. Moscow, 1974.

3. For example, secondary education is sufficient for working on a conveyer production line in modern production. Active participation in the management of such production and in the social control of it requires extensive professional knowledge and a high educational level.

4. In turn, each of these operations is concretized. For example, the "study of conditions of labor activities" must include items such as the division of labor, type of activity, labor wages and organization, system of management and relations within the collective and so on. The summarizing indicator of the various working conditions is the satisfaction with it. A similar "decoding" is possible for each separate operation.

ROUNDTABLE ON DIFFERING FORMS OF PRIVATE-PUBLIC COOPERATION IN AGRICULTURE

Tbilisi ZARYA VOSTOKA in Russian 17 Oct 81 p 2

[Report by G. Mchedlishvili: "Advantage of the Private Plot"]

[Text] General Secretary of the CPSU Central Committee, Chairman of the Presidium of the USSR Supreme Soviet Comrade L.I. Brezhnev has noted that the basis of forming state marketing food resources is without doubt public production. "At the same time," Comrade L.I. Brezhnev pointed out, "it is important to fully utilize the resources of private subsidiary farms." In recent years, practical measures have been and continue to be implemented relating to the improvement of conditions of operating private subsidiary farming; thanks to this, as pointed out at the 26th Congress of the Communist Party of Georgia, the first results have already been achieved--a stable tendency has been marked of increase of the number of cattle on private subsidiary farms and of reduction of the number of the rural population not having one. A reliable aid in this matter has shown to be such a form of economic relations as cooperation of collective with private farms.

Cooperation of collective farms with the population on the basis of contractual agreements has long been practiced in the republic. In recent years, this practice was improved. In the seventies, despite a significant curtailment of the share of private subsidiary farms in the total production and procurement of agricultural products, their absolute growth has been almost 1.6-fold and sales to the state almost twofold.

But the potential for increase of production of agricultural products, especially animal-husbandry products, on private farms exists in almost all of the rayons. The job of party, soviet and agricultural organs in the republic is to find the best and most acceptable forms for a given region of utilization of these possibilities. For this end, special interest is presented by the experience of a number of rayons in our republic, which were positively marked by Comrade L.I. Brezhnev at the time of his visit to Tbilisi. This accumulated experience is described today at the "round table" of ZARYA VOSTOKA by the chairman of Abashskiy

Rayon Agricultural Production Association, V. Khutsishvili, the chairman of the Makharadzevskiy Rayon Agricultural Production Association and the head of the Gruzptitseprom Production Association of the Poultry Raising Industry, V. Gvardzhaladze.

V. Khutsishvili: Inasmuch as at the 3rd Plenum of the Central Committee of the Communist Party of Georgia, Abashskiy Rayon was among the first of a number of rayons to achieve successes in the field of cooperation of collective with private farms, I shall begin the talk.

Cooperation of collective farms with owners of private farms in the production and procurement of pork in our case began to develop stage by stage in 1979-1980. In 1979, we used two forms of cooperation and then in 1980 we turned to a third--this time the only one for the production of pork and for the production of milk.

What is the nature of each of them? In the case of the first form, a kolkhoz farmer, worker or pensioner residing on the territory of a collective farm or a physician, teacher or the like living in the village fattens his own piglet to 90-100 kilograms of weight and turns over to the farm pork at the state purchase price, obtaining in addition 3.5 kilograms of corn kernels also at the state price for each kilogram of meat.

In the second case, he obtains this piglet from the farm, paying it the value of the initial weight. In case of its dying, the owner of the private farm is obliged either to pay the farm its value or put on another piglet of the same weight to fatten. The collective farm in both of these forms pays the owners of private farms for the labor they spent on the care and fattening of the piglets.

In 1980 we used another form, which in the view of scientists was economically more profitable both for the collective farm and for the owners of private plots. It is used in the production of milk and in the production of pork and provides for the allotment to workers, employees and pensioners engaged in cooperation of 0.5 hectare of plowland, whose cultivation is totally assumed by the farm. It is the same as sowing one's own corn seeds, application of fertilizers and use of transport and livestock-expert services. A cooperating owner of a private subsidiary farm is credited with a certain number of labor-days; 70 percent of the crop produced on the allotted area of corn is issued in the form of additional pay, while chala, soybeans and ordinary beans and intermediate crops produced on the same area are issued in full and for free.

In case of necessity, the farm issues credit for the acquisition of productive cattle (cows, heifers), provides private animal-husbandry farms where possible with coarse and succulent fodder at cost.... The owner of the private subsidiary farm engaged in cooperation with the collective farm is under the obligation of providing it with 50 kilograms of cheese or the amount of milk required for its production and 100 kilograms of pork; furthermore 80 percent of the milk or cheese and the entire amount of pork are to be made available before harvesting work.

The popularity of cooperation is graphically demonstrated by figures. As of 1 January 1980, the rayon included 9,300 rural households; of these 2,785 families were engaged in cooperation. Today about 3,500 families are involved in cooperation; they are fattening about 15,000 pigs and this year there will be sold 1,000 tons of meat above plan.

N. Takidze: Cooperation of collective and private farms began in our case in 1977 in a relatively simple form. During 1979-1980 it achieved a broader scope and assumed one might say a mass character. The rayon's kolkhozes and sovkhozes began to issue on the basis of contractual principles cattle and pigs for fattening and for the production of milk by productive cows. This year, 5,074 famiies are engaged in cooperation for the production of milk and already 1,174 tons of it have been produced in the rayon. A total of 5,552 families are engaged in the production of meat; 870 tons of beef and pork have been produced, of this, 614 tons have been turned over to the state. For example, their number this year compared to 1980 has grown by 800.

What forms of cooperation are practiced in the rayon? We have several--three in the production and procurement of milk and dairy products and two in the production and procurement of meat. ZARYA VOSTOKA described them in detail on 2 August 1980. But they have a common foundation--this is the conclusion of a strict contract on a voluntary basis.

In addition to this, the first steps are being taken in the rayon for cooperation with owners of private subsidiary farms in the production and sale to the state of poultry and rabbit meat.

V. Gvardzhaladze: This is undoubtedly the right road to take; in the development and implementation of the food program, cooperation with the population can greatly increase the production of poultry meat and create additional reserves of it.

The first steps taken by our poultry factories in this direction provide the basis for making the conclusion that the forms and principles of cooperation are creating an eager interest among the population, and they must be developed in every possible way. The results relating to the growth of poultry have turned out to be quite satisfactory; weight gains at most farms were within normal limits as stipulated by contracts, while a state of good preservation of them was found quite high at many of the farms.

Despite the short time that has elapsed since the conclusion of the first contracts, poultry farms have secured tens of tons of essentially first-rate poultry meat through cooperation with the population, and citizens themselves are getting a good income.

In the handling of this work, we ran into difficulties. First, in order to fully satisfy the growing requirements of the population for day-old chicks, we have to have adequate amounts of broiler incubative eggs, and there is a shortage of them. In order to eliminate this gap between resources and demand, we have to carry out a number of measures. For example, several poultry farms have already been transferred from eggs in the direction of meat. Moreover, there is planned a high priority construction of an area for a parental flock at the Caspian Broiler Poultry Factory for 160,000 bearing hens, which provides the possibility of increasing the number of day-old chicks turned over for rearing by private subsidiary farms to 4 million. This will make it possible to produce an additional more than 3,000 tons of poultry meat.

A serious problem is presented with respect to zooveterinarian servicing of private farms, provision of feed to place of rearing of poultry, availability of aid to subsidiary farms in the erection of most elementary structures and the like. The accomplishment of these operations is connected with the inevitability of constant mutual contacts, and this creates for both sides the danger of bringing in infection with all the serious consequences stemming therefrom. At the present time, measures are being developed together with the Veterinary Administration of the republic Ministry of Agriculture that would regulate all questions relating to the strict observance of veterinary prescriptions, but other questions also have to be solved. We consider it correct for citizens whose conditions are such as to provide for normal maintenance of poultry and who reside only an insignificant distance away from the poultry factory to become involved in private subsidiary farms in work relating to the rearing of poultry on cooperative principles. Here one should think out the question of the number of day-old chicks to be issued for rearing by a single subsidiary farm.

I return once more to the question of day-old chicks. Satisfying of the need of the population in the shortest possible time does not seem possible because there are only two broiler poultry factories in the system. We believe that this work should be transferred to incubator-poultry raising stations. Such a solution is favored by their quantity, location by regions of the republic, a large amount of experience in selling day-old chicks to the population and by other factors. But these incubator stations should be appropriately prepared both organizationally and materially. Broiler poultry factors should provide incubator stations with incubative eggs.

Thus the work of rearing poultry on private subsidiary farms on cooperative principles will include most of the republic's regions; its scale will increase significantly, and the number of citizens taking part in this important work that is profitable to both sides.

In his report "On the Draft of the Constitution (Fundamental Law) of the Union of Soviet Socialist Republics and the Results of its Nationwide Discussion" at the Session of the USSR Supreme Soviet of 4 October 1977, Comrade L.I. Brezhnev said on the proposal to eliminate or sharply restrict subsidiary farms: "This is a form of labor not connected with exploitation which plays at this time a useful role in our economy." And it is very important for the cooperation of kolkhozes and sovkhozes in this form of labor to bring about perceptible results first and foremost in the growth of the volume of production and procurement of animal-husbandry products.

REGIONAL

MORE RAYON-LEVEL CONTROL OF FARM SERVICE ORGANIZATIONS URGED

Moscow SOVETSKAYA ROSSIYA in Russian 20 Oct 81 p 2

[Article by P. Bondarenko, chief of the agricultural production administration of Sandovskiy Rayispolkom, Kalininskaya Oblast: "Who is the Coauthor of the Harvest"]

[Text] I am in complete accord with the authors of the articles published in SOVETSKAYA ROSSIYA under the heading "The Rayon Economic Link" to the effect that the basic foundation of the agroindustrial complex is bound to be the rayon link. Only it can provide for the development of fair and at the same time rational economic ties between kolkhozes, sovkhozes and organizations and enterprises which in one way or another contribute to the production of agricultural products or purchase and process them. The experience of past years leads us to this conclusion.

It has already been written in SOVETSKAYA ROSSIYA that in repairing equipment rayon associations of Sel'khoztekhnika do not think sufficiently of reducing the cost of repairs and often strive to get maximally large sums. We know that Sel'khoztekhnika is today in rural localities by virtue of its monopolistic possession of spare parts, including the ones in shortest supply. Certain unscrupulous representatives of it frequently take advantage of this. "Do you need a rear axle and engines? By all means, only we are unable to install them as we do not have any fitters at this time." The kolkhoz or sovkhoz mechanic will agree to anything just to get a machine running: "We shall do the installation; do you think we have no specialists?"--"Then take it, but get the papers through the machine shops." This means that the farm will have to pay not only for the spare parts but also for the repair work--as if everything had been done by the fitters from Sel'khoztekhnika.

I shall cite only two concrete examples. In May of this year, Kolkhoz imeni Sverdlov to our Sel'khoztekhnika association for capital repair work on a MTZ-80 tractor; actually, the spare parts cost 1,007 rubles, and 186 rubles were obtained illegally. In June, in order to get missing spare parts for a combine, which was being repaired locally, the kolkhoz was obliged to overpay by a sum of 165 rubles. Of course, heads of farms can be accused of unscrupulousness by indulging in such violations. But what are they to do? They frequently have no other way out.

The situation has reached a point where farms have foisted on them equipment for which they have not the slightest need. Once, for example, they brought us vegetable drills, although we grow no vegetables. Then they began to send flax thrashers. But we harvest flax with combines....

We may be asked: why, actually, do you not expose such facts, why are not proceedings instituted against the guilty parties? We do expose, we do institute proceedings, but our measures are of little effect inasmuch as such deals are of economic interest to one or the other side. The head of a farm understands that downtime of a combine or a tractor will cost him dear, and we, of course, try not to spoil good relations with Sel'khoztekhnika. Sel'khoztekhnika personnel under the existing system of indicators are not concerned with the harvest but with the pursuit of gain; profit for them is the chief result and culmination of all their labors.

There is, I think, just one conclusion: it is necessary to redirect Sel'khoztekhnika (and as quickly as possible) to the harvest, to real end results and to introduce a system of pay in which profit and income would be in direct and immediate relationship to the profit and income of agricultural enterprises that they service and on how efficiently the equipment operates there.

I would first include among the chief indicators average output of equipment repaired by Sel'khoztekhnika--in standard hectares or engine hours: the higher it happens to be, the higher the size of bonuses and other payments to personnel of the association. The quality of repair work would undoubtedly rise: what is the sense of getting rid of a patched up combine if the money does not go into paying for repairs but rather for the time the machine is in the field. In addition it would be worthwhile to take into account average downtime for technical reasons of each machine that is serviced by Sel'khoztekhnika: then its workers would finally find the interest in the quickest possible elimination of defects and the quickest possible return of the equipment to operation. At the present time they simply are not interested in how much tractors cost and how long they work: it is even better for them that they break down more often for then it would easier for kolkhoz and sovkhoz machine operators to agree to overpay.

Among the most important results of the work of Sel'khoztekhnika there should be included the level of mechanization of production of agricultural products. At the present time, even those possibilities that exist at hand are not being used. Today, for example, industry puts out a complete selection of machines required for the transition to an industrial technology of cultivating flax. Sel'khoztekhnika sells these machines, but whether they work or not does not bother it, although the permanent schedule of rayon associations includes a special service for the introduction of new equipment. And there are specialists aplenty, and the best engineering forces are concentrated there.

It goes without saying that my proposals, like other proposals of the same kind, require study. The development of a new system of indicators redirecting Sel'khoztekhnika from the profit ruble to the quintal of production is not simple. I can well imagine the difficulties that Sel'khoztekhnika would meet up with under the new conditions. It would lose a part of the profit for reasons over which it has no control, but the end results would show, for example, the skill level and degree of conscientiousness of kolkhoz and sovkhoz machine operators. Well, so what? This is not a defect but a virtue of the indicators proposed by me. Sel'khoztekhnika would then have to establish control over the use of equipment and over cadre training; its representatives would spend days and nights in the field.

Many difficulties are caused by the fact that neither Sel'khoztekhnika nor Sel'khozkhimiya is directly subordinate to the rayon agricultural administration. We could achieve this only when we rest on the force and the authority of Soviet organs of power. Here I am in complete agreement with the main conclusion of the director of the Orenburg Sarinskiy Sovkhoz, I. Solovykh, in the article "Without Change of Sign" (SOVETSKAYA ROSSIYA of 27 September): we must invest with fullness of power and load with work those organs that exist in the rayons. The assignment schedule for Sel'khozkhimiya and routes of mechanized detachments are determined, for example, by decision of the ispolkom of the rayon soviet. And what do you do if an operating intercession in the question is required? We frequently hear in reply to our wishes and recommendations:

"We cannot, we have our own plans."

I repeat, I would like to join forces with those who already have proposed in the pages of SOVETSKAYA ROSSIYA operative guidance of rayon associations of Sel'khoztekhnika and Sel'khozkhimiya and planning of their work to be put in the hands of rayon organs of power. It would be better for this if oblast associations restricted themselves to the allocation of capital investment, problems of technical policy and material supply. It can be seen better in the rayon what should be done where and first of all.

The administration of such organizations as Mezhkolkhozstroy, Mezhkolkhozdorstroy and Mezhkolkhozsovkhozles should be transferred to the rayons. While established with the funds of kolkhozes and sovkhozes, they have become under the influence of their oblast administrations independent firms in fact and have succeeded in becoming basically bogged down in narrow departmental interests. For example, Pamyat' Zhdanova Kolkhoz ordered a plan for the construction of a complex for the rearing of young cows. It did not order it from just anyone but from the planning institute of its own Mezkhkolkhozstroy. The institute accepted the order, received 20,000 rubles from the kolkhoz and then after a year and half reported that the ordered plan had become practically obsolete and that a decision of the collegium of the RSFSR Ministry of Agriculture took it off production. We became interested: "What about the money?" They calmly replied to us: "The money was spent. Pay again."

This is not just a special case. The same Mezhkolkhozstroy, after putting down certain prices in the planning estimated for reinforced concrete items then produced them at other prices--higher ones. Grain warehouses became higher in price by eight to ten thousand rubles, hay barns--by seven thousand... Interkolkhoz timber operations are doing the same thing: the price of pine-needle flour has been raised above the price of bread--to 22-30 kopecks per kilogram. The result is that the daughter enterprises created by kolkhozes and sovkhozes are obtaining unjustifiably high profits while their coowner bosses are carrying losses. One can excuse those directors who decline from participation in collective initiatives: to turn over timber to an interkolkhoz timber operation under the present conditions means to deprive oneself of timber. Of course, concentration and specialization provide certain advantages; the problem, however, is that farms gain nothing from these advantages.

You can see that a paradoxical situation is created: the immediate producers of agricultural products in the family of economically related partners frequently found themselves in the position of poor relatives.

The time evidently has come to rebuild the interrelations existing between the farms and those organizations which are meant to help them in the attainment of high end results.

GEORGIAN ECONOMIST VIEWS ROLE OF PRIVATE PLOTS IN SOCIALIST ECONOMY

Tbilisi ZARYA VOSTOKA in Russian 16 Oct 81 pp 2-3

[Article by R. Andguladze, candidate of economic sciences, deputy director for science at the Georgian Scientific-Research Institute of Economics and Organization of Agriculture: "Under Contractual Conditions"]

> [Text] In addition to food resources an important role is assigned to private subsidiary farms of citizens under contractual conditions entering into cooperation with republic kolkhozes and sovkhozes.

The 26th party congress defined the chief tasks, ways and concrete measures for the further development of the country's agriculture. "If one speaks of agriculture as a whole," L.I. Brezhnev emphasized in his report at the congress of comrades, "it is also faced with the same chief problem that is to be found in the other sectors of the national economy--raising of efficiency and quality. We in the future shall allocate for rural localities large financial and material resources and continue the planned conversion of this sector to an industrial basis. But the center of gravity here--and this is a distinctive feature of agrarian policy in the '80s--is shifted to return on capital investment, growth of agricultural productivity and deepening and improvement of its ties with all the sectors of the agroindustrial complex."

In the long-term complex program of the most rapid possible rise of agriculture developed by the 26th CPSU Congress, a significant place is occupied by a system of measures for the further improvement of the material well-being of workers as a most important condition for the development of public production and boosting of labor productivity. This task will be solved as before primarily by a boosting of the rate of development of public production. At the same time, it is impossible not to take into account the fact that at the given stage of development of our country, an important source for the satisfaction of the constantly growing requirements of the people for food products is the private subsidiary farm, which represents a constituent part of socialist agricultural production. "The basis of socialist agriculture," it was stated at the 26th CPSU Congress by Comrade L.I. Brezhnev, "has been and continues to be kolkhozes and sovkhozes. But this does not at all mean that we should neglect the opportunities provided by private subsidiary farms. Experience attests to the fact that such farms can serve as a significant support in the production of meat, milk and certain other products. The orchards, vegetable gardens, poultry and livestock belonging to workers are a part of our total wealth."

When it comes to the nature, essence and role of the private subsidiary farm of citizens, different explanations are given and have been offered both in the recent past and today. This is principally due to the complexity of the expressed economic interrelations of this form of operation.

Some think that the private subsidiary farm is a vestige of private ownership that has achieved a different meaning in the epoch of socialism. In the opinion of others, an individual peasant farm has become a constituent element of the socialist economy that has lost the sense of private but yet is not part of public production or the collective farm. A third group of scholars adheres to the point of view that the private subsidiary farm is a form of small-scale individual production operated by the workers of socialist society. Its material base is far from where it would be adequate to the meaning of socialism, yet it is involved in socialist production relations.

The interests of the society of developed socialism demand a proper definition of the meaning and place of the private subsidiary firm in the system of socialist agrarian relations. Only in this case shall we be able to avoid the economically not thought out conclusions of some scholars and supervisory personnel, who in the recent past have more than once brought about unjustified restrictions relating to this form of operation and its artificial withdrawal from socialist agrarian interrelations.

True, the private subsidiary farm is not a directly constituent element of the socialist economy, corresponding to its meaning of operation, but it is a specific part of socialist public production. For today, private subsidiary farming is a necessary and most practicable form of fusion of public and individual interests. This form of operation does not have an independent social-economic mold. Its social nature determines the consideration that it functions on public land and is operated by workers employed either in public labor or in other spheres of public life. While depending on public, private farming is subsidiary in regard to basic public production and creates additional food production; it constitutes a significant source of reproduction of manpower in agriculture. It should also not be forgotten that for a number of categories of workers, pensioners, the disabled and children, the private subsidiary farm is one form of involvement in socially useful labor.

In addition to performing its chief function--the satisfaction of needs of rural residents for food products, the private subsidiary farm serves as an additional sources of marketed products for supplying the entire population. In the years of the 10th Five-Year Plan, there were sold to the state from private subsidiary farms of workers of the republic 1 million tons of grapes, 1,900,000 tons of fruits and citrus fruits, 280,000 tons of meat and many other products.

In our republic, the level of development of the private subsidiary farm has always been rather high. But to say that under these conditions the private subsidiary farm has no major resources for expanding its production, including the production of marketed products, would be wrong. Here is just one fact.

In 1979, cattle were not maintained on 37.3 percent of all the republic's households of rural inhabitants, cows and female water buffalo--44.5 percent. Here as well it can work in cooperation with the collective farm, especially in the production of animal-husbandry products.

A good example of such cooperation is shown by the farms of Abashskiy, Makharadzevskiy, Gardabanskiy, Zugdidskiy, Tsulukidzevskiy, Samtredskiy, Kaspskiy and several other rayons, where, as pointed out at the 3rd plenum of the Central Committee of the Communist Party of Georgia, very good results were produced by the first steps taken in the use of the experience of the Hungarian People's Republic in the field of cooperation of public and personal farms. Comrade L. I. Brezhnev at the time of his visit to Tbilisi in May rated highly the work done along these lines in the republic. "We know," Leonid Il'ich said, "that in Georgia in recent years resources have not been used badly in increasing the production of meat and milk on private plots. The comrades said that rural inhabitants are eagerly pursuing the development of private farms. And this should continue to be promoted, naturally without letting go of attention with respect to public production."

Study of the already acquired experience of these rayons carried out by the Scientific-Research Institute of Organization of Agriculture and analysis of their operation permit the conclusion that there must be sought out in each rayon and in each concrete farm within the rayon the most optimal ways of cooperation of public and private farms most suited to local conditions. No ready-made prescriptions exist for this work. There can only be recommended several of its form in the production of almost all agricultural products. In animal husbandry, cooperation may be carried out in the production and sale to the state of beef, pork, mutton, poultry and rabbit meat, milk and dairy products. In plant growing--in the production and sale to the state of fruits, grapes, citrus fruits (especially lemons) and vegetables in closed and open ground, potatoes and so forth. But we repeat the main thing here is to avoid blind copying, imitation--one form that could successfully be used, let us say, in one of the grape rayons, for example in Zestafonskiy or Mayakovskiy Rayon, will not produce the same effect in Gurdzhaanskiy or Telavskiy Rayon and vice versa. The only thing that can and should remain in common is that of controlling relations of the public and the private subsidiary farm as shown in a juridical document--the contract. A model form, approved by the appropriate directive organs has already been sent to all the regions and rayons of the republic.

Three forms of cooperation can be recommended in production and procurement of milk and dairy products (cheese). In the first form, the kolkhoz or sovkhoz allots for maintenance to the owner of a private subsidiary farm one of its productive cows (acquired in addition to the registered number on its animal-husbandry farm) and indicates in the contract its inventory number, live weight and average yield. The cow allotted to the owner of the private subsidiary farm is listed on the balance sheet of the kolkhoz or sovkhoz. In the course of the year, he is left both 50 percent of the produced milk and half of the produced offspring. In addition to this, he will be credited with 30-50 man-days and their appropriate pay for taking care of the cow.

The second form of cooperation in production and turning over of milk to the state differs from the first in that the owner of such a farm obtains from the kolkhoz or sovkhoz a loan to the account of Gosbank credit for acquisition of the cow. It is paid back in 5 years beginning with the second year of obtaining the loan. At the same time, in accordance with the decree of the CPSU Central Committee and the USSR Council of Ministers "On Additional Measures for Increasing the Production of Agricultural Products on Private Subsidiary Farms of Citizens," sovkhozes and other enterprises in agreement with the trade-union committee are permitted to pay off up to 50 percent of the credit with money from the economic stimulation fund. The owner of the subsidiary farm is commited, depending on the productivity of the cow, to turn over to the state from the farm annually 250-300 kilograms of milk or the corresponding amount of cheese at state purchase prices.

As for the third form, it differs from the first only in that the milking cow used in the cooperative effort belongs to the owner of the private farm. All the other conditions remain unchanged.

In the cooperation of public and private farms in the production of beef, two forms are recommended. The first form provides for the allotment of cattle from the public herd to the owner of a subsidiary farm for rearing and fattening and the second the use of cattle in the cooperative effort either belonging to the owner of a private farm or acquired through a loan of the farm which is again repaid in 5 years, but this time beginning with the third year after receipt of the loan. In the first case, the citizen obtains 80-85 percent of the value of the meat turned over to the state on the account of the farm and in the second--its full value at state purchase prices.

As in the case of cooperation in production and turning over to the state of milk and also in the case of cooperation in the production and turning over to the state of meat, an important place is assigned to the fodder base. Farms are recommended to allot to private subsidiary farms entering into the cooperative effort relatively flat, unworked plowland as well as 0.3-0.5 hectares of natural fodder land for the production by them the necessary amount of fodder. In the same regions (for example, in the rayons of intensive fruitgrowing, citrus raising, tea raising and viticulture), where no such possibilities exist, the provision of private subsidiary farms with both coarse and succulent fodders and combined feeds should be assumed, if not in entirety, then at least partially, by the collective farms.

When entering into cooperation in the production and sale to the state of beef and milk, the collective farms also assume other obligations: they carry out in agricultural periods and at a high qualitative level the cultivation of the allotted plots of plowland, conduct sowing of corn with their own seeds, apply fertilizer and the like to the soil, provide the private subsidiary farm with free transport and veterinary services, pay the rent in the amount of 20 rubles per year for quarters for housing cattle, take steps relating to cultivation and boosting of the productivity of pastureland and the like. A certain amount of experience in this regard has been accumulated in Makharadzevskiy and several other rayons of the republic.

Major opportunities exist in many rayons of the republic in increasing the production of pork. To owners of private subsidiary farms entering into cooperation, collective farms should either issue up to 80-100 kilograms of a specific number of piglets for rearing and fattening or cooperate with owners who own such head. In both instances, the collective farms provide the private subsidiary farms proper feed that is delivered at the state price and, in case of their lack, with necessary areas for their production; they also provide veterinary and transport services and so on.

That which can be provided by such cooperation is graphically illustrated in the example of Abashskiy Rayon where 1,000 tons of pork will be sold above plan to the state.

here the question may arise: where can you get enough piglets for rearing and fattening, for on many farms of the republic piglets present far from a simple problem? Obviously, the experience should be endorsed of Kolkhoz imeni Marks of Kakhati Village in Zugdidskiy Rayon and of the Krtsanisskiy Pig Raising Complex, where the following principle of cooperation has been introduced. A sow, acquired by the collective farm, is allotted to the owner of a private farm. He is also provided either with 0.3-0.5 hectares of land not being used in agricultural turnover or the necessary amount of feed. Eight to 12 piglets from each sow belong to the farm in a year (the remaining number is left to the owner of the private farm); each of the piglets at the time is reared to a weight of 20-25 kilograms. Subsequently, a part of this number is fully reared either by the collective farm or by the population that is cooperating with it.

We have major cooperation possibilities in the production and sale to the state of poultry and rabbit meat. But at the same time, it is necessary to especially emphasize that the help provided to private subsidiary farms through allocation to them of head of cattle, poultry and the like must in no way interfere with the full development of the capacities of animal-husbandry farms. Quite the contrary, the development of these capacities must have first priority.

Many of the above presented forms of cooperation can also be introduced into plant growing--viticulture, fruit cultivation, citrus growing, vegetable growing in open and closed ground. But it must be clearly understood that the contract loses force in all cases of cooperation if an able-bodied kolkhoz member (sovkhoz worker) or an able-bodied member of his family keeps away from collective useful labor.

The private subsidiary farm of kolkoz members of sovkhoz workers is connected by many links with the collective farm; it depends on it and is due to it. It is therefore considered advisable to have on the staff of large, economically strong farms a special unit of the deputy, while economically weak farms should have this job handled by existing staff units. There is evidently required special accounting of the products produced through cooperation with private subsidiary farms.... The scale of the tasks facing kolkhozes and sovkhozes should not belittle the importance of the private farm, the resources of which should be fully utilized in the interest of the present and future development of agricultural production and fuller satisfaction of the needs of workers for high-quality food products.

UKRAINIAN CP NOVEMBER PLENUM RESOLUTIONS

Kiev PRAVDA UKRAINY in Russian 26 Nov 81 pp 1-2

[Decree issued by November Plenum of CPUk Central Committee "On the Duties of the Republic Party Organization in Carrying Out the Decisions of the November (1981) Plenum of the CPSU Central Committee and the Directives Set Forth in Comrade L. I. Brezhnev's Speech at the Plenum"]

[Excerpts] Communists and all working people in the Ukrainian SSR responded to the decisions of the CPSU Central Committee Plenum with great satisfaction and approval.

Socialist competition for heightened production efficiency and the use of all reserves for the successful attainment of five-year-plan objectives has been launched in the republic on a broad scale. The plans for the first 10 months of this year for the sale of industrial products and the augmentation of labor productivity were fulfilled.

Existing national economic reserves and possibilities are still not being used fully, however. Some enterprises, construction organizations, kolkhozes and sovkhozes did not complete their assignments. There was a higher number of lagging enterprises in the networks of the Ukrainian SSR Ministry of the Construction Materials Industry, Ministry of the Timber and Wood Processing Industry and Ministry of the Meat and Dairy Industry and in Donetskaya, Voroshilovgradskaya, Zhitomirskaya, Khersonskaya, Dnepropetrovskaya and Kirovogradskaya oblasts. In some branches, production capacities are not being completed and incorporated on schedule, the return on capital has decreased, overhead cost and profit assignments are not being completed, the material requirements of production and the percentage of manual labor are still too high, and the necessary persistence is not displayed in the incorporation of scientific and technical achievements, new progressive technology and advanced experience. Reclaimed lands, fertilizer, equipment and fodder resources are not being utilized efficiently on a number of farms and in some rayons and the productivity of animal husbandry is low.

The CPUk Central Committee Plenum believes that one of the main reasons is that the move to primarily intensive factors of economic growth and the reorganization of the style of management and methods of planning and administration are still progressing too slowly in some areas. Significant errors in the management of subordinate branches have been committed by, in particular, the Ukrainian SSR ministries of the coal industry, ferrous metallurgy, light industry, local industry, the construction materials industry, agriculture and trade. Some party obkoms, gorkoms, raykoms and primary party organizations do not demand enough from economic managers in matters regarding the strict observance of state discipline, the fulfillment of plan assignments and the compliance with party decisions.

The November (1981) CPSU Central Committee Plenum stressed that the accomplishment of the massive and intense work of the five-year plan will require redoubled and retripled effort in each area of economic construction, the quicker reorganization of operational methods and style and the even more persistent intensification of national production.

The plenum of the Central Committee of the Ukrainian Communist Party hereby decrees:

That the compilation and implementation of a food program must be assigned top priority by the CPUk Central Committee, the Ukrainian SSR Council of Ministers, party and soviet organs and republic ministries and departments. The resolution of the food problem should be the aim of the development of all links of the agro-industrial complex--agriculture, the industrial branches serving it and the systems for the procurement, storage, processing, shipment and sale of products. All opportunities to supplement food resources must be utilized in full. The fodder base must be reinforced and the productivity of animal husbandry must be heightened.

The Ukrainian SSR Council of Ministers, concerned ministries and departments, party, soviet and economic organs and trade-union and Komsomol organizations must take steps to radically improve the work of enterprises in the coal industry and ferrous metallurgy, speed up the augmentation of nuclear power engineering capacities, ensure the strictest conservation of fuel and energy resources and guarantee the widespread use of energy-saving equipment and technology.

The Ukrainian SSR Gosplan, ministries and departments, ispolkoms of oblast soviets and the Kiev City Soviet of People's Deputies and party obkoms, gorkoms and raykoms must consistently strive for the concentration of capital investments, forces and material resources for the completion of major national economic projects on schedule--nuclear power stations, main gaslines, capacities in the coal industry, ferrous metallurgy and agricultural machine building, enterprises connected with consumer goods manufacture, housing, schools, pre-school establishments, hospitals and polyclinics. The production base of construction must be thoroughly developed and reinforced.

The heads of ministries and departments, railways and shipping lines, enterprises and associations must ensure radical improvement in the work of all types of transport, especially the railroads, focusing primarily on the acceleration of drayage operations, the loading and unloading of railway cars, motor vehicles and ships and the delivery of fuel, raw materials, food, fodder for animal husbandry and other extremely important freight on schedule.

The CPUk Central Committee Plenum believes that one of the important duties of party, soviet, economic and trade-union organizations consists in carrying out the measures specified by the CPSU Central Committee and USSR Council of Ministers for the improvement of economic planning and management, administrative style and methods and the structure of the administrative system, the reduction of this system and the reinforcement of state plan discipline.

Existing opportunities for the acceleration of technological progress, the augmentation of labor productivity and the return on capital, and the dramatic reduction of manual labor by means of the comprehensive mechanization and automation of production processes must be utilized in full. Scientific research, project planning and design organizations must play a greater role in this process and strive to make their work more productive.

Party obkoms, gorkoms and raykoms and primary party organizations must raise the standards of organizational work in the area of economic construction, considerably increase their influence in the sphere of economic management, make more efficient use of party control in all links of production and management and persistently and purposefully defend statewide interests. They must conduct a well-planned and exacting personnel policy so that all areas of work are headed by politically mature and competent individuals, capable of putting the tremendous potential of the socialist economy to work and ensuring the completion of five-year-plan assignments.

Higher demands must be made on personnel and on their responsibility so that each administrator and each worker can make correct and discerning evaluations of his own work and its results, notice shortcomings before it is too late and correct them, and so that each communist devotes all of his effort, experience and knowledge to the improvement of conditions and sets the proper example of selfless labor.

The foreign policy activity of our party and state and the new major initiatives of the CPSU Central Committee and Soviet Government in the international arena must be thoroughly and clearly publicized, all of the intrigues of hostile propaganda must be resolutely repulsed and the political vigilance of Soviet people must be enhanced.

With a view to the new objectives of economic and social development, the peculiarities of the present international situation and the exacerbation of the ideological struggle in the world, we must strive for more vigorous, efficient and effective party organizational and ideological work so that people can be readily mobilized, will be prepared to overcome difficulties and will be able to assess current events correctly and draw the necessary practical conclusions from these assessments.

REGIONAL

AUTHORITY OF GEORGIAN SOVIETS MUST BE UPHELD

[Editorial Report] Tbilisi KOMUNISTI in Georgian on 12 November has an 1100-word front-page editorial on the need to uphold and enhance the authority of the local Soviets of People's Deputies, as spelled out in the new 1977 constitution. The editorial refers generally to pluses and minuses in the performance of the Tbilisi soviets, and sketches briefly the workings of the Kutaisi City Soviet, which has an effective monitoring system, and the Rustavi City Soviet, which has instituted a system by which all acts and projects are meticulously checked to ensure conformity to the law.

'LAW AND ORDER' PLANNING PROPOSED BY GEORGIAN LEGAL EXPERT

[Editorial Report] Tbilisi KOMUNISTI in Georgian on 13 November page 3 under the periodic current rubric "Prior to the GCP CC Plenum" carries an 1100-word piece by Juridical Sciences Candidate Dzh. Khetsuriani, an instructor in the Kutaisi Gorkom, on the need to apply scientific methods to the planning and implementation of long-term (medium-range) law and order measures on a regional basis. He calls for a special law and order section within regional social-economic development plans, and urges the use of statistics for mapping regional crime patterns, dynamics, types, causes, categories of perpetrators (first-timers, recidivists, those shunning socially useful labor), factors such as the region's industrial level and demography, and so on. On the basis of such chartings, reliable and effective forecasting can be done over medium-range periods. He also urges that jurists be added to the relevant inter-rayon departments of the Scientific-Research Institute for Economics and Planning of the National Economy (under Gosplan).

GEORGIAN LABOR LAWS MUST BE ENFORCED

[Editorial Report] Tbilisi KOMUNISTI in Georgian on 4 November page 2 carries a 900-word piece by G. Iosava, head of the GSSR Trade Union Council's Juridical Consultation Department, on the need to enforce labor laws more effectively. He cites a number of instances where officials and managers fired personnel illegally on various grounds, usually without the consent of the trade union unit, either in ignorance or willful disregard of the law. A high percentage of such firings are overturned by the courts. In some cases, the trade union units themselves give their consent wrongfully, generally out of ignorance. Criminal Code passages dealing specifically with these matters and calling for strict punishment of the responsible officials--including dismissal or imprisonment--are all too rarely applied. The article ends with a brief quote by Shevardnadze on the subject.

WORK OF GEORGIAN LANGUAGE NORMS COMMISSION DISCUSSED

[Editorial Report] Tbilisi KOMUNISTI in Georgian on 1 November page 2 under the rubric "O Mother Language!" carries a 2000-word Gruzinform interview with Zurab A. Pataridze, chairman of the GSSR Council of Ministers and also chairman of the Permanent State Commission for Setting the Norms of the Modern Georgian Literary Langauge, concerning the commission's efforts in recent years, in particular since the joint GCP CC and Council of Ministers decree on improving the instruction of Georgian language and literature. He describes the commission's measures to study and decide on matters of vocabulary, morphology, syntax, orthography; literary, advertising, radio, and TV usage; the preparation of dictionaries, manuals, and textbooks; and so on. The commission itself publishes periodic collections of articles on particular linguistic norm problems, and is preparing a second volume setting forth the principles of determining grammatical usage. A second edition of the orthographic dictionary is ready, and specialized glossaries of foreign personal and geographic name spellings are in preparation. Radio and TV "Language Purity" features are broadcast, and rubrics of that sort have been or are to be introduced in the newspapers and journals. Editors in all the media are convened regularly for discussion and instruction.

HISTORY, CULTURE, DEVELOPMENT OF GEORGIA'S SVANETIA FEATURED

[Editorial Report] Tbilisi KOMUNISTI in Georgian on 5 December devotes most of page 2 and all of page 3 to special feature articles on mountainous Mestia

Rayon, the heart of Svanetia--its ancient and recent history, culture, economic progress and development, its people, crafts, and demography.

The main article is a 3100-word piece by Prof Grigol Margiani. Svanetia (Mestia Rayon) shares many of the characteristics and problems of Georgia's mountain districts. In particular, for years "in the recent past" it suffered from the neglect and bad policies of the leadership of that time. Thanks to the new leadership, the region has been revived. People are returning, the economy is developing apace, the new road from Zugdidi to Mestia has ended centuries of cultural and social isolation, and schools, industrial, farm and tourist facilities, and housing are being built. Nevertheless, there are factors that need to be controlled to ensure that Svanetia is a producing, not merely a consuming, district. For one thing, too many of the able-bodied population still seek employment and opportunity elsewhere, including outside of Georgia.

Professor Margiani then dwells on some circumstances hinting at the people's discontent with their lack of jurisdictional authority. For example, the Khudoni GES now under construction and designed to be the second largest hydropower complex in Georgia after the recently completed Inguri GES at Dzhvari is actually 34 km from Khudoni but just a few kilometers from the Svanetian town of Khaishi. Official efforts to get the name changed are stymied by the fact that Khudoni is the name given in all the official documents from the beginning. Next, authority over Mestia Rayon's forestry and timber operations has been headquartered for 17 years in the neighboring Tsalendzhikha Rayon despite Svanetian leaders' promises to bring it back home. The situation dates from 1962, when logging and timber operations were halted in Mestia for environmental reasons, then resumed later by the Timber and Woodworking Industry Ministry but with jurisdiction transferred to Tsalendzhikha. Professor Margiani attributes this to "those who claimed" that Mestia was incapable of fulfilling production plans. Under the present jurisdictional set-up, however, official output is way down compared with 1962, yet large-scale illegal logging operations, which also pose the threat of colossal erosion and environmental damage, are practically out of control.

On other topics, Professor Margiani deplores the fact that many of Svanetia's wealth of cultural monuments and art treasures (more of them have been preserved in Mestia Rayon than anyplace else) still suffer from neglect and inadequate facilities. As for the Svan people's place in history, he decries the "falsification, distortion, and artificial archaization" of Svanetia's culture and social structure, started by historians writing in the 19th century and still cropping up to this day--in particular, claims that the Svans still lived and governed themselves in primitive clan/tribal groupings, a "concoction" which noted historian Niko Berdzenishvili himself renounced late in his life.

Finally, the author discusses at length the problem of sorting out positive from harmful customs and traditions--the latter including centuries-old practices of clan blood feuds and bride-kidnapping (also wife-stealing). Nevertheless, the main worry today is posed by harmful "traditions" that have taken hold in recent times, such as excessively lavish weddings and funerals, graft, and corruption, fostered by "some officials."

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service (NTIS), Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semimonthly by the NTIS, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

Soviet books and journal articles displaying a copyright notice are reproduced and sold by NTIS with permission of the copyright agency of the Soviet Union. Permission for further reproduction must be obtained from copyright owner.

TURKMEN COMMENTS ON SOVIET PEACE INITIATIVES

Ashkhabad TURKMENSKAYA ISKRA in Russian 12 Dec 81 pp 2, 3

[Article by Ya. Zharan, lecturer of the Ashkhabad City Committee of the Turkmen CP: "The Soviet Peace Program for the 1980s"]

[Text] The Soviet people are working with exhilaration and enthusiasm to fulfill the grandiose plans for economic and social development outlined by the 26th CPSU Congress. Remarking on the tremendous significance of the decisions of the November Plenary Session of the CPSU CC, Comrade L. I. Brezhnev emphasized in his brilliant speech: "The present plenary session of the Central Committee can be regarded as a direct and immediate continuation of the work of the congress." The decrees adopted by the plenary session inspire the workers of the country to achieve new successes in all fields of political and economic life.

An important prerequisite for further progress by the Soviet people and successes in their creative labor is the provision of the necessary external conditions. The foreign political program for the 1980s developed by the 26th CPSU Congress was primarily directed toward this. At the party congress, this message was distinctly heard: "Preserve peace--there is today no more important task in the international arena for our Party, our people; indeed, for all the people of our planet."

In the Appeal of the Supreme Soviet of the USSR "To the Parliaments and Peoples of the World" it is stated: "Securing peace has been, is now, and will continue to be the goal of the foreign policy of the Soviet state. The Program of peace for the 1980s, adopted by the 26th CPSU Congress, is directed toward this goal." The Congress continued and developed the principles and thrust of Soviet foreign policy laid down by V. I. Lenin. There is one unbroken line from Lenin's decree on peace to the Program for Peace in the 1980s put forward by the 26th CPSU Congress.

Our Program for Peace embraces all the most acute contemporary problems, those that demand decision without delay. It embraces problems relating to the conduct of negotiations on medium range missiles in Europe and strategic nuclear weapons, proposals relating to creation of a nuclear-free zone in Northern Europe, and conversion of the Mediterranean Sea to a zone of permanent peace and cooperation. There is also the question of stabilizing the situation in the Persian Gulf region and, on a broader scale, that of the principles of relations with the developing countries of Asia and Africa; problems of resolving the Near East crisis; convening a conference on Near East problems; proposals relating to questions of strengthening the peace in Asia, in particular, that of extending to the Asian continent measures of military trust.

The Soviet peace initiatives relating to Europe and the Mediterranean, the Near East and Africa, the Far East and Southeast Asia are specific and are of an all-embracing and constructive nature. In them are expressed the readiness of the Soviet Union to conduct negotiations on any topical questions of peace and security, and to regard attentively any constructive ideas from other countries.

Our party and the Soviet state have conducted persistent and consistent work in compiling the foreign policy program of the congress. It is entirely obvious that, without the active and purposeful efforts of the USSR and the fraternal socialist countries toward the realization of the USSR's proposals, the world situation would be more complex and explosive. Moreover, the validity of these proposals continues to increase, inasmuch as the actions of imperialist powers, primarily the USA, are aimed at exacerbating the international political climate.

The U.S. government openly places its trust on accelerated stockpiling of nuclear weapons of every type, beginning with intercontinental missiles and ending with neutron weapons. But at the same time, they are preparing to create new and more monstrous weapons of mass destruction, including lasers designed for military use from satellites in outer space.

Recently, the U.S. government took a new step toward nuclear catastrophe: President Reagan announced an all-embracing program of militaristic preparations, calculated, by his own admission, to carry through "to the end of this century and further". The Reagan program calls for accelerated buildup and modernization of the U.S. strategic forces--bomber aircraft armed with nuclear missiles, land-based intercontinental missiles, and atomic submarines with ballistic missiles. This program, as stated in a document published by the White House "provides the United States with the possibility in future years of changing the course of Soviet-American rivalry in the strategic field." In other words, it establishes the goal of achieving military superiority over the Soviet Union. It goes without saying, of course, that this goal is illusory; our country has at its disposal everything necessary to maintain its defense posture at the necessary level. However, another lap in the arms race would exacerbate the international tensions and increase the threat of war.

The intensification of military preparations by the USA and the other NATO countries is accompanied by open propaganda of nuclear war. All sorts of doctrines proclaiming its "admissibility" and "acceptability" are being advanced. In addition, documents claiming to be official are being circulated, citing various falsifications in which the comparative strengths of the world's armed forces are distorted and also ascribing aggressive intentions to the Soviet Union. The facts are, however, that Washington is preparing to deliver the first nuclear strike.

But, as the Pentagon pursues the production of qualitatively new offensive systems of nuclear missiles and other weapons of mass destruction, the more attractive to public opinion becomes the appeal of the 26th CPSU Congress for restraint in the field of strategic weapons. It should be clear to everyone that the Soviet Union will not remain indifferent to the appearance of new and still more dangerous types of weapons in the arsenal of the USA and other NATO countries. But it firmly proposes that their creation be rejected. There is an alternative to an unrestrained arms race. It is a mutually acceptable agreement on preservation of the existing balance of military forces of the USSR and the USA and of the Warsaw Pact and NATO, and of a reduction in their level.

The Program of Peace in the 1980s has become a most important factor of international life, which exerts a beneficial influence on future development of events. In the time which has elapsed since the 26th Congress, the Program has been supplemented by a number of specific proposals put forward in appearance by Comrade L. I. Brezhnev during the course of meetings with leaders of the socialist countries in the Crimea and in discussions with eminent political figures of the West. For example, in a meeting with the chairman of the Social Democratic Party of Germany, W. Brandt, Comrade Brezhnev put forth new specific initiatives aimed at limiting rhe nuclear race in Europe and at speeding up the beginning of discussions on nondeployment of medium-range nuclear missiles in Europe.

Wide positive response throughout the world was occasioned by the Appeal of the USSR Supreme Soviet "To the Parliaments and Peoples of the World". The deep concern for the increasing danger of war and the unprecedented scope of the arms race expressed in the appeal has been shared by parliaments and broad public circles of many states.

There was broad response to the reply of L. I. Brezhnev to the questions of a PRAVDA correspondent published on 21 October. The hard words of warning of the Soviet leader to the effect that "the only person who would initiate a nuclear war in the hopes that he will emerge victorious is one who has decided to commit suicide" appeared in the press throughout the world.

The consistency of the foreign policy course of the USSR toward eliminating the danger of war has also found its embodiment in the specific conditions of Soviet diplomacy in strengthening the political-legal basis for international security.

Our country put forth new major initiatives during the course of general political discussions at the 36th Session of the UN General Assembly. Particularly noteworthy among them was a proposal for adoption of a Declaration "To Prevent Nuclear Catastrophe", which pronounced that "states and national leaders who resort to first use of nuclear weapons have committed the most serious crime against humanity."

Comrade L. I. Brezhnev put forward at the 26th CPSU Congress a broad and realistic program for strengthening peace and preventing nuclear war, repeating many times the basic tenents of that program. He presented them anew in answering the questions of the editors of the West German magazine DER SPIEGEL. There was a tremendous, truly worldwide response to these answers among political figures and among the public at large in all countries on all continents. This was entirely natural, since L. I. Brezhnev's most important proposals on questions of strengthening peace, curbing the arms race, and on relaxation of tensions were of enormous international significance. These proposals are a further intensification of the basic course in the struggle for peace, contained in the Program for Peace in the 1980s, developed by the 26th CPSU Congress.

At present, the attention of the entire world is riveted on the results of the visit of L. I. Brezhnev to the FRG. The significance of that visit extends far beyond the framework of bilateral relations between countries and even beyond Europe. There is tremendous significance in the warning put forward in Bonn that today there exists a situation in which one uncertain step could become fatal.

It is well known that, on the eve of the renewal of the talks in Geneva, U.S. President Reagan put forth a proposal on the so-called "zero variant." This proposal amounts to the USSR eliminating all its medium-range missiles which oppose the nuclear forces of the USA and its allies which are deployed in Western Europe and targeted on our country. In exchange for this, the USA would agree only not to deploy its new missiles.

It is not difficult to comprehend that Reagan's proposal calls for the USSR to carry out a unilateral disarmament and that the approximately 1,000 nuclear weapon carriers of the USA and its allies targeted on us would remain undisturbed.

In his speech in Bonn, Comrade L. I. Brezhnev countered the false peaceableness of the U.S. president with his own genuine peaceableness.

In presenting the results of Comrade Brezhnev's visit to the FRG, the CC CPSU, the Presidium of the USSR Supreme Soviet, and the USSR Council of Ministers emphasized that, on the whole, the visit to the FRG was actually a mission of peace in its fullest and highest sense.

Leonid Il'ich put forward new proposals in Bonn, which serve but one purpose--to find mutually acceptable grounds for negotiation, to rid Europe of the danger of a nuclear conflagration. The essence of these proposals amounts to the following. While negotiations are in progress, neither side will deploy new medium-range nuclear weapons in Europe and will not modernize the old ones. Moreover, Comrade Brezhnev advised that the USSR, upon agreement by the other side, is prepared to go further. "As an act of good will," said the Soviet leader, "we might on a unilateral basis curtail some of our nuclear medium-range armaments in the European USSR. This would be done in advance and would be a step toward that low level to which the USA and USSR might stipulate in the negotiations. This is a new and substantial element of our position." It was also noted that the USSR proposes that Europe be freed of all nuclear weapons, both medium range and tactical. This would indeed be a true "zero decision", a fair one for all countries.

The new initiatives by the Soviet Union, put forth by Comrade Brezhnev, are a graphic demonstration of the realistic, businesslike approach to solving the problem of nuclear weapons in Europe. In this, the USSR is oriented toward the prospect of converting all Europe into a nuclear-free zone. Such an approach is a striking contrast to the line of those who permit themselves to view the European continent as a "limited nuclear battlefield."

Comrade L. I. Brezhnev's negotiations and conversations in the FRG, his meetings and appearances were a strong political action and a practical realization for the Program of Peace for the 1980s.

Armed with this constructive program of action, our country, together with the fraternal socialist states, will intensify the struggle for securing the peace, for continuing and intensifying relaxation of tensions, for curtailing the arms race.

ECONOMIST VIEWS PROS, CONS OF PRIVATE ENTERPRISE, EAST EUROPEAN EXAMPLE

Moscow SOVETSKAYA ROSSIYA in Russian 3 Jan 82 p 3

[Article by Ye. Ambartsumov, section director of the Institute of Economics of the World Socialist System of the USSR Academy of Sciences: "On Private Enterprise"]

[Text] As is well known, some foreign socialist countries, in order to increase agricultural production and to improve consumer services, employ individual labor activity. People working in the private sector receive a considerable supplement to their income; in addition, a considerable part of the participation of collective-cooperative and family forms in performing services relieves state trade and consumer service establishments of some of their burden, and also provides unquestionable convenience to citizens.

Recently personal initiative and individual labor activity in these spheres have persistently made their way into our daily lives. The interest of those readers who commented on the article "On Private Enterprise" (SOVETSKAYA ROSSIYA No 86), which discussed the experience of the fraternal socialist countries in this regard, is understandable. The authors of one group of letters call for wider use of private labor; another group asks for a more detailed account of the practice of private initiative in management. There also were comments in which readers expressed concern with regard to its negative socio-economic and political consequences.

First of all, it should be noted that the individual form of labor activity is not a new phenomenon in our society. It has existed for many decades and is supported by law. In accordance with Article 17 of the USSR Constitution individual labor activity is permitted in the fields of cottage industry, agriculture, consumer services, and also other forms of activity based on the personal labor of citizens and their families. It stands to reason that all these forms of personal activity must continue to develop in accordance with the public interest.

A special decree of the CC CPSU and the USSR Council of Ministers is aimed at party, Soviet and economic organs, and directs them to take additional measures to increase production in personal subsidiary enterprises. This includes all-round assistance to personal subsidiary enterprises, and not only collective farmers but also to all other workers, including city dwellers with their garden and orchard plots. It follows from this decree and from the directions of L. I.

Brezhnev at the 26th CPSU Congress that each citizen who through his personal labor provides his family with agricultural products and sells any surplus is doing something useful and deserves all kinds of support. Statistical data eloquently demonstrate the contribution of personal subsidiary enterprises to the overall state "money box". In 1980, for example, they produced 64 percent of the potatoes, 42 percent of the fruit and berries, 33 percent of the vegetables, 32 percent of the eggs, 31 percent of the meat, 30 percent of the milk and 21 percent of the wool.

It is gratifying that many readers correctly evaluated not only the socio-economic but also the moral-psychological significance of the development of personal subsidiary enterprise. Labor veteran I. Babakov (Moscow), in supporting the attention of the party and government to the agricultural household, remarks: "This is hard work -- maintaining a garden or orchard, tending livestock. But indeed, it is an education in labor, and so instills love and respect for the land, the countryside, and for grain." In this connection, it has long been time, write many readers, to remove the obstacles which prevent city dwellers from buying abandoned farm homes in rural areas, and particularly in the non-chernozem zone of the RSFSR. It is indeed here that there is particularly large potential for growth in private enterprise. Considering the shortage of agricultural products, the abundance of uncultivated land, and the exodus of workers from rural areas, the return of people to the land would bring a tangible addition to the common stock.

It stands to reason that we are talking about production of produce through personal labor, and not through exploitation by the state or other citizens. Of course, the resale of produce at markets, the feeding of personal livestock with grain stolen from a kolkhoz or sovkhoz, or speculation, about which a group of comrades from Kalinin Oblast, V. Baklakov of Moscow and I. Kalpakov from Tatariya wrote, are illegal. Local organs must, on the one hand, establish the most strict control over individual labor activity; and on the other, render the utmost assistance.

Many readers (A. Boykov from Novosibirsk, V. Arutyunov from Groznyy and others) are interested in which private industries citizens may engage in. Decree of the USSR Council of Ministers No 283 of 13 May 1976 permits participating in all types of cottage industry except those listed in the decree (manufacture of weapons, ammunition, explosives, poisonous and narcotics substances, medicines, precious jewelry, etc). In addition, citizens may be prohibited from engaging in certain other industries "if their development might be damaging to the public interest" by union republic councils of ministers (but not local organs, which occurs not infrequently, according to some letters from readers). It is believed, however, that in light of the 1977 USSR constitution the time has come to adopt a law which would emphasize the compatibility of such activity with the interests of society.

It also would be useful not to limit individual labor activity to cottage industry, but also to apply it to other branches in the sphere of services, which could be interpreted to derive from Article 17 of the constitution.

Some readers logically pose the question of state assistance in this sphere of activity. This is even more logical since there is a model -- the decree of the CC CPSU and the USSR Council of Ministers on private subsidiary enterprises. This decree provides for all sorts of assistance to them. It calls for provision of equipment, instrumentation, credit, and even (if livestock is being raised on contract) permission to maintain the number of heads above the norm. Also worthy of attention is the suggestion of reader V. Levin to establih tax privileges for pensioners and war and labor invalids. On this point, the practice of the fraternal socialist countries demonstrates the expediency of tax privileges for those types of activity whose development coincide with the interests of society. And even in our country the government has adopted a decision to exempt from income tax assessment those private plots of citizens who grow produce which is in short supply, as for example, French beans. This is to stimulate production of such scarce products.

As soon as the necessary attention to individual labor activity in the sphere of services gives results in the form of their rejuvenation, it may be possible, on the other hand, to increase the fee for permission to engage in a cottage industry, which now is the paltry sum of 5 rubles.

All these proposals are by no means some new discovery. They are in accordance with the constitution, and follow the course of Lenin's theories and practice of the building of socialism.

And now to the subject of the concern expressed by the authors of several letters (N. Asafov from Monchegorsk, A. Dogachev from Biysk and others) that the development of small-scale private enterprises might lead to the rebirth of the bourgeoisie and of capitalism. I must assure them that there are no grounds for such fears. Indeed, we are not talking about private capitalistic enterprises based on hired labor and exploitation of the individual, but rather of individual and family type enterprises, in which another's labor is not exploited. Moreover, the activity of the private sector is under constant control of the state and of society and by virtue of that alone cannot be converted into a private capitalistic sector.

Alarm is also expressed in letters from G. Yegorov of Okha and Comrade Odnolyubtseva of Moscow that individual labor activity will attract "much healthy, energetic, enterprising and highly skilled labor from basic production activities," will lead to excessive enrichment of cottage industries, to speculation and theft. But I would remind them that in this regard we are speaking mainly of labor which is not engaged in primary production. These are pensioners, housewives and invalids, people who can work only part of the day, who supplement their work with other work, and so forth.

CENTRAL ASIAN REPUBLICS OBSERVE MILITIA DAY

In the Kirghiz SSR

Frunze SOVETSKAYA KIRGIZIYA in Russian 10 Nov 81 p 3

/Article by A. Gabidulin, KiSSR minister of internal affairs: "In Good Conscience and Without Fear"/

> /Text/ /"I swear in good conscience and without fear to fulfill all the obligations imposed upon me...."
>
> These sacred words of the oath are always pronounced solemnly and excitedly by persons who have, of their own free will, decided to devote their lives to the selfless service of the people by joining the ranks of the Soviet militia./ /in boldface/

Service in the militia is difficult and not always without danger. A militia man must often come into contact with a sphere of human relations which is far from the best: he is on the leading edge of the fight against thefts and speculation /black-marketeering/, drunkenness and parasitism, hooliganism and other negative phenomena which hinder the active creative labor of Soviet people, their social life, rest and recreation.

One could cite quite a few examples where these soldiers of law and order, scorning mortal danger and exhibiting unprecedented courage, have honorably carried out their duty to the people, who have given them broad powers and a lofty responsibility.

Recently on the territory of the Tokmakskiy PMK /Mobile Mechanized Column/ a group of hardened criminals killed a guard and stole a state-owned motor vehicle. In order to seek out the criminals, an operational group was formed, headed by the deputy chief of the Chuyskiy ROVD /Rayon Division of Internal Affairs/, senior lieutenant of militia V. Saybel'. The evil-doers prepared a new crime when the militia men came upon their tracks. It was not so easy or safe to disarm these armed and motorized bandits, who, as they say, had nothing more to lose. Now they have all been arrested, and soon they will stand trial.

Considerable amounts of persistence and courage have been displayed by the militia men during the responsible time of harvesting the crops and procuring feed grain for the livestock. Thousands of people cultivate farm crops by self-sacrificing and daily toil. At the same time there are individual extortioners who strive to tear off from the public loaf as big a piece as possible for themselves. Under cover of night they haul wheat, corn, hay, and feed concentrates into their own private barns and sheds. During this period the militia men are always at their duty posts: they maintain law and order on the grain routes, intercept the slightest attempt at stealing the harvest, and guard the threshing-floors and ricks against fires.

As is well known, the militia does not work in isolation. It is aided by a broad-based group of activists, all honorable persons, who have pledged themselves to work for order in our cities and rural areas, as well as to reinforce legality. With the aid of the public a group of plunderers who had been supplying themselves for a long time at the Oshskiy Meat-Packing Combine was disclosed. These criminals had inflicted enormous harm on the state. But in order to reveal all the clever intrigues of this criminal case, the investigators--Militia Captain T. Akchurin and Lieutenant V. Burlutskiy, together with a whole group of BKhSS /Struggle against Theft of Socialist Property and Speculation/ of the oblast militia administration, had to work for more than one or even two months. All those who took part in this thievery were punished severely. More than 300,000 rubles worth of materials were taken from them on behalf of the state.

The ranks of the Oshskiy UVD /Administration of Internal Affairs/ have dozens of experienced persons who are devoted to the cause of the Chekists /Militia/. BkhSS Inspector Major R. Musardin has been working in the militia for more than 20 years. He is responsible for discovering hundreds of petty and major thefts, which he has handled with a high degree of professionalism; these include the exposure of a group of criminals who plundered an over-all total of more than 600,000 rubles at the Kolkhoz imeni Rakhmanadzhan in Oshskaya Oblast.

Many more names worthy of mention could be cited. An entire series of this republic's militia men have been awarded the titles "Best Inspector of Criminal Investigation," "Best Militia Investigator," and "Best BKhSS Inspector." Many have been entered in the Book and on the Board of Honor of the KiSSR Ministry of Internal Affairs; they have been awarded the following medals: "Outstanding Militia Man" and "For Outstanding Service to the Ministry of Internal Affairs." These include the precinct inspectors A. Shevchenko, K. Moynokov, the investigators R. Kachkanakov, G. Timofeyev, and others.

Not long ago a rally of young militia workers was held in Frunze. More than 300 staff members from the various services of the internal affairs organs came to this rally from different rayons and oblasts of the republic. Also among them were the following: the UVD senior inspector in Frunze, S. Ryspayev, the precinct inspector of the Oktyabr'skiy ROVD of Frunze, S. Aydarov, and the militia sergeant from the separate unit for protection of national economic facilities, L. Yustus. They came with good reputations as persons who know their business and are thoroughly devoted to it.

We have a special attitude toward the new generation of militia men. They comprise our replacements. Within 15 to 20 years they will form the backbone of this republic's workers in the field of internal affairs. To form their political world view, to educate their activities, to teach them how to work operationally, selflessly, and, as it says in the militia oath,--with good conscience and without fear--this is our top-priority task. And of no small importance here is the personal example of the older generation, commanders of the sub-divisions and services. A good reputation in the militia is enjoyed by the following mentors of the youth: Senior Sergeant N. Zubov, Militia Man of the Sulyuktinskiy GOVD /Municipal Division of Internal Affairs/, M.Begemkulov, and others.

The 26th CPSU Congress posed great problems for the Soviet militia men with regard to strengthening socialist legality as well as law and order. And we are doing everything to justify this high trust of the party and the people. Nevertheless, not everywhere in the republic has the proper law and order been instituted. Matters still do not stand well in our republic with regard to the prevention of crimes and violations of the law, although all the conditions exist for this purpose. Now in operation within the republic are more than 400 public points for maintaining law and order, about 1500 preventive councils in labor groups, and more than 4,000 voluntary people's guard groups, in which there are more than 90,000 people's volunteers. This is a large and active army of enthusiasts for maintaining law and order. Our public aides, however, are operating at half-strength, which is explained by the inertness and lack of know-how among the militia men with respect to guiding the common efforts into the necessary channel.

Nor are we taking full advantage of the possibilities presented by the law in the struggle against drunkenness, hooliganism, parasitism, phenomena which give rise to many types of crimes. Unfortunately, not a single rayon division or municipal administration of internal affairs in this republic can state that within its precinct there are no parasites or drunkards--potential criminals, as practical experience has shown.

Work is being poorly conducted with regard to preventing recidivist crimes. The way of life and behavior of parolees released ahead of time are, as a rule, poorly supervised. Sensing this lack of supervision, and unused to an independent, honest, and regular life, along with social labor, these people often commit repeat crimes.

The successful implementation of the plans outlined by the party for socio-economic development is inextricably linked with the further strengthening of legality and law and order, with the education of citizens in the spirit of a high level of discipline, a conservationist attitude toward socialist property, as well as an unwavering observance of the laws and rules of the socialist community. Herein a role of considerable importance belongs to the organs of internal affairs.

The party and the people expect from the militia men an intensification of the decisive, uncompromising struggle against the plundering of socialist property, all kinds of swindlers and speculators, all those who violate our system and interfere with the self-sacrificing labor of Soviet people. Every day, every hour life confronts the militia men with complex tasks which require a high degree of professionalism and standards, endurance, and determination. There is no doubt that this republic's militia men are coping with them and performing their duties with honor.

In the Kazakh SSR

Alma-Ata KAZAKHSTANSKAYA PRAVDA in Russian 10 Nov 81 p 2

[Article by A. Platayev, Kazakh SSR minister of internal affairs: "Serve the People Faithfully"]

/Text/ Today our country is marking Soviet Militia Day. Created right after the Great October Socialist Revolution by order of V. I. Lenin, it became from the very first days of its existence a fighting detachment for defending the people's interests. In all the stages of building the socialist society the militia has consistently implemented the Leninist testament on supporting the revolutionary system, ruthlessly combatting counter-revolutionary elements and hooligans; it has stood vigilantly on guard over the people's property.

The 26th CPSU Congress set forth the task of further strengthening law and order as well as socialist legality, the unflagging implementation of the Leninist principle of the inevitability of punishment, and the reliable protection of the interests of the state and society. It was noted at the congress that workers in the organs concerned with maintaining law and order should combine practical qualities with civic courage, incorruptability, and a sense of justice. "The Soviet people," declared Comrade L. I. Brezhnev, "are correct in demanding that their work be effective to the maximum degree, that every crime be investigated in the proper manner, and the guilty persons bear the punishment which they deserve."

Under present-day conditions this task can be successfully carried out only by well-trained, morally stable workers. Therefore, the party and the Soviet organs, along with the republic's Ministry of Internal Affairs are according top-priority attention to the selection and education of personnel for the Ministry of Internal Affairs system and, above all, for its most numerous detachment--the militia. At the direction of the party and Komsomol organs as well as labor groups, thousands of Communists and Komsomol members come into the militia. These are primarily young people with a good preparation in general education and possessing high moral and political qualities.

The militia is under the constant control of the masses. Its employees are included among labor groups, in rural assemblies, and sessions of the ispolkoms of Soviets of People's Deputies. All this constitutes traits of the genuine populism of our militia.

Many rayon and municipal divisions of internal affairs are fully staffed with qualified employees and have reliable reserves for supplementary use. For example, two-thirds of the personnel of the Division of Internal Affairs of the Chingirlauskiy Rayon Soviet of People's Deputies of Uralsk Oblast consist of Communists, while almost all the remaining staff members are Komsomol members.

In carrying out the party's directives, the militia of Kazakhstan has everywhere intensified the struggle against crime and violations of the law. Moreover, it is making ever more extensive use of newer and more effective forms and methods of operation; it is also adopting the experience of the best units and the progressive components of the service. The struggle against drunkenness, hooliganism, parasitism, robbery, and plundering of socialist property and speculation is being stepped up.

The main thrust in the militia's activity remains the prevention of violations of law--the most humane and result-producing way to root out crime. Predominantly preventive measures are also employed to resolve such problems as supporting law and order in the cities and other populated points and preventing violations of law in public places. With this goal in mind the Kazakh SSR Ministry of Internal

Affairs organized a new type of service--the PPM /Mobile Militia Points/, which have become an effective means of maintaining public order and for preventing violations of law on the streets of cities and villages, and they have received widespread support by the population.

In accordance with the directive of the CP of Kazakhstan CC and the republic's Council of ministers, party and Soviet organs in the localities have rendered a great deal of aid in organizing this service. Today PPM's are operating in practically all the cities and many of the republic's rayon centers.

The PPM's are unique departments of the militia. They have allowed it to strengthen ties with the population and to make patrol-post assignments more mobile. There has also been a strengthening of the ties between the militia and the volunteer people's druzhiny /guard groups/; furthermore, it itself has begun to work more effectively and with higher standards. There has been stepped-up prevention of disorders on the streets since the mere appearance of the PPM's influences persons inclined to violations of the law.

There has been an increase in the mutual cooperation among the PPM teams, the volunteer people's guard groups, and the operational Komsomol detachments. They all perform a number of common functions, organically supplementing each other.

PPM's have also shown themselves to be of quite good use in rural localities. Here, with the help of the public, their teams expose parasites and vicious drunkards, as well as checking up on the status of fire safety. As an example in this regard, we can cite the PPM of the Bishkul'skiy Rayon Department of Internal Affairs of the North Kazakhstanskaya Oblast (with its chief, Senior Militia Lieutenant B. Zhorov), which gives no leeway to law-breakers and which operates in close contact with the public.

With the introduction of the PPM's in the republic, not only has there been a reduction in the number of law violations committed on the streets, but there has been a noticeable intensification in the struggle against the most widespread anti-social phenomena--drunkenness and hooliganism. Their teams have been responsible for uncovering many hot leads to crimes: robberies, thefts, and fights.

Good service is also being rendered by the PPM's of Karaganda, Ural'sk, Dzhambul, Petropavlovsk, and other cities in this republic. We hope that, with the support of party and Soviet organs, this flexible and effective service will make its appearance in all cities and rayon centers.

The strength of the Soviet militia lies in its increasingly stronger ties with the people, in its close interaction with the public. It is carrying out preventive work jointly with the other formations of the working people in accordance with integrated, comprehensive plans.

Within the republic there are more than 11,000 councils for the prevention of law violations at enterprises, 2,700 public points for the maintenance of law and order, 18,000 volunteer guard groups, 2,500 operational Komsomol detachments, and a number of other self-help organizations of the working people. An active part in their work with regard to curtailing violations of law is played by staff members of the organs of internal affairs.

The militia is facilitating in all ways the implementation of the tasks of the 11th Five-Year Plan, ensuring the preservation of the people's welfare, waging the struggle against malpractices in trade and everyday services. Its workers from the first to the last day of the present harvest supported law and order in the rural areas, implementing measures on fire safety in the fields, threshing-floors, and grain-receiving enterprises. The GAI /State Motor-Vehicle Inspection/ workers have covered thousands of kilometers of grain routes and side roads, as well as checking out numerous motor-vehicle pools which took part in the harvest.

Not a single fire was allowed in the fields or threshing-floors. More than 600 tons of grain were taken from the plunderers and hoarders and returned to the farms.

Also important is the fact that, due to the vigilance of the GAI workers, the number of motor-vehicle accidents on the roads was significantly decreased. And, of course, during the feverish harvest time in Kazakhstan's northern oblasts there were an enormous number of motor-vehicles and other equipment.

GAI workers Senior Militia Sergeant N. Barinov, Junior Militia Sergeants B.Zhanazhanov and B. Abuov from Turgayskaya Oblast, Militia Sergeants M. Vikhrenko and A. Sernyayev, Militia Master Sergeant I. Ponomarenko from Tselinogradskaya Oblast, as well as many others have earned our sincere gratitude for their self-sacrificing toil.

And here again a good word should be said about the PPM's, which, for the first time, took part in harvesting the crops. Thus, the team of the Shortandinskiy Rayon of Tselinogradskaya Oblast, headed up by Militia Lieutenant V. Yermakov, took two tons of wheat away from plunderers and returned them to the Sovkhoz imeni Seyfullin.

The 26th CPSU Congress emphasized the need for instituting order in trade and in the service sphere. We need to firmly close up all kinds of loop-holes and cracks for speculation, extortion, bribe-taking, etc. The struggle against this evil should be waged by the militia in close alliance with the organs of the public prosecutor, the people's control, the inspection offices, and public organizations. We must admit, however, that there are still many shortcomings in this matter. Relying on the public, militia men ought to wage a determined offensive against grabbers of every stripe.

Service in the militia is a responsible and honorable matter. Its workers must always be prepared to come to people's aid and, risking their own lives, perform their duty to the end. They carry children out of burning houses or boldly go forward to arrest armed criminals. At all times they are guardians of law and order at their posts.

Let me cite the following examples. A worker on the line point of the Dzhuslan Militia Station of Kzyl-Ordinskaya Oblast, Sergeant M. Koybagarov, scorning danger, saved a person from perishing. His heroic deed was marked by the Order of the Red Star.

Courage and valor were manifested by workers in the field of criminal investigation, Militia Captain A. Ismaylov and Inspector S. Oralbekov in arresting a particularly dangerous criminal. And certain armed criminals were pursued for a long time by inspectors of the road-patrol service of GAI of the Alma-Ata UVD, Militia Sergeants V. Aleksunin and V. Kaloshin; they entered into an equal fight with these criminals, arrested them, and disarmed them.

There are many such examples. And it is not by accident that last year more than 100 workers in the republic's organs of internal affairs were awarded orders and medals; more than 3,000 earned the medal entitled "For Irreproachable Service."

There are still quite a few shortcomings in the work of the republic's internal-affairs organs. They were pointed out by the 25th Congress of the CP of Kazakhstan. Constant demands for improving the work of the organs concerned with maintaining law and order have been presented by the CP of Kazakhstan CC and the republic's Council of Ministers, as well as personally by CPSU CC Politburo member and first secretary of the CP of Kazakhstan CC, D. A. Kunayev. And we are striving to constantly raise the level of our own work, to decisively avert all shortcomings.

The chief task of the Societ militia is to unconditionally carry out the decisions of the 26th party congress, to ensure effective law-keeping work for the purpose of successfully performing the economic and social tasks of the new five-year plan, the reliable protection of the legitimate interests of the state and the society, of each Soviet person. To faithfully serve the people--that is the vocation and the duty of the Soviet militia.

In the Tajik SSR

Dushanbe KOMMUNIST TADZHIKISTANA in Russian 10 Nov 81 p 2

[Article by I. Kurbanov, Tajik SSR minister of internal affairs: "To Serve the People Is the Highest Duty"]

> [Text] /The Soviet militia is the same age as the Great October Revolution. Upon the initiative of V. I. Lenin the People's Commissariat for Internal Affairs on 28 October (10 November) 1917 adopted a decree entitled "On the Workers' Militia." Taking part in organizing the first detachments of the guardians of the revolutionary system were the following outstanding leaders of the Leninist party: F. E. Dzerzhinskiy, M. I. Kalinin, M. V. Frunze, K. Ye. Voroshilov, the first people's commissar of internal affairs G. I. Petrovskiy, and many others./ [in boldface]

Sixty-four years ago the Soviet militia, created under enemy fire, overcoming hunger, cold, a shortage of arms, began in a self-sacrificing struggle to carry out the extremely complex and responsible tasks confronting it.

On 7 December 1924 the Commissariat of Internal Affairs of the Tajik Autonomous Republic was created. We will always remember the hero of the Civil War, the first people's commissar, Abdullo Yarmukhamedov, the chief of the republican militia, and the active participant in the struggle against the Bashmak Movement in Turkestan, Frants Izhevskiy. Remaining forever in the annals of the Tajik militia will be the names of those who were the first to join its ranks: Malik Davlyatov, Sharif Ziyayev, Bobo Azimov, Gaib Kholov--in Garmskiy Rayon, Kutbiddin Nazhmetdinov

--in Khodzhentskiy Uyezd, Kasym Nasimov, Nabi Valiyev--in Kulyaba, and many others. These were genuine heroes, people who selflessly devoted themselves to the cause of the Revolution and to the Soviet regime.

Their cause is being continued in a worthy manner by the present-day veterans of service to law and order, militia colonels N. K. Yakh"yayev, M. Toshev, major general of internal service K. Kh. Khabidov, and many others. Along with the veterans, absorbing their experience and skills, members of the new and younger generation of the militia stand on guard over the law. At the call of their hearts and the vocation of their souls, the following outstanding militia men have joined the internal-affairs organs and are devoting their knowledge, skills, and experience to the struggle for socialist discipline and law and order: deputy chief for political-education work in the OVD of the Leninabad gorispolkom militia captain V. Maslyakov, precinct inspector of the OVD of the Frunze rayispolkom in Dushanbe militia captain I. Radzhabov,militia master sergeant Kh. Valiyev, militia senior sergeant S. Abdulov from the UVD of the Dushanbe gorispolkom and many others.

Over the last few years, thanks to the unwavering care of the party and the government, significant qualitative changes have taken place in the militia organs. Now the overwhelming majority of the staff members in the service of law and order have a higher or a secondary specialized education and a high degree of professional training. This is facilitated by the work of the Dushanbe Secondary Specialized School for Militia, whose graduates are serving in all organs and units of our republic's internal affairs. This year saw the creation of the Dushanbe Correspondence Division of the Tashkent Higher School of the USSR Ministry of Internal Affairs for training highly qualified specialists directly within the republic.

Our militia is flesh and blood of the people. Its ranks are constantly being replenished by the best members of the working class and the kolkhoz peasantry. They come to work for the militia organs upon the recommendations of party and Komsomol organizations or at the direction of workers' groups.

The party and the government manifest a constant concern for the workers in the internal-affairs organs. During the course of the last few years the material security of the militia men has been improved, and the sizes of their pensions has been increased. There has also been a considerable strengthening of the material-technical base, and, most importantly, a closer link has begun to be established between the Soviet militia and the people, which sees in it a reliable guardian and protection of its own /i. e., the people's/ interests.

A program of comprehensive practical activity has been constituted for us by the decisions of the 26th CPSU Congress, the 19th Congress of the CP of Tajikistan, and the decree of the CPSU CC, entitled "On Improving Work To Maintain Law and Order and To Step Up the Struggle against Violations of the Law." Guided by these documents, militia men will continue to improve their professional skills, as well as perfecting their activity for ensuring and protecting the interests of the state, the laws, honor, and property of the citizens.

In accordance with the decisions of the party and the government, the prevention of law violations in the republic has become the general thrust in the work of rooting out crime and its causes. In recent times significantly greater general-preventive and individual measures have been conducted within workers' groups.

Volunteer people's guard groups have long proved themselves to be trustworthy assistants to the militia. There are now about 3,000 of them in the republic. Almost 70,000 volunteer guardians of law and order help to preserve peace and tranquility for the citizens. Many guard groups have made a substantial contribution to strengthening law and order. I would particularly like to note the work of the volunteer guards of Leninabad, Chkalovsk, Kulyab, Nurek, Kurgan-Tyube, and Tursunzade.

The broad-based program which was put forward by the 26th CPSU Congress for upgrading the people's prosperity has confronted the internal-affairs organs with responsible tasks for ensuring the preservation and inviolability of the national property as well as the personal private property of the citizens. The ways to solve these problems must be sought in a comprehensive approach, improving the activities of the units for preventing and disclosing crimes, creating posts of people's control and volunteer people's guard groups for safeguarding socialist property.

Today the staff members of the internal-affairs organs, faithful to the glorious Leninist traditions and armed with the militant program of activity which was set forth by the 26th CPSU Congress, are resolving the principal problem--to vigilantly stand guard over the public law and order. And they will do this with inexhaustible energy, a high degree of awareness and responsibility, with creative ardor and initiative.

In the Turkmen SSR

Ashkhabad TURKMENSKAYA ISKRA in Russian 10 Nov 81 p 2

/Article by R. Berdyyev, Turkmen SSR minister of internal affairs: "People of Civic Courage"/

/Text/ It has become a tradition to observe Soviet Militia Day right after the holiday marking the Great October Revolution. This present-day anniversary is illuminated by the light of the magnificent, creative plans which have been outlined by the 26th CPSU Congress. They have summoned up among the Soviet people a new upsurge of political and labor activity, they have constituted an inspiring stimulus for further developing the socialist economy, and they have once again demonstrated the great unity between the party and the people.

In the Accountability Report of the CPSU CC to the 26th congress Comrade L. I. Brezhnev awarded high marks to the organs of the Soviet militia. "The professional skills of the workers in these organs," he said, "should be combined with civic courage, incorruptability, and a sense of justice. Only such people can worthily carry out the obligations which have been imposed upon them." And the staff members of our republic's internal-affairs organs, like those of the entire country, are serving their difficult but meritorious tours of duty with honor.

Created during the first few days after the victory of the Great October Revolution on the initiative of V. I. Lenin, the Soviet militia has faithfully and devotedly served the working people, the cause of the Communist Party, and the lofty principles of socialist legality and humanism. At all stages of the Soviet state's history the force of the militia and its authority have always been conditioned by the guiding leadership of the party, as well as by the close and unbreakable links with the people.

During the years of the Civil War and the foreign intervention, and subsequently in the years when socialism was being peacefully built, the militia units were actively establishing and supporting the revolutionary system, guarding the material valuables which had become the national heritage as well as protecting the honor and property of the young Soviet state's citizens. And during the difficult period of the Great Patriotic War the staff members of the internal-affairs organs, together with the soldiers of the Soviet Army, heroically fought on the fronts against Hitler's predators for the freedom and independence of our Motherland.

Many of them were awarded orders and medals for their heroic deeds. It is with pride that we name our veterans--Heroes of the Soviet Union B. G. Sorokin, N. I. L'vov, A. P. Kapriyelov, P. M. Karyakin, T. Dzhumamuradov, and others, who even now are still in service and transmitting their abundant experience and skills to the younger generation of Soviet militia workers.

It can be said with assurance that the personnel of this republic's internal-affairs organs are successfully coping with all the problems confronting them. This assurance is caused by the consistent improvement in the personnel of the internal-affairs organs, representing today a fusion of the many years of experience on the part of the veterans with the energy and the enthusiasm of the younger workers.

Among the best workers one can cite the following: senior precinct inspector of the Leninskiy ROVD of the city of Ashkhabad, militia captain Ch. K. Nurmamedov, precinct inspectors of the Krasnovodskiy GOVD senior lieutenant K. Butantayev and the Murgabskiy ROVD senior lieutenant A. Dzhumayev, CUR inspector of the Bayram-Aliyskiy GOVD militia captain K. Bayramov, precinct inspector of the Proletarskiy ROVD junior lieutenant B. Khalmuradov, senior investigator of the Turkmen SSR Ministry of Internal Affairs B. Taganov and many others.

The Communist Party and the Soviet government are constantly concerned not only about the staffs of militia workers but also about strengthening the leading services of the internal-affairs organs, improving their supplies of technical equipment, and expanding their scientific bases. Now firmly included within the operating system of the law-keeping organs are up-to-date methods of planning the prevention of law violations.

Our republic has consistently followed a course of further strengthening socialist legality and law and order. Important measures have been carried out with regard to perfecting legislation, improving the activities of the law-enforcement organs, and further developing activities on the part of the public.

A link with the public has always characterized the internal-affairs organs. At the present time it has become one of the important factors in the successful fight against crime and, above all, in preventing violations of law. The people's guard groups render great aid to the militia in the struggle against hooliganism, drunkenness, thefts of socialist and private property of citizens, other crimes, and administrative misdemeanors. Also operating within this republic are hundreds of public points for maintaining law and order, and there are more than 1500 preventive councils in production groups.

Some of the important tasks in the prevention service include the following: rendering assistance within the labor and everyday structure to persons returning from places of imprisonment, facilitating the active re-education of persons leading a parasitic way of life, disclosing and eliminating the causes which are conducive to the commission of crimes. All preventive measures have had a positive effect on the results of the fight against law violations: in a number of the republic's cities and rayons public law and order has been strengthened, a reduction in crime has been noted, and more crimes have been averted. There has been a strengthening of criminal responsibility for crimes against socialist and private property of citizens, and this has certainly had a positive influence on the status of the struggle against this type of crime. The struggle against a hobo-type way of life and begging is also being activated.

But in speaking about successes, we should in no way forget about the existing shortcomings and unsolved problems, and we are seeking out ways to improve our work. A great deal remains to be done by our militia to further activate the struggle against speculation, theft of socialist property, and hooliganistic phenomena. We must also step up our efforts in the fight against drunkenness.

The Soviet people are steadfastly implementing the plans of the 11th Five-Year Plan, as well as strengthening the economic and defensive might of our Soviet Motherland. No small contribution to this enormously important work is likewise being made by the law-enforcement organs, including the internal-affairs organs.

In the Uzbek SSR

Tashkent PRAVDA VOSTOKA in Russian 10 Nov 81 p 4

/Article by G. Davydov, Uzbek SSR first deputy minister of internal affairs: "Soldiers of Law and Order"/

/Text/ The Soviet militia has stood and is standing on guard over the public order, on guard over Soviet laws, the peaceful labor, rest and recreation, and safety of Soviet citizens, on the leading edge of the struggle against crime and violations of socialist legality.

The party and the government are actively and consistently solving the problems of developing the legal groundwork for legality and public order. Testimony to this is the decree of the CPSU CC entitled "On Improving Work with regard to Maintaining Law and Order and Stepping Up the Struggle against Violations of Law." It obligates the internal-affairs organs to specify ways for further improving the efficiency and the quality of the activities of all the units and services.

Particular demands are made on the preventive service which has been created within the internal-affairs organs. It is precisely this which constitutes the organizing unit for the course being carried out within our country of a broad-based social prevention of crime. The activity of this service is being built up under the leadership of the party and Soviet organizations, in close inter-action with the public, and based upon comprehensive plans.

Comprehensive plans for preventing violations of law are being worked out in every oblast, city, and rayon of the republic. They provide for joint measures by party, Soviet, trade-union, and Komsomol organizations, as well as law-enforcement organs and the public, aimed at preventing crime. There is active cooperation among the public points for maintaining order and the councils for preventing crime which are located in labor groups. In Uzbekistan 1,850 public points for maintaining order have been created and are functioning successfully. The following strong points have become centers for preventive work: on Mt. Karakamysh in Tashkent, in the Takhtakuprik apartment committee in Namangan, the Termezskiy river port, in the micro-rayon of the meat-and-fat combine in the city of Fergana, on the Kolkhoz imeni Kalinin in Izbaskanskiy Rayon, and many others. Every day tens of thousands of volunteer people's guards come out together with the militia men for the purpose of maintaining public order.

The joint activity of the militia and the public facilitates the reduction of crime in the republic and allows us to achieve a genuine improvement in the public order in many cities and rayons.

Soviet people have gotten used to seeing in the persons of the internal-affairs organ workers not only guardians of law and order, protecting them from criminal encroachments but also people of high standards of conduct, which are based on the principles of Soviet humanism and collectivism. And this is not by accident. From the moment of its creation on, our militia has been inculcated in the spirit of an attitude of respect for human beings. And it could not be otherwise in the first proletarian state, whose founder, V. I. Lenin, pointed out that the working people needed a militia which was truly of the people.

Courage, heroism, a high political awareness, manifested in the protection of the interests of the state and the people--such are the characteristic traits of the guardians of law and order.

/A motor-vehicle theft was reported to the on-duty unit of the Namangan City Department of Internal Affairs. The militia group was confronted with the task of arresting the criminals. Resourcefulness and boldness were exhibited by the group's commander, militia sergeant T. Sabirov, and militia private Sh. Muminov, who quickly discovered and arrested the criminal.

A high degree of professionalism and courage were also manifested by still another investigating, operational group which arrived at the site of a crime. This case was in Karakul: in a garage an unknown man inflicted several knife wounds on a woman and then hid.... Talks with witnesses cleared up the picture of what had happened to a certain extent: all indications led to the house of a certain Buran Davranov. Militia men A. Yakhshiev and Sh. Khaytov immediately went to the suspect's house. When Davranov caught sight of these militia men at the doorway, he threw a lighted match into the corridor, on which he had previously poured gasoline, and he hastened to flee. Fire spread over the militia men. And still they managed to arrest the criminal. He was brought to trial./ /in boldface/

Also working at full efficiency are the following: precinct inspector of the OVD of the Kokandskiy gorispolkom militia lieutenant Odilzhon Gafurov, chief of the passport desk of the Nishanskiy rayispolkom OVD senior militia lieutenant, Galina Korchagina, inspector of the GAI UVD of the Bukharskiy oblispolkom junior militia lieutenant Zarif Ashurov, senior inspector of the OBKhSS UVD of the Tashoblispolkom senior militia lieutenant Bakhodir Kholmatov and many others.

One of the most important tasks for the militia organs is ensuring the complete disclosure of crimes, implementing the principle of the inevitability of punishment. And the militia of Uzbekistan have achieved successes in this direction.

Many former law-breakers have become acclimated to a life of honest labor. Quite a few carefully obscured groups of plunderers of socialist property and bribe-takers have ceased to exist. During the course of several years our republic has maintained the lowest level of crime in the country.

A leading role in securing firm law and order belongs to the patrol-post service. We are extensively introducing the experience gained in this matter by the internal-affairs organs of other republics.

Militia men are striving to close tightly all loop-holes for speculation /black-marketeering/ and bribe-taking, as well as all channels for gaining income without working.

Individual kolkhoz members with a low level of awareness or persons who do not work anywhere seek out easy ways to enrich themselves; for example, they attempt to haul fruits and vegetables beyond the borders of this republic and there sell them at inflated prices. By such actions they bring shame upon our republic and its heroic laborers, who are now struggling to achieve a six-million /ton?/ harvest of "white gold" /cotton/. To cut short such elements is the duty not only of the workers in the internal-affairs organs but also of broad strata of the public.

According to the branches of their activities, the militia organs actively participate in the struggle for the new man; they are always to be found in the leading segment of ideological and educational work, requiring political maturity and high standards. Subordinated to this are all our work in recruiting, distributing, instructing, and inculcating personnel.

To faithfully serve the people is the highest duty of the militia. The workers of Uzbekistan's internal-affairs organs, inspired by the decisions of the 26th CPSU Congress and the 20th Congress of the CP of Uzbekistan, will continue to stand honorably and worthily on guard of law and order and legality, defending the interests of our socialist Motherland.

REPUBLIC MINISTRIES OF INTERNAL AFFAIRS OBSERVE SOVIET MILITIA DAY

Zhabitskiy on Soviet Militia Day

Minsk SOVETSKAYA BELORUSSIYA in Russian 10 Nov 81 p 2

[Article by Belorussian SSR Minister of Internal Affairs G. Zhabitskiy: "Faithfulness to the Ideals of the October Revolution"]

[Text] On 10 November our country honors the workers of the Soviet militia. Its biography is an integral part of the heroic history of the Soviet state, its activities represent the practical accomplishment of the bidding of the great Lenin, who saw in the worker-peasant militia of a socialist state an expression of the real intellect and will, the strength and power of the vast majority of the people.

The Republic Minister of Internal Affairs G. N. Zhabitskiy talks about the daily routine of the Belorussian militia.

The birth of the Soviet militia is indissolubly connected with the history of our socialist homeland and the Great October Revolution, the 64th anniversary of which we have just celebrated with ceremonies and festivities.

From its very first steps our militia served as a faithful and reliable instrument of the Soviet regime, the Communist Party, and the working people in the struggle against crime and also against the counterrevolutionary sorties of the enemy. Hand in hand with the VChK [All-Russian Extraordinary Commission for Combating Counterrevolution and Sabotage (1917--1922)] and receiving support from the workers it overcame the sabotage committed by the kulaks and speculation and struggled against anarchy and gangsterism.

In the last few decades there have been several generations of militia-men, but selfless service to the people has always been and remains the chief trait of their work. We honor those veterans who have given up the best years of their lives in the service of the militia. The young militia-men are being taught by the older generation of soldiers of law and order a selfless attitude toward their work and a faithfulness to the oath they have taken and to their official duties.

In recent years a number of measures have been adopted for improving the work of the militia and strenthening its effectiveness and mobility of action under changing conditions. The patrol-sentry service has been reinforced considerably. In all the cities of the republic it has been organized according to a unified plan, in accordance with which the efforts of the militia and the voluntary people's patrols are combined in the preservation of public order. Subdivisions have been provided with additional technical equipment.

The selection and training of personnel, the improvement of political-educational work among the staff, and the further improvement of general as well as professional standards make up the primary condition that provides for an improvement in the operations of all the links. The primary party and komsomol organizations of the organs of internal affairs, which are in the forefront of the struggle to implement the decisions of the 26th Congress of the CPSU and the 29th Congress of the KPB [Communist Party of Belorussia], have played an exceptionally important role in the resolution of these and other questions.

The numerous letters addressed to the ministry contain expressions of gratitude to the many workers of the militia who have exhibited professional competency and sensitivity to people in their difficult and sometimes dangerous work. The following are mentioned for their exemplary service in the following Rayon Departments of Internal Affairs: V. I. Isakovskiy from Polotskiy, M. A. Zaretskiy from Svetlogorskiy, P. M. Trukhanovich from Glusskiy, N. V. Konakorov and T. I. Koren' from Sovetskiy in the city of Minsk, M. I. Polko from Kamenetskiy, B. N. Faleychik from Baranovichskiy, A. M. Karebo from Sovetskiy in the city of Gomel', N. V. Sokolovskiy from Voronovskiy, and militia-men A. N. V'yun from the Brestskiy Oblispolkom UVD [Administration of Internal Affairs], N. N. Akinchits from the Gomel'skiy Oblispolkom UVD, M. V. Logovoy from the Vitebskiy Oblispolkom UVD, and many others.

The work of the sentries of law and order is highly valued by the people. More than 600 of our employees have been elected as deputies of local Soviets, the photographs of 72 employees have been hung on oblast, city, and rayon boards of honor. Hundreds of workers have been awarded with orders and medals for the selfless performance of their official obligations.

Such a powerful means of incentive as the socialist competition which was promoted under the slogan "Work with efficiency and quality" serves the purpose of creating a strong professional nucleus of personnel and implementing all opportunities for improving the work with which we have been entrusted. As a living creation of the masses this patriotic movement, based on a high degree of awareness and initiative, has produced significant results in the organs and subdivisions of internal affairs in the republic.

We have a right to be proud of the successes achieved by the staff in the organs and subdivisions of the Vitebskiy Oblispolkom UVD, which for the third time has won the Red Banner of the BSSR MVD [Ministry of Internal Affairs], which was awarded in perpetuity on the eve of the 26th Congress of the CPSU.

The organs of internal affairs are faced with responsible and complex tasks. The militia preserves public order, the economic basis of our system -- socialist property, wages a struggle against violations of the law, and guards the rights and interests of citizens.

In the current year the organs of the republic militia have worked long and hard on implementing the decisions of the 26th Congress of the CPSU, the 29th Congress of the Communist Party of Belorussia, and the demands of the 2 August 1979 resolution of the CPSU Central Committee "On improving work in the protection of law and order and strengthening the struggle against crime". The best results were achieved by the Brestskiy, Pruzhanskiy, Baranovichskiy, Zheleznodorozhnyy, and Tsentral'nyy in the city of Gomel', Svetlogorskiy, Checherskiy, Bykhovskiy, Logoyskiy, Smolevichskiy, and Stolbtsovskiy ROVD's [Rayon Departments of Internal Affairs], and many others. Without a doubt, much credit in this belongs to department heads N. S. Volchk, M. I. Kindruk, S. P. Kravchenko, V. T. Lukomskiy, V. F. Frolenkov, A. F. Tsurkan, A. S. Manchenko, V. T. Prokhortsev, A. A. Usov, F. Ye. Glushakov, and V. F. Gaychuk, who were able to unite and mobilize their staffs for the successful accomplishment of the tasks before them.

With all the humaneness of Soviet society and our laws the struggle against violations of the law should be decisive and uncompromising. The main emphasis in this struggle, as was noted in the decisions of the party and legislative acts, is prevention.

The BSSR MVD is accomplishing this task under the leadership and with the constant assistance of the Central Committee of the Communist Party of Belorussia and the republic Presidium of the Supreme Soviet and Council of Ministers in cooperation with law enforcement organs and the public.

A competition for high standards and exemplary public order in the cities, population points, and microregions has been extensively developed in the republic. More than 21,700 population points, 1,285 village and settlement councils, the collectives of more than 3,500 enterprises and construction sites, and 1,700 kolkhozes and sovkhozes are participating in this competition. Public points for the protection of order represent an organized form of joint action between the organs of the MVD and the labor collectives. Activists in the public points in the Prinemanskiy microregion in the city of Grodno, in the villages of Yayechkovichi in Ivanovskiy Rayon and Yanovichi in Vitebskiy Rayon, the Voronino Sovkhoz in Bykhovskiy Rayon, and public point No 6 in Zheleznodorozhnyy Rayon in the city of Gomel' have achieved good results in preventive work. These forms of preventive work are contributing much to individual educational work and to the verification of the safety of socialist property. All this makes its possible to prevent criminal acts in time.

For more than 20 years already the voluntary people's patrols have stood vigilantly together with the militia in the protection of public order. In connection with the new measures aimed at the improvement of their operations the area of the application of their acitivities is being expanded considerably. In the republic there are approximately 9,000 DND [Voluntary People's Patrols], which include more than 400,000 public helpers who participate in the prevention of violations of the law and in the preservation of public order. The work of the voluntary people's patrols in the Kalinovka Sovkhoz in Lyubanskiy Rayon, the Brest Milk Combine, the village of Gatovo in Minskiy Rayon, the Minsk Plant imeni Vavilov, the Minsk Production Association imeni V. I. Lenin, the Baranovichi Silo Combine, and number of others is deserving of a good word.

In the republic there are many effective methods of educating citizens in the spirit of the strict observance of Soviet laws and standards of a socialist society. More than 5,000 crime prevention councils have been formed in the collectives of the enterprises, organizations, construction sites, kolkhozes, and sovkhozes. Working in close contact with public points for the protection of order, with trade union and komsomol organizations, and with the organs of internal affairs they are having a positive effect on those who violate public order.

However, public activism is not yet sufficient everywhere. In individual cities and rayons the work of voluntary people's patrols and of public points for the protection of order has not been properly organized. Only together can we achieve a situation in which respect for law and order will become the personal conviction of each Soviet citizen.

In noting Soviet Militia Day we do not forget for a moment that there are still unresolved questions in the work of the organs and subdivisions of internal affairs in the republic and that we owe a great debt to the workers.

The employees of the Belorussian militia, inspired by the decisions of the 26th Congress of the CPSU, will continue to faithfully serve the people and steadfastly guard the achievements of the Great October Revolution.

Bradulov on Soviet Militia Day

Kishinev SOVETSKAYA MOLDAVIYA in Russian 10 Nov 81 p 2

[Article by Moldavian SSR Minister of Internal Affairs H. Bradulov: "[Faithfulness to Duty"]

[Text] From the first days of the victory of the Great October Revolution the worker-peasant militia accomplished responsible tasks in the defense of the achievements of the revolution and struggled against hooligans, thieves, and all those who were remnants of the old world. Today's generation of soldiers of law and order are religiously preserving and augmenting the glorious traditions of faithful service to the party and the people.

Along with concern for the comprehensive development of the economy, science, and culture in our country daily attention is being given to the protection of the rights and interests of Soviet citizens and their human dignity. In recent years the CPSU Central Committee, the USSR Presidium of the Supreme Soviet, and the USSR Council of Ministers have adopted a number of important resolutions and legislative acts aimed at educating citizens in the spirit of conscious, state, and labor discipline, perfecting administrative and criminal legislation, the passport system, and the protection of socialist property, improving crime prevention, and providing for a safe traffic system.

"In strengthening the socialist legal system and law and order," noted Comrade L. I. Brezhnev at the 26th Congress of the CPSU, "the organs of justice, the courts, offices of the public prosecutor, and the Soviet militia have a great responsibility. The professional knowledge of the workers in the these organs must be combined with civic courage, integrity, and fairness. Only such people can honorably carry out the serious obligations with which they are entrusted. The Soviet people have a right to demand that their work is maximumly effective in order that each criminal act will be properly investigated and the guilty parties will receive the punishment they deserve. In this respect the organs protecting law and order will be given the full support of the party and, without a doubt, the support of the public."

Such is the program instruction of the party, which places many obligations on the workers of the organs of internal affairs. The basic directions of their work is today determined on the basis of these strict requirements.

In life there is always a place for acts of heroism. This axiom holds especially true in the service to protect public order. Russian Andrey Bazhenov, Ukrainian Fedor Fedorenko, Moldavians Konstantin Kozhokar' and Nikolay Vornichesku, and other employees of the Moldavian militia have accomplished heroic deeds even in times of peace. In carrying out their official duty they gave up their lives in the name of the good fortune and well-being of the living. Their names are recorded on a memorial plaque in the Moldavian SSR Ministry of Internal Affairs.

The average weekday of the militia-man is rigorous and filled with tension. Even though the social roots of crime in our country were liquidated a long time ago, hooligans, parasites, and those who misappropriate socialist property have not yet been eliminated. The workers of the militia are adopting all kinds of measures to create an atmosphere of intolerance around such parasitic elements.

Under the direction of the party and Soviet organs of the republic the structure of the organs of the militia is being improved and the basis for the scientific organization of labor and administration, the professional specialization of employees, and an overall approach to the accomplishment of tasks for ensuring an exemplary public order are being introduced.

The personnel staff has also changed considerably. The best people have come to us on the recommendation of party, komsomol, and trade union organizations, the collectives of enterprises and construction sites, kolkhozes, and sovkhozes. Now approximately 80 percent of the officers in the organs of internal affairs have specialized higher and secondary qualifications. The rank and file militia-men, as a rule, have a general secondary education. The overwhelming majority of employees is made up of Communists and members of the komsomol.

With the help of progressive workers and those who have distinguished themselves in service and veterans of the Moldavian militia the younger generation is quickly and confidently achieving successes in their work.

Senior Militia Sergeant A. Levitskiy is waging an active struggle against crime and violations of public order. In this year alone, after having exhibited courage and resourcefulness, he prevented and exposed many crimes, detained dangerous criminals, and was given recognition as the best militia-man of the patrol-sentry service of the capital city.

Militia lieutenant-colonels P. Shubin and N. Dimitrashko, militia captains R. Shikhlyarov and A. Yarovskiy, Sergeant-Major V. Volovey, and many others who are giving all their efforts and energy to a difficult but honorable and necessary service to the people are enjoying the respect of the public.

The workers of the Criminal Investigation Department are found on the front line of the struggle against crime. The employees of BKhSS [Combating the Embezzlement of Socialist Property and Speculation] are accomplishing important tasks in the protection of socialist property. The State Motor Vehicle Inspection is working hard to ensure the safety of motor vehicle and pedestrian traffic. The divisional inspectors of the militia are real plenipotentiaries of the Soviet regime. Our investigators are engaged in a constant battle for man, the triumph of law, and justice.

It is impossible to even enumerate the numerous activities of the organs of internal affairs. It is important, however, to note that this work is connected with providing a peaceful and safe life for the Soviet people -- the builders of a communist society.

Thanks to the growing professional standards of our workers and to the improvement of the operational and technical equipment of the militia, which has at its disposal the best equipment and the latest achievements of chemistry, physics, biology, and medicine, the militia now has all the opportunities for exposing any crime.

One of the basic directions of the struggle against crime is prevention and the elimination of the reasons and conditions that encourage crime. The system of social prevention includes the commissions of the Soviets of People's Deputies on questions concerning the legal system and law and order, on juvenile affairs, and a number of other issues. The councils of crime prevention in enterprises and public points for the preservation of order in housing areas are playing an important role.

The best results are being achieved there where crime prevention in residential areas or units is combined with general educational work in the labor collectives. Today there are approximately 500 public points for the preservation of order and more than 1,500 councils of crime prevention in the republic. They are making a big contribution to the reinforcement of public order in the microregions. This work has been especially successful in Kishinev, Bendery, Tiraspol', and Rybnitskiy, Lazovskiy, and Ryshkanskiy rayons.

We value highly the contribution of more than 140,000 members of the voluntary people's patrols, who have been reliable in the organization of the labor and peace of citizens. According to last year's results the winner in the republic competition was the headquarters of the voluntary people's patrols in Rezinskiy Rayon (Chief Bezruchko), which was awarded the Red Banner of the Moldavian SSR Council of Ministers and a monetary prize. The headquarters of voluntary people's patrols in Orgeyevskiy, Faleshtskiy, and number of other rayons are doing a good job.

The aggressive struggle against drunkenness is an important integral part of crime prevention. In order to strengthen this struggle, closer contacts are being established between the militia and the labor collectives and organs of the public health service. A differentiated approach to people who abuse alcohol has been worked out. Voluntary treatment in alcoholism clinics in enterprises is becoming more prevalent. Those who intentionally avoid such treatment are sent to a medical-labor dispensary.

Concrete measures for strengthening labor discipline are being worked out and adopted in many enterprises, kolkhozes, and sovkhozes, in which workers' meetings, village assemblies, and comrades' courts play an important role. Thanks to the healthy moral climate the labor and public activism of collective members is steadfastly increasing here. It is difficult for loafers, bad workman, and those who miss work to evade the comrades' courts.

Now that the party is adopting measures to augment the economy and to form a food-producing program for the purpose of further improving the well-being of the Soviet people, it is imperative for everyone to strengthen the struggle against the misappropriation of socialist property, squandering, bad management, corruption, and speculation and to be merciless toward those who do not want to work honestly and build their own well-being at the expense of income not derived from labor.

The recently adopted additional legislative acts for strengthening the struggle against gross violations of regulations pertaining to trade and public services were accepted by the workers with satisfaction.

It is gratifying that public participation in the struggle to strengthen socialist order is becoming ever more prevalent. The creative workers of literature and the arts, cultural and educational institutions, the theater, music, television, and radio are making an important contribution to this important cause.

In noting this professional holiday the employees of the Moldavian militia are evaluating the results of their work from the point of view of self-criticism and are concentrating their attention on unresolved questions. They will exhibit more initiative, an adherance to principles, persistence, and irreconcilability in the struggle against any violations of Soviet law and order in order to make a worthy contribution to the implementation of the decisions of the 26th Congress of the CPSU and the 15th Congress of the Communist Party of Moldavia.

Aslanov Observes Soviet Militia Day

Baku BAKINSKIY RABOCHIY in Russian 10 Nov 81 p 3

[Article by Azerbaijan SSR Deputy Minister of Internal Affairs and Militia Colonel T. Aslanov: "Guarding Law and Order"]

[Text] The Soviet militia can trace its geneology to the third day after the victory of the Great October Socialist Revolution. On 10 November 1917 an historic statute "On a workers' militia" was adopted on the initiative of Vladimir Il'yich Lenin, and for 64 years already the Soviet militia has steadfastly and selflessly served its socialist homeland, the people, and the cause of the Communist Party.

The history of our militia is inseparable from the history of the Soviet regime and is indissolubly connected with the name of Lenin, who considered the questions of providing a revolutionary legal system and law and order as an integral part of the teachings on a proletarian state. Given birth by the October Revolution the worker-peasant militia became the first armed vanguard of workers to rise up in defense of revolutionary law and order.

The fighters in the Leninist Guard -- F. E. Dzerzhinskiy, M. I. Kalinin, M. V. Frunze, K. Ye. Voroshilov, G. I. Petrovskiy, and others -- promoted the establishment of the militia and the creation of its glorious traditions.

In the first years of the Soviet regime yesterday's workers and peasants, soldiers and sailors, struggled against crime, political gangsterism, and kulak revolts. During the years of industrialization and collectivization the militia helped the people on the labor front, stopped the machinations of the profiteers of the New Economic Policy, thieves, and speculators, and exposed criminals of all colors. It was rightly considered the friend of homeless children.

During the bleak years of the Great Patriotic War the employees of the militia together with all the Soviet people courageously and steadfastly fought on the fronts and in partisan detachments and vigilantly protected socialist law and order in the interior.

The Azerbaijan militia, which was created on the day after the establishment of Soviet authority in our republic, is one of the fighting detachments of the Soviet militia. A statute on the militia of the Azerbaijan Soviet Socialist Republic was worked out and approved in the first few days of Soviet authority while the instructions concerning the militia-man were formulated somewhat later. Thus was the beginning of the militia of the republic, which was headed by the prominant revolutionary Gamid Sultanov, who was appointed the people's commissar of internal affairs. The Central Committee of the AKP(b) [Azerbaijan Communist Party (of Bolsheviks)] in considering the role of the militia in the struggle to consolidate the young Soviet regime enlisted the faithful sons of the Azerbaijan people, who were boundlessly devoted to the cause of the revolution, into the organs for the protection of public order. In the 1920's and 1930's, Aziz Nazarov, Mamed Amin Shekinskiy, Makhmud Godzhayev, Gusi Gadzhiyev, Ibragim Abilov, and many others who directed the work of the militia in the republic, played an important role in strengthening law and order and in the struggle against gangsterism, speculation, and other criminal acts.

The heroic deeds of our employees during the Great Patriotic War are inscribed in gold letters in the history of the Azerbaijan militia. While routing the aggressors 797 militiamen, sergeants and officers, selflessly fought on the fronts. Among them were Shirin Aliyev and Lavrentiy Dubovitskiy from Baku, Dzhavad Mamedov from Zhdanov, Melik Azizov, and Grigoriy Avshalumov from Kuba, Gadzhibaba Mustafayev from Kyurdamir, Ismail Ismaylov from Kazakh, and hundreds of thousands of others.

The war came to an end, and new replacements who had been tempered by the front joined the organs of the militia. In utilizing their battle experience they skillfully waged a struggle against crime while passing on their experience to younger members of the militia.

The workdays of the contemporary guardians of public order are filled with heroism and selflessness. They vigilantly carry out their duty while protecting the peace of the Soviet people. Employees of the organs of internal affairs speak with pride about holders of the Order of the Red Star Sergeant-Major E. Kuliyev, Senior Lieutenant O. Badalov, M. Khalilov, Senior Sergeant V. Aliyev, and many others who have won the great respect of the workers with their devotion to the cause, courage, and fearlessness in the struggle against criminals. The love and trust of the people, their daily support, and the constant concern of the party and the government inspire the members of the militia in their difficult and responsible service. They are well aware of the importance of the task entrusted to them by the motherland and they have vindicated the trust of the people.

The soldiers of law and order have made their own contribution to the successes achieved by the agricultural workers of the republic in the first year of the 11th Five-Year Plan. People in the uniform of the militia are reliably protecting public order, they have guaranteed the uninterrupted flow of transportation, and have struggled against those who misappropriate agricultural products. They have done everything within their power for the successful fulfillment of the economic plans.

The workdays of the militia represent a daily, collective effort requiring a vast amount of endurance and persistence, good professional training, and ideological tempering. The republic MVD, its organs and subdivisions, are constantly experiencing the effective assistance, the daily leadership, and the demanding attitude of the Azerbaijan Communist Party Central Committee toward its practical work. As a convincing confirmation of this there is the resolution of the Azerbaijan CP Central Committee "On the work of party, Soviet, and public health service organs in Narimanovskiy Rayon on the implementation of the 2 August 1979 resolution of the CPSU Central Committee 'On improving work in the protection of law and order and strengthening the struggle against violations of the law'". Every employee of the republic organs of internal affairs has perceived this important document as a concrete and long-term program of their work in the activization of the struggle against crime, in raising the standards of work, and in comprehensively strengthening the socialist legal system.

The Communist Party exhibits considerable concern for the inculcation of ideological convictions and high standards in workers of the organs of internal affairs. The party organizations in depending on the ahievements of pedagogy and psychology are educating the soldiers of law and order in the spirit of Soviet patriotism, a high degree of vigilance, and a strict observance of the requirements of the oath and regulations. All the forms of political, moral, and esthetic education are aimed at the formation of a communist philosophy among the members of the militia.

Serious attention is being given to improving the composition of the personnel. At the present time almost all the officers in the republic organs of internal affairs have a higher and secondary specialized education. The proportion of specialists with higher qualifications -- jurists, teachers, and engineers -- grows with each year. The Leninist principle of replenishing the militia with the best people from labor collectives and komosomol and trade union organizations is being consistently carried out.

Recently the republic MVD and its local services and organs of internal affairs have increased their attention to the questions of raising the level of professional competency and strengthening cooperation with the public.

We have already long ago become accustomed to the fact that in the streets and public places in villages and cities people with the red bands designating members of the voluntary people's patrols are maintaining public order together with the militia. There are more than 66,000 of them in our republic. The DND [Voluntary People's Patrols] of the Severnaya GRES, the NGDU [Gas and Oil Extraction Administration] imeni 26 Bakinskiye Komissary, the marble plant, the Ship Repair Plant imeni Parizhkaya Kommuna, and the Karadagskiy Cement Plant have shown themselves to good advantage.

The komsomol detachments, comrades' courts, and temporary workers are actively assisting the members of the militia. Approximately 3,000 councils of crime prevention are functioning in the labor collectives of enterprises and institutions. There are 525 public points for the protection of order operating successfully in local residential areas. They have become an important link in the prevention of crime. Good results have been achieved by our voluntary assistants from public points for the protection of order No 41 in Nizaminskiy, 83 in Karadagskiy, 13 in Oktyabr'skiy, 92 in Azizbekovskiy, 61 in Ordzhonikidzevskiy rayons in Baku, 156 in the city of Ali-Bayramly, 202 and 204 in Yevlakh, 160 in Astara, 347 in Khachmas, and others.

In recent years significant changes have taken place in the work of the militia itself: preventive work, the patrol-sentry service, and the operations of on-duty subdivisions are being improved. Socialist competition has been extensively developed in all city and rayon organs and subdivisions of internal affairs. It has become an effective means of improving the operational-service activities of each collective.

Among exemplary workers in the militia it is possible to cite divisional inspectors Militia Captain K. Amirov from the Ordzhonikidzevskiy ROVD [Rayon Department of Internal Affairs], Militia Captain S. Akhverdiyev from the Yevlakhskiy ROVD, inspectors of the Criminal Investigation Department Militia Captain G. Dalukhanov, Senior Lieutenant M. Abduragimov, Militia Captain S. Mamedov, who is the chief of juvenile affairs for the UVD [Administration of Internal Affairs] in the city of Baku, Major G. Babayev, who is an investigator in the Neftechalinskiy ROVD, militia-man A. Muradov from the Akhsuinskiy ROVD, Captain Sh. Kurbanov, who is an inspector in the BKhSS in the Sabirabadskiy ROVD, and many others.

Under the direction of the party and in close contact with the public the personnel of the organs of internal affairs in our republic are making every effort to implement the decisions of the 26th Congress of the CPSU and the 30th Congress of the Azerbaijan Communist Party and by this are making their own contribution to the cause of building communism.

BALTIC REPUBLICS OBSERVE MILITIA DAY

Public Role Emphasized

Riga SOVETSKAYA LATVIYA in Russian 10 Nov 81 p 4

[Article by Latvian SSR Minister of Internal Affairs M. Drozd: "Support From The Public"]

[Text] Consistent measures are being taken in our country for further strengthening the socialist legal system and law and order. Important measures are being carried out for perfecting legislation, improving the work of law enforcement organs, and developing the activism of the public.

In talking about law enforcement organs at the 26th Congress of the CPSU L. I. Brezhnev emphasized: "The Soviet people have a right to demand that the work of the organs will be maximumly effective and that each criminal act will be properly investigated and the guilty parties will receive the punishment they deserve".

The decisions of the party congress and the instructions of L. I. Brezhnev are being carried out. In summing up some of the results on this holiday in accordance with tradition, we can say that much has already been accomplished in the months that have gone by since the congress.

This year we succeeded in reducing crime on the whole. The number of violent crimes was reduced appreciably, and in the second half of the year the same can be said for the reduction of juvenile crime. The creation of special patrol-sentry subdivisions of the militia in a number of cities has had a positive effect on the state of law and order in public places, streets, and parks. The number of highway-transport incidents has been reduced, particularly those which have had serious consequences.

An overall plan for the prevention of crime has been worked out and is being successfully executed in the republic. In addition to law enforcement organs, party, Soviet, trade union, komsomol, and economic organizations are participating in the execution of this plan. The plan provides for a system of practical measures aimed at the prevention of crime, educational measures, and corresponding punishment for crimes committed.

In the first year of the 11th Five-Year Plan the best results were achieved by the divisions of internal affairs in Liyepayskiy, Balvskiy, Preyl'skiy, and Tukumskiy rayispolkoms and the Oktyabr'skiy Rayispolkom in Riga.

Many workers have made a worthy contribution in honor of Soviet Militia Day. Among them I will name divisional inspectors Ya. Shpel', S. Safronov, and A. Melngarsh. It is difficult to overestimate their contribution to the prevention of crime and to the development of public activism. It is the divisional inspectors in particular who are the organizers of preventive measures in residential areas -- in the cities and rural villages.

Some of the best workers in the Criminal Investigation Department, such as P. Naglis, I. Kheynatskiy, B. Buynenko, E. Spila, L. Banenkov, A. Puyat, and many others, have rendered considerable service to the work of exposing crime.

Workers in the service of BKhSS [Combatting the Embezzlement of Socialist Property and Speculation] are contributing much to the prevention and exposure of crimes against socialist property. One of these veterans of this service, youth instructor R. Yust, also an energetic young worker by the name of V. Tsyganov, and many others deserve high praise for their work.

Yanina Tsavro and Liliana Vanaga have had good results in their work in a difficult section -- the investigation of minors. They know how to make contacts with juveniles, to exert an influence on their parents, to maintain close ties with the schools, and to make use of a wide circle of activists.

Among the workers of GAI [State Automobile Inspection] and the highway patrol I would like to mention M. Lasmanis, V. Chaplinskiy, T. Lamberate, and A. Polyakov, who together with their assistants -- public motor vehicle inspectors and members of voluntary people's patrols -- are doing much to provide for the safety of highway traffic.

Service in the militia is not easy work, sometimes accompanied by danger and requiring the maximum output of one's physical and mental efforts. And it should be noted that the absolute majority of workers in the organs of internal affairs are a model of discipline, conscientiousness, principles, modesty, and high standards in the performance of their work.

Qualified replacements enter the republic organs of internal affairs each year. Young people who have completed service in the Armed Forces, graduates of the law faculty of the Latvian State University and the Riga Specialized Secondary School of the Militia in the USSR Ministry of Internal Affairs, and graduates of other educational institutions are sent to us by the labor collectives and the komsomol. Each one of them must be given special attention, help must be given to them in mastering their work and acquiring practical skills, and they should be supported in an atmosphere of friendship if everything does not go well at first.

The power of the militia lies in the comprehensive preparation and high professional standards of its personnel. We now have at our disposal numerous detachments of specialized investigative personnel and veteran instructors for youth. Several organizational measures have been carried out for strengthening the key services of the OVD [Department of Internal Affairs] where a stable nucleus of qualified specialists has now been formed. Work is being accomplished on the development of patrol-sentry and guard services. All this creates the necessary conditions for the more successful accomplishment of the tasks involved in the struggle against crime and for the scaling of new heights in the reinforcement of public order.

Throughout its whole history the Soviet militia has always enjoyed the support of the people. And today we count on the effective assistance of the public, their awareness, and the public activism of all citizens. Indeed, all honest people are directly interested in an exemplary state of law and order.

Many crimes would not happen if it were not, let us say, for the carelessness of apartment managers or the owners of motor vehicles, who create certain conditions for theft and crime. And why should it just be members of the militia or voluntary people's patrols who must stop acts of hooliganism in means of public transportation even in those cases when there are many young, healthy men among the passengers? The militia is conducting a struggle for the strict observance of the regulations concerning the sale of alcoholic beverages, but individual citizens are completely indifferent to the fact that unscrupulous sales personnel violate these regulations by selling alcoholic beverages to minors, for example. It is in just such everyday situations that the public activism of citizens is put to the test.

Our main support comes from public organizations which together with the militia are waging a struggle for exemplary law and order. A network of public points for the protection of law and order has been developed in our republic. These points represent a great contribution to the organization and coordination of efforts directed at the prevention of criminal acts and to providing interaction with the organs of the militia. Public points No 7 in Oktyabr'skiy Rayon, No 2 in Kirovskiy Rayon in Riga, the public point in the Popskiy Sel'sovet [Village Council] in Ventsilsskiy Rayon, and a number of other public points, for example, are working with initiative.

However, several public points exist on paper only, do not carry out any functions, not even have the necessary facilities. To a significant degree, the parties at fault are the ispolkoms of the local Soviets, which are obligated to direct the activities of the public points for the protection of law and order.

The work of voluntary people's patrols has recently improved. This is, above all, the result of their well-defined leadership on the part of DND [Voluntary People's Patrol] headquarters and the councils of public points as well as the result of daily support given to the members of voluntary people's patrols by party organizations and the administration of the majority of enterprises and farms.

The organs of internal affairs, particularly, divisional inspectors and the directors of subdivisions of the patrol-sentry service, should make every effort to strengthen the ties with the public and employ various means of interaction with the DND, komsomol detachments, and activists in public points.

We count on the assistance of the public in the struggle against drunkenness, which has a considerable effect on the state of crime, in the struggle against hooliganism and parasitism, and in the exposure of speculators, who create an artificial deficit of goods. Incidents of bad management and a negligent attitude toward the safe keeping of products, fuel and lubricants, and equipment must be made known to the broad public.

We understand precisely that we still have much to do in order to accomplish the requirements of the party with respect to improving the effectiveness of preventive measures in the struggle against crime and strengthening law and order. In strictly observing socialist laws the republic organs of internal affairs are making every effort to accomplish the new goals outlined by the 26th Congress of the CPSU under the leadership of the party organizations and with the support of the public.

Lithuanian Militia Praised

Vilnius SOVETSKAYA LITVA in Russian 10 Nov 81 p 3

[Article by M. Prochukhanov, first deputy minister of internal affairs of the Lithuanian SSR: "People With An Obligation"]

[Text] The Soviet people are celebrating the holiday devoted to the many thousand member detachment of the sentries of law and order -- the workers of the militia. Created by the revolution and having come from the people, the militia throughout its whole history has always worked with the people and carried out their will. Cherished by the party, the militia of faith and truth serves communist ideals, steadfastly defends the achievements of the October Revolution, and stands its watch on the forefront of the struggle for the further improvement of the cultural, moral, and spiritual life of the members of our society.

The Soviet militia has been entrusted with the task of guarding the interests of workers, protecting them from all kinds of infringements on human dignity, and helping those who have gone astray to return to the true path and become useful to the Fatherland and the people. Within the system of law enforcement organs the militia plays a special and, if you will, most complex role. Indeed, in addition to all this, the militia has been called upon to assist in strengthening a healthy, moral, and psychological climate in the most important social links of Soviet society -- in the labor collective and the family, in the association of citizens in residential areas, and in public recreational facilities.

Only people who are profoundly aware of their official and moral duty and who have high moral-political and strong qualities are capable of dealing with such a complexity of professional obligations. The party and the komsomol send people of a similar make-up for work in the organs of internal affairs and it is in this very spirit that the personnel in the militia are educated. Integrity and communist convictions, patriotism and internationalism, collectivism, and an uncompromising attitude toward anything that hinders the progress of socialist society -- make up the traits characteristic to our personnel.

Those who join the ranks of the Soviet militia from the labor collectives carry out their watch in the protection of public order with honor. Such people are A. Damauskas, who was sent from the El'fa Plant and is acting as on-duty assistant to the chief of the Soviet ROVD [Rayon Department of Internal Affairs] in the city of Vilnius, V. Lyubets, who is a former worker in a radio measurements instrument plant and is presently the deputy section chief of the Criminal Investigation Department of the Vilnius Gorispolkom UVD [Administration of Internal Affairs], A. Navitskas, who was formerly an agricultural worker and is presently an employee of the Alitus City ROVD, and many others.

At the 26th Congress of the CPSU Comrade L. I. Brezhnev emphasized that the professional knowledge of workers in law enforcement organs should be combined with social courage, integrity, and justice. The make-up of a Soviet militia-man is unthinkable without such traits as discipline and initiative, decisiveness and resourcefulness, endurance and self-control, courage and selflessness. A readiness to accomplish heroic deeds, that is, to exhibit one's best human and professional qualities under difficult circumstances -- is the crown of dignity for a militiaman.

It is just such qualities that were exhibited by Yonas Gazhyunas, senior lieutenant of the militia and divisional inspector of the Tel'shyayskiy ROVD, who entered into a skirmish with three armed criminals. Though wounded, he did not hesitate and detained one of them, and later -- the remaining. In a similar situation Senior Lieutenant Osval'das Straukas from Plunge, who was also wounded by bandits, did not hesitate or retreat. With the help of several citizens he organized the pursuit and arrest of the group of criminals, who attempted to escape in an automobile.

The names of our comrades who have given their lives for the life and peace of others will remain in the eternal memory of the people. It is not without emotion that we recall Militia Major Yuozas Paltanavichyus and Captain of Internal Service Lyudas Neshukaytis, who gave up their lives in time of peace in the defense of state interests and the rights of citizens.

The short, laconic entries in the archives, "Died in the performance of official duties", for the younger generation of militia-men serve as pages from the textbook of courage, determination, and boundless devotion to their duty and revolutionary traditions.

The organs of internal affairs are contributing much to the struggle against encroachments on socialist property and the personal property of citizens and to the education of people in the spirit of a sacred respect for public property and intolerance toward such remnants of the past as speculation, cheating, abuse of official position, drunkenness, and lack of discipline. Such employees as N. Osenenko and I. Vitkauskas from Vilnius, R. Shnyukshta from Klaypeda, Yu. Narkyavichus from Vilkavishkis, and others have distinguished themselves in their work within the system of the BKhSS [Combating the Embezzlement of Socialist Property and Speculation].

Any kind of order begins with preventive measures. Preventive educational work with respect to the law remains at the heart of all the work carried out by the militia. Here such qualities in the militia-man as honesty, high standards, politeness, and consideration are especially valuable. Along with a high level of professional qualifications they are a prerequisite for the exemplary execution of official duties by militia-men. And this in turn evokes a sense of gratitude among the people, creates around the militia an atmoshpere of trust and public support, provides discipline for citizens, and educates them in the spirit of a respectful attitude toward the law and guardians of the legal system.

The gratitude of citizens whom the militia-men have helped in a difficult moment is perceived as the highest award for their work. Expressions of gratitude to Chief of the Soviet ROVD S. Burokas for his sensitivity toward people were written in a letter from R. Lelyaykis, a resident of Vilnius. Comrade Khimkova from Druskininkay writes about the warmth and concern of Lieutenant-Colonel of the Militia Yu. Yurchyukonis. V. Veresov, a war invalid from Vologda, expresses profound gratitude to M. Petrovskiy and V. Shul'tsas, employees of the Criminal Investigation Department, in the capital city of the republic. There are many such letters, and they cannot help but evoke a sense of legitimate pride in the noble and necessary militia and in our soldiers of law and order.

Members of the militia carry out their endless watch day and night. These people of a special make-up and nature, soldiers of an invisible front, who have sworn allegiance to the law and law and order, are acting as legal representatives of state authority in the name of and on behalf of the people. And from all their heart the people congratulate the knights of public order on their professional holiday. And along with them the country honors the army of voluntary people's patrols and public activists who are standing side by side with the militia guarding law and order and the socialist legal system.

Minister of Internal Affairs Interview

Tallinn MOLODEZH' ESTONII in Russian 10 Nov 81 p 2

[Interview with Estonian SSR Minister of Internal Affairs M. O. Tibar by M. Levin, date and place not specified]

[Text] As with anything, if a conscientious attitude is adopted, "This service is both honorable and difficult". These are the words that are sung in the popular introductory music to the very popular television series entitled "Znatokakh" A series about employees of the Criminal Investigation Department. But in this song -- remember -- they sing about the fact that this work differs from all others: "Again, we must go into an invisible battle". And, indeed, the employees of the organs of internal affairs, whether in uniform or "in civies", armed with a pistol or a magnifying glass, are waging a constant battle for order on the streets and highways, for the observance of laws and social norms, and in general -- for the protection of each one of us. For our mutual respect and for our peace. Regardless of duties or rank the job for all members of the Soviet militia is not easy. However, this is why their official duty is high and honored and is equal to their civic duty. It is no accident that the shoulder straps of the militia-men bear a gold emblem with the State Seal of the USSR: the militia-man is a man of the state.

On the eve of Soviet Militia Day MOLODEZH' ESTONII turned to M. O. Tibar, minister of internal affairs of the Estonian SSR and major-general of the internal service, with a request to answer a few questions.

[Question] Feliks Edmundovich Dzerzhinskiy was one of the original leaders of the Soviet militia. In your opinion, Marko Oskarovich, in what form do the traditions laid down by Dzerzhinskiy manifest themselves today?

[Answer] In a faithfulness to the duty before society. In an understanding of the tasks with which we are faced and in a devotion to the ideals of our state. The concrete work of the Soviet militia is precise, its results are far from being seen immediately. And if our employees do not lose heart, overcome professional difficulties and hardships with determination, it is because we recall the bidding of Dzerzhinskiy: our national militia-men should have a cool head, a warm heart, and clean hands.

[Question] A capacious formula! But to conform to it is probably not easy... What methods do you see for increasing the authority of the organs of internal affairs?

[Answer] The careful preservation of the honor of the uniform. And by this we mean effective measures and an adherance to principles and correct behavior on the part of each employee. And, naturally, the more extensive and stronger our ties with the public, the greater the authority of militia, on the whole. Let us cite an obvious example. There was a time in Tallinn when the greatest number of traffic violations was committed by the taxi fleet. With the help of workers of the GAI [State Motor Vehicle Inspection] service and public inspectors and with the help of the press and a system of measures adopted within the taxi fleet itself not only have violations been reduced to a minimum, but the taxi drivers themselves have begun to set the tone on the streets of our city. Thus making regulations known and a skillful application of our sanctions have contributed to an increase in the authority of the militia. For our own part we are conducting an ardent struggle to increase an adherance to principles and to ensure that there is strict conformity with our principles in the actions of each employee of the Ministry of Internal Affairs. I will not say that everything has already been accomplished in this respect and that we have eliminated all violations, but improvements cannot be denied.

[Question] To talk about the militia -- means to talk about its personnel. In the first few years of the Soviet regime the personnel in the Soviet militia were basically replenished from the komsomol...

[Answer] And today also. In this is yet another tradition laid down by Feliks Edmundovich. The educational level of employees has become very high. Youth make up almost half of the employees in some rayon departments of internal affairs. On the whole, our employees have a special or higher education or are studying in a higher educational institution. Why am I talking about this? Because the level of education frequently determines the professional level and attitude toward one's job. They come to us on the direction of party and komsomol organs after having passed an interview by preliminary selection commissions in the raykoms (divisional inspectors are even interviewed in the rayispolkoms). We are striving to keep to a minimum the number of people coming into the militia by chance. That is why so much attention is given to political-educational work. Indeed, each employee reresents the law and, subsequently, he himself must irreproachably conform to it.

[Question] To tell the truth, as a rule, we remember the militia only when we find ourselves in a difficult situation or become witnesses to a violation of the law.

Or when the militia stops our own violations of the law. And few find that pleasant... In a word, your work is difficult! Is that not a pity?

[Answer] No crime is committed without witnesses, certain facts depend on them. Everyone understands this, however, the militia has a difficult time in securing witnesses. And, indeed, an atmosphere of indifference toward illegal acts frequently becomes a prerequisite for crime.

[Question] I remember, Ostap Bender dispersed a crowd of curious bystanders after having pulled out a notebook: "Witnesses, write down your names!"

[Answer] Exactly. In order not to submit and to resist indifference, we constantly strive to expand the ranks of public activists. And the result is that a few years ago we received 100--120 alarms and calls daily, but now we receive up to 300, I repeat, daily. Convincing, yes? And gratifying. Indeed, the fact that people turn to us attests to the growth in their trust. This also means our authority has increased. Incidentally, there is yet another sign of the times: the tolerant attitude toward drunkenness is slowly but surely disappearing. And in this we depend on the public. There is less formalism at meetings of the councils for the prevention of alcoholism in enterprises and residential management committees. In the last few years the number of members of the voluntary people's patrols has doubled in the capital city of the republic, for example, and throughout Estonia tens of thousands of people are participating in the work of the DND [Voluntary People's Patrol], which is a whole army! And now with justification we believe that young people should be accepted into the voluntary people's patrols not just on the basis of their desire, but on the basis of having earned this honor through exemplary work in komsomol detachments, whose assistance we value highly.

You mentioned that we are, on the whole, remembered only during difficult moments? No, that is not a pity. Indeed, are physicians thought of in any other way? What is important is that we render aid in time there where we are needed. The militia is technically well equipped, however, without the activism of all our citizens, without their appreciation, the prevention of crime would be difficult.

[Question] Marko Oskarovich, violations of the law are far from being eliminated, as is known. Juveniles are of special concern. What are the chief reasons here? And what is the first thing the public can do with respect to this matter?

[Answer] Much more thought should be given to the better organization of leisure time for youth. We still have very few study groups and play areas within the housing units, there should be a cafe for youth, all kinds of children's clubs, centers, and parks in every city. And I would like to point out to parents that a child is educated much better in the home than outside of it. When a juvenile ends up under investivation by the section on juvenile affairs, it is frequently too late. The purpose is not to correct, but to prevent the "entry" into a life of crime. When a boy between the ages of 11 and 14 steals an automobile on a dark night, I always want to ask not why he has stolen the automobile, but why he is on the streets at all at that time of the night. There is the suspicion that at home all is not well with the parents. Here I think members of the komsomol should exert an influence -- in connection with evening programs and, above all, in connection with the organization of free time for children of school age. And the militia will always assist them in this matter.

[Question] We began with Dzerzhinskiy's "formula', which describes the professional qualities of an employee of the militia. Let us try to find a "formula" which describes the work of employees of the internal service.

[Answer] Such a "formula" has already been found: "My militia protects me"! This could not be said any better. Indeed, our main task consists of ensuring that each resident of the republic (and of the country) feels that he has someone on whom he can depend. This is our goal, and this is why we exist.

[Question] I would like to thank you for this conversation and to congratulate all the workers of the militia on their national holiday and wish them new successes.

[Answer] Thank you. We will continue to do our job.

TAJIK INCOMES STEADILY INCREASE

Dushanbe TOJIKISTONI SOVETI in Tajiki 22 Nov 81 p 2

[Article by A. Boymatov, candidate in economics, director of the "Tajikistan VNIIK" branch of the USSR Ministry of Trade: "Care of the Populace"]

[Text] During the years of Soviet rule, the face of Tajikistan has changed beyond recognition. It has been transformed from a backward province of imperial Russia into a modern republic with a highly advanced industry and agriculture and a constantly rising standard of living.

Year by year the Communist Party and the Soviet government are steadily working out plans aimed at raising the living standards of the populace. The people's socialist state concerns itself constantly with the workers' wellbeing and the improvement and development of education, science and culture. Favorable conditions for personal development at work and recreation have been provided on a regular all-round basis. There is a steady rise in the population's income and in their consumption of material and spiritual benefits. Each member of the socialist society is guaranteed an equitable share of social security. The rise in the standard of living is directly linked to the national income. At present more than three-quarters of the national income is used directly for popular consumption.

The real income of the populace during the last three five-year plans has almost doubled. The reasons for this steady increase are, first, that the prices of basic consumer goods and services and apartment rents have remained unchanged. For instance, retail prices for the majority of foodstuffs and non-foodstuff items have not increased during the past quarter-century, and in fact by comparison with the amount of goods stockpiled, have decreased. Moreover, for the past fifty years apartment rents have not risen, and remain the lowest in the world. Secondly, the wages of workers in industry, services and kolkhozes--the basic source of any rise in living standards--are rapidly increasing.

While in 1965 the average monthly wage for a worker or services employee was R 96, in 1980 this was up to R 143.2, an increase of R 47.2. During the same period the wages of kolkhoz workers have increased 1.8 times, bringing them quite close to the level of pay for urban and services workers.

The rise in material wellbeing is inseparable from the satisfaction of demand for highclass goods and services. This point of the Party's program is reflected in the rapid development of production and retail distribution of goods produced by the people. Tajikistan, as a highly-developed republic of the Soviet East, now manufactures the requisite quantity of products to satisfy the demands of the populace, and even more in the case of a whole range of goods.

During the last five-year plan alone, production of consumer goods increased by more than 1.4 times, and retail sales turnover by 37 percent. Every year, each inhabitant of the republic is sold 580 rubles' worth of various foodstuffs and manufactured articles, representing an 18 percent increase over the beginning of the 10th Five-Year Plan. Foodstuffs distribution has greatly improved and demand for manufactures such as textiles, knitwear, stockings, socks and shoes is being more satisfactorily met. The business of supplying the populace of the republic with everyday necessities is improving.

Community consumer funds are playing a considerable part in raising the standard of living. The amount spent on specialized and advanced education, medical services, public assistance, pensions, scholarships, annual leave, expenses for pre-school institutions and a range of other grants and subsidies that the people of Tajikistan get from community funds passed the 1.1 billion ruble mark in 1980; this comprises 281 rubles per head of the population.

A large amount of the state budget is spent on public education. At present one-third of the population of the republic is receiving free tuition at a school, college or technical college. Seldom do we consider how much this costs the state. For example, in the course of one year the cost to the state for a student in a general secondary school is more than R164; for one in a special secondary school, R 620; and for a student in a college, R 920. All students at technical and vocational training centers are given stipends and provided free with food and clothing. Free medical services for the whole population of the republic constitute an enormous benefit. Thanks to the constant concern of the Party and government, our republic possesses large and versatile polyclinic dispensaries, which provide both towns and villages with top-grade essential services. At present the government spends about R 50 per year for each inhabitant of the republic on health care and more than eight rubles per day for each patient in hospital.

It should be noted that so far as concerns indexes of health care development, the republic has surpassed not only the neighboring Near and Middle Eastern countries but even the advanced capitalist countries of western Europe.

In our country children are treated with great care, and their pre-school education is spent in kindergartens and day care centers. Presently over 110,000 children are being looked after at any one time in the republic's day care centers. Over 380,000 children enjoy vacations every year at summer camps. The cost of caring for one child at a day care center amounts to more than R 450 per year, 80 percent of which is met from state funds.

For the 11th Five-Year Plan, a greater increase is projected in the material and cultural living standards of the people. The 75.3 percent of the national income devoted to consumer use will be raised to 77.3. It is planned to set aside R 16 billion for centralized projects to increase wages and also pensions and subsidies. The minimum monthly wage is to be raised 13-16 percent, to

R 190-195. Kolkhoz workers' incomes from communal agriculture will be raised 20-22 percent. Community consumer funds will comprise R 138 billion, an increase of 20 percent over 1980.

In the present five-year plan many projects are underway to upgrade state allowances for large families. Thus during 1981-83 the granting of paid leave for care of a child up to the age of 1 year has been implemented in part, and it is planned to give an allowance in a lump sum at the birth of the child and to increase the monthly allowance for single mothers. In the 11th Five-Year Plan an improvement is also projected in the living standards of veterans of labor and of the Great Patriotic War. The minimum pension rate will also be raised. The government is to allocate an extra R 6 billion for improving social services.

Among the projects aimed at raising the living standards of workers, special importance is attached to adequately meeting the demand for a variety of goods and services. With this in view, during the 11th Five-Year Plan it is intended to expand production of manufactures, and to increase the range and improve the quality of those products most in demand. By 1985, foodstuffs production will have increased 23-26 percent and light manufactured articles 18-20 percent over 1980; while production of household goods and appliances will have increased by a factor of 1.4.

The volume of retail sales turnover at state outlets and cooperatives in the republic is increasing 36.7 percent, and the volume of consumer services by 50 percent.

The successful implementation of the broad social and economic program initiated by the Communist Party and Soviet Government will ensure a great advance in the material and cultural living standards of the people and a long life for Soviet man.

CHUVASH EXPERIENCE SHOWS NEED FOR LOCAL CONTROL OF AGRICULTURE

Moscow IZVESTIYA in Russian 10 Dec 81 p 2

[Article by A. Yezhelev, special correspondent of IZVESTIYA, Chuvash ASSR, "The Land Needs One Master -- Eleven 'Proms' in One Rayon"]

[Text] Tsivil'sk -- an ancient town on the banks of the Volga -- is the center of the large agricultural region of Chuvashiya. The local farmers are famous for the good yields of grains and potatoes, and have much experience in growing hops. Indeed, the republic is the largest producer of this technical crop in the Russian Federation. And in livestock raising the workers of Tsivil'sk villages have also had great success.

And one more feature: the 16 sovkhozes situated on the territory of Tsivil'sk Rayon are directly subordinate to 11 various organizations and departments (prom). Is it easy to administer such a complex? The following republic associations have farms here: "Chuvashkhmeleprom", "Chuvashsemprom", "Chuvashsvinoprom", "Chuvashplodoovoshchkhoz", "Chuvashptitseprom". Also with farms are the breeding trust "Rosplemob"yedineniya", the All-union Academy of Agricultural Sciences imeni V. I. Lenin section for the non-chernozem zone of the RSFSR, the sovhoz-tekhnikum of the Main Administration of the Ministry of Agriculture of the RSFSR, and the Chuvash Zonal Scientific Research Hops Cultivation Station. There is not a single sovkhoz or kolkhoz directly subordinate to the agricultural administration of Tsivil'sk Rayon. The administration does exist, although it is true that the salaries of the chief and the specialists are somewhat lower than usual, but they have no real authority to manage...

"It is an advisory organ," the first secretary of the Tsivil'sk Party Raykom, Maksim Ivanovich Korotkov, says of it. "All that remains for the specialists to do is give advice, which no one is obligated to follow, and to compile reports. At the November (1981) Plenum of the CC CPSU Leonid Il'yich Brezhnev emphasized: "An important place in developing the food supply program must be devoted to such major problems as perfecting the economic mechanism and management systems -- management of agriculture and the agricultural industrial complex as a whole. And, of course, management at the local level... We must comprehensively strengthen the rayon echelon of management."

At present it is frequently like this: the rayon officials can only consider the farms which are being normally serviced, but they are helpless to assist those in difficulty.

"For example", continues Maksim Ivanovich, "at one time a poultry complex with a capacity of 230,000 laying hens was built at the "Dinamo" sovkhoz. It was a necessary project, but we understood that once such a complex was built that housing for workers would be necessary also. And what happened? During the entire 10th Five-year Plan we requested "Ptitseprom" to allocate the means to construct two 18-apartment buildings. They were included in the plan only last year. As a result, time was lost, and the sovkhoz is in a most difficult situation with regard to personnel. At four hops raising sovkhozes no housing at all is being built, although we requested it long ago..."

The directors of trusts and associations also do not manifest the necessary concern when sovkhozes do not fulfill their plans for production and sale of crops other than those in which they specialize. Lip service is paid to the fact that all branches should operate efficiently, but in fact one struggles with pork, another with hops, while production of "non-primary" crops -- grain, potatoes, milk, wheat -- is in the position of an outcast which "overburdens" the plan in "prom" farms. For example, at the hops raising sovkhozes (of which there are five in the rayon) the very lowest yields of grain are received from year to year -- five to six quintals less than the rayon average. Their yields of tilled crops are noticeably lower. But indeed thousands of hectares of such crops are under cultivation. Could it be that the fields of the hops growing sovkhozes are distinguished by their low natural fertility? No, in their soil characteristics they are not a bit poorer than the rest. There is a different reason.

First of all the difference in yield is explained by the fact that all organic fertilizers are used up by the hops cultivation; there are not enough organics left for the other crops. The rayon has long posed to "Chuvashkhmeleprom" the question: compensate for the shortage of organics at least by increasing deliveries of mineral fertilizers. But the association invariably cites its limited resources, and promises to once more appeal to "Roskhmel'". But what do grain, potatoes, milk and meat mean to an office which manages hops production? Thus none of them has solved the question of fertilizer.

Because of the low yield most of the crops of these very hops growing sovkhozes incur not inconsiderable losses. And the rayon plan is not fulfilled.

Tsivil'sk Rayon is not far from Cheboksary, but directors and specialists of associations and trusts, according to Maksim Ivanovich, are not frequent visitors here. "We do not see them on the farms," he said. And when they do pass by they are home in Cheboksary by nightfall. During such trips, of course, no serious questions are studied, and no problems are resolved. Superficiality is the unavoidable style of management for a distance. They are cut off from the land! How many people have been taken from the villages and resettled in Cheboksary -- indeed hundreds of them in all the "prom" offices... Hundreds of specialists tied down by paper! Just try now to find a specialist on a sovkhoz...

Korotkov began to enumerate: there are no chief agronomists on the "Rassvet", "Pamyati Ul'yanova" or "Pravda" sovkhozes; no chief livestock specialists at the "Bronevik", the "Soyuz" or the "Kommunar"; and no machine operation engineers or economists on several other farms. "Our personnel the breed Cheboksary asphalt Would you like to know how many of them are there at present..."

I was interested in knowing. And it was not difficult to become convinced that the administrative staffs there are in fact inflated. All the associations now have all the services: agronomic, animal husbandry, engineering, economics, construction, accounting-audit, and management. Every "prom" has scores of specialists, but the specialized activities of the branch are handled by only a few people. For example, out of the 24 employees of "Chuvashskotoprom" only three are veterinary specialists. The remainder, in essence, duplicate the work of corresponding sections and services of the Ministry of Agriculture of the autonomous republic.

Fifteen years ago a total of only 86 people worked at the ministry. Remember: 86. Today on the staffs of only six of the leading "proms" there are more than 190 people, whose monthly total salaries are 29,630 rubles plus a temporary duty travel fund of many thousand rubles (association workers travel to farms for temporary duty work)... A large four-story building built in a new rayon of Cheboksary especially for the "proms" is already crowded. And the Ministry of Agriculture? Why it, naturally, has not been reduced in personnel -- on the contrary, it now has 114 employees.

Thus it is seen that the management apparatus for agriculture in the republic has increased from 86 to 304 staff members. But that is not all. For a full picture we must add to this the management personnel of the "Chuvashkombikorm", "Chuvashsel'energo", "Chuvashsel'khozkhimii", and "Chuvashsel'khoztekhnika ", of the republic inter-kolkhoz administration for capital construction, of several land reclamation organizations, and of the laboratories of Scientific Organization of Labor, created to solve problems of rational organization of labor.

My interlocutors in Cheboksary and in the rayons of the republic did not attempt to derogate the significance of the "proms". Of course, the associations have played their role in accelerating the process of specialization and of confirming progressive principles of management. But unfortunately, this has not happened without cost. With regard to the expediency of a particular form of organizational structure, it is necessary to evaluate it in terms of the final results.

Semen Valer'yanovich Valer'yanov who has for fourteen years -- since the day of its establishment -- headed the "Vurnarskiy" sovkhoz related to us in detail how much the "Chuvashskotoprom" association has done to strengthen and develop this farm. "I do not see," he said, "any inconvenience in the fact that the headquarters is located in Cheboksary. It is true that I must travel there not less than once a week. But so what? I have a vehicle, the road is good, and 100 versts is no distance. Of course, many questions which we decide at the association would be decided locally in our rayon if we were not subordinate to the association. But it is not so terrible to travel there frequently -- work proceeds normally in my absence".

Propaganda and the dissemination of advanced experience in feeding cattle are considered by the director to be the most valuable facet of the activity of

"Chuvashskotoprom". To study this experience S. Valer'yanov traveled to the best "prom" farms in many oblasts -- Orenburg, Novosibirsk, Kursk -- in other words "he covered half of Russia"... "Chuvashskotoprom" regularly conducts seminars to study the experience of the most progressive members. These are attended not only by directors but also by specialists from the sovkhozes. "What did the study of advanced experience do for you? How do you use it?"

"We try not to lag behind the advanced ones. Our sovkhoz is far from the worst in the association..."

"And what is the best that you saw in your travels, for example, this year?"

"I went to 'Yadrinskiy'. The average daily overweight there? It is good -- 700 grams and even up to 800... The distance? About 135 kilometers."

"How far is it, Semen Valer'yanovich, to the 'Samolet' kolkhoz, which is in your own rayon? About ten kilometers... Did you not go there for experience? Indeed, in your specialized sovkhoz in eight months of this year the average daily overweight of cattle was 271 grams, while in 'Samolet' it was 897, a little more than in 'Yadrinskiy' ".

"Maybe that was the result of terminal fattening at 'Samolet', while we use general fattening -- the whole herd." The director attentively noted the presence at our discussion of the first secretary of the party raykom, Vasiliy Ignat'yevich Romanov, as if seeking support from that experienced manager, Honored Agronomist of the RSFSR, behind whom is an enormous amount of experience in work directly at the rural level. But how was he to console the director, knowing well the "pluses" and "minuses" of all farms of the rayon!

"Come," I suggested, "compare some more general results. The 'Samolet' kolkhoz completed the tenth five-year plan with a surplus; your sovkhoz suffered a loss of 856,000 rubles. Included was a loss of 325,000 rubles in fattening cattle."

We did not look for such bad examples among the farms subordinate to the association. To pick out one in Vurnarskiy Rayon would be impossible; all the sovkhozes belonging to the specialized association had losses according to the results of the five-year plan. The average daily overweight at the "Chuvashsvinoprom" sovkhozes "Kolos" and "Mir" was nearly twice as low as those of the interkolkhoz swine-raising complex. In overweight of cattle 16 farms were ahead of the livestock association sovkhoz "Vurnarskiy".

The chief of the agricultural administration of Urmarsk Rayispolkom, Georgiy Ivanovich Chernov, was himself the former director of one of the "prom" sovkhozes, and as he expressed it "grew tired of going to the management in Cheboksary because of thousands of pieces of brick". This meant he did not like traveling 100 or so kilometers for just any insignificant reason. As head of the administration which was responsible for agriculture in the entire rayon, he saw in even greater measure the contradiction and absurdity of what is sometimes called the "dual subordination" of specialized sovkhozes. Here there are ten such sovkhozes (and four kolkhozes). "Dual subordination," continued Chernov, "amounts to a situation in which the 'proms' issue instructions and collect reports, while everyday matters and needs of the farms are practically handled by rayon organizations. And frequently they lead to misunderstanding or contrary actions to those of the 'prom'."

"Take a simple example," relates Chernov. "On a livestock association sovkhoz spring sowing is in progress. I see a field of excellent barley. Consider, I say, conserving all the grain from this field for seed. You need it, and you can help out your neighbors a little -- their barley did not ripen well. But mow it at the right time and let it lie in swaths. It seemed to be agreed. The agronomist concurred, as did the director. But a couple of days later I went there again, and what did I find? The barley was already threshed and the hay was shocked. Back at the sovkhoz I asked what had happened. Excuse us, they explained, an order came down to us to immediately cut all the barley and deliver the grain. So we did so, maybe for fodder." And they remained without certified seed.

What happens? We assist the sovkhozes, at least to the extent of our capability -- and then things like this. We can control, advise, recommend, but require -- excuse us, they say, but we have our own superiors...

Chernov, as well as Korotkov, in no way doubts that specialization is one of the most important prerequisites for efficient conduct of agricultural production. But this does not mean that it is mandatory that governmental superstructures in the form of associations and trusts must arise in oblast and autonomous republic centers, and that several "proms" must stand above the farms of a single rayon. Such a dispersal of authority in management impedes, and very substantially, the process of interfarm cooperation and agro-industrial integration, the complex socio-economic development of the rayon.

I requested the chief of the "Chuvashskotoprom", Mikhail Ivanovich Zhirnov, to make an appraisal of this situation.

Mikhail Ivanovich has headed the association for only a year, having moved here from Shumerli, where for a long time he was a livestock specialist of the rayon agricultural administration. Of his present job he said: "It is difficult to effectively manage an association whose farms are scattered throughout 14 rayons."

"Chuvashskotoprom" did much over a period of 15 years in connection with establishing a production base. It placed vitamin-grass meal units in almost all sovkhozes; built combined fodder shops, many hay trenches, and devices for active ventilation of hay; and constructed new livestock barns. But in spite of this, the necessary fodder base was not established, and the sovkhozes were not able to feed out the number of head of livestock that their farms would accommodate. In the best years the farms were provided with only 58-60 percent of the required feed. The average daily overweight of livestock on the specialized sovkhozes of "Skotoprom" did not exceed the average indexes of the other farms. Not a single farm fulfilled the five-year plan. Not a one made a profit. The losses of the association according to results of the five-year plan were 11 million rubles.

Thus, two situations were precisely highlighted in my many discussions in Chuvashiya: the management of agriculture has been weakened in the rayons; and on the other hand, the associations have not insured efficient development of production by the sovkhozes subordinate to them.

"Management must be business-like, specific, operational -- who can object to this?" asks the minister of agriculture of the Chuvash ASSR, V. A. Dubinin. "The rayon was always responsible for meat, grain, milk and potatoes. At that level all questions of efficiency of operation of kolkhozes and sovkhozes were decided; there the fate of the harvest was determined, but what is the rayon today? A certain number of farms divided up according to departmental subordination among various 'proms'; and here and there, not everywhere, kolkhozes, for which the rayon administrations do not have enough specialists to carry out normal work. And even then their staffs are transferred to those same 'proms'. There are many managers, but a true master -- no.

Yes, here is really something to ponder..."

U.S. ACCUSED OF EXPORTING COUNTERREVOLUTIONS

Moscow APN DAILY REVIEW in English 5 Jan 82 pp 1-4

[Article by Spartak Beglov, Novosti political analyst: "The Worse for All, the Better for Washington"]

[Text] After Chile and Afghanistan there came Poland's turn. Washington subjected that country to unprecedented pressure in order to eliminate the social order which it finds objectionable by provoking chaos and fratricidal civil war. Nicaragua has now found herself in a very similar situation. Somewhat earlier this was the case with Angola, Mozambique and Iran, not to mention Cuba which is continuously threatened by American intervention.

Eight years ago in Chile the United States polished its method of massive destabilization of governments with the simultaneous use of external and internal (found within the country in question) levers. At that time the US reactionaries were so skilful in manipulating the trade union of Chilean truck drivers that the country's economy was in a complete mess in the course of several weeks. The Allende-led Popular Unity Government failed to take emergency measures in time. As a result, the reactionary and terrorist junta of Pinochet captured power without much effort and has since been engaged in the Washington-approved orgy of violence.

But a corresponding scenario proved to be a flop in Poland. Lessons of history do have their effect. Hence, Washington's truly hysterical reaction to the imposition of martial law by the government of Jaruzelski. Scapegoating the Soviet Union for the failure of the US scenario of "blood bath" in Poland, the White

House has betrayed yet another sinister feature of its global policies--its readiness to sacrifice the interests of the highest order--international cooperation, detente, disarmament and lasting peace--to blind emotions.

Poland is not Chile, however. To begin with, the CIA's sway in Chile a decade ago was facilitated by that country's location on the outskirts of a far-away continent. Meanwhile, Poland is a nerve centre of world politics. It is located on a social, political and military border dividing the two alliances and the two opposite social systems. Interlacing in Poland are vessels which are feeding the young organism of detente, trade and other exchanges, something, on which the destiny of peace and the economic future of Europe increasingly depend.

Having failed to make Poland a second Chile, the US has embarked on an all-out effort to tear this tissue asunder by sanctions. In so doing, Washington pays no attention to the fact that it may hit at the most vulnerable and sensitive centres in the political and economic structure of its own partners in the process.

Washington's provocation in Poland has crowned, as it were, the year-long record of the US Administration's foreign policies. This record is notable for the US failure to contribute to the solution of even one global problem. The US did not help in any way either to lessen nuclear war danger, or solve the problems of developing nations, or weaken destabilizing factors in the Western economy, or find a way out of the Middle East blind alley, or to show a more realistic approach to changes in Central America, or to achieve a settlement in the South of Africa, or establish normal relations with the socialist world.

Conversely, the Administration was trying to pour oil on the flames of each and every dangerous and complicated situation. In other words, it acted in line with the principle "the worse, the better," that is the worse for the rest of the world, the better for the United States.

The past year can well go down in the history of world relations as a year of the export of "crises made in the US," a year of the export of a "limited" nuclear war doctrine in Europe, a year of the export of the doctrine of countering "international terrorism," i.e. national-liberation movements, to El Salvador, as well as to the North and South of Africa.

This was also a year of the export of counterrevolution to Nicaragua, Poland, Afghanistan and Cuba. Besides, it was a year when the US exported its economic crisis to Western Europe (in part, by its stubborn stake on high interest rate from dollar credits) and to the developing nations, for that matter (its refusal to enter into global talks on trade, power engineering and other problems, reaffirmed in Cancun, bears this out). It was also a year of record shipments of US arms to Pakistan, as well as countries in Eastern Africa and the Arabian Peninsula. By so doing the US wanted to create crisis situations around India, Ethiopia, South Yemen and other countries. It was a year of US imperiously brazen behaviour in the Middle East. Suffice it to mention its attack on Libyan aircraft or Israel's impunity in Lebanon, the Syrian Golan Heights and in case of Iraq.

This was the general background against which Washington started using the situation in Poland and around it for fanning passions in one of the most strategically important centres of world politics.

European countries are bound to realize that this is not just another "whim" of their overseas partner. Washington is carrying out a large-scale operation. Its aim is to export in Europe artificially generated tensions and to raise political temperature there to the burning point so as to burn down the main supports of detente and mutually beneficial East-West ties and exchanges in the flames of this crisis, "made in the US."

Washington's unruly encroachments on the structure of detente and international exchanges reflect the Reagan team's specific mentality. It won't be enough just to say that the arms race is their favourite invention (the golden rain of profits reaped by the California military and industrial complex fell on the soil on which they grew), or that militant anti-Communism is their main inspirer. They are obsessed with the desire to snub Washington's partner-rivals in the attempt to bring back the golden age of US capital's complete sway on the world market. They are compelling Japan to unreasonably boost her military spending with the sole purpose of weakening that country's competitiveness. They are going all out to push Western Europe back into the bunkers and barracks of the Cold War so as to deprive it of the opportunity to make independent decisions on security and economic matters.

On top of all that, the Reagan team are craving for alibi for the inevitable and already discernible failure in domestic affairs.

Not knowing how to create, these political "hawks" are capable of destroying anything with amazing irresponsibility. They know nothing about the price, effort and severe lessons behind the Europeans' gain of detente. By a single belligerent phrase or a single signature under the act of "sanctions" the Reagan team are ready to deprive Europeans of dozens of thousands of future jobs, to deny Europe's power industry of "second wind" and to block anything which does not fit in into Reagan's rigid line towards confrontation.

"The worse for all, the better for Washington." Only people of yesterday can reason in this way, people who are making yesterday's speeches and showing inexcusable irresponsibility before the future.

CRITIQUE OF REAGAN'S POLICIES, IDEOLOGICAL OUTLOOK

Moscow APN DAILY REVIEW in English 15 Jan 82 pp 1-4

[Article by Spartak Beglov, Novosti Press Agency columnist: "A Year of the Reagan Administration" A 'Scenario' and Reality"]

[Text] James Reston, the patriarch of American analysts, wrote in one of his latest surveys of the present U.S. Administration's activities that Ronald Reagan had a "scenario," rather than a world policy. Clearly, Mr. Reston meant the inclination of the present American Administration to give a simplistic division of the world into "policemen and criminals" and act accordingly by "punishing" some members of the international community and "encouraging" others.

The "scenario" in line with which the American President acts is based on the film scripts of the early 50s when Ronald Reagan was completing his Hollywood career. It was a time when the cold war was at its peak, making the decisive influence on the mentality of many American politicians. The international crisis of those years stemmed from the fact that America's bosses who had made fabulous capital on World War Two wanted to tailor the world to their liking, which entered into a sharp conflict with the processes of change that had become imminent already. It was then that Washington changed over to a policy of strength and of intimidating peoples with the A-bomb, and to other methods of "rolling back socialism." In those years all American politicians had to swear allegiance to "the ideals of free enterprise" and the precepts of primitive anti-communism. The harsh lessons of history, however, made many of them subsequently change the US foreign policy strategy by making it more realistic. This was true, in particular, of Presidents John Kennedy and Richard Nixon.

Having emerged on the main political scene in the late 70s, Ronald Reagan began speaking and acting as if the decades full of notable events and change had not passed since the cold war. This was also largely due to the efforts of his political tutors whose aggrandizement had been connected with the cold war, bellicose anti-communism and the philosophy of America's "world leadership" and who had been waiting for their new hour of triumph.

Small wonder many episodes from Reagan's scenario are just a repetition of the past which has once proved to be untenable. It is worth recalling Reagan's aim of making "a great leap forward" in the arms race in a bid to gain military superiority over the Soviet Union, accentuating the readiness of the United States to act in the spirit of the concept that a nuclear war is permissible and fightable; the lifting of all restrictions from the elements of the "free market" and its expansion outside of the United States; the active use of all the levers of interference in the internal affairs of other countries, especially socialist nations, with a view to creating maximally favourable conditions for those forces which are obsessed with the idea of restoring capitalism, and the allout encouragement of reactionary and dictatorial regimes which display readiness to be the armour-bearers for Washington in pursuance of its global strategy or its "deputy sheriffs" in the struggle against the national liberation movement.

The economic part of Reagan's scenario, so-called Reaganomics, has also entered a blind alley. The elements let loose by the Administration have only aggravated the ailment of the American economy. This is manifested by the current slump of production, the highest rate of unemployment in the last five years and recurring outbursts of panic at New York's Stock Exchange. Reagan's failure to provide the first proof of the correctness of his economic course by balancing out the Federal budget is particularly vivid: the budgetary deficit will grow by no less than 50 per cent.

Outside the United States, in line with the principle "ruin your neighbour," Washington has made West European countries reduce the influx of means into their economies and has forced them into a tighter embrace of the economic crisis, having raised the interest charge on the dollar operations. At the "north-south" summit in Cancun President Reagan made it clear to the developing countries that instead of talks on global economic problems, the United States was only interested in measures opening up fresh opportunities for the incursion of multinational monopolies into these countries.

Addressing the Foreign Affairs Council in San Francisco on New Year's eve, Secretary of State Alexander Haig said that the fundamental objective of his foreign policy was the ensurance of a favourable international atmosphere for American "aims and ideals." Judging by U.S. moves in Central America, the Middle East and southern Africa, the White House Administration has pointed its gun at precisely those peoples which are waging struggle for their rights and for the restoration of justice that has been trampled underfoot. In his speech at the Council Mr.Haig expressed the blatant hope that in Poland the economic chaos and the spread of hunger would eventually lead to the failure of the measures taken by the Polish Military Council of National Salvation. Such are the true "aims and ideals" of the American Administration with respect to Poland and other socialist countries.

The failure of the Polish part of Reagan's script has led to an outburst of irritation and impulsive actions aimed at "punishing" Poland and the USSR at that. Washington is forcing its partners to unwillingly approve of its actions, though the latter cannot but realise that Poland is just a pretext to drive them into the bunkers of the cold war and, therefore, make them act in line with the American scenario of global confrontation.

This is also realised by other countries. The Indian newspaper National Herald writes, for instance: "Clearly, it's time for the American President to stop attempts to tailor the world according to his wishes. He would do better to consult his allies before taking any actions instead of browbeating them into an agreement with him."

The part of the Reagan scenario which provides for nuclear blackmail and which, among other things, dooms West Europeans to the role of victims in a "limited" nuclear war has entered into a no less obvious conflict with reality. This is eloquently borne out by the unprecedented scope of a powerful anti-war movement whose participants say a resolute "No" to these plans. The reaction of President Reagan to this movement is quite natural for a person whose tutors are people with a mentality formed during the cold war of the 50s. He said that like in the 50s that movement was inspired and financed by the organisations of the worldwide communist front. The alarmed Europeans justly classify this statement as an insult which demonstrates the entire measure of the new Administration's disregard for the problem of the survival of Europe and civilisation as a whole.

During his election campaign Ronald Reagan said, in the spirit of his nuclear mania, that the Soviet Union was behind all the world developments. Prof. George Kennan, one of the architects of cold war diplomacy, who critically reviewed many things thirty years later, almost every day appeals to the White House to stop looking at the world through the prism of a militarised policy, blind anti-Sovietism and obsession with the atomic arms race. There are no indications, he says, of the USSR hatching aggressive plans with respect to the United States. He stresses that he believes in the sincere intention of the Soviet Union to prevent nuclear war.

The experience of the past shows that the attempts to intimidate the USSR and speak to it in a language of power are futile. The Soviet Union conducts a consistent policy aimed at curbing the race in nuclear armaments and resolving all urgent problems through honest negotiations. This policy is the true alternative to Mr. Reagan's scenario. It has been supported by the United

Nations in a series of resolutions adopted at its current session.

Washington's consent to resume negotiations with the Soviet Union on the limitation of nuclear weapons in Europe has been classified in the world as an indication that the sproutings of the interest in a dialogue have appeared on American soil. If these sproutings are not destroyed by a political icy cold in Washington and if Washington displays goodwill and assumes a constructive stand, world politics will have a chance to avoid a second cold war.

U.S., PRC RAISE TENSIONS IN SOUTHEAST ASIA

Moscow APN DAILY REVIEW in English 14 Jan 82 pp 1-3

[Article by Stanislav Modenov: "Who is Raising Tensions"]

[Text] The South-Eastern tip of the giant Asian mainland has been one of this planet's "flash-points" for years. Washington's Vietnam venture and Peking's aggression against the Socialist Republic of Vietnam would seem to have long been things of the past. Yet the tension in the region is still persisting. It is being whipped up by China and the United States. All progress towards stabilising the situation in South-East Asia is contrary to their supremacy-seeking ambitions.

There are some reasons behind this line of Washington. American monopolies have been out to get that very rich market of raw materials and food as well as outlet for their own manufactured goods. Suffice it to note that the United States is meeting 90 per cent of its demand for natural rubber and 72 per cent of its demand for tin through supplies from this region. What attracts the Pentagon is the extremely advantageous strategic position of this region lying at a junction of the Pacific and Indian Oceans.

Peking, in turn, is known to have always claimed to pursue "special interests" and to be entitled to "special rights" in South-East Asia. China has territorial claims practically to all the countries of the region, having designated them as "lost Chinese territories" on its maps. Peking hegemonists are calling even the South China Sea an "inland sea of the PRC".

Both Washington and Peking dream of bringing the whole of South-East Asia under their control. They are exercising unending pressure on the ASEAN nations - Thailand, Malaysia, Singapore, Indonesia and the Philippines in the hope of pushing them into a confrontation with the Socialist Republic of Vietnam, the People's Republic of Kampuchea and the Lao People's Democratic Republic. To cover up their own unseemly acts, the US and China have been circulating a story of their own fabrication about a threat from Vietnam. They are using this as an excuse to urge the ASEAN countries to commit themselves to an arms build-up.

By using a set of various pressure tactics, ranging from outright flattery to direct intimidation - the Washington administration and the Peking leadership have succeeded in drawing the ruling circles of some ASEAN states into their dangerous game. Their collaboration with Peking and Washington can hardly be reconciled with the ASEAN's officially declared objective of making South-East Asia a zone of peace and stability.

The Peking and Washington secret services have turned the Thailand-Kampuchea border into a frontier of an "undeclared war." Secret bases to train and arm Pol Pot's thugs have been set up in Thailand with its government's connivance. Bands of mercenaries are systematically trying to cross into the territory of the People's Republic of Kampuchea.

Peking and Washington are still stubbornly trading on a non-existent "Kampuchean problem." They have never desisted from their attempts at setting up a "united" front of Kampuchean counter-revolution headed by such despicable American and Chinese puppets as Sihanouk, Son Sann and Khieu Samphan.

Chinese planes intrude into Vietnam's air space almost every day, while Chinese warships just as incessantly invade its territorial waters. China continues to hold the illegally seized slices of Vietnamese soil in the hope of turning them into a bridgehead for further aggression. Unending armed inroads and threats "to teach a new lesson" compel the sister nations to divert considerable resources to strengthening their defence capability and upgrading their armed forces.

The Vietnamese, Kampuchean and Lao peoples, engaged as they are in constructive work, have a vital stake in peace and good relations with their neighbours. The very nature of people's rule established in these countries precludes them from showing any hostility, and their foreign policy is a policy of peace and security in the region. Their constructive initiatives offer conclusive evidence of the interest the nations of Indochina have in creating a good-neighbour climate.

Back in July 1980, Vietnam, Laos and Kampuchea called on the ASEAN nations to conclude treaties of non-aggression and peaceful coexistence. That was followed somewhat later by a number of other constructive initiatives which were carried forward in the memorandum of the Ministry of Foreign Affairs of Laos distributed at the UN in September 1981. It proposed, in particular, setting up a standing body to arrange for a dialogue and consultations between two groups of nations - those of Indochina and the ASEAN.

The Soviet Union and other socialist countries have always been at one with those three heroic nations of Indochina, whether in the hard times of war ordeal or now that they are working for a healthier climate in South-East Asia, while upholding their own independence and sovereignty. The latest indication has been the consultative working meeting of the Deputy Foreign Ministers of Laos, Vietnam, Kampuchea, Bulgaria, Hungary, the German Democratic Republic, Mongolia, Cuba, Poland, the Soviet Union and Czechoslovakia in Vientiane on December 18-19, 1981. Its participants, having reaffirmed their full support for the efforts of the three Indochina countries towards establishing peace and stability, stressed that the nations of the region must themselves reach agreement on all regional problems. It was declared that all issues concerning Kampuchea could be settled only by the Kampuchean people and their legitimate representative - the government of the People's Republic of Kampuchea.

USSR HELPS AFRICAN COUNTRIES DEVELOP NATURAL RESOURCES

Moscow APN DAILY REVIEW in English 19 Jan 82 pp 1-4

[Article by Yu. Doletov: "African Oil"]

[Text] Africa is the third largest oil producer in the non-socialist part of the world. Geologists have found much oil in Algeria, Angola, Gabon, Egypt, Zaire, Libya, Nigeria, the People's Republic of the Congo, and Tunisia. Oil has also been discovered in Guinea, Ghana, the Republic of Benin, Ivory Coast, Chad, Cameroun, Sudan, and other African countries. In 1979 alone the number of operating oil wells in Africa increased by 210.

Geologists are looking for oil in the off-shore zones and (hinterland areas of 31 African countries. Oil discoveries are reported every month. These discoveries show that Africa accounts for over ten per cent of the proven oil resources of the developed capitalist and developing countries -- nearly 7,000 million tons. The term proven resources covers the amount of oil which can be extracted by the methods now in use, provided that its production will be non-deficient at today's prices.

The organisation of oil production in Africa proceeded in a situation characterised by the African countries' strong economic and political dependence on the imperialist states. Thus, Algeria was a colony of France, Nigeria, a colony of Britain, and Libya, a formally independent nation, was a raw materials appendage to the world capitalist economy. That was why the foreign monopolies usurped the right to develop oil resources and build infrastructure to suit their selfish interests.

In the early independence years of the emergent states, the Western companies, knowing that the African countries lacked experience and personnel, concealed oil exploration data and tried to monopolise the transportation, processing and marketing of oil. Because of the plunderous concession agreements the monopolies imposed upon African countries, they received an insignificant proportion of incomes from their oil. On the average, their treasuries received some 74 cents from the eleven dollars which made the average price of a barrel (159 litres) in the 1960s.

Apart from that, the Western monopolies hindered in every way African countries' efforts to use natural resources to promote their national interests. In many cases, oil extraction gives rise to associated industries -- oil processing, gas, mineral fertilizers, etc. With few exceptions, Western monopolies did nothing in Africa to promote the development of these industries, alleging that oil extraction was the sole sphere of their operations.

After achieving political independence African countries entered another difficult period in their development -- the drive for economic independence. At this stage the main aim of the African countries to get rid as soon as possible from the domination of foreign capital which has become firmly enrooted in the continent. A major step towards this goal is the struggle of African countries for the right to use their natural resources, oil included, in national interests. Algeria was the first African country to start a successful struggle against the oil monopolies. The Algerian government nationalised most of the property of the foreign oil companies and transferred it to the state corporation SONATRAC. Under the law on oil, adopted on April 12,1972, foreign firms may be invited to the development of oil in Algeria and may function there only as junior partners.

Africa uses up to 60 mln tons of oil products a year. Over half of this amount comes from elsewhere, particularly, to countries which have no oil fields of their own. The sale of oil and oil products is controlled by Western companies there. These companies react to price rises by oil exporting countries by immediately increasing the prices of their products. As a result, African countries which import oil and oil products suffer big losses and show great concern over the growth of prices.

Some emergent states became OPEC members (Algeria, Libya, Nigeria and Gabon). This is important for promoting their independent oil policies.

The actions of African countries towards ousting foreign capital encounter frenzied resistance on the part of Western monopolies which do not want to reconcile themselves with the changes taking place on the continent. In reply to the nationalisation of a subsidiary of British Petroleum by the Libyan government, the oil cartel immediately blocked the sale of Libyan oil from its concessions in the country on external markets. At present, having launched an unprecedented campaign against Libya, Washington has recalled 1,500 American experts, who worked on contract at the oilfields, from that country. The United States has announced plans for discontinuing Libyan oil purchases.

In Nigeria, the Western corporations have reduced the number of derricks for prospecting for oil deposits from 27 to 16.

The governments of African countries are aware that complete liberation from foreign dependence can be achieved only by training their own cadres of oil-industry workers, by developing their own oil-extraction, oil-refining and petrochemical industries, and by building up their own fleet of tankers. In short, through the mastering of the entire oil-industry cycle--from sinking wells to the construction of filling stations.

The striving of young states to place their natural resources at the service of the national interests meets with the Soviet Union's understanding and support. The USSR has rendered large-scale assistance to Algeria in setting up the state sector in the oil industry by supplying SONATRACH with equipment for drilling oil wells. A group of Soviet experts has taken part in specifying Libya's oil reserves.

In Nigeria, Soviet experts, jointly with the local oil-industry workers, are busy erecting new drilling rigs. In 1980, the 800-kilometre Warri-Ikorodu-Ilorin oil pipeline built in that country with Soviet assistance was put in operation.

Much attention is given to the training of cadres of their own specialists in the newly-independent countries. For example, the USSR has assisted Algeria in setting up an institute and a specialised secondary school, and to Nigeria in establishing an institute. These institutions have already trained many specialists for the oil and gas industries in those countries.

Africa is emerging as a major centre of oil production. This process takes place in the period of important political, economic and social transformations in the independent African countries. The initial achievements on this road instill hope in them that their oil and other mineral resources will be used in the interests of national development.

(Pravda, January 18. Abridged.)

WEST'S ECONOMIC CRISIS DESCRIBED

Moscow APN DAILY REVIEW in English 14 Jan 82 pp 1-6

[Article by S. Menshikov, doctor of science (economics): "Capitalist Economy: Crisis Continues"]

[Text] A year ago the Western business press was full of optimistic forecasts. Nearly all bourgeois economists alleged that the bulk of the recession which started in some countries in 1979 was already behind. They consoled themselves by saying that the current recession was less profound and protracted than the 1973-1975 crisis.

However, as the world entered 1982 it became clear that the evaluations of the current state of the capitalist economy are not optimistic and that short-term forecasts are not cheerful. In 1981, as preliminary data show, the national product and industrial output of the developed capitalist countries grew by less than a per cent. General stagnation has been persisting for the second year now.

General indices cover up dramatic events in the main bastions of capitalism. After a fall in 1980, production in the United States grew, but it failed to regain the pre-crisis level and a fall resumed in the summer of 1981. It is believed that the recession will continue for at least another half a year. Whereas earlier the public was promised a growth of four per cent or more, today Administration officials limit themselves to more modest two or even one per cent.

In the past two years in Britain industrial output has gone down by 12 per cent. Although the British officials allege that the worst is behind and that the economy has passed the low crisis point, industrial production remains on a lower level than in 1973. Britain has not lived through such a long period of stagnation since the Great Depression.

In West Germany the indicator of real economic growth stands below zero too. Like in the United States, in West Germany production fell in two waves. For the current year economists promise only a cosmetic growth of only 0.5 per cent.

In Italy and France, industrial output has fallen by about four per cent. A cut in production was registered in Belgium and other countries as well. Growth rates have also fallen in Japan, although it has managed to avoid a recession thanks to overseas commercial expansionism.

The stagnation of such a long duration is something new in the capitalist economy of the past few decades. This time the recession is not very profound. However, the signs of a cyclic revival and a boom are absent. The worst hit are consumer durables, housing and associated industries, which, contrary to the expectations of economists, do not show any signs of emerging from the crisis.

The growth of production is continued to be hindered by inflation which has reduced the real incomes of the working people in many countries. Besides, in 1981 stagnation revealed a number of new features. Bank rates reached an unprecedented high of 15-20 per cent and adversely affected consumer credit and the financial position of industrial corporations. Thus, in the United States the ratio of the liabilities of industrial firms to net worth has reached an all-time high since the war. Interest payments on credits claim a sizable proportion of the industrial profits. Industrialists fear that a new recession can generate a tide of bankruptcies of big companies. That is why the investment programmes are being regularly reduced and the volume of incomplete construction is growing. In Britain massive bankruptcies are a feature of the day.

Another new element of stagflation is the negative effect of the budgetary deficits which have reached record levels in all major capitalist countries. At one time Keynesians regarded budgetary deficits as a cure-all from crises. Today the deficits are considered a disaster because they put the state before the insoluble dilemma of either patching up the holes in the treasury by issuing new paper and credit money and thus promoting inflation, or of limiting the growth of the stock of money in circulation and of making credit dearer, which hiders production and provokes a new recession. Last but not least, economic instability is growing due to dramatic jumps in exchange rates.

Today even bourgeois experts fear that the dragged-out stagnation can turn into another profound crisis. The noted US economist Lester Thurow wrote recently that something more formidable that a moderate recession was imminent and that the economy was threatened with a repetition of the 1974-1975 catastrophe. The almost eight years which have passed since the beginning of the 1973-1975 crisis are a period long enough for the formation of the prerequisites for a new cyclic recession. It is premature to speak about the specific fear features of such a crisis, but the growing contradictions of capitalist reproduction show that this drama is not excluded.

The protracted downturn exacerbated the trade and economic war among major capitalist nations, hindering attempts at concerted action to cure their economic malaise. Western Europe and the United States took more rigid protectionist steps against the penetration of Japanese monopolies. The US government demanded that Japan reduce its custom duties on imported goods from America, so as to cut the latter's enormous trade deficit with its Far Eastern partner. Premier of Japan Zenko Suzuki refused.

The working masses of the capitalist countries were the worst hit by the drawn-out crisis. Even stagnant production, let alone curtailments, inevitably leads to the growth of the army of unemployed. To check the rise in unemployment, it is necessary that output should grow at least accompanied by higher labour productivity. But in reality this does not occur. By the end of the year the number of fully unemployed (according to official data) reached 9.5 million in the USA; in Britain 3 million, in Italy and France 2 million each, in the Federal Republic of Germany 1.7 million and in Japan 1.2 million. Over the past year total unemployment in the six capitalist states went up by almost 25 per cent. The number of unemployed is now 50 per cent higher than in 1975, that is, at the height of the deep economic crisis, and continues to grow.

Despite the fall in world market prices on fuel and raw materials and the attempts by official propaganda to play down the growth in the cost of living, retail prices in the capitalist countries continued to rise with a terrifying force. Inflation in the United States in the past year constituted over 10 per cent, in Britain it reached 12 per cent, in France 14 per cent and in Italy exceeded 20 per cent.

The past year was a turning point in the dynamics of real wages. Whereas in previous years wages at times grew faster than inflation, now the rise in prices in Western Europe everywhere outruns that of nominal pay rates. As for the United States, working people's real incomes (in absolute terms) have been dwindling there for several years now.

Not content with the operation of the economic mechanism of capitalist accumulation, the monopolies and bourgeois states carried on a direct onslaught on the gains and rights of the working people. The US administration put forward and got an economic program through Congress that envisages cuts in allocations for social needs. At the same time, it "solicitously" reduced the taxes on wealthy families and big business. Even officials have had to concede that this program pursues the aim of redistributing income in favour of the rich. Meanwhile the Conservative government in Britain announced its intention to prune various social programs still further and slash grants to the system of education and nationalised industry.

Even in the FRG, where the Social Democrats head the government coalition, a group of experts was commissioned to work out a program under which the taxes on profits must be cut while the growth of wages must lag behind that of prices for several years.

Only in France the government of left forces has been insisting on reforms aimed at the development of the economy and the alleviation of the lot of the working people. But its program of reforms, including the nationalisation of a number of monopolies, meets with strong opposition from rightwing political forces.

The resentment of the masses against the continuing crisis and the reactionary policy of ruling circles shows itself ever more openly even in countries where very conservative elements stand at the head of the trade union movement. Thus, in September 1981 in the USA the leadership of the AFL-CIO was forced to sanction a mass protest demonstration against the anti-people line of the new administration.

The times are gone when the military-industrial complex could befool the masses with its talk about the beneficial role of the arms race. Now millions correctly perceive the excessive military expenditures and the related budget deficits as one of the main causes of stagnant production, inflation, unemployment and attempts to take away social gains from the working people. This additionally spurs them to act in the ranks of the antiwar movement.

Western arms spending has reached unprecedented dimensions. Under the pressure of the military-industrial complex, most of the spheres of economic activity of leading capitalist states have been reoriented accordingly. Arms production has become a permanent and heavy burden for the Western economy, aggravating its crisis phenomena.

In spite of the attempts to conceal the huge profits of the monopolies fattening on the arms race even at the height of the economic recession, the facts of this enrichment are becoming known to the public. Thus, for example, while the after-tax profits of all US corporations on the average fell as compared with 1980, those of the corporations producing MX missiles, Pershings-2, the B-1 bomber, cruise missiles and other weapons of mass destruction again increased.

The lingering crisis in the bastions of capitalism also hit painfully the developing countries. Production slump led to a fall in the demand for oil and raw materials, bringing down the export earnings of many newly independent states. Some of them tried to expand their sales of food and manufactured goods. But these efforts too ran into protectionist custom barriers and the limited effective demand in developed capitalist nations. As a result, the export of manufactured goods from the developing countries is at a standstill, while the world prices of sugar, coffee, cocoa beans and other foodstuffs fell sharply as compared wiht 1980.

The continuing crisis of the capitalist economy eloquently attests to the sharpening of internal contradictions of the system based on the exploitation of man by man, as well as to its inability to solve the urgent problems facing mankind.

KAZAKH HISTORICAL CONNECTIONS WITH EGYPT

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 18 December 1981 carries on page 13, under the regular rubric "Journey Into the Past," an 800-word article by Ghalyn Akmedov entitled "Kifjaq in Egypt." Akmedov's article is concerned with a recent work by the Egyptian Amin al-Khali devoted to the Mamluq dynasty of Egypt (founded 1260) that stresses the importance of a Kifjaq, i.e. Turkic-speaking element among them and of the connections maintained by the Egyptian Mamluqs with the Kazakh steppe. As a consequence a Turkic culture of sorts, including many Turkic literary and cultural figures, flourished in Egypt. Akmedov, noting Amin al-Khali's frequent references to still existing archival materials relating to the Mamluqs, calls for closer study of this Egyptian Turkic culture by Kazakh scholars both in its own terms and in terms of the light that it will shed upon the history of the Kazakhs themselves. The time has come, the author concludes, to look beyond the limited and all but exhausted Kazakh resources in studying the Kazakh past.

KAZAKH STRESSES ISLAMIC CULTURAL TIES WITH MIDDLE EAST

[Editorial Report] Alma-Ata ZHULDYZ in Kazakh No 11, November 1981 carries on pages 187-194 a 3,700-word article by Rakhmanqul Berdibaev on Kazakhstan's historical connections with the Islamic culture of the Middle East and present relations with the Syrian Arab Republic. Cultural relations between the peoples of Kazakhstan and Central Asia and the peoples of the Arabic world go back to ancient times. This closeness in relations was reflected in the use of the Arabic script by the Kazakhs in schools and for literature and for whom knowledge of this script signified learning and culture. Moroever, with the Arabic script came Arabic literature (e.g. "The Thousand and One Nights"), literary forms and conventions while Kazakh writers of the past came to identify with the culture of the Islamic world of the Middle East, some even living most of their lives there and making major contributions to a common Islamic culture.

The author attacks those who deny the importance of the Arabic script for the Kazakhs and of the Kazakh literature written in it and stresses the importance of the many technical and nontechnical loan words in Kazakh from Arabic. A people need not necessarily have, he says, its own script to be literate while the borrowing of words from other languages is an important and desirable linguistic phenomenon. After all, he continues, has not the Russian language itself borrowed from the Turkic peoples just as they have borrowed from the Islamic world. Moreover, Berdibaev goes on, the past connections of Kazakhstan with the Arabs through the Arabic script and Islamic culture are of the utmost importance in terms of present Soviet policy and interest in the Middle East.

Parts two and three of the article deal with the author's own visit to Syria as part of a friendship delegation and the present position of Syria within the Arabic world. The author stresses there the role of the Western Powers as breakers of Arabic unity in contrast to the role of the Soviet Union and its peoples who maintain solidarity and friendship with the Arabic world.

NEW NEED TO COMBAT CHRISTIAN SECTARIANS DESCRIBED

Kiev PRAVDA UKRAINY in Russian 9 Jan 82 p 2

[Review by R. Yarotskiy, candidate of philosophical sciences, of book "Khristianskoye Sektantstvo i Problemy Ateisticheskoy Raboty" [Christian Sectarianism and Problems of Atheism Work] by E. G. Filimonov, Politizdat Ukrainy, Kiev, 1981]

[Text] The propagandists of scientific atheism have long awaited a book such as this. It seems to me that religious believers will find it useful to read also. The evolution of Christian sectarianism under conditions of socialism, the characteristics of the manifestation of the crisis in sectarian associations, questions of overcoming sectarian religiousness, and summarizing the experience of party and public organizations with indoctrination work among sectarian believers — these and other important problems are treated in the book "Christian Sectarianism and Problems of Atheism Work."

The book employs rich historical and concrete sociological material. The author focuses attention on disclosing the causes and consequences of Christian sectarianism and the characteristics of its manifestation under conditions of a developed socialist society.

As the author notes, the crisis of religious sectarianism, which stems from general socioeconomic, social-cultural, and ideological factors, has its own distinctive characteristics in socialist conditions. The degree and depth of the process of secularization (that is, emancipation from religion) of the consciousness, psychology, behavior, and way of life of sectarians is determined largely by the character of the faith, the historical traditions and activism of sectarian communities, and other factors. This process occurs in different ways among the Baptists, 7th Day Adventists, "Pyatidesyatniki" [translation unknown; literally "members of the 50"], Jehovah's Witnesses, and other sects.

All these things give the evolution of sectarianism a complex and contradictory character. Thus, the sects of Orthodox origin (Christ believers, various schools of Molokane, Dukhobory, Subbotniki, Iyegovisty-Il'intsy, and others) have essentially died out or are in their final stage of disappearance. But Protestant sects (imported into our country from the West during prerevolutionary times or during World War II) have to some degree adapted to the conditions of socialism and have shown more flexibility in the survival process.

Therefore, as the monograph under review shows, we cannot represent the evolution of religious sectarianism in socialist society as a smooth, declining curve. Temporary upsurges of religious sectarianism during particular periods and growth in the number of associations and members are possible. In this connection the author draws important conclusions while tracing the process of secularization of the consciousness and behavior of believers as an indicator of the spiritual crisis of Christian sectarianism. He essentially reveals the new type of contemporary sectarian believer.

Social and scientific-technical progress, growth in education and culture, and the development of the mass information media could not fail to affect the consciousness of sectarians, especially the new generations of believers who have grown up in socialist conditions, studied in Soviet schools, and now work at socialist enterprises, kolkhozes, sovkhozes, and other institutions. At the present time, there is emerging among the Baptists, Seventh Day Adventists, and Jehovah's Witnesses a type of believer with a new attitude toward scientific, technical, and cultural achievements, one that conflicts with traditional sectarian norms and wishes and with the cult of sectarian isolation from the world around. Of course, the modernism and adaptation cause, on the one hand, a crisis in the traditional sectarian complex, organizational schisms, and ideological ferment in the communities; on the other hand, they make atheism work with this group of believers more difficult. It requires thorough preparation by atheism cadres.

The book has an important section which analyzes the causes and forms of manifestation of the crisis of sectarianism that is occurring within religious organizations. It finds expression above all in a constriction of the channels through which sectarian religions reproduce themselves, in a decrease in the absolute and relative number of believers and the disintegration of associations (chiefly rural ones), in a qualitative change in the social-demographic structure of the composition of sectarian communes, and in significant departures of cult workers.

The chief source from which sectarian organizations have been replenished still remains the religious family, which the sectarian ideology has begun to view as the "church at home." The leaders of the Christian sects devote great attention to the religious indoctrination of children from religious families, using various means of moral and organizational pressure to pursue far-reaching goals: insuring the future of religion.

But neither the growing activity of the leaders of sectarian communities nor the efforts of certain religious parents to indoctrinate their children in the religious spirit can preserve for the religious family the function of reproducing sectarian communities on their former level.

Particular attention is devoted to the problem of the religious family, children, and the school. This is the area of ideological indoctrination work whose effectiveness has the most direct impact on deepening the crisis of sectarianism and shaping the new type of human being.

The author devotes a special section of the book to analyzing the social and ideological essence of religious extremism in sectarianism. Revealing this phenomenon primarily as an endeavor by cult workers and the leaders of sectarian organizations to surmount the crisis of religion by means of extreme actions leading to violation of Soviet laws, the author discloses the close relationship between the intensification of extremist actions and the intensification of ideological struggle in the current phase. Imperialist propagandist centers are providing moral and material support to religious extremists and incite them to illegal actions.

The reader has an opportunity to learn that religious extremism is a specific holdover from petty bourgeois individualistic psychology and ideology clothed in religious forms. It is not accidental, therefore, that many of the religious extremists are persons with shady pasts, unprincipled people who are dissatisfied with the Soviet way of life, have been in trouble with the agencies of Soviet power for long periods of time, and use their religion to cover up antisocial views and actions.

Many believers are beginning to realize that their extremist-minded leaders have little concern for the interests of the religious communities. This leads to splits and differentiation in the ranks of the extremist sectarian groups. A significant number of believers who formerly followed the extremists blindly are breaking with them and returning to the path of observing Soviet laws.

The tendency for rural sectarian communities to decline and wither away and the adaptation of sectarianism to urbanized conditions are viewed in the context of the objective social-demographic processes of our day.

Under conditions of the socialist city, the author concludes, the evolution of sectarian religion is determined by two opposite tendencies: the intensive process of secularization characteristic of the socialist city, and efforts to step up the activity of sectarian organizations to use traditional channels — the religious family, the community, and the small group — to lessen the influence of secularizing factors, overcome the crisis, and insure that sectarian religion continues on the new basis.

This makes the recommendations proposed by the author for overcoming religious sectarianism especially significant. Summarizing the experience of atheistic indoctrination accumulated in party organizations of the republic and different parts of the country, the author substantiates the need for a comprehensive approach to ideological indoctrination and atheism work among sectarians and raising the level of party guidance in this important sector of ideological activity.

REGIONAL

COMMON ROOTS, UNITY AFFIRMED

Kiev PRAVDA UKRAINY in Russian 14 Jan 82 p 2

[Article by N. Kotlyar, doctor of historical sciences: "From a Single Root"]

[Excerpts] Twelve centuries ago a large and mighty state arose on the vast spaces of Eastern Europe, known to the world as Rus' or the Russian Land. The center of this state became Kiev, whose 1,500th anniversary we will soon celebrate. Karl Marx ranked Rus' alongside the Byzantine Empire and the Kingdom of the Francs.

Kievan Rus'. When we turn to this majestic stage in our history, we see before us the ancient Russian people in all their majesty. Drawing ever closer together, they created their language, their material and spiritual culture and their own statehood. They increasingly developed a common economic life together with their common language, territory, culture, consciousness and psychology.

Kievan Rus' could measure its strength against haughty Byzantium. Diplomats from Kiev were received with honor in the palaces of Rome, Paris, London and Krakow. The royal families throughout Europe dreamed of making marriages with the house of Yaroslav.

"It was from this, from Kievan Rus', that the three fraternal peoples take their origins. The history of the ancient Russian state," wrote outstanding historian Academician B. D. Grekov, "is the history of a state which gave the Ukraine, Belorussia, and Great Russia an opportunity to mature and grow. This is the reason for the enormous importance of this period in the life of our country."

The political unity of the Kievan state began to break down in the 1130's. It entered the period of feudal fragmentation.

Soviet science rejects the erroneous view typical of representatives of bourgeois, in particular bourgeois-nationalist , historiography that this period was a time of regression and breakdown of all ties among the Eastern Slavic lands. Study of the numerous sources, documents and artifacts leads to the conclusion that the ancient Russian state was not a unified state only from the 9th Century to the first third of the 12th century, but also that it remained such during the period of feudal fragmentation, when merging processes continued to grow and were only stopped with force by the invasion of Batyr's armies.

Even during the conditions of appanage ["udel"] Russia, which led to the formation of feudal estates and principalities and to marked political isolation of them, other processes continued and went into force: a deepening division of labor and development of economic-cultural ties. These processes promoted consolidation of the country and supported the general yearning of the masses of people for unification of the separate lands into a centralized state. Thus, while the principalities and estates of 12th Century Russia had a certain independence, this did not preclude a number of elements of statewide unity and a yearning by progressive people for unity. This interaction of, at first glance, contradictory processes was the dialectic of social and state development of Ancient Rus' in the age of feudal fragmentation. Developed feudalism brought a different form of state, the federated state, which was appropriate to the level of productive forces achieved at that time and the economic growth of formerly backward frontiers of the Russian land.

In evaluating the political and ideological trends and currents of Russian life of that time, the statement that the struggle among the different principalities for their own particular plan to consolidate Rus' did not produce stable results and generally promoted further feudal fragmentation does not change anything. We emphasize another, more important circumstance: In the second half of the 13th Century and the early 14th Century, despite the fact that Rus' was politically dependent on the Golden Horde of the Khans, the unifying centers of Northeastern, Southwestern and Western Rus' continued to exist and gradually gathered strength.

The territories of the Russian, Ukrainian and Belorussian peoples took shape in the 13th-16th centuries. The territorial basis for formation of the Ukrainian nation was the lands of Kiev, Pereyaslavl', Chernigov-Siverskiy, Volyn', Galitsa and Podol'ye, as well as Bukovina and the Transcarpathian region. The ethnic nucleus of the future Ukrainian people formed in the Middle Dnepr region, at Kiev, and settlement of the other South Russian lands centered around it. It was not accidental that the name "Ukraina" [the Ukraine] was given to the middle Dnepr region earlier than to other parts of Southern Rus'. In time (in the 17th Century) this became the name for the ethnic territory of the Ukrainian people. The Ukrainian nation took shape at the same time as the Russian and Belorussian and had ties and mutual influences with them.

The Russian nation formed in the lands of Rustov-Suzdal', Murom-Ryzan', Novgorod and Pskov. Rostov-Suzdal' was the main center of its formation. But the formation of the Great Russian nation had a distinctive feature in that the subsequent political and ethnic processes of the 14th-15th centuries were led not by the old feudal centers of Novgorod, Pskov, Ryazan' or Rostov, but rather by the city of Moscow, which had originated in the 12th Century. Its favorable location on the frontier of the ancient territories of two mighty tribal alliances (the Vyatiches and the Kriviches) and its swift economic development promoted the rise of Moscow.

The Belorussian nation formed in the lands of Polotsk, Minsk, Turov-Pinsk, and partially Smolensk, Volyn', and the Upper Dnepr region.

The formation of groups of lands and principalities that subsequently grew into the territories of the East Slavic peoples by no means weakened the ties among these groups. Just as during the time of the early feudal monarchy of Vladimir and Yaroslav, all the Russian lands were united by common economic, social and cultural processes.

The unification movements which engulfed the second half of the 12th and the 13th centuries continued to spread and grow stronger in later centuries. The result of these movements by all the people was the reunification of the Ukraine with Russia in 1654, when the fraternal peoples who had been forcefully disassociated by foreign aggressors were reunited.

Looking back through the centuries today, we study the role and significance of Kievan Rus' in the formation of historical progress of the three fraternal peoples, the Russian, Ukrainian and Belorussian with a special feeling.

We are proud today of our new historical community that arose under the banner of Great October and is called the Soviet people. This community, an indissoluble alliance of all the classes, social groups, nations, and nationalities of a developed socialist society, is demonstrating its great strength of unity and purposefulness. At the 26th Congress of the Ukrainian Communist Party, Comrade V. V. Shcherbitskiy, a member of the Politburo of the CPSU Central Committee and first secretary of the Central Committee of the Ukrainian Communist Party, emphasized: "In May 1982 we will celebrate a portentous date, the 1,500th anniversary of Kiev. Celebration of this event will unquestionably add another memorable page to the chronicle of the great friendship among the Russian, Belorussian and Ukrainian peoples and all the fraternal peoples of our country and will provide new impetus to work on patriotic and international indoctrination."

The glorious party of communists is leading the peoples of our country down the road of friendship and brotherhood. There never has been and never will be a force in the world that can shake our Leninist friendship, which has been cemented by joint labor and struggle.

MUSLIM OBSERVANCES IN TURKMENISTAN ATTACKED

Ashkhabad SOVET TURKMENISTANY in Turkmen 10 Oct 81 p 2

[Article by T. Ylyasova, candidate of philological sciences: "We Must Put An End To Religious Vestiges"]

[Text] Educating a new man is one of the important measures in the transition to communism. This question was given special attention at the 26th CPSU Congress. Comrade L. I. Brezhnev, Secretary-General of the CC CPSU said:

"Much work stands before us in perfecting the socialist way of life and in rooting out and destroying those things which impede bringing a new man to perfection. This in itself is one of the component parts which is inseparable from party policy; as for the goal of this policy, it is the happiness and fortune of the Soviet peoples."

One of the fundamental things impeding bringing a new man to perfection is religious vestiges, because the new man must be free of religion in the full sense of the word. For this reason, in our country and in our republic serious propaganda is being conducted against religious vestiges and negative customs and traditions. Certainly the growth of science and technology is playing a large role in this question. The invention of all types of machinery, the growth of the role of the natural sciences and chemistry, the mastery of the expanses of outer space have attracted man's attention to the power of science. Thus, the number of religious believers is being sharply reduced.

Despite atheistic propaganda, there are still men among us entwined in the web of religion and shortsightedly practicing harmful traditions and celebrating religious holidays. Among the holidays that are being celebrated is the "feast of sacrifice" [Kurban Bayram]. There are many independent reasons for its celebration. In our opinion those celebrating the sacrifice are, fundamentally, unthinking young people. Such youths and girls generally are not thinking of the basic religious content of the sacrifice, but are interested in adorning themselves, putting on expensive clothes and going from party to party for 3 days without working. They give no thought to the fact that they are pointlessly wasting valuable time. They do not consider that there is no making up for lost time. At such times adults must sit down, talk to them and give them advice. But there are those adults among us who have been unable to break out of the spider web of religion and appreicate that the young are celebrating the religious holiday. This being the case, they are keeping some religious views.

Originally, said Karl Marx, "fear established religion." In earlier times in some tribes, men fearing natural phenomena sacrificed their children or even their great men as religious offerings. Later, it became acceptable to sacrifice animals instead. When the ancient Arabs traveled to Mecca, prior to the establishing of Islam, they killed a cow as a religious offering. Later, representatives of Islam made it obligatory to make a sacrifice at a certain time.

Even today, some people adhere to this religious vestige and make a religious offering by sacrificing an animal. It is known that making a sacrifice is especially widely practiced in Ashkhabad, especially on the outskirts. Why this takes place is the question. It results from the fact that atheistic education is weak among the population. Where atheistic education is conducted weakly, the celebration of religious traditions is practised.

A large group of women, do not work in factories or shops, are occupied with housework. As a result, they do not pay enough attention to cultural growth and religious influences are powerful among them. They influence each other and celebrate every kind of tradition. They are disturbing more than their own families when they make sacrifices; they also meet children of the enterprise and neighbors' children at the playground. The fathers and mothers of the children playing at the playground give no thought to the possibility that these children are being destroyed. As a result, possibilities for every kind of misfortune emerge.

School teachers are doing significant work by exposing the rules of religion. They must hold talks on this topic with children and parents, set up lectures on atheism, win over the participation of students and parents and have the students themselves make talks on the subject of atheism. It would be helpful for the class leader to call a joint meeting of students and parents and talk about the harm of religious holidays and about the view of our party and government on religion. Such discussions should not be alarming to teachers and parents. In fact, the school and family must play a major role in educating the young in the spirit of atheism. Thus, school and family must work together.

Teachers of chemistry, nature, history and literature, especially, can do a lot of work in this question. Literature teachers can give talks on the contents of works of past authors and poets which expose religious tradition, which deal with the content and growth of religious reaction, and can instill enthusiasm among the children to read such works. As for chemistry and nature teachers, they must turn religious omens into a lie by doing many kinds of experiments which expose religion. In order that the work done by teachers be effective, they must be well armed with the theory of Marxism-Leninism.

To educate the new man, a cultured man in the full meaning of the word, one of the most important duties of the day is strengthening atheistic education among the youth.

TURKMEN ATHEISM LECTURES DESCRIBED

Ashkhabad SOVET TURKMENISTANY in Turkmen 16 Sep 81 p 2

[Article by B. Durdybaev, teacher at the Turkmen Polytechnic Institute: "We Are Giving The Young A Scientific-Atheistic Education"]

[Text] The 26th CPSU Congress stated the necessity to strengthen ideological and political education and especially to conduct this work well among some young. Comrade L. I. Brezhnev, Secretary-General of the CC CPSU said in his report at the Congress: "It is no secret that the knowledge and awareness among some young people is connected with political naivete and a lack of sufficient responsibility as far as professional preparation is concerned.... In other words, educational work must be strengthened."

One must perfect teaching and educating students according to the decrees of the 26th CPSU Congress. It is necessary to conduct all educational work seriously among the students. As in other VUZes, in forming the scientific-materialistic world-view among future specialists the course "The Fundamentals of Scientific Atheism" is taught and thoroughly studied, along with the history of the USSR, Marxist-Leninist philosophy, political economy and scientific communism. These make it possible to instill faith in these ideas and implacability towards bourgeois ideology and religion.

The professors and teachers collective of the institute are conducting related work in perfecting their ideational-theoretical levels and raising professional competence. Special attention is given to raising the quality of lectures. These questions are decided on at department meetings and councils of the social sciences department. Methodical assistance is worked out. In order to help students studying "The Fundamentals of Scientific Atheism", the methodical assistance consists of using local materials. There is also a program section for the young atheists' school within the methodical assistance prepared for those studying in the sociology department. Teachers in our department also participate in this work.

At the scientific-theoretical conference of some of the professors and teachers of the institute and the students, data relevant to the decrees of the 26th CPSU Congress and the 22d Congress of the Turkmen CP on the obligations of the scientific-atheistic education for young people and on the use of local materials were heard. At the conference those studying at the young atheists' school under the sociology faculty spoke. Second course students A. Kirillina, Ya. Kerimov, Y. Toplyev,

A. Nurmammedov and O. Ayberenova reported on the educational importance of the honorable traditions of Soviet students, the criticism of religion in Turkmen-Soviet literature, and the position of students in the struggle against harmful vestiges of the past. The recommendation was made to read these reports in auditoriums and to construction crews in the production training period.

A large group of students are studying at the 2-year school of young atheists under the sociology department. Here they are taking a special course in scientific atheism and in mastering the fundamentals of lecturing. These skills are organically connected to the study process. The school of young atheists cooperates closely with the profsoyuz and komsomol organizations of the VUZ.

Everyone studying at this school picks a topic on which to speak at a mass lecture. After the students have made a number of speeches in front of the workers, they receive an evaluation based on theory. Those receiving a high grade for skill are given a second degree called "lecturer-atheist."

Young people receiving this diploma, after leaving the institute, are able to use it by talking with people unable to break away from harmful vestiges of the past and in establishing various measures against harmful religious traditions.

By making use of materials from the 26th CPSU Congress and the 22nd Turkmen CP Congress, and by struggling to make a contribution to improving ideological, political, educational work and atheistic propaganda, our teaching component is trying especially to improve their own work. The teachers manifest much concern to make the content of ideological work especially up-to-date; as for it forms, they do not avoid confrontation with serious themes--the so-called 'related difficult questions'--and they make these forms worthy of the current demands and desires of Soviet youth. The growth in propaganda measures taken by the class enemy and his increased efforts to influence the mentality of the Soviet people by implanting religious views, in particular, is borne in mind.

This work is implemented both in the study process and in the students' free time. In conducting atheistic work among the students, special lectures, talks, question and answer evenings on the atheistic theme, talks on the institute radio network, photo montages, wall newspapers and the widely circulated INZHENER magazine are used.

Giving an atheistic education to youth is a multi-faceted process demanding a creative approach to the work from teachers and exchanges of experience in the practice of scientific atheism. The teachers are always concerned about forming a scientific-materialistic, atheistic world-view in the student youth, in teaching a communist perception of labor, and in raising their social-political and work efficiency. We consider this work our honorable duty and are trying to do this duty most effectively and with the highest quality.

TURKMEN CATEGORIES MUSLIMS BY DEGREES OF BELIEF

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 25 September 1981 p 2 carries a 1,200-word article by N. Kulyev, doctor of philosophical sciences, entitled "On the Interrelationship of Some Religious and Nationalistic Vestiges," in which he says that "in imperialism's ideological diversions against socialism one cannot forget its attempt to stimulate national antagonism and religious thought. Bourgeois ideologists try to show religious traditions as a national characteristic and national feelings and customs as religion," He categorizes religious believers by dividing them into four categories: 1) active believers; 2) doubters who are unwilling to admit their doubt; 3) disbelievers who participate in religious ceremonies; 4) atheists who practice religion for other reasons. About the latter he states that "there are enough of such people among the clergy." He also points out that "religious believers and nonbelievers are equal before the law."

KAZAKH NATIONAL GAMES EXPRESS NATIONAL CULTURE

[Editorial Report] Alma-Ata BILIM ZHANE ENGBEK in Kazakh No 11, November 1981, carries on pages 19-20 a 1,700-word article by E. Saghyndyqov, published under the regular rubric "Readers Share Their Thoughts" and entitled "The Educational Significance of National Games." National games are a widespread form of education and are a means of imparting desired characteristics and forming moral habits. Among the Kazakhs such games are closely associated with past Kazakh heroes and leaders and express traditional cultural patterns and values. The author, who quotes numerous Soviet pedagogs to support his views, calls for more research into the pedagogical significance of the games from a Marxist-Leninist standpoint and increased effort to use them in Kazakh educational programs.

KAZAKH OBLAST SOVIETS STRIVE TO MEET CONSUMER, CULTURAL NEEDS

[Editorial Report] Alma-Ata QAZAQSTAN KOMMUNISI in Kazakh No 11, November 1981 carries on pages 38-45 a 3,300-word article by Q. Zhumabekov, chairman of the Executive Committee of the Dzhezkazganskaya Oblast Soviet of People's Deputies, on what his and other local soviets of the oblast are doing to improve consumer and cultural services in their jurisdictions. The 26th CPSU Congress pointed out that raising the living standards of the Soviet people is a major goal of the 11th Five-Year Plan. Achieving this goal is, in turn, connected with meeting the cultural and domestic services needs of the people as fully as possible. Thus the party congress planned improvements in all areas of consumer and cultural services, including consumer goods supply, housing, cultural and recreational facilities.

This is a logical goal since an individual's creativity and productivity on the job is related to how well his domestic needs are met. Increased productivity and improved work quality, in turn, make possible more free time, more free time means a better rounded, more capable individual. Local soviets of people's deputies have major roles in these areas, with consumer good production a particularly key area. The author then examines the work of oblast and local soviets in Dzhezkasganskaya Oblast with respect to consumer and cultural services, noting the major achievements in an oblast that is but 8 years old. Problem areas are construction bottlenecks, food supply and food services, communications and transportation and difficulties in training cultural workers.

KAZAKH MONUMENTS PRESERVATION SOCIETY STRIVES TO SAVE CULTURAL HERITAGE

[Editorial Report] Alma-Ata ZHULDYZ in Kazakh No 11, November 1981 carries on pages 195-201 a 4,700-word article by Anvar Alimzhanov, chairman of the Central Council of the KaSSR Society for the Protection of Historical and Cultural Monuments, on past achievements and current work of his society published under the regular rubric "Art and Science." He notes that we live in times when man's survival is at stake due to the threat of nuclear war. Just as writers, historians and artists have always devoted attention to recalling the past heroism and cultural traditions of their peoples in times of crisis, the work of the KaSSR Society for the Protection of Historical and Cultural Monuments forms part of this effort, especially in view of L. I. Brezhnev's call for special attention to history and cultural legacies in his report to the 26th Party Congress. The society's work was favorably evaluated at the 15th Kazakh CP Congress; the KaSSR Council of Ministers undertook various resolutions on improving and strengthening the society's work in order to enhance the connection between the past and present and to promote friendship and national pride.

The author reviews current activities of his society in archaeology: the opening and expansion of museums and museum collections; the discovery or preservation of architectural monuments; the propagandization of the past, particularly in schools; cooperation with other, similar organizations, and maintaining archives. Alimzhanov complains of a lack of resources adequate to the enormity of the society's tasks, particularly in terms of the collection, study and storage of archaeological artifacts. He also decries a lack of attention in Russian schools in Kazakhstan to the Kazakh past, Kazakh cultural heritage and Kazakh language and notes that although special textbooks exist for use in the Russian schools for instruction in these areas, they are seldom used. He warns against a worship of technocracy that produces poorly rounded individuals that are "robots" rather than constructive citizens. In this context Alimzhanov seems to suggest that constitutional guarantees to national minorities are not being met in the USSR.

He also laments the general disrespect for past monuments--the "pot hunting" and conscious destruction. The oblasts with a majority Russian population are singled out for castigation in this regard. The author is also concerned about the collection of Kazakh manuscripts and similar local documentary materials by national Soviet (i.e. Russian) organizations when, he suggests, this might be done more properly by his society (thereby keeping Kazakh historical materials in Kazakhstan).

Alimzhanov also notes that the legacy of the past may be expressed in environmental terms. He stresses the cultural importance of the Aral Sea and doubts that the Siberian Rivers Project alone will save it. The author ends by condemning Chinese "cartographic" expansionism (i.e. efforts by Chinese archaeologists and their Western allies such as William Watson to show a Chinese cultural dominance in Turkestan and Siberia in ancient times), stressing the indigenous character of south Siberian and Turkestanian culture and calling for more resources to further the preservational and propagandistic efforts of his society, especially in connection with current interest in the 250th anniversary of the Voluntary Incorporation of the Kazakhs with Russia.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service (NTIS), Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semimonthly by the NTIS, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

Soviet books and journal articles displaying a copyright notice are reproduced and sold by NTIS with permission of the copyright agency of the Soviet Union. Permission for further reproduction must be obtained from copyright owner.

SOCIOLOGISTS CRITICIZE SHORTCOMINGS OF 'ZNANIYE' LECTURES

Moscow SOVETSKAYA ROSSIYA in Russian 12, 13 Nov 81

[Two-part article by N. Mekhontsev and N. Mikhaylov: "The Reputation of the Public Lecture"; "The Lecture and the Audience"]

[12 Nov 81 p 2]

> "[Text] More than 70,000 lectures are given in our country every day. What pressing problems of lecture propaganda are found in such vast activity? This is the subject of discussion by N. Mekhontsev and N. Mikhaylov in this column today. Their statements and assessments are based on sociological studies made in Chelyabinskaya Oblast in 1970 and 1980. About 10,000 workers and employees expressed their opinions about the lectures.

What Do the Statistics Fail To Show?

The lecture had been announced in the rayon newspaper and on local radio. It was attended, in a hall of the Palace of Culture figured for 800 persons, by 15 persons. "Who needs a lecture?" the director of the palace sighed. "Every family today subscribes to three newspapers. Everyone has radio and television. You cannot get any attention with a lecture."

In our matched studies 10 years apart we were primarily interested in the question: how has people's attitude toward lectures changed? And how correct is the view that "you cannot get any attention with lectures today" and that the reputation and popularity of public lectures is gradually declining?

The official statistical reports used by workers of the "Znaniye" society, by contrast, appear optimistic: more lectures are being given, and the number in attendance is steadily growing. Just compare the figures. In 1970 213,000 public political lectures were given in Chelyabinskaya Oblast, while in 1980 more than 354,000 were given; in 1970 11 million persons attended them, but in 1980 it was 17 million.

But are these figures sufficent to judge the actual popularity of the lectures and the real growth of their reputation in the eyes of the audience, No, they are not. For example, let us take the indicator of the number of persons attending lectures during a year. In reality, it records not the number of people, but the number of arrivals at lectures. That is, the same person attending 10 lectures in a year is counted 10 times and the report shows that 10 people attended lectures. But in fact there was one. You will agree that the picture is distorted. The large total audience figure may represent a fairly small group of curious listeners who attend lectures regularly. What about the rest?

The number of lectures given is another very arbitrary indicator. No matter how much we talk today about quality, scientific level, and the effectiveness of lecture propaganda, to be frank the number of lectures given is still the main criterion to evaluate the work of organizations of the "Znaniye" society. Higher-ranking bodies consider a decline in this indicator as undesirable, and in fact intolerable, and if it occurs there will immediately be a menacing question: how could it be that you gave fewer lectures, on atheism for example, than last year? This is terrible! There must be more. How many more? Nobody knows that.

What is the answer? There is just one answer, to make a careful and universal study of the needs and interests of the audience and construct lecture propagandists so that it meets their real needs and interests. Should it just meet them? No, that is not all. Imagine a listener who is avidly interested only in lectures on sexology and brushes aside all other suggestions. The organizer of lecture propaganda should not blindly follow the tastes and wishes of the listener. He must shape the people's needs. But to shape these needs, he must know the people. Let us see how the wants and needs of the listeners are being met, choosing lectures on social and political subjects for analysis.

"Demand" and "Supply"

Let us briefly step away from the problems of lecture quality and what the listeners like and do not like in the lectures. Let us think about quantitative indicators. Many more social-political lectures were given than in 1970. There were marked increases in the number of lectures on the international situation (almost nine percent), the history of the CPSU (13 percent), the state and the law (eight percent), and moral-ethical and pedagogical topics (seven percent). Is this growth adequate to satisfy the interests of the audience? Or, is "supply" possibly outrunning "demand"? The most persuasive, although of course also subjective, answer to these questions can be obtained by matching these figures against the opinions of liteners as to whether "too many or too few" of these lectures are being given.

This is what we did, but the question was asked in a slightly different form: "On what subjects would you like to hear more lectures?" Analysis of the responses testifies without qualification that despite the increased number of such lectures, the audience's needs are far from being met for all of the topics without exception. Moreover, dissatisfaction with the number of lectures given has risen markedly since 1970. Whereas 10 years ago just 8.6 percent of the listeners thought that there were too few lectures on literature and art, for example, today 18 percent of those surveyed mentioned a "scarcity" of these lectures. One out of five listeners complain of a shortage of lectures on moral-ethical topics (in 1970 it was one out of 10), while one out of three say there are not enough lectures on timely issues of CPSU foreign and domestic policy (in 1970 it was just 12 percent).

So we see that lecture propaganda has not reached its top limit yet. And it hardly seems that it ever will, because there is a pattern operating here that is paradoxical at first glance: the more lectures given, the more people want to hear them. In reality there is nothing paradoxical in this at all: it is a characteristic of cultural-spiritual needs that they can never be fully satisfied.

Comparison of the results of the studies in 1970 and 1980 convinces us that the lecture is becoming a more widespread and customary form of cultural activity for most people. It is sufficient to compare these figures: 20 years ago more than 20 percent of the workers at enterprises we surveyed did not attend lectures, and today it is just 10 percent. Today every other worker and employee attends lectures at least once every two months, whereas before the frequency of attendance was typically every four months. The changes have been particularly great with respect to rural audiences. In the early 1970's lecture propaganda in the rural rayons of the oblast was a "sore point" in the Chelyabinsk "Znaniye" society organization. A study by sociologists at that time revealed an alarming situation: 70 percent of the rural inhabitants were unable to attend lectures regularly simply because so few were given. Today 27 percent of the rural inhabitants surveyed complained of this.

So, things are fine? No, not at all. The employees of the Chelyabinsk "Znaniye" society organization and the party committees of the enterprises surveyed are upset by these figures obtained during the study: one out of 10 does not attend lectures at all, and a significant share of the workers and employees attend lectures only once or twice a year.

In practically all labor collectives women with children and young workers recently arrived on the job were among those most "consistently absent." The reasons are simply understandable. If a lecture is given after the working day the alternatives are family concerns, study, sports, and simple rest. It is clear that only an established, stable interest in learning will compel a person to postpone all domestic affairs and go to a lecture at the Palace of Culture. Moreover, the person still does not know how interesting the lecture will be. It is natural that the choice (and the leisure time of a contemporary person must be this, a choice of what to do) by no means always favors the lecture. It is a different matter when lectures are given right in the labor collective, before and immediately after work or during the lunch break.

The opinion of listeners was almost unanimous that that would be better. But it became clear later that a lecture during the lunch break (the most common form of organization for lecture propaganda) still does not guarantee 100 percent attendance. We must wonder why. After all, it would seem that a person has no other choice. Needless to say, no one has the right to force people to listen to a lecture during the lunch break. This is a completely voluntary matter. For example, part of the lunch break can be used to listen to a lecture, or to play a game of dominoes. It can be, but should it be? After all, you can play dominoes any day, but lectures are not that frequent. You need very substantial "grounds" not to go to the red corner with everyone else. Some of the listeners find such grounds.

"Fatigue on the job" and "family circumstances" are among the long-familiar reasons given for failure to attend lectures. What is bad, though, is that many organizers of lecture propaganda hasten to classify them as "objective" reasons, as if to say these things do not depend on us. Is this true? A differentiated approach to listeners, which is required by contemporary organization of ideological work, presupposes careful consideration of the specific characteristics of all categories of working people: the conditions of their jobs, everyday life, and leisure time. Whereas it is possible to organize a lecture at the end of the working day in a shop at a metallurgical plant, this is hardly reasonable in a collective of women at a spinning-weaving factory where many of the workers are in a hurry to get their children from daycare centers and nursery schools.

In the Flow of Information

There is one more "objective" factor that certain lecture organizers love to refer to: the competition of the mass information media.

No, we do not claim that lectures are the most important and popular source of information for our contemporaries. Our study showed that, just as 10 years ago, lectures stand in fourth place in the ranks of information and propaganda media, trailing (and quite significantly) the press, radio, and television. This is not at all unexpected, of course, and it certainly is not "degrading" to the lecture.

In the first place, even if attendance at lectures is done regularly, it is an occasional event (specialists consider 10 lectures a year a good figure), whereas the press, radio, and television accompany us every day.

In the second place, the "information explosion" about which so much is written and said today has naturally led to a redistribution of free time. In the early 1970's, for example, many rayons in the mining regions of the Urals were not in the zone of "consistent reception" for television broadcast. Thanks to artificial communications satellites, the construction of relay stations, and other steps, today there is scarcely a single populated point in the Southern Urals that does not have television. Has this had an effect on people's leisure time, on the activities they choose during free time? Of course, it has.

Finally, the social-political information communicated by radio and television has a number of unquestionable advantages over a lecture in an auditorium. It is up-to-the-minute, vivid, and emotional. It comes into our homes and is offered to us at a convenient time. It is authoritative, with major scientists, leading journalists, and state figures appearing before the television audience.

What about lectures? Do they have any advantages over the mass information media? Yes, they do. We are convinced of this, specifically, by analysis of a projected ("game") situation created by sociologists. During the study persons were asked to answer this question: "If you were given the choice of hearing the same lecture on the radio, on television, or in an auditorium, which would you choose?" The "live" lecture scored a convincing victory; 75.7 percent of those surveyed "voted" for it.

Here are the reasons behind the "vote": a lecture in an auditorium is easier to listen to and is presented in a more lively, intelligible manner — 29.5 percent; you can ask the lecturer questions — 40.9 percent; it is more interesting to listen to a lecture as part of a group — 18.8 percent; after the lecture you can exchange opinions with your comrades — 25.2 percent; and, the talk is more frank at an open lecture than in the media — 14.8 percent. As you see, the reasons need no special comment. The most important one is the need for interaction. This need can be fully met only where the audience and the lecturer are in direct contact and it is this which attracts people to the lecture. It is not just a matter of feedback where the listeners can ask questions and engage the lecturer in discussion. Another type of interaction is equally important. This is the exchange of opinion which, whether organized or spontaneous, always takes place in the audience.

It is silly and artificial to juxtapose the mass information media to the public lecture. The press, radio, and television, of course, report primarily raw information on the events of public life. Unlike them the lecturer's job is not so much to communicate new information as it is to help the audience correctly interpret new phenomena, including those reports which are delivered every day by the technical mass media. The lecture cannot and should not copy the "Latest News" or the "Time" program, just as it cannot claim the currency of the "Today in the World" television broadcast each evening. The social-political lecture is above all a scientific analysis of key facts and events, expanded commentary on them, and purposeful, emotionally sharpened interpretation.

Thus, there is no reason to think that under contemporary conditions the lecture is gradually losing its stature. Whether we should be thinking of new forms for giving the lecture and different, more flexible opportunities for organizing lectures is a different matter.

[13 Nov 81 p 2]

Our Strict Connoisseurs and Judges

In the course of our study we asked listeners to evaluate the lectures and compared the results with evaluations recorded in 1970, 10 years ago. Needless to say, we were clearly aware of the full subjectivity of listener opinion.

We learned that 6.7 percent of the listeners are not satisfied by the quality of lectures given. This seems like a small figure, but still it was higher than 10 years ago, when just 4.6 percent of those surveyed expressed dissatisfaction. Moreover, the number of "good" evaluations declined sharply. Whereas in the early 1970's more than 59 percent of the workers at enterprises surveyed evaluated the lectures they heard as "good," in 1980 it was less than 40 percent. This is a drop of almost 20 percent, and that is a great deal!

What is the reason? Are lectures being given more poorly now? But here is one more curious fact. In the oblast center almost one out of 10 persons surveyed gave lectures they had heard a low evaluation, while in the rural areas it was one out of 50. But we would expect just the opposite. The oblast center, as the point where higher educational institutions, institution of literature and the arts, scientific research institutes, and the like are concentrated, has the most highly qualified group of lecturers. Perhaps the point is not that the quality of lectures has declined, but rather that the level of interest and demands by listeners for the quality of lectures is steadily rising? It is easy to explain why these demands would be higher for an inhabitant of the oblast center than for a rural inhabitant: city dwellers have a higher level of education and a broader choice with respect to lesiure time. If you like, they are more "spoiled" with meaningful information than rural inhabitants.

And it is perfectly obvious, of course, that lectures have not become worse. On the contrary, during the 1970's the qualitative composition of the lecture group improved significantly in Chelyabinskaya Oblast, as it did everywhere, the scientific methods councils of the "Znaniye" society became more active, and the organizational forms of lecture propaganda were refined. But the changes in those who attend lectures today were even more striking; they expect much more from the lecture than 10 years ago. And this is understandable.

The Path to a System of Knowledge

What is behind the evaluations of listeners? What do they expect from lectures and how are these expectations being met? When speaking of the role and significance of lectures, students of lecture propaganda very correctly point to the many different goals of a lecture appearance. Among them are ideological indoctrination, agitation, organization, counterpropaganda, and others. But this is when we look at the lecture through the eyes of the organizer and the lecturer. What if we look through the eyes of the listener?

A person usually goes to the lecture to learn something new and the learning motive is the principal one. For most listeners education, learning new things, is the obvious and self-apparent reason to go to a lecture. Needless to say, there are also other reasons, but they are not so widespread. For example, only four percent of the listeners attend lectures because they need to do so to perform their basic work. For some listeners attending social-political lectures help them in their own propaganda activity. But let us repeat that the direct learning interest predominates. More than 80 percent of the total audience surveyed mentioned this. This is no accident. Lecture propaganda is increasingly being integrated into the so-called continuous education system being formed today.

In itself the idea of continuous education is not so new. "As long as a person lives," A. V. Lunacharskiy noted long ago, "he is also learning."

So why is the idea of continuous education undergoing a second birth today? The point is that the scientific-technical revolution, the complex social problems of the contemporary world, the growing volume of new information, and other factors have made it both objectively and subjectively essential for a person to constantly replenish his knowledge. In other words, the objective need for continuous education which did exist earlier is now felt by more and more people as a pressing personal need. This need cannot be satisfied by educational institutions alone. This is the source of the growing popularity of people's universities, Lenin universities of knowledge, lecture series, and the like. Our study showed, in particular, that one out of three listeners today is no longer satisfied by occasional one-time lectures, but rather prefers to attend a series of lectures in a certain field of knowledge.

In the eyes of the audience the lecture hall is increasingly becoming a kind of educational institution, an aid in their self-education. It is important to note here that the growing desire of people to master "extracurricular" knowledge is usually disinterested. It is not dictated by the utilitarian requirements of vocational improvement, promotion at work, and the like. We will take the risk of suggesting that by no means is everyone fully aware of this trend today. But the future belongs to it. We are convinced that the lecture of the future, of the 1980's and 1990's that is, will be less and less a one-time "information activity" and will come increasingly close to its college analog, that is, providing a systematic form for organizing the learning of educational material.

We will illustrate this thought with a situation that seems to us very symptomatic and deserving of reflection. The sociologists of the Ural University made a study of students in the evening division of the history department, majoring in art history. It turned out that many of them (and they are people from very diverse occupations) are not even thinking of being professional art experts in the future. They are entirely satisfied with their present specializations, growth prospects, earnings, and the like. In other words, they do not need a diploma as such. Then why are they in school? They are there only to satisfy their interest in art better, to receive reliable knowledge on the theory of the history of culture. Could series of public lectures on art organized by the "Znaniye" society today satisfy this interest to the same degree (we emphasize, to the same degree!). This is something to think about, isn't it?

The Main Effect

The fact that learning goals predominate among persons attending lectures certainly does not mean that the educational aspect of the lecture should be considered as the principal and self-sufficing one.

The party lecturer does not simply educate the audience, but also deliberately shapes the position of the audience and influences the development of their labor and political activism. As our study shows, this is exactly the kind of lecture that listeners vote for. Innocuous, politically stale lectures evoke a solid protest from a worker audience. Here is how the listeners responded when we asked them to identify especially intolerable shortcomings in lectures:

- "departure" of the lecture from critical issues (almost 37 percent of the total number surveyed);

- lecture material not closely related to actual life (more than 22 percent);

- dry, monotonous, indifferent presentation of the material (more than 21 percent);

- politically stale, out-of-date material (more than 13 percent).

Need we comment? Our audience is extremely supportive of the person on the podium. They will forgive many things such as an improper accent, poor diction, forgetfulness, and even certain mistakes in presentation of the facts. But they will never forgive indifference, false objectivity, and pseudoscientific abstraction in presentation of the lecture material. It is noteworthy that the quality indicated by listeners as most valued in a lecture was "timeliness of the subject." And while 10 years ago only 11.6 percent of those surveyed put it in first place, in the 1980 study more than 40 percent did.

In this connection we would like to observe that one out of four lectures given today in labor collectives in Chelyabinskaya Oblast is devoted to dissemination of progressive know-how and labor initiatives. Here is just one example. A movement has developed at enterprises of the oblast to conserve ferrous and nonferrous metals. All organizations of the "Znaniye" society, from the oblast organization to the primary organizations, have modified their plans for lecture propaganda with this in mind, refined the subject matter of lectures, opened new departments in people's universities, and organized lecture series and practical conferences.

"The Truth, Only the Truth, and Nothing but the Truth"

In comparing the public lecture with lectures on the radio or television, listeners noted one rather important advantage of the lecture in an auditorium. It is usually sharper, more "unfettered"; as the listeners observed, "People speak more openly and say more." This is something to think about.

What lecturer is unfamiliar with the old, but reliable method of getting the audience's attention: "And now," the lecturer says in a conspiratorial tone, "I would like to share something with you that does not always get into the press, but which I can tell you in this auditorium." We can be sure that what the lecturer says in confidence to "this audience" will be remembered for a long time. We have recalled this oratorical device, which is by no means the best one but still occurs frequently, to emphasize that people come to a public lecture expecting that they can get a direct, truthful answer to any question, that the lecturer will not start "rounding off the corners," "sidestepping," covering up shortcomings, and withdrawing. It is not accidental that the listeners put "evasion of critical issues by the lecturer" first among the most intolerable shortcomings in lectures. During our investigation we suggested that our subjects write down their suggestions for improving lectures, assuming that the topic of "critical issues" would certainly be heard. But the reality exceeded our expectations. Literally one out of three demanded: "answer questions more convincingly"" "speak more frankly about the objective situation in the country and abroad," "do not bypass the existing shortcomings and contradictions of socialism," and "put greater trust in the audience."

Are there grounds for these demands? A survey of 10,000 persons showed that there are. Judge for yourself. More than 42 percent of those surveyed believe that many lecturers sidestep (a more convenient word is "overlook") so-called "critical" issues, and almost 44 percent of the listeners said that lecturers do not give convincing answers to questions asked from the audience.

Why does this occur? There are essentially three reasons for poor answers to listeners' questions. The lecturer does not know how to answer the question and, not wanting to lose authority, avoids answering; it seems to the lecturer that the listener's question does not deserve attention ("why answer that, even a child understands it"); the lecturer hesitates to answer the question directly and truthfully because he believes that may diminish the propaganda effect of the lecture.

Let us discuss the so-called "critical issues." The endeavor to sidestep them not only fails to save the propaganda impact of the talk, as some lecturers believe, it has the opposite effect. It completely destroys it. If only this "figure of silence" discredited just the lecturer! But the consequences are much worse. The lecturer is not a private person. If the lecturer avoids critical problems and talks his way out with generalities and memorized formulas, he betrays the hopes of the people who came to hear him.

It sometimes happens that the lecturer is inadequately informed about the problems of life in the country, oblast, city, rayon, and production collective. Therefore, he does not always anticipate questions that may be asked and has trouble answering them. For several years now the Chelyabinsk "Znaniye" society organization has, with the help of the lecture group of the oblast CPSU committee, conducted an analysis of audience questions. If a question concerns local problems, it is sent to the appropriate organizations, to divisions of the executive committees of the Soviets of Peoples Deputies, and so on. The answers flow together at the boards of directors of city and rayon organizations of the "Znaniye" society and are analyzed in methods sections. After this they are reported at seminars for lecturers. At these same seminars lecturers are given information on complex sociopolitical and economic problems.

These are just a few observations made in the course of a concrete sociological study of lecture propaganda in labor collectives of Chelyabinskaya Oblast. They do not, of course, claim to be universal, and our advice cannot be a "perscription for all actual cases." Nonetheless, we hope that our conclusions and statements will not be without some use to the organizers of lecture propaganda.

ORENBURG OBKOM SECRETARY ON IMPROVED WORK WITH LETTERS

Moscow SOVETSKAYA ROSSIYA in Russian 5 Jan 82 p 2

[Interview with S. A. Chekasin, secretary of the Orenburg Obkom CPSU, by G. Goryachenkov; date and place not specified]

> [Text] Recently the editors received a letter from the communists A. Berezkov, V. Pavlyuchko, and V. Klimantov who are workers at the motor vehicle base of the Orenburg City Health Department. Its authors describe how an unhealthy situation developed at the enterprise. After surrounding himself with lackeys and sycophants, the chief of the motor vehicle base Zolot'ko literally demolished the work of the enterprise in a brief period of time. The communists turned to the party obkom for help. . . . "Our morale climate has improved," the motor vehicle workers write. "Many people wanted to quit before, but now they have decided to stay. The new leadership is basing itself on the party bureau in its work." Orenburg people write to the editors about different things: they ask for advice, they themselves give it, they wish to know about the domestic and foreign policies of the party and state, and they criticize shortcomings. Our correspondent met with the secretary of the Orenburg obkom CPSU comrade S. A. Chekasin and asked him to comment on the mail which the editors are receiving from Orenburgskaya Oblast.

Answer: The letters which have come into SOVETSKAYA ROSSIYA and with which I have been able to become acquainted reflect, in my view, a general tendency in today's mail. In comparison with, for example, last year, there have been appreciable changes in its content. There are now a larger number of practical proposals and criticism has a more constructive character.

Another difference of the present mail from last year's is a decrease in the number of letters connected with personal requests and complaints. . . .

We are happy for such letters, for, on the one hand, they characterize a growth in the political activeness of people and their sincere civic concern about affairs of state and of society as a whole. On the other hand, for us party workers letters are a valuable flow of information about the state of affairs in the localities and about the needs and hopes of the workers of town and country.

A decrease in the number of personal complaints is also natural. It is a result of definite successes in realizing the social and economic program for the development of the Southern Urals. It is also testimony to the fact that the oblast's party, government, and economic agencies are improving, as is demanded by the Central Committee, the work with workers' letters.

A year ago when preparations were being made for the plenum of the obkom at which there was a special discussion of this question we noted that in the work with letters there was less formalism and that the letters were in fact becoming strong living threads connecting the party committees and the population. At that time we calculated that in two years the oblast's party committees had discussed 360 questions raised in the letters of citizens or in oral addresses. On the basis of letters decisions were taken, for example, on improving the party direction of public health and social security agencies and on the work of the Orenburg party gorkom to further develop the material and technical base of trade and of domestic services. In brief, the letters served as a basis for the examination of fundamentally important questions.

Nevertheless, I am far from the opinion that everything which is possible and everything which is necessary has been done in the organization of work with letters. It also happens that some comrades are publicly unstinting in their gratitude for good advice and suggestions, and they willingly provide assurances and promises. But, in fact, they disregard advice, and they regard help to people as a favor. . . . Such facts were brought to light at the plenum of the obkom and were subjected to strict censure. Punishment was meted out to those who deserved it, and those who needed it were corrected. But the most important thing is that a complex of measures was outlined whose realization will to a definite degree guarantee a punctual and business-like and, what it especially important, a conscientious and unbiased examination of letters and oral declarations.

Now all of the letters which come into the obkom are analyzed every month by the topics and problems raised in them. This permits us to have a clear view of what exactly at any given moment is of concern to people in a specific rayon or at a specific enterprise. A study is made of all of the answers which are given by party committees to the authors of the statements and complaints which these committees have been charged with examining. In my opinion, the rule that all of the mail is read by obkom secretaries which has been instituted in the oblast committee has proven to be very useful. Recently, for example, a certification was received from the Pervomayskiy Raykom of the party: the complaints against the director of the so-and-so sovkhoz have been checked out, and the director has been informed of them. From the reply it could be felt that there had been no careful check, while the complaints, it must be said, were very serious and, if valid, then "informing" is only a ground for new complaints and clearly of no benefit to our common work. After all, a lack of principle is not the best ally in increasing exactingness and responsibility toward one's work. I have telephoned the first secretary of the raykom and ordered him to personally look into the complaints more attentively. Incidentally, in accordance with a decision by the bureau of the party obkom, all repeat letters are considered personally by the heads of organizations.

Of course, the oblast's party committees see their chief task not only in having officials react to complaints punctually and correctly, but also in eliminating the causes which give rise to the complaints.

Question: The mail from Orenburg shows that there is one especially painful "sore point"; the supply of housing. What is being done, Stepan Alekseyevich, in order to reduce the complaints about this to a minimum?

Answer: It has happened that in housing construction Orenburg has lagged behind the centers of neighboring oblasts. This lagging has given rise to much criticism and to many requests and demands which it was frequently simply not possible to satisfy. It was frequently necessary to refuse help also for the residents of other cities.

Today the situation has changed sharply. In two five-year plans, for example, in Orenburg alone 2,825,000 square meters of housing has been built, and in the other cities, settlements, and villages of the oblast housing with a total area of 800,000-850,000 square meters is being built every year. Today no one asks any longer: Give me some kind of housing. Today it is a matter of well-appointed apartments. Two years ago the bureau of the party obkom set the appropriate organizations a task: to rapidly provide housing for all people who were in acute need of it. And today I am able to say that quite a bit has been done. For example, of the 5,000 families which have been living in temporary houses built in connection with the construction of a gas complex, 272 families remain to be resettled in comfortable homes.

Question: There are still letters in which people complain about an incorrect approach to the distribution of housing.

Answer: I have to say that complaints of that kind are understandable, but not always justified. There are people who think that their personal inconveniences are the greatest, that their sadnesses are the deepest, and that their reasons are the most convincing. And they do not always know the true situation and the genuine cares of others. And the fact that an apartment has been given not to him, but to his neighbor, is regarded as an injustice. Housing is distributed in our oblast in accordance with the generally accepted regulations and the law. Strict control by party and trade union bodies has been established over this. Nevertheless, we give especial attention to letters in which attention is called to cases of abuses in the distribution of housing. If they are confirmed, we mete out strict punishments to the guilty parties. Thus, for example, an instructor from the Orenburg rayispolkom who obtained an apartment through deceit was removed from his job and expelled from the party. For having "moved forward" the line for an apartment for his wife's sister the chairman of the Akbulakskiy rayispolkom Manannikov was also removed from his job. He was also punished strictly along party lines. Cruel? Yes! But we could not act otherwise, we did not have the right. Because such actions cause not simply a lengthening of someone's line; they cause enormous damage to morale and they inflict damage upon the authority of party and government organizations.

Question: An appeal for help and support to the obkom and to central agencies is often caused solely by the fact that the authors of the letters receive unjustified rejections at, so to speak, home. Complaints of this kind come to SOVETSKAYA ROSSIYA also from Orenburgskaya Oblast. . . .

Answer: I have already spoken about the complex of measures to improve work with letters. They have been working quite effectively, but it is true that some leaders who have been entrused with this important work sector do not always have a deep awareness of the responsibility which has been placed upon them and do not always justify the confidence in their sensitivity, concern, solicitude, and sense of justice which is shown by a person who has appealed for advice and help precisely to them. In evaluating such workers we proceed from the idea that the maturity of cadres is determined to a large extent precisely by how they approach the examination of workers' letters and how objective and principled their reactions are to signals and declarations. And if a person, the more so a leader, does not show this maturity, then, of course, we cannot entrust him with the leadership of a sector. We have to show an especially intolerant attitude toward cases of the squelching of criticism and of prejudice.

I will cite two more examples. The former worker at the Novotroitsa Ferroconcrete Products Plant Kireyeva made a request that she be assigned a pension on privileged terms. Neither the director nor the chairman of the plant trade union committee wanted to help the woman. Eleven months went by on petitioning. Finally, the city social security office assigned her a pension, but not from the day of the submission of the application, but from the day of the presentation of documents. Naturally, new complaints arose: to the city social security office, to the oblast social security office, and to the gorispolkom. And all to no avail: Kireyeva's letters got into the hands of her tormentors. And they, having become "insulted" by the pensioner, deprived her of a privileged pension. The indifference and irresponsibility of the officials was properly evaluated. The party gorkom gave strict punishment to the plant director Kuznetsov, the manager of the social security section of the gorispolkom Nikitina, and the deputy chairman of the gorispolkom Blinov. And the bureau of the party obkom announced a reprimand to the chief of the oblast social security department Timashev.

Comrade Gazimullin, a worker at an "Orenburggazprom" trade and procurement base and a member of a people's control group, opposed the abuses, mismanagement, and rudeness of individual workers and fought for a strengthening of labor discipline. But he did not receive support from the leaders and the public organizations of the base. Worse than that, they began to intimidate him. Having despaired, Gazimullin wrote a declaration on leaving his job. His "request" was hastily met.

On a charge from the obkom, this question was examined by the bureau of the Orenburg gorkom. Justice, of course, triumphed. The former chief of the base Tret'yakov, who at the time Gazimullin's letter was being verified had received a promotion--he began to work as the chief of the trade department--was for his inattentive attitude toward letters and rude suppression of criticism expelled from the party and removed from his job. The same punishment was endured by his successor Kurbanov. The deputy chief of the Workers' Supply Administration Pen'kov had announced to him a strict reprimand which was entered in his record card, and he was also removed from his job. A similar punishment was given to the secretary of the party committee of the Workers' Supply Administration Gol'tsov. For a formal attitude to a complaint by a people's controller a reprimand has been announced for the secretary of the party committee of "Orenburggazprom" Prognimak. Nor have any of the other people who are responsible before the party for squelching criticism and for protecting this evil escaped punishment. Of course, this kind of attitude toward letters is an exception. Usually, the reasons for unsatisfactory work with letters are elsewhere: in an inability to see what stands behind them--a fact or a phenomenon,--and sometimes in the incompetence of the performers. Hence--half-measures, hence--the elimination of individual shortcomings, but not of the reasons that give rise to them. And hence, finally, attempts simply to be silent in reply to criticism. . . . But we are persistently teaching people to work with letters, and this training is producing results.

The decree of the party's Central Committee "On Measures to Further Improve Work With the Letters and Suggestions of Workers in the Light of the Decisions of the 26th CPSU Congress" obliges us not to be complacent with what has been achieved. Let us remember the words from the Summary Report of the CC to the 26th CPSU Congress. "Every party worker and every leader has to look upon a sensitive and attentive attitude toward the letters, requests, and complaints of citizens as his duty to the people and to the party." It cannot be otherwise in our society; for behind the letter there stands a person.

PRIMARY PARTY GROUPS MUST IMPROVE LABOR DISCIPLINE

Moscow PARTIYNAYA ZHIZN' in Russian No 21, Nov 81 (signed to press 27 Oct 81) pp 26-33

[Article by R. Musin, first secretary, Tatarskiy obkom of the CPSU: "Primary Party Organizations: Increasing the Labor and Social Activism of the Masses"]

[Excerpts] Discipline, order and organization are extremely capacious concepts that encompass many demands of socialist management. The strengthening of discipline and organization in production, in every workplace is one of the major reserves for enhancing society's wealth and is an important source for raising labor productivity. V. I. Lenin repeatedly emphasized that a "substantial task in positive communist construction, in the creation of new economic relations and a new society" is directly connected to "iron discipline on the job...." Discipline, he stated, "is the core of all economic socialist construction...."

Socialist labor discipline, as the discipline of a conscious attitude toward labor, is formed by the entire orientation of our life. But this is not an automatic process. The party is ever mindful of all questions associated with improving labor discipline.

The problem of strengthening discipline is resolved directly in the work collective. It is specifically the work collective that under the leadership of primary party organizations inculcates a communist attitude toward labor, high labor discipline and responsibility for the work of the collective. The party implements its policy and strengthens its ties with the masses through the primary party organizations.

Taking into account changes taking place in the economy under the conditions of the further concentration and specialization of production, the Tatarskiy obkom, party gorkoms and party raykoms are continuously improving the structure of primary party organizations in order to secure the optimal placement of communists and through them to exert an ever increasing influence on the economic activity of enterprises, on the education of the work force and on the strengthening of labor discipline. During the 10th Five-Year Plan, the number of our primary party organizations has grown by more than 15 percent. The growth of their number has been accompanied by an increase in the number and improvement of the quality of the communists in these organizations. The average number of members and candidate members of the CPSU per primary party organization is 125 at industrial enterprises and 60-63 on kolkhozes and sovkhozes. In the last 5 years, the number of communists with higher, incomplete higher and secondary education increased by almost 12 percent. The network of shop party organizations and party groups expanded. Between 1976 and 1980, their number increased by 289 and 874, respectively. The qualitative composition of party committee and bureau secretaries improved. Today over half of this category of the party aktiv have higher education.

The party obkom shows unceasing concern for improving the activity of primary party organizations, for strengthening their role in the struggle for the inculcation of conscious discipline, for increasing the labor and social activism of people. In the last 2 years alone, we heard reports from more than 20 primary party organizations, reports from a number of party gorkoms and party raykoms on their supervision. The question of increasing the activism of primary party organizations in mobilizing the masses for the implementation of the decisions of the 26th CPSU Congress was examined at a plenum of the party obkom in August of this year.

The republic's primary party organizations see their principal task to lie in exerting and constant, purposeful influence on the activity of enterprises and organizations, in creating in the collectives a moral and political atmosphere that would enable them to maintain a high degree of organization and discipline, that would ready people for shock work, for the fulfillment and overfulfillment of plans of the first year and the 11th Five-Year Plan as a whole.

The recent decree of the CPSU Central Committee "On the Work of the Nizhnekamskiy Gorkom of the CPSU on Mobilizing Enterprise Collectives to Increase the Effectiveness of Production and to Improve the Quality of Work in the Light of the Decisions of the 26th CPSU Congress" was the mobilizing factor in the organizational work of all primary party organizations of Tatariya in inculcating conscious discipline and in involving all working people in the effort to strengthen this discipline. The Central Committee of the party obligated party organizations to show constant concern for increasing the labor and social activism of the working people and to instill in them a high feeling of responsibility for the quality of work and a thrifty attitude toward public property. The creative search for production reserves must become the norm of the labor activity of each worker, specialist and supervisor.

In the complex of organizational and ideological measures elaborated by the party obkom, gorkoms and raykoms relative to the fulfillment of the given decree, much attention is devoted to further increasing the responsibility of primary party organizations for the formation of an atmosphere of demandingness, comradely mutual aid at every enterprise, on every construction site, on every sovkhoz and kolkhoz, and for the development of the working people's initiative. Communists have been assigned the task of consistently and purposefully strengthening labor discipline, order and organization in all links.

The most important directions of activity of party organizations to strengthen labor discipline are: raising the technical level of production, improving the organization of labor, and creating favorable conditions for highly productive work. This has a favorable impact on the atmosphere in the collective and creates a healthy working mood within the collective.

The acceleration of scientific and technical progress is the basis of strengthening the creative character of labor and is an indispensable condition to the strengthening of discipline. V. I. Lenin emphasized that "technology prescribes the unconditionally strictest disciplin· and the greatest scrupulousness in the observance of the share of work assigned to each person...."

Primary party organizations are doing much to introduce advances of science and technology into production. At their initiative, each enterprise develops comprehensive plans for scientific and technical progress, the implementation of which is under constant party supervision. Meetings of communists and sessions of party committees hear regular reports from economic managers, from specialists on technical improvements of production. The work of commissions that monitor administrative activity promotes the full realization of the given measures.

The increased influence of party organizations during the 10th Five-Year Plan facilitated the introduction of over 4,000 units of progressive equipment and approximately 1800 mechanized and automated flow lines into industrial production and the total mechanization of over 600 shops and sectors.

The republic's kolkhozes and sovkhozes have mechanized most types of field work. New technology is also being actively introduced on livestock farms where many arduous manual operations are also fully mechanized. It should be emphasized that we attach particular significance to the mechanization of agriculture. We consider the fact that in addition to other factors, there are also very acute personnel problems here: despite the large volume of agricultural production on kolkhozes and sovkhozes, they employ only about 18 percent of the republic's employed population.

The raising of the technical level of production of all branches of the national economy made it possible to take a sharp turn toward the primarily intensive path of their development. Under the 10th Five-Year Plan, the share of increased labor productivity due to technical progress measures exceeded 75 percent.

But we are far from complacent. Analysis shows that some republic enterprises are still slow in raising the level of mechanization and automation of labor especially in assembly, loading-unloading and monitoring operations. Nor is enough concern shown for production esthetics, for the creation of favorable conditions for the highly productive labor of the work force. And this, as practice shows, leads to higher personnel turnover and to the slackening of labor discipline. It is for this reason that we encourage primary party organizations to work even more persistently on raising the technical level of production, to analyze the activity of managers and specialists concerned with the technical retooling and reconstruction of enterprises and with the preparation and launching of new production facilities and technological processes.

Improvement of the organization of labor also has a substantial influence on the strengthening of order and discipline. One avenue leading to such improvement is the brigade which works on the basis of the same order [naryad]. The brigade organization of labor is being diffused throughout the republic. Today approximately half of the industrial workers belong to brigades. This progressive form of organization of labor must become still more widespread under the 11th Five-Year Plan. This point is directly indicated in the decisions of the 26th CPSU Congress.

What changes result from the introduction of brigade cost accounting? The changes are numerous. Above all, there is collective interest in and responsibility for the attainment of the end results of the work. The result of all this is a favorable moral and psychological climate. And naturally each violation of labor discipline is strictly evaluated by the members of the collective.

Absentees are reprimanded by fellow brigade members at a workers' meeting and if necessary are punished in monetary terms. Practice shows that intrashift idle time in brigades at machine building enterprises is reduced to one-half or one-third of the previous level and that the average annual increase in labor productivity is nine percent. It should also be borne in mind that the brigade form of organization of labor creates good conditions for upgrading occupational skills, for mastering related specialties, which in turn promotes the elimination of "bottlenecks" and the lowering of losses of working time.

This is why the formation of brigades from the very beginning has been under the constant control of the republic's primary party organizations. They take a most direct part in the formation of the collectives of brigades. And this is not such a very easy matter. The transition to the brigade method requires breaking with the mental attitude that developed as a result of individual piecework over the years in the course of which some people developed the striving to obtain more "profitable" work and were primarily concerned with personal success. For this reason, communists must perform a very important task: use facts and figures to explain to workers the advantages of the brigade method so that they themselves would understand the need to form brigades and would do so voluntarily. But this is still not everything. In the process of forming the brigades, party organizations try not only to consider the intrashop technological flow at the enterprise but also the psychological compatibility and moral qualities of workers. It is necessary to reflect at length before recommending a brigade leader who will to a decisive degree determine the working mood of the collective and the establishment of a healthy moral and political atmosphere within it.

In a word, primary party organizations do a considerable amount of work to introduce collective forms of organization of labor. But it must be said candidly that they lose sight of many things and fail to do everything they should. Thus out of all the brigades, only a few have established party groups. And yet it is well known that the collectives that make the best showing are those that have a firm nucleus of communists capable of leading others, capable of setting the tone in labor, capable of presenting an example of discipline. Therefore, we try to see to it that the organization of party groups in cost accounting brigades would be one of the main directions in the work of the republic's party organizations. We are stern with those who are listless in their attitude toward this question and who underestimate its relevance to the higher effectiveness of social production.

Nor can we be satisfied with the rate of restructuring of the organization of labor. The brigade form is being introduced at a slow pace at some enterprises. The force of inertia, which was discussed at the 26th Party Congress, the habit of thinking in old categories, and the reluctance of some managers to take on additional work to improve planning and timely material-technical supply evidently make themselves known. But who if not the party organizations must be alarmed by such a situation and demand that such officials take a responsible approach to the matter? They have every possibility and all rights to make this demand.

And it is intolerable when a party organization is formal in its approach to the organization of brigades, is not interested in the life of primary production cells, and does not influence the formation of such collectives. For example, in some brigades of the "Bugul'maneftemash" production association, wages were distributed among workers without regard to their personal contribution to the work of the collective and proper attention was not devoted to training personnel in related occupations.

In order to correct the situation, the party obkom makes stricter demands on those party committees that do little to assist primary party organizations to create an atmosphere of organization and mutual demandingness.

The strengthening of the ideological and political education of the working people and the inculcation of them with a communist attitude toward labor are a no less important direction in the effort of primary party organizations to strengthen labor discipline, order and organization. In this regard, we attach much importance to the organization of political and economic education, to the organization of socialist competition and to the utilization of the power of the work collective.

Multifaceted party-political work to strengthen socialist labor discipline is conducted on the basis of the strengthening of the relationship of propaganda and agitation to the solution of economic tasks, to their greater effectiveness and concreteness. Special attention is devoted to the affirmation of the authority of honest, conscientious, creative labor as a key factor in the fight against consumerism and vestiges of philistinism. Party organizations try to use various ideological means to reveal the creative force and high moral value of work that is full of initiative; to educate people on the basis of concrete examples of the unconditional fulfillment of civic obligations; and to show the great harm that is caused to the nation's economy and moral atmosphere in the collective by absenteeism, lack of discipline and other negative phenomena.

The system of political and economic education and schools of communist labor devote much attention to the study of the works of V. I. Lenin, to the study of party and government documents concerning the strengthening of labor discipline, the fundamental principles of labor legislation, and the experience of production leaders and innovators.

Nonetheless the competition has not yet everywhere become an effective method of realizing economic and educational tasks. In a number of labor collectives, the competition does little to orient workers toward the attainment of high end results, toward strengthening conscious labor discipline. Party organizations are occasionally indifferent to the dissemination of valuable initiatives, fail to publicize the competition and do not promote a truly competitive atmosphere among its participants. In a word, as mentioned at the 26th CPSU Congress, formalism makes itself known in the development of labor competition. And we will have to make a considerable effort so that no party organization would be reconciled to shortcomings in the organization of the competition, so that every party organization would actively struggle for its high effectiveness.

The obkom, gorkoms and raykoms of the party are striving to see to it that primary party organizations raise the educational role of the collective in the struggle to strengthen discipline and organization. "To the person working in the collective," Comrade L. I. Brezhnev emphasizes, "the collective is home, family, and school. It is specifically in the collective that professional experience, mastery and the habit of working conscientiously are passed on from one generation to another."

Hence it is understandable why the most effective way of influencing a violator of labor discipline is discussion within the collective. Whereever the party organization and collective keep a tight check on people who have violated the norms of labor discipline and social conduct, order and organization are higher.

In this regard, party and trade union organizations ascribe major importance to workers' meetings in the education of the working people. First of all, they try to see to it that a greater measure of planning is introduced into the practice of conducting workers' meetings so that they would discuss not only production affairs and the fulfillment of the plan for a given month or quarter, but also the state of educational work and discipline in the collective. It is important that trade union committees keep a tight check on the implementation of proposals made by workers at the meetings.

I wish to emphasize: in their effort to strengthen discipline, order and organization, communists of enterprises, kolkhozes and sovkhozes try to make more complete use of the power and potential of social organizations of working people and especially their most massive form: trade unions.

G. Gimadiyev, a member of the CPSU, worked as chairman of the "Friendship" collective farm. He grossly violated labor and plan discipline and abused his official position. In other words, while occupying an official position, G. Gimadiyev not only did not strengthen order and organization on the farm, but instead had an essentially demoralizing effect on people. However, the collective farm's primary party organization did not make demands on him and did not criticize him. Only after the intervention of higher party organs were measures taken against him. The Kukmorskiy Raykom of the CPSU expelled him from the ranks of the party. He was stripped of his chairmanship.

Unfortunately, some primary party organizations occasionally lack principle in evaluating such leaders. No small measure of blame here would seem to rest with party gorkoms and raykoms that still do not sufficiently analyze the processes that take place in party organizations and do not render effective assistance in improving their work.

The struggle for healthy, well organized life is one of the directions in the overall complex of work of primary party organizations in the effort to instill socialist labor discipline. It presupposes effective educational activity in the home and the rational organization of various spheres of personal services.

We know, for example, the harm that is caused by so-called administratively authorized leave. The reason given for granting such leave is that savings banks, notarial offices, and drug stores are open only during working hours. With the aid of the appropriate organs, we see to it that organizations in the service sphere arrange their work routine to accomodate the population.

In order that party organizations might effectively combat violations of discipline, we demand that they have a clear picture of their cause: level of education, family strife, or shortcomings in educational work. Only by getting to the heart of the problem, by carefully studying it, can we find the means of influencing the state of discipline.

Analysis by party organizations shows that over half of the young violators of labor discipline are young workers. Evidently, the family and the school have not succeeded in instilling everyone with a sense of responsibility for their assigned task. When coming to work at the plant, on the kolkhoz or sovkhoz, they sometimes have a frivolous attitude toward their jobs and become violators of labor discipline from the very first days on the job. Communists together with social organizations have to correct educational deficiencies "on the run." Young workers are assigned experienced mentors who not only teach young workers a craft but also inspire their need for honest, conscientious work.

Unfortunately, the cause of violations associated with family strife continues to be a "dark spot" for many party organizations. And in my view, an important factor is that some party organizations do not show proper interest in the problems of the family whose proper functioning largely determine's man's attitude toward his job. This is food for thought for party gorkoms and raykoms that devote unconscionably little attention to strengthening the role of primary party organizations in the strengthening of the family.

Drunkenness, which causes great economic and moral harm, is a major evil. It is the basis for the growth of absenteeism, for violations of labor and technological discipline, and for family strife. The republic's party organizations have done much to eradicate this social evil. Specialized institutions that detect alcoholics and bring them to account, alcoholism control commissions created under all executive committees of city and rayon soviets of people's deputies, and the corresponding sections of prevention councils in labor collectives have begun operating more effectively. More active use is made of the potential of treatment dispensary, the party and society are more closely monitoring the observance of regulations governing trade in alcoholic beverages, and the network of narcological points and posts at enterprises has been expanded. The forms of interaction of internal affairs organs with health care, cultural and other institutions are being improved. Measures taken to prevent alcoholism promote the creation of an atmosphere of intolerance and general condemnation around those who abuse alcohol.

A most important indicator of the state of discipline and organization in the collective is the moral atmosphere in the collective. In a strong, unified collective all violations of norms governing labor discipline and public order encounter strong condemnation. Therefore the party obkom, gorkom and raykoms encourage primary party organizations to increase their influence on the formation of specifically that kind of collectives and to make every person implacable toward shortcomings.

Guided by the decisions of the 26th CPSU Congress and subsequent decrees of the Central Committee of the party, the Tatarskaya Oblast party organization strives to improve its activity directed toward raising communist consciousness, toward the strengthening of discipline, order and organization. And, as a result, the state plan for sales volume for the first half of 1981 was fulfilled ahead of schedule on 29 June. Industrial output increased by five percent compared with the level for last year. The plan for construction and installation work has been fulfilled by the republic's organizations. The production of livestock products increased compared with the corresponding period for last year.

The workers of Tatariya are striving to complete the targets of the first year and of the 11th Five-Year Plan as a whole. The high political and labor activism of people, the strengthening of discipline, and the strengthening of the responsibility of each person for his work are the reliable guarantee of our future successes.

SERVICE ORGANIZATIONS RESPONSIBLE FOR ODESSA FARMS' LOW RETURN ON INVESTMENT

Moscow IZVESTIYA in Russian 5 Jan 82 p 3

[Article by F. Chernetskiy, IZVESTIYA correspondent, Saratskiy Rayon, Odesskaya Oblast: "Idle Revolutions: Why Is the Ruble Not Providing the Proper Return on the Kolkhozes and Sovkhozes of Saratskiy Rayon?"

[Text] Recently I happened to visit the farms of Saratskiy Rayon. I asked about the economic work on the kolkhozes and sovkhozes, and asked how the rather considerable assets and funds which are going into the development of agriculture -- and in constantly increasing volumes with every passing five-year plan -- are "working" for production.

Saratskiy Rayon cannot be considered either one of the advanced rayons or one of the lagging ones. It is precisely Saratskiy Rayon's, so to speak, "middle position" that provides the opportunity to a certain degree to analyze certain processes in agricultural production which are also typical of the oblast as a whole. And, apparently, not only for the oblast. The rayon has 15 kolkhozes and three sovkhozes. The farms are not subdivided into departments, and basically they have just one boss -- the rayon administration. One does not observe here any misalignments in the turnover rate of the managerial personnel. In order to characterize the rayon, one should state that the land here is good, with chernozem soils. True, one cannot count on the weather here from year to year: dry winds are frequent guests, and, since there are no irrigated areas of land, this frequently puts the farms in complicated situations. The vegetable husbandrymen in Saratskiy Rayon are recongized masters in the growing of sunflowers. Corn -- whether grown for seed or as commercial grain -- is also a traditional crop for the rayon. Viticulture is well developed. There is a rather large amount of productive livestock.

With First Secretary of the rayon party committee, Anatoliy Petrovich Pankov and chief of the rayon administration of agriculture, Valentin Nikiforovich Chumachenko, we analyze the economic reports for the rayon. We compare figures, and ascertain what they reflect. We have a thorough-going, frank discussion. We take as our basis the results of the farms' activities during the Ninth and Tenth Five-Year Plans.

The increase in gross output, if one compares the average annual indicators for the two five-year plans, constitutes almost 5 million rubles. Is that a lot or is it a little? It is difficult to give an unambiguous answer. An objective criterion in this instance could be the capital investments, their volumes: what was invested, how much, what return was received. And the decisive role here is played by the fixed assets of production. Their degree of saturation and their structure influence the level of production of output.

In the Ninth Five-Year Plan those assets on the rayon's farms grew noticeably. The material-technical base was substantially reinforced. But the difference between the rates of increase of fixed assets of production and gross output is extremely tangible -- 28 and 9 percent. In other words, the investments grew 3 times faster than the return on investments. True, it is necessary to consider the fact that not all the fixed assets, so to speak, directly work for the harvest. Therefore let us isolate separately the investments intended specifically for agricultural, production purposes. Here the contrast is even sharper: their value increased by practically one-half, and the gap between the rate of increase in gross output and the increase in the value of the fixed assets reaches a five-fold value. Putting it more simply, from every additionally invested ruble, output valued at 20 kopecks was produced. Thus, one immediately asks for an answer to the question: did the rayon's farms have a large increase or a small increase in the gross output? Would one say a small increase? But, nevertheless, let us take a little more time in making a final conclusion.

Up to now, we have been talking about the total value of the fixed assets. But a factor of no less importance is their structure. A ruble expended for the purchase of tractors, combines, motor vehicles, and other means, and a ruble expended for the construction of accommodations for animal husbandry work differently. That is what is shown by the comparisons of certain average-annual indicators. On the rayon's farms, the number of tractors (in physical terms) increased by 10 percent; and in conventional, standard terms, by 8 percent. The number of grain-harvesting combines remained at its previous level; the number of corn-harvesting combines dropped by 10 percent. The motor-vehicle pool increased by 9 percent. Consequently, the real capacity of the machine-tractor pool -- that most active part of the fixed assets -- in general increased proportionately to the increase in the volume of gross output, which increase, as was already noted, comes to 9 percent.

Consequently, the value evaluation of the fixed assets requires a certain interpretation. For example, let us consider those same machines. A large amount of money was expended for them, and in the fixed assets they occupy a noticeable place, but they do not guarantee a complete return on the ruble invested in them. This is a contradiction that is influenced, in particular, by the following. The previous tractors are to be replaced, for example, by new, energy-saturated K-700 tractors. Their cost is approximately twice as much. One would think that the return on investment is also supposed to grow proportionately. However, because of the lack of the total set of necessary machines and tools, the energy-saturated tractors are harnessed to the plow that was used with the T-74, or one attaches to it the trailer intended for the Belarus' tractor. The return remains the same, but with increase depreciation and operational expenses. Let us take the cost of a new grain-harvesting combine. That cost has approximately doubled, but the productivity of the combine has remained at practically the same level. That is a kind of example of how, when there has been, on the whole, a correct trend in capital investments, they turn out to be insufficiently effective because of the fact that they were made in a noncomprehensive manner: they are not covered by an increase in productivity.

It is already obvious that the capital investments in animal husbandry also are not having the corresponding return. Economists compute how much reinforced concrete and metal are being used today in terms of a single cow or calf. The figures that result are impressive. The volumes of reinforced concrete and metal are growing considerably more rapidly than the milk yields and weight increases in the animals.

Much is being done to mechanize the technological processes on the animal farms. That mechanization also costs a pretty kopeck. The herd productivity has not been increasing very much. It is necessary first of all to fatten up the cow. But the supplies of fodders are thin. It is necessary to take them from the fodder field. And that means taking them with the aid of the very same tractors and trucks which, if one judges by the value, exist in large supply, but which actually are in insufficient amount.

The farm managers have a large number of claims against Sel'khoztekhnika. In the economic interrelations with that organization there are a lot of rough spots. Here are a few examples. Previously the farms would drive, for example, the combine from the railroad station, or from the base, by using their own efforts. Depending upon the distance, as much as a hundred rubles would be expended for this. Now, Sel'khoztekhnika itself delivers the very same combine to the farm, but it costs the kolkhoz or sovkhoz practically 10 times more -- 11 percent of the cost of the machine. The situation is the same with the delivery of spare parts. There is an infringement upon the interests of the kolkhozes, primarily the financial interests, when repairing the technology.

Other partners of the vegetable husbandrymen also are, as yet, showing little concern for the "health" of the kolkhoz ruble. Associates of the Ukrainian Scientific-Research Institute for the Economy and Organization of Agriculture imeni Shlikhter computed: the republic's kolkhozes and sovkhozes expended 58 million rubles in 1979 for delivery of milk by using their own transportation, and only slightly more than half was returned to them on the basis of rates. When transporting livestock to meat combines, the kolkhozes fail to be compensated for approximately one-third of their expenditures. Or take grain. During the harvesting period, sends the grain -- at purchase prices (8.9 rubles per quintal) -- to the elevator, and after a certain period of time some of the grain returns as forage. But now there is a different price: grain, to be used as grain, is 14 rubles, but processed as combined fodder, is 24 rubles [per quintal]. For purposes of comparison we might state that the production costs of one quintal of the very same combined fodder at an interfarm plant is 15 rubles. One could continue to list similar examples.

If, however, one generalizes, one can discern a distinct tendency: the funds are being pumped from one area to another. The state invests tremendous funds in agriculture. But those funds, which have been sent to the kolkhozes and sovkhozes, are not kept there. Instead, in various forms and types, they are transferred to "subcontractors," to partners who use them to construct their own prosperity. The partners purchase, and agriculture loses. The state sends more full-valued rubles to the kolkhozes and sovkhozes. And their path is again repeated. What does this lead to?

It was already noted that the volume of production of gross agricultural output in Saratskiy Rayon increased by 9 percent. According to the logic of things, one ought to expect the following result: more output and more gross income. In any case, this is necessary for the stable development of the farm, for the observance of the requirements of expanded reproduction. But what kind of tendency does one observe here? Here are the comparative figures: in the Ninth Five-Year Plan the average-annual gross income of the farms in the rayon was a total of 29,715,000 rubles; in the Tenth, 29,375,000, that is, 340,000 rubles less. It is a strange situation that is being created: the entire average-annual increase in production -- 5 million rubles -- was produced by farms and transferred to society, as it were, as a present, free of charge. But the farms, in order to make ends meet, have to get funds from somewhere. Therefore there has been an increase in the total amount of credit given to the kolkhozes by the State Bank, a sum that is computed as many millions of rubles.

Now it is necessary to ascertain who wins in this and who loses. Society received from the farms in Saratskiy Rayon a 9-percent increase in gross production. It would be desirable, of course, to receive more, but on the whole there has been a gain. But what kind of situation is there from the point of view of the kolkhoz member or the sovkhoz worker? There also should be no complaints there. Judge for yourselves: the average-annual fund for payment of labor increased by 13 percent and at rates which, as we can see, even outstripped the production of output. And so every worker personally also gained. The only thing that suffered a loss was the farm: with an increase in the volumes of production of output, there was a reduction in income. That is a tendency which is obviously unfavorable.

That situation was created by virtue both of objective reasons which we have already discussed and subjective reasons: the ability to run a farm, labor and production discipline, the level of administration. There is a large number of barriers on the path of reinforcing the economy of the kolkhozes and sovkhozes. Therefore Comrade L. I. Brezhnev at the November 1981 Plenum of the CPSU Central Committee emphasized, "It is necessary to create those conditions which would encourage more actively the growth and increase in intensity of agricultural production, and would encourage the initiative of the kolkhozes and sovkhozes, and all the links in the agroindustrial complex. . ." A large amount of work remains to be done in this direction. And the practical life of Saratskiy Rayon attests to the fact that it is necessary to engage in that work in a thorough-going, serious manner, and to carry it out fundamentally.

TURKMEN FARMS SHOW IMPORTANCE OF MANAGEMENT FOR RETURN ON INVESTMENT

Moscow IZVESTIYA in Russian 8 Jan 82 p 1

[Article by V. Gavrichkin, IZVESTIYA correspondent, Turkmen SSR: "Investments and Return: Why Results Are Different on Neighboring Farms"]

[Text] Recently there have been frequent remarks concerning the reduction in the effectiveness of investments in agricultural production. This is explained by the rise in the prices of technology, equipment, building materials, and the services provided to agriculture, and also by the complexities in the process of the primary accumulation of the means of production, when, at first, there is an inevitable increase in the production costs, and, consequently, a reduction in the return on each ruble.

But every reduction in return has a limit. Investments in production qualitatively change it, make it more mobile, more intensive. Apparently, another factor is the ability to dispose of the ruble and the new capabilities that have been created with its aid. And that is an ability which, unfortunately, not everyone possesses.

The economic effectiveness of agricultural production is linked with the extent to which it is provided with the basic production assets. Let us take, for example, two farms. The Sovet Turkmenistany Kolkhoz, for every 100 rubles of those assets, produces output valued at 79.1 rubles; but its neighbor, the Kolkhoz imeni Makhtumkuli, produces output valued at 78.4 rubles. Both farms are managed in what would appear to be an identically effective manner. But that is only at first glance...

At the Sovet Turkmenistany, during the past five years the fixed production assets increased by 38 percent; and at its neighbor, by 66. During the same period of time at the first farm the return on investment dropped by 9 percent; and next door, by 36 percent.

Let us compare the structure of the fixed assets on both farms. On the Sovet Turkmenistany, the percentage of buildings and structures in the overall assets balance sheet constitutes almost 70 percent; machinery and equipment, 7 percent; and productive livestock, also 7 percent. For its neighbor, the situation is somewhat different: respectively, 40, 11, and 22 percent. From the economical point of view, the situation would appear to be preferable at that farm which develops the active part of the assets (machinery and livestock, as specifically the components of an active part that is rapidly paying them back). But upon checking one sees a result that is directly opposite: whereas on the first farm the production of gross output per 100 hectares of sown areas during the five-year period increased to 340,000 rubles, that is, by 32 percent, on the second farm it dropped to 164,000 rubles, or by more than half. In other words, the production of gross output at Sovet Turkmenistany proved to be 2.1 times greater, and the productivity of live labor, even 3 times greater.

The reasons for this will become obvious if one considers that here the extent to which production was provided with assets and the capital-labor ratio are more than twice the values at their neighbors' place. Relying on such a solid base, the farm achieved what is probably the chief thing: there was a sharp increase in the intensity of use of our basic wealth -- the land. The harvest yield for vegetables, for example, on the Sovet Turkmenistany Kolkhoz is more than twice that of its neighbors.

The Sovet Turkmenistany also provides today an incomparably larger mass (2.1 times greater) of various kinds of output. and this, in the final analysis, is the most important thing to which the party orients the rural workers in the resolution of the food-supplies program.

The Sovet Turkmenistany Kolkhoz specializes in the production of the most labor-intensive and capital-intensive output: it produces vegetables, a considerable quantity of which comes from the covered ground, and also produces milk. The total value of the fixed assets for these two branches alone exceed 5 million rubles on the farm. The concomitant branches are the growing of melon crops, fruits, and grapes, the fattening of cattle, and the growing of sheep. The farm has a hog farm and a poultry farm. The kolkhoz's fixed production assets have reached 16 million rubles. All the branches of the farm have a well-adjusted and complete technological cycle.

The hothouse complex, for example, under local conditions when the vegetable-growers have time to complete only one turnover, is a production that is known to be of little effectiveness. But the kolkhoz nevertheless constructed hothouses in order to provide the city with vegetables during the winter, and the profitability of the structures was increased by forcing the seedlings in the hothouses: the early vegetables which subsequently were produced in the open ground constitute one of the most substantial items in the kolkhoz's income.

And one could cite many such examples. Recently the farm started up a dairy complex for 800 cows. The capacities are only being assimilated, but the milk production is already profitable, because livestock with good breeding lines were selected and the kolkhoz has reinforced its fodder base.

The kolkhoz animal husbandrymen have not been overlooking an additional very important reserve -- the increase in the sale price of the output by improving its quality. For example, 96 percent of the milk sold by the farm is Grade 1; of 997 quintals of beef, 800 quintals were sold with increased degree of fatness; of 2,506 quintals of pork, 2,364 quintals were sold in Category 1. The sale alone of animal-husbandry products of higher quality brought 2,249,000 rubles into the kolkhoz cashbox last year.

Of course, the kolkhoz also has unresolved problems. Suffice it to state that more than 2 million rubles are not working on the farm every year, but, instead, just "lie around" like a kind of "dead capital." This is the money that has been frozen by "*dolgostroy*" [long-term construction]. It is necessary to state flatly: if the construction workers had been more efficient, the kolkhoz, when assimilating the projects that had been turned over promptly, would not have allowed this reduction -- a reduction of 9 percent -- in the return on the fixed assets, and would have been run in an even more profitable manner.

The Kolkhoz imeni Makhtumkuli also produces commercial vegetable output. Unlike its neighbor, it is part of the Semprom system, and specializes in shipments of seeds for grain crops and vegetable and melon crops. In addition, dairy animal husbandry and sheep-growing have become important branches; the farm has an orchard and vineyard, a hog farm, and a poultry farm. There are also the conditions for more effective work, but the farm long ago occupied a steady position among the laggards. And the principal reason for that is because, for a long time, it developed without any systems approach.

It is well known, for example, that among all branches of agricultural production, seed growing is one of the most profitable. And at first it did provide a tangible return here. But the volumes increased, and increased demands were made on the quality of the work in the branch. But the farm failed to react to those changes, and failed to invest the necessary means in the development of the material-technical base of seed production. There was a reduction in the seed yield. The rather weak seed point failed to cope with their cleaning and processing, and there was a sharp increase in the share of manual labor. The branch changed from a profitable one into one that was operating at a loss.

The farm's economic service failed to notice promptly the complexity of the situation. The annual reports indicate that the kolkhoz, for a period of five years, had been intensively investing money into dairy animal husbandry. But how? The value of the productive livestock, for example, during that period, with an overall increase in fixed production assets of 66 percent, increased by 84 percent. Well, in principle that was the correct step, since good livestock means that the ruble invested in it is "working" well. But that is only if one proviso is necessarily met: if that livestock is completely provided with fodders, with a consideration of its potential productivity, which, for pure-bred animals, is high, and, consequently, requires absolutely complete rations. But no concern was shown there for fodder production. It was left at its previous low level. And so, despite an increase in the number of head of livestock, the milk yields, which had even so been none too rich, dropped, as did the weights of the animals that had been fattened up.

Incidentally, that is not surprising. Although the kolkhoz's fixed production assets during the five-year plan alone increased by a factor of 1.7, because of the uncomprehensive, poorly thought-out investment of funds, the extent of production supply at not a single one of the branches of the farm currently guarantees what could be considered effective, or simply normal, work. The gross income of the farm increased by only 4 percent, and the net income even dropped by 229,000 rubles. There was a drop in the labor productivity, whereas the payment for the labor grew by 36 percent. The kolkhoz already owed Gosbank more than 2 million rubles.

Without removing the blame from the kolkhoz's specialists and managers, it must be said that the difficult economic situation in which the kolkhoz found itself was complicated not without the participation of the oblast organizations. From year to year they assigned a poorly thought-out and contradictory program that was oriented variously at the production of seeds, or at the production of vegetables, or at the development of animal husbandry, and the fulfillment of that program was required at any price. And so the result is that the kolkhoz's branch structure currently fails completely to conform to its basic production purpose -- the seed-production purpose. Other farms also suffer from instructions that are issued in an unsystematic manner.

And if, in this situation, the Sovet Turkmenistany has nevertheless succeeded in correctly managing its funds and has been steadily increasing its mass and quality of output, right next to it, behind an outwardly favorable figure for return on investment, another farm has taken an irreversible turn downward.

One could fail to see this only in a situation of an overall low level of economic work. On the Kolkhoz imeni Makhtumkuli there has not yet been any introduction even of intrafarm cost accounting [*khozraschet*], just as it does not exist, incidentally, on many other farms in the republic.

Then too, the Kolkhoz imeni Makhtumkuli, like the Sovet Turkmenistany, is situated in the Gyaruskaya Valley, which recently was completely without water. Now, however, a powerful agricultural complex is being intensively formed here, and that complex is supposed to became the standard for the assimilation of new land in the zone of the Karakum Canal. The state has been investing into the development of production on those lands tremendous amounts of money, and therefore every ruble and the return on it must be specially accounted for, and must be monitored both from the bottom and from the top.

RSFSR SEL'KHOZTEKHNIKA CHIEF ON MACHINERY REPAIR BRIGADES

Moscow IZVESTIYA in Russian 9 Jan 82 p 1

[Article: "A Trouble-Shooter Arrived at the Farm." Follow-up to article in IZVESTIYA, 29 Dec 81 p 2 published in JPRS Report 80045]

> /Text/ An article concerning the operational experience of the Orlovskiy Rayon specialized brigade for the technical servicing of animal husbandry farms and complexes was published in Issue No. 303 of our newspaper, in late December of last year, under the title "A Trouble-Shooter Arrived At the Farm." The deputy editor of the newspaper IZVESTIYA, for the Department of Socialist Competitions and the Publicizing of Leading Experience, A. Koptsov, met with the chairman of the State Committee of the RSFSR for production-technical support for Agriculture, N.V. Bosenko, and requested him to discuss the dissemination of this new form for providing technical services for animal husbandry.

The subunits of RSFSR Goskomsel'khoztekhnika were prepared for this important work. Fifteen hundred specialized stations have already been created for servicing the equipment at animal husbandry farms. And more and more of this equipment is appearing with each passing year. Today the heavy manual labor performed by milkmaids and herdsmen has been replaced by 230,000 milking units, 159,000 feed distributors, 290,000 conveyer lines for the cleaning of facilities, 40,000 refrigeration units and 146,000 steam-generating boilers. The efficient utilization of this powerful technical potential is greatly dependent upon our activity.

The specialized stations have at their disposal 9,000 mobile workshops and 50,000 skilled expert trouble-shooters, technicians and engineers. During the past 3 years, the readiness of the principal technological equipment at the farms was 98 percent prior to the commencement of the livestock wintering period and this served to ensure reliable operation of the equipment. Thus, our expert trouble-shooters were in large measure responsible for the fact that last year the farms succeeded in increasing their sales of 1st class milk to the state to 70 percent, compared to only 43 percent in 1976.

And now -- concerning our specialized brigades for providing services for animal husbandry. One such brigade has been discussed in detail on the pages of IZVESTIYA.

It should be emphasized: the specialized brigades make it possible to service large animal husbandry enterprises and to create all-round crews or sections for assignment to specific farms. The crews and sections of specialized brigades are located permanently at large farms and complexes. Moreover, jointly with the engineering services at these farms, they bear complete responsibility for the continuous operation of all equipment. The best conditions are created in such specialized brigades for ensuring material interest by its workers in the final results of the animal husbandry farms served.

At the present time, 196 specialized brigades have already been created -- in the Tatarskaya ASSR and in Orlovskaya, Belgorodskaya, Vladimirskaya, Kurganskaya, Rostovskaya and other oblasts. The leaders and specialists of kolkhozes and sovkhozes and workers attached to agricultural organs have placed a high value on the work being performed by the specialized brigades, considering this to be a very promising trend. Allow me to cite several letters:

"This method for providing services successfully combines the interests of a farm and Sel'khoztekhnika" wrote the chief of the Suzdal' Animal Husbandry Complex in Vladimirskaya Oblast, K. Gorbunov, "The high technical readiness and reliability of the mechanisms are promoting improved productivity in the animals and the daily weight increases of the large-horned cattle have been raised to 940 grams."

"The creation of specialized brigades" wrote the chief of the Agricultural Administration of the Nizhnekamskiy Rayon Executive Committee in the Tatarskaya ASSR F. Sabitov, "has brought about positive qualitative changes both in the work of raysel'khoztekhnika itself and on farms throughout the rayon. The planned servicing of the farm equipment has raised its reliability and increased the normative service life of the mechanisms."

"Our specialized brigade is performing in a fine manner, such that even the most fault-finding leaders of sovkhozes are unable to find anything to complain about" commented the 1st secretary of the Khabarovskiy Rayon Party Committee V. Mogila, "The animal husbandrymen on the farms are satisfied."

This progressive form for providing technical services for the farms has received the recognition of many soviet and party organs: proposals for creating new specialized brigades have been received in Goskomsel'khoztekhnika for the RSFSR.

The expert trouble-shooters in Moscow Oblast have rejected the old methods for providing technical services. The specialists of oblsel'khoztekhnika and the Main Agricultural Production Administration of Mosoblispolkom /Executive Committee of the Moscow Oblast Soviet of Workers' Deputies/ developed a basically new structure for their operations using electronic computers. Powerful stations for providing technical services from a good production base have been created in each rural rayon. Approximately 2,700 workers and engineering-technical workers are working at these facilities. Multipurpose brigades of the technical servicing stations of raysel'khoztekhnika have been assigned on a permanent basis to 341 farms. Support points of Sel'khoztekhnika have been created on many farms where, in addition to instruments and equipment, there is also an optimum supply of units, assemblies and materials.

Nevertheless, it must be stated that many problems associated with improving engineering services for animal husbandry exceed the limits of responsibility of RSFSR Goskomsel'khoztekhnika. Earlier, the planning organs satisfied the requirements of the farms and complexes for pipe, rolled ferrous metals, cable and electric motor wiring by only 15-30 percent. Special concern must be shown for the large animal husbandry complexes. RSFSR Goskomsel'khoztekhnika has accepted a majority of them for technical servicing. Yet it is impossible to introduce, in full volume, a planned preventive system of technical services.

RSFSR Goskomsel'khoztekhnika, jointly with the republic's Ministry of Agriculture, is presently furnishing assistance to the animal husbandrymen in successfully carrying out their livestock wintering operations. There are presently 44,000 feed preparation shops and kitchens in operation at kolkhozes and sovkhozes. Operational control has been established over the technical status of other mechanization equipment in animal husbandry. More than 5,000 special mobile brigades have been formed for the purpose of eliminating break-downs and carrying out the planned-preventive servicing of mechanisms.

In a speech delivered before the November (1981) Plenum of the CC CPSU, Comrade L.I. Brezhnev pointed out that the uninterrupted supply of high quality food products for the nation requires good work on the part of both agriculture and the branches which service it. The workers attached to RSFSR Goskomsel'khoztekhnika are doing everything possible to improve the engineering support for animal husbandry and for all agricultural production.

NEW ACCOUNTING SYSTEM TO CHECK WASTEFUL FARM INPUTS

Frunze SOVETSKAYA KIRGIZIYA in Russian 16 Jan 82 p 2

[Article by K. Umuraliyev, candidate of economic sciences, director of the Center for Scientific Organization of Labor of the Kirghiz Ministry of Agriculture: "The Coupon System: Who Is for It, and Who Is against It?"]

[Text] The corn-raising team of N. Didenko from the Rossiya Kolkhoz worked outstandingly all summer. It raised the highest yield in Moskovskiy Rayon and overfulfilled its plan by 50 percent.

The members of the team received due praise. They were declared winners in socialist competition and spoken of at meetings. Newspapers published the story of their work practices.

But when the kolkhoz members received the final accounting at the year, our heroes no longer felt like heroes. For their work they received the same pay as others who had just barely fulfilled the plan and had not worked nearly as hard. The accounting office explained to them, "You have expenditures significantly beyond your cost accounting assignment." "Where are the overexpenditures?" the team leader asked in surprise. "They are here, and here."

What had happened? In the spring the team, as well as the brigade in which it works, were given a cost accounting assignment. It provided for everything: how much labor, fertilizer, and other means should be expended to produce the output. But how much actually was expended? Neither the brigade leader nor the team leader kept track of this. Their only thought was for what needed to be done to get a good harvest. Three or four times during the summer kolkhoz economists analyzed performance of the cost accounting assignment. Of course, it was a fairly crude analysis. And only at the end of the year did they calculate exactly how much had been received and how much was spent to get it.

Did the team spend too much? Perhaps it did, and perhaps it did not. For the total expenditures of the brigade were then divided for all its subdivisions, and the corn growers ultimately found themselves accountable for fertilizer that spoiled in the warehouse because of careless storage and for fuel that was not pumped into the gas truck at the filling station.

Internal cost accounting has been used for several years now at many farms. But the lack of a proper system of accounting and monitoring at many of them, as in the above example, precludes the possibility of prompt analysis of expenditure of material and monetary capital for production. This diminishes the importance of cost accounting. In practice only three people monitor compliance with planned expenditures: the bookkeeper, the economist, and the farm manager, and as we have seen they are very slow. These delayed calculations do not give the farm collective any incentive to struggle to reduce the prime cost of output.

The "check" ["chek" — receipt coupon] form of mutual accounting makes it possible to increase the economic efficiency of production and improve relations among subdivisions of a farm as well as within them. Under this system the economic accountability assignments themselves are worked out more correctly and accurately. And the managers of the subdivisions themselves monitor performance of the assignments daily.

How does this look in practice?

The manager of a cost accounting collective receives these coupons together with the assignments. Using specially developed rate scales he writes up receipts for everything, fuel, fertilizer, seeds, and the like and services, showing from whom it was received and the price. So you can be sure that the brigade leader will not accept, for example, seeds without knowing the exact weight, and the team leader will carefully figure the cost of spare parts delivered and will refuse "outside" help, knowing what it costs.

By using a receipt register it is simple and easy for each subdivision manager to figure actual expenditures, compare them with planned expenditures, and make an economic analysis without waiting for results from the central accounting office. Then he can take operational steps to prevent overexpenditure of planned capital and receive more output with lower inputs. All rural workers have a greater interest in the final results of labor, in better economic indicators. This is especially true if we consider that one-fourth of the material-monetary expenditures saved in plant growing and 40 percent in animal husbandry are given to the collectives. But when there is an overexpenditure, half of the additional pay and bonuses due to the workers is withheld. Incidentally, this is the money that was subtracted from the earnings of the corn growers mentioned at the beginning of the article. They could only be found "guilty without guilt" under their system of accounting or, more accurately, the lack of a system to monitor execution of the cost accounting assignment. And to be blunt, they paid out of their own pocket for the poor work of the economic service. But with the coupon form of mutual accounts this is impossible.

The division for introduction of internal cost accounting of the Center for Scientific Organization of Labor of the Republic Ministry of Agriculture worked out a model statute and helped implement the coupon system at 70 farms in the republic. In those places where the farm managers and economists took a conscientious attitude toward it, positive changes in production activity were not long in coming.

For example, let us take the Kolkhoz imeni Lenin in Tonskiy Rayon, where the economic service works very well. The coupons are filled out and torn off at the proper time, and all expenditures are entered in the savings register. The bureau of economic analysis meets regularly. As a result, during the very first year of work under the new system the first sheep raising unit saved 133,000 rubles, the horse unit saved about 70,000, the tractor brigade saved 19,000, and 40,000 rubles were saved at the garage.

This farm and other farms in Tonskiy Rayon which had introduced the coupon system of mutual accounts — the Kolkhoz imeni XXII Parts"yezda and the Kolkhoz imeni 50-Letiya Komsomola Kirgizii — raised net profit from 25,000 to 203,000 rubles in the first year of its use. The total economic impact in the rayon from the coupon system was about 2 million rubles, while expenditures to introduce it in Issyk-Kul'skaya Oblast as a whole were just 27,300 rubles.

Many such examples could be given. But despite the obvious effectiveness of the coupon system, many farms prefer to get along without it. The result? While the prime cost of crop and livestock output at these farms in Tonskiy Rayon is declining according to plan, at the Kolkhoz imeni Karl Marx where the coupons have not been introduced, the prime cost of wool, meat, milk, and grain is steadily rising.

Why did the economists at the Kolkhoz imeni Karl Marx not like cost accounting with the coupon monitoring system? There are many reasons. They say that mutual accounts are too complex and the brigade and team leaders do not have time to fill out and keep records of incoming material-technical assets.

But here is what is behind these excuses. Cost accounting with the coupon monitoring system can be introduced and used efficiently where the farm managers and specialists have respect for the economic service and understand its role in management. The employees of the "economic shops" are themselves well educated, knowledgeable, and enterprising people. Contemporary forms of economic management demand a new style of work. But does the level of education and energy among specialists meet the requirements of current production everywhere?

Introduction of the coupon system is continuing. That is natural, for it is a natural continuation of the development and refinement of cost accounting.

GEORGIAN TRADE UNIONS STRESS WORKING CONDITIONS, WORKERS' RIGHTS

Tbilisi ZARYA VOSTOKA in Russian 12 Jan 82 p 2

[Article by I. Nedashkovskaya and R. Peradze: "A Powerful Force"]

[Excerpts] L. I. Brezhnev's book, "Sovetskiye Profsoyuzy v Usloviyakh Razvitogo Sotsializma" [Soviet Trade Unions Under the Conditions of Developed Socialism], was recently published. Urgent questions concerning the activity of the trade unions in the task of constructing communism are examined in L. I. Brezhnev's reports, speeches, addresses, and greetings -- which compose this collection either in full or extracted form -- in close correlation with Leninist teachings on the leading role of the working class within the system of socialist public relationships, on the unbreakable friendship of the working class and kolkhoz peasantry, and on the growing role of the CPSU as the leading and directing force.

The creation of a developed socialist society has posed in a new way a number of very important tasks for its further economic, social, political and spiritual development. The profound reorientation of many aspects of the practical work of the party, soviets, and public organizations -- which has taken place in connection with this -- also fullypertains to the trade unions, one of whose main features is the fact that they -- as one of the most important links in socialist democracy -- are directly participating during their struggle for the workers' interests in the raising of production, the improvement of its effectiveness, and the control of the national economy.

During his speech at the November 1981 CPSU Central Committee Plenum, Comrade L. I. Brezhnev mentioned the plenary 17th Congress of USSR Trade Unions among the important political events with which 1982 will be filled. Republic trade union congresses are preceding it. The 17th Georgian Trade Union Congress will be held in January. The special coloring and tone of the recently completed campaigns to hear reports and elect officials in trade union organizations having been reported, the preparations for it are now being broadly expanded throughout the republic.

The tasks of the trade union organizations to use production reserves and capabilities better and improve the political and work activity of production collectives in carrying out the historic decisions of the 26th party congress and the November 1981 CPSU Central Committee Plenum are at the center of the discussions taking place at the round table.

A word for the round table participants.

G. Bakhtadze

A lot of attention is devoted in L. I. Brezhnev's works, which are included in the collection, to the creation of the new Constitution of the USSR. The legal position of our country's trade unions is defined by it and the social, political and economic basis of their activity is legally confirmed.

The book's material clearly shows how the new Constitution of the USSR raised the role and responsibility of trade unions. The right to work is guaranteed by the basic law of our state. Its content has been expanded, and it now includes not only the right to any work but to work with payment for work depending on its amount and quality but no lower than the minimum prescribed by the state. It also includes the right to select a trade, kind of studies and work in accordance with one's vocation, abilities, professional training, and education considering public needs.

It is natural that the significant expansion of the labor rights of workers and employees has evoked the need to broaden the rights and duties of the trade unions. In participating in the regulation of labor relations, the trade union organs adopt normative acts, whose effectiveness is guaranteed by the Constitution of the USSR. In particular, the "Statute on the Legal Inspection of Labor", which was approved by the AUCCTU presidium is related to them. The creation of this inspection widened the control opportunities of trade unions, and it has acquired special significance in the struggle against negative phenomena which was expanded in the republic after the adoption of the CPSU Central Committee decree for the Tbilisskiy party gorkom.

The intense attention of the Georgian Communist Party Central Committee toward strict observance of the rights of citizens, which are guaranteed by the Constitution of the USSR, has simplified the realization of trade union control functions. Noticeable positive changes for the better were the result of this. Whereas Georgia occupied one of the first places among the union republics--based on the number of illegal dismissals -- before the adoption of the decree for the Tbilisskiy party gorkom, the curve of such dismissals has irreversibly gone down during the last five years and we will come to the 17th Georgian Trade Union Congress with a fourfold decrease in them.

In the activity of the republic's trade unions, a special place is devoted to the struggle against personnel turnover which inflicts considerable damage on the national economy. In this respect, the trade unions proceed from the fundamental proposition that not only illegal but also fully legal dismissals must force both trade union and economic leaders to think seriously about whether errors are being committed in providing normal working conditions in the enterprise entrusted to them and what the true causes are which push a worker to dismissal. An analysis of our practices shows that where the administration is demanding, especially on itself, and where good working and living conditions are created for the collective, there, labor discipline is also high. Workers do not leave such enterprises. As the old saw says: "Let well enough alone"....

Z. Mekvabishvili

Here is what Leonid Il'ich Brezhnev's book says regarding this: "Concern for the development of the national economy and for raising production and concern for the rights and interests of the workers and for their working and living conditions -- this is the dual task of trade unions. It is dual since the growth and qualitative improvement of the economy is the direct and true path to improving the living conditions of a working man, his family, and all citizens". This principle must become the basic one not only in the activity of trade unions but also in the administration of enterprises.

G. Bakhtadze

Undoubtedly. Remembering that the socialist system of management implies a correct organization -- based on the law -- of the production process, the republic's trade unions are exercising control so that production plans are fulfilled and overfulfilled with a strict observance of the work rights of Soviet citizens. Increased attention on this was, for example, displayed by the Georgian trade union council in the formation of a commission, attached to it, for defending the workers' and employees' constitutional work rights. The commission regularly reviews specific cases of violations by economic leaders of labor laws and takes steps to eliminate and prevent them. The presidium of the Georgian trade union council and the presidiums of the branch trade union committees -- either themselves or jointly with the collectives of ministries -- discuss materials on the state of observing labor laws in the ministry and department system. Questions are studied in coordination with party and soviet organs and with court and procurator organs. The presidium of the Georgian trade union council recently discussed the question of the observance of work time policy in the republic's enterprises. It turned out that workers were enlisted in overtime work in the Rustavskiy Metallurgical Plant, Tbilisskoye ATP [Motor Vehicle Transport Enterprise] No. 1 and No. 8, Motor Vehicle Column No. 2651, Kutaisskoye Cargo ATP No. 4, the Rustavskiy Cement Plant, and the Tbilisskoye Silk Association. They are grossly violating labor laws by this. The leaders of these enterprises have been sternly warned that, if the necessary measures are not adopted by them to eliminate the overtime work, the material on their responsibility will be turned over to administrative organs.

It is necessary to say that the laws on work time policy are violated most frequently of all when the enterprise leadership is not able to cope with wasted time and absenteeism and cannot establish strict state and labor discipline. As Leonid Il'ich Brezhnev points out, here the daily active participation of trade union organizations in all the multifaceted economic and cultural life of the collective acquires extremely important significance. I think that you, Zurab Shalvovich, have something to say about this from the example of your enterprise.

Z. Mekvabishvili

During the 26th CPSU Congress and the November 1981 Central Committee Plenum, the party proposed first and foremost the task of improving the material and cultural level of the people's life. Its program slogan: Everything in the name of the individual, everything for the good of the individual, is being embodied in practical tasks.

When studying Leonid Il'ich Brezhnev's book, you note what enormous attention has been devoted by him in it to the solution of tasks directly connected with improving the life of the people. Here-- Leonid Il'ich emphasizes -- is the most important sphere of trade union activity. It is the improvement of the people's living and working conditions, the concern for their health and rest.

It was figuratively said during the 26th Congress of the Georgian Communist Party that the 10th Five-Year Plan was decorated with the Order of the Red Banner in the republic. This will justifiably be said also regarding our Tbilisskiy Construction Materials Combine. During the 10th Five-Year Plan, the temporary Red Banner of the USSR Ministry of the Construction Materials Industry and of the branch trade union was awarded to the combine for the 21st time.

The progressive movement of our collective can be judged from these figures. During the 10th Five-Year Plan, we produced 3,605,000 rubles of commodity production a year, and during the 11th -- 6,642,000. This period has been characterized by a growth in labor productivity which reached 54.4 percent by the end of 1980. A considerable increase in average wages was a result of the collective's economic and social development. Whereas it was 184 rubles in 1975, it has grown to 208 rubles today. During the years of the last five-year plan, 643,000 rubles alone were paid to workers as bonuses which stimulate highly productive labor. The fact that the output of products worthy of the honorary pentagon increased fifteen-fold in comparison with the 9th Five-Year Plan testifies also to the increase in production efficiency. It reached 27.8 percent overall.

Of course, the coordination of the actions of the economic leadership and of the party, trade union and Komsomol organizations played the main role in the successes of the combine's collective. However, it is not possible to belittle the large amount of work which the enterprise trade union committee performed through the commission to protect labor.

Our attention was directed to the exposure of harmful work conditions. For this purpose, we established contacts with the workers in the republic and rayon medical and epidemiological station. They conducted thorough research on the level of noise, vibrations, lighting and temperature at work positions and gave recommendations. After their implementation, the statisticans of our commission for social insurance fixed a sharp decrease in various cattarrhal cases. Today, professional illnesses have been completely excluded in the combine. Since 1976 the enterprise collective has invariably been victorious in the competition contest: "For High Standards and Exemplary Production Discipline"; and during the past year, it was awarded the certificate and pennant of the Georgian Communist Party Central Committee, the Georgian SSR Council of Ministers and the republic's Trade Union Council for its victory in the contest for the title "An Enterprise of High Production Standards and Work Safety". Here, I would like to stop on this characteristic conformity to law. The concern for the protection of the collective's labor and way of life is enlisting ever newer members in the work of controlling production. These tasks are becoming their own vital work for the people. The enterprises successes are based on this to a large degree.

N. Chkhaidze

This is true. Here is our brigade, which Roman Murvanidze leads, manufacturing flooring, frames and packing for electric bogies. Seemingly the work is not complicated, but it requires high conscientiousness and -- I would say -- a state approach. You see, the electric bogies of the Batumskiy Electromechanical Plant are sent to all ends of our country as well as to many countries of Europe, Asia and Africa. If the packaging is bad, one can imagine in what shape the items will arrive.

This is already the seventh year that our brigade, which is a collective of communist labor, has elected me to be the trade union group organizer. Of course, it increases work for me. It is necessary to direct the socialist competition in the trade union group, achieve an increase in the effectiveness and quality of each brigade member's work, and not lose sight of questions concerning the indoctrination of the people. Such a circle of duties can only be managed with the support of the aktiv.

It happens that some trade union organizers complain that they cannot make their aktiv work effectively. They explain this by the fact that each one has his own concerns. I am confident that the trouble there is something else. It is the violation of the principle of the unity of political and economic work in the trade union group. This principle has been clearly formulated in Leonid Il'ich Brezhnev's book, "Soviet Trade Unions Under the Conditions of Developed Socialism". The weakening of one of the aspects in this work unavoidably leads to the passivity of the trade union group members. Here is how others complain of a certain exclusive circle. The trade union active is inactive; therefore, the trade union work is poor -- and it, in its turn is poor because the trade union aktiv is inactive. I found corroboration for many of my thoughts in Leonid Il'ich's book, and it taught me a lot: a detailed analysis, a wide-ranging look at seemingly habitual things. I would like to say more about this. It often happens that the trade union committees of enterprises yearn to solve questions themselves. However, they, of course, do not have it within their power to embrace everything that the life of the production collective gives birth to every day. This weakens their ties with and their leadership of the shop trade union organizations and trade union groups. It is necessary to load the lower trade union links more with lively non-regulated work.

During the 26th CPSU Congress, Leonid Il'ich Brezhnev said: "It is also necessary to intensify further the control of the trade unions and of work collectives over the solution of all questions concerning the work, life, customs and mores of the people, to expand their participation in the planning and direction of production, in the selection and assignment of personnel and in the effective use of the resources of enterprises and organizations". The work in this direction is now the main thing for us. The plans of 1982 and of the 11th-Five-Year Plan must on the whole not only be fulfilled but also overfulfilled.

The editors organized the round table.

FARMS HURT BY CONFLICTS OF INTEREST WITH SERVICE ORGANIZATIONS

Service Organizations Exploit Farms

Moscow PRAVDA in Russian 24 Dec 81 p 2

[Article by I. Zuyev, brigade leader of "Klimshchinskiy" Sovkhoz, Pochinkovskiy Rayon, Smolensk Oblast "The Village and its Partners"]

[Excerpts] Certainly, we have plenty of partners. But whether we are harnessed together as a team is something that bears some thought. They repair a tractor or combine, but at times it cannot go beyond the entrance of the workshop under its own power. They drain a meadow so that grass does not grow on it. They build a cow-shed, but do not consider whether modern machinery can be installed in it. On the other hand, money is collected accurately. Our partners are strengthened, but many farms are up to their ears in debt. How long will this continue? Ten years ago our sovkhoz, lean and poor, made 200,000 rubles profit. Today it has up to a half million in losses. It is true that we have some negligence here. But the main thing is that the cost of various types of services has increased. And even more, the losses in production from lack of coordination with the partners have increased.

And here arises the question: how can we more closely coordinate the partners in agricultural production? How can we harness ourselves into one team? In order, as my peasant mind tells me, to do our business and serve the rural economy, we must strengthen it. I do not conceal anything: there is much to meditate on.

Here is our sovkhoz. We have 150 various machines, tens of implements on the farms. We cannot get along without electrical machinists and adjusters. Today there are many of them, as I said earlier, in the rayon center. They come on call. But shouldn't a large scale maintenance base be created in the field? No matter even if we had to accommodate their foremen, too. If something in the cow barn breaks down it isn't right to have to wait until the machine servicer "of the new type" arrives from the rayon center. In the best cases this takes a half day. But on weekends or holidays, it may take two or three days. But a cow must be milked three times a day...

The Goskomsel'khoztekhnika is being strengthened in rayon and oblast centers. At its feet, far from the fields, is also being built a base of "Soyuzsel'khozkhimiya". As if grain were actually to be grown on the asphalt. Neither of these organizations bear responsibility for the harvest. The chemical people spread lime on 200 hectares of plowed fields. They apparently finished the work, but we received no noticeable return from it. But to a contractor, that makes no difference. He received full payment -- and a goodly amount at that -- from the sovkhoz.

The other partners conduct themselves in almost the same manner. The purchasers and treatment people also establish their bases a long distance from the fields, and strive to bolster their well-being at our expense. The purchase of flax, milk and meat are conducted in such a manner that they make a profit and the farms take a loss. We are not opposed to paying for services. But actual assistance must be rendered. Everyone should work for the final result. The well-being of all should depend on the productivity of the fields and farms. But what do we actually have? A lot of scurrying about by everyone, but still a shortage of milk and meat.

I am very glad that these questions were sharply posed at the November Plenum of the CPSU CC. From my very soul I support the words of Comrade L. I. Brezhnev: "We must create those conditions which will more vigorously stimulate the growth and an increase in the intensity of agricultural production; which reward the initiative of kolkhozes and sovkhozes, and all other echelons of the agro-industrial complex; which force them to work not toward intermediate indices, but rather, toward a high final result."

And here, it seems, is the most important thing -- to go about this matter in such a manner as not to weaken but rather to strengthen the basic link of the complex -- agriculture. Take those very technical services for maintenance of machinery. Must they always be located in cities; would it not be better to develop them in the rural areas? There would arise in the countryside a modern technical base, it would increase, as they say, an industrial stratum of workers, working in the main sectors of production. Moreover, the choice of a profession would be wider...

Rayon Unified Administration Needed

Moscow PRAVDA in Russian 29 Dec 81 p 2

[Article by V. Burchik, first secretary of the Shchigrovsk Party Raykom, Kursk Oblast: "In Ten Channels -- Field-plant: A Single Complex]

[Text] Serious questions have been raised in his article published recently in PRAVDA by brigade leader I. Zuyev of the Smolensk sovkhoz "Klimshchinskiy". Let's take just the question of partners and their disconnection from each other.

Both this disconnection and the damage caused by it are felt particularly keenly at the rayon level. Indeed, it is the basis of the agro-industrial complex being formed in our country. It is right here, in the rayon, that the producers are located, where the manpower is concentrated; and most importantly, it is here that the fate of our plans is decided. The rayon agricultural industrial complex is a living organism, the component parts of which are constantly in interaction.

But today that organism is artificially divided. Just look at how spotty the picture is. The farms are subordinate to various administrations and trusts -- "Skotoprom", "Ptitseprom", and other "proms". They are serviced by 30 various offices. Each of them, naturally, is subordinate to a higher department, the interests of which, as experience, alas, has demonstrated, often do not coincide with the interests of the rayon agricultural industrial complex...

I recall a recent conversation in the field with the chairman of a kolkhoz. Normally reserved and quiet, he was excited: "And they consider this fertilizing! Here there is none, there it is thick. But "Sel'khozkhimiya" takes our money nonetheless. And sometimes for work they don't even perform. And others strive to outsmart the kolkhoz. We have gone some years with losses, but in their offices there are solid profits."

The chairman, perhaps, was not completely fair with respect to the partners. If we look at it objectively, specialized services perform much work, but its effect, I'll say frankly, is not great. This is apparent in the economic indicators. The volume of services and profits of the "para-agricultural" organizations increase not only as in the example of the "Klimshchinskiy" sovkhoz, about which I. Zuyev writes. Total expenditures on the final product increase, while the yield of fields and farms remains low...

As a matter of fact, out of the 20 farms in our rayon, only four are profitable. There are dissentive opinions as to the reasons for the unprofitability. I would remark only that they are associated, first of all, with the high cost of production. And, it would seem, so long as the producers of meat, milk, grain and sugar beets suffer considerable losses, then the financial well-being of their partners should not be bright. But it turns out otherwise. The rayon "Sel'khoztekhnika" association, the meat-packing plant, and many others constantly show a profit, sometimes in the millions. A branch of "Sel'khozkhimiya", which has existed only a year and a half, succeeded in receiving 754,000 rubles in clear profit.

In any other situation we should rejoice that the collectives operate with such economic stability. But, as we see, this economic stability is not consistent with the results of agricultural production.

The way out of this predicament would seem to be simple: deregulate the financial interrelationship between the partners. Suppose that payments for services were reduced. As a result of this would there be less badly repaired tractors? Would "Sel'khozkhimiya" demand payment not only for delivery of fertilizer but also for applying it, although this is supposed to be performed by the kolkhoz itself? The answers to such questions are not as simple as they appear at first glance. The defects in the activities of the organizations in question have their roots.

The fact of the matter is that the economic interests of the farms and their partners are different. The former are responsible for production of agricultural products, the latter only for fulfilling the plan for services rendered. They are not concerned with the final results -- harvests, milk yield, and weight gains.

One can become convinced as to what this leads to by the example of our Shchigrovskiy Rayon. During the 10th Five-Year Plan the capital fund for agriculture increased by 50 percent. The electric power resources of labor increased twofold. However, the rate of growth of the volume of gross output lagged significantly behind the rate of increase of capital investment. It turned out that the agricultural workers of the rayon did not take advantage of the resources allocated to them as they should have. The yields of grain and sugar beets remained in essence at the same level. The situation of our dairy farming is also unsatisfactory to us.

The raykom and the farm party organizations have done much to direct the efforts of the collectives at increasing the efficiency of production. But their success is not so great. And the stumbling block is frequently the economic fragmentation of the partners.

Characteristically, fragmentation and isolation exist also between agricultural enterprises. Here is an example. At the "Shchigrovskiy" poultry sovkhoz questions of reconstruction and construction of production facilities are not being solved satisfactorily; there are no hard-surface roads; and there is a critical housing shortage. We decided to have a detailed look at the situation on the farm. A session of the raykom bureau was devoted to these questions; the director of the oblast trust "Ptitseprom", N. Shustov, was invited. Here it was revealed that this manager thinks only about production of eggs. The more rational utilization of land is not his concern. Social problems are poorly addressed, and cannot be successfully resolved. And indeed capital investment is divided among the trusts. Moreover, N. Shustov is provided only "a drop in the bucket", which he must allocate among several trust farms...

Outwardly the formulation of the rayon agricultural production complex appears to be conducted successfully. The production base of the farms and their partners is being expanded; processing facilities are being built. But capital investments, as we see, are received through the most varied channels. As many administrations, trusts and offices as there are, there are the same number of sources of financial support. All in all, it would appear that last year a not inconsiderable sum, 16 million rubles, was allocated. But at the same time the rayon cannot use this money. And the money is dispersed and spread on all sides. It is spent on countless projects and "mini-projects", on "long-term construction" with decades of tenure.

Even the smallest office strives to have its own base. For example, the supply of electric power to agriculture is provided by several organizations -- the rayon electric system, the "Kommunenergo" and "Sel'elektrostroy" services, and an energy sub-element of "Sel'khoztekhnika" has also been created. In spite of this, interruptions in power supply to farms are still frequent occurrences. There are installations alongside the farms, separated only by a fence, every one of which has on its own premises a power plant, workshops and administrative buildings. Would it not be reasonable to establish a unified electric supply service?

Moreover, these organizations strive to procreate numerous supplementary subelements. "Sel'khoztekhnika" for example, has four; the rayon association, a special section for repair of tractors, a mobile farm mechanization column, and a start-up adjustment unit. And all of them are allocated not inconsiderable funds. They are located, naturally, not in the countryside, but in the city, inasmuch as the offices settled in Shchigry.

Incidentally, of the 16 million rubles a significant portion has not been allocated at all to the kolkhozes and sovkhozes -- the basic producers of agricultural products -- but to their partners. And they have built nothing noticeable or important. One office was allocated several thousand rubles. Millions are spent on trifles! And we have so few good roads, such a shortage of housing with modern conveniences!

But rayon organizations cannot become involved in this process; cannot redistribute resources. Frequently we are informed only of the construction of some building or other. For example, on one occasion the oblast administration of the milk industry decided to build a plant to produce non-fat powdered milk. It was supposed to process 110 tons of raw milk per shift. But with insignificant reconstruction of our dairy plant it could have completely coped with this production. The estimated cost of the new plant was more than 6 million rubles, and it has been under construction seven years. As of now it has not been decided where the raw milk will come from. Shall they transport it several score kilometers from other rayons? There is no better solution. Our principal building contractor organization -- PMK-720 of the "Kursksel'stroy" Trust -- has been engaged in this construction. Meanwhile, construction of several important buildings in our villages has come almost to a standstill.

Inasmuch as the rayon has no single organ of management of the agricultural industrial complex, it has fallen involuntarily to the party raykom and the rayispolkom to regulate the interrelationship of the partners. But their efforts to regulate the use of capital investments and to prevent their dissipation are not always successful.

It is my opinion that the rayon agricultural industrial complex should be managed by a single management organ. It would allocate all resources provided by the state to kolkhozes, sovkhozes and service and processing enterprises. What it is called -- either agricultural industrial association or something else -- is not, it seems, very important. The main thing is that it become the single authority and common master on the land; that it combine the overall responsibility of all the organizations which today answer only for fulfillment of individual operations, and not for the final product. Where to give priority in applying investments, how to realize them in the very shortest period -- these questions would be constantly at the center of attention of the agricultural industrial association.

Such services as "Sel'khoztekhnika" and "Sel'khozkhimiya" must, both from an organizational and economic standpoint. be included in the association, and equally with the farmers and livestock breeders bear responsibility for harvests, milk production and weight gains.

I know that in some rayons in the Baltic area and in Georgia such associations are operating successfully.

I would like to become more familiar with details of the experience of their work, and with the results of these interesting experiments.

REGIONAL

INVESTMENT, RIVER DIVERSION SOUGHT FOR CENTRAL ASIA

Tashkent PRAVDA VOSTOKA in Russian 27 Dec 81 p 3

[Article by chairman of the Council for Study of Productive Forces of the republic Academy of Sciences and academician of the Uzbek SSR Academy of Sciences S. Ziyadullayev in the column "An Urgent Problem": "Siberian River Water is Needed"]

[Text] In our republic, as indeed in the other Central Asian republics situated in an arid zone with an extremely droughty continental climate and negligible precipitation (especially in the summer), intensive agriculture is impossible without artificial watering, i.e., without irrigation and land reclamation. No wonder there is an Uzbek folk saying: "Where there is water, life begins." However, before the victory of the October Revolution irrigated farming was extremely backward and primitive. The great Lenin who believed that only irrigation could transform the region originated a new stage in the development of Central Asian irrigation.

Today, in terms of scope and experience, Uzbekistan holds the lead in the construction of irrigation systems and the development of irrigated farming not only in the region but in the country as well. The Golodnaya and Karshinskaya steppes have been brought to life and have bloomed in a brief period. Hydroeconomic construction has reached enormous proportions, especially over the last 15-20 years. Each year the republic is bringing more than 100,000 hectares of new irrigated land under cultivation. In terms of its dynamism and agricultural growth rate, our republic is one of the foremost in the country. This is the result of faithful implementation of party and government resolutions, the result of selfless labor of the workers, kolkhozniks and agricultural specialists and the result of the efficient practice of irrigated farming which is achieving large, uniform and guaranteed harvests.

Every year the Uzbekistan workers achieve higher growth indicators in the production of cotton and other crops, precisely as a result of efficient agricultural management at a modern scientific and technical level and of the successful opening of new irrigated tracts.

From this it follows that it will be necessary from now on to expand the development of irrigated farming on which implementation of the food provision program depends to a significant degree.

As a result of the present agrarian policy of the party and the union-wide specialization of agricultural production, 90 percent of all the All-Union production of cotton, 100 percent of ambary, 78 percent of silk cocoons, 60 percent of astrakhan lambskins, 20 percent of rice (with Kazakhstan included--40 percent) and a significant amount of the vegetables, cucurbits, fruit and grapes are now concentrated in the Central Asian republics where only 9 percent of the country's population lives. Systematically increasing production and supplying the main bulk of such valuable crops as cotton, silk, cocoons, karakul sheep and more to the All-Union fund, the region's workers are worthily fulfilling their international obligation to the country.

As a result of implementation of the Lenin industrialization policy, the region's industry occupies a leading place in the all-union division of labor. Here 100 percent of the all-union production of cotton picking machines, cotton-processing tractors, tractors for sowing and cultivating and other machines for the complete mechanization of cotton raising are concentrated, 90 percent of the production of cotton gins and cotton thread, 25 percent of the spinning machinery and 20 percent of vegetable oil. More than 30 percent of the natural gas is extracted in our region. Coal, oil, copper, lead, zinc, gold, silver, tungsten, molybdenum and other vitally important raw materials are also mined here.

The potential resources and natural wealth of Uzbekistan and all of Central Asia are, indeed, immense for further vigorous development of productive forces. First, there are high growth rates of the population and labor force, three times greater than the all-union indicators. Second, our region possesses rich mineral and raw material resources. Third, the Central Asian republics and Kazakhstan have huge land resources available for subsequent vigorous development of irrigated farming and agriculture. In Uzbekistan alone there are nearly 16 million hectares suitable for land development as compared with 4 million hectares presently under cultivation. With water available these barren tracts would become an important resource for further growth in agricultural production.

Therefore, increasingly excellent future prospects are being opened up to the Central Asian republics which have sufficient labor, mineral and raw material and land resources. But there are insufficient water resources for converting these potentials to actuality. Specialists believe that at the current rate of new irrigated land development the water resources of the main rivers, the Amudar'ya and Syrdar'ya, will be completely exhausted in the near future while a scarcity will be felt in many regions by the 12th Five-Year Plan. Also noteworthy are a lowering of the Aral Sea level and increased salinization of the irrigation water in the lower reaches of the Amudar'ya and Syrdar'ya. The danger of pronounced salinity is increasing along with a reduction in fertility and irrigated land dropping out of agricultural rotation. This danger will increase in the future due to a lack of fresh water for washing out the salts. That is why redistribution of the country's water resources and diversion of part of the flow of Siberian rivers to Central Asia are necessary and indispensable conditions for successful accomplishment of the tasks involved in developing the national economic sectors targeted for long-term economic and social progress.

In the resolutions of the 25th and 26th CPSU Congresses, there was indication of the need to perform scientific research and planning studies on the diversion of part of the flow of Siberian rivers to our region. Guided by these resolutions, the Central Committee of the Uzbekistan Communist Party and the republic's government are taking the required steps to accelerate solution of the pressing problem. As we all know, on the instructions of the USSR Academy of Sciences and USSR GKNT

[State Committee on Science and Technology], more than 120 scientific research and development organizations in the country have been doing these studies for about 10 years now. Soyuzgiprovodkhoz [All-Union State Planning, Surveying and Scientific Research Institute of Water Management Construction] of the USSR Ministry of Reclamation and Water Management had drawn up a technical and economic substantiation (TEO) for the diversion (the first phase) and submitted it for review to the State Expert Commission (GEK) of USSR Gosplan as early as 1 July 1980. We hope that the commission will finish its work in the near future and come to a decision on the TEO so that a technical plan can be worked out.

Of course, until the actual delivery of the Siberian water it will be necessary to make maximum use of all domestic resources so as to utilize the water resources most efficiently. The main directions have already been determined and a series of organizational, economic and technical production measures have been put into practice for the most complete, efficient and economical use of available local water resources. In accordance with resolutions of the 26th CPSU Congress and the 20th Uzbekistan Communist Party Congress on 11th Five-Year Plan projects, large-scale studies are planned on upgrading the irrigation systems of Uzbekistan. But comprehensive, in-depth scientific analysis shows that the strain on the region's water supply and the growing shortage of water resources cannot be completely offset using domestic reserves. For this reason, work on constructing the diversion canals and upgrading irrigation systems must be done simultaneously. The validity of this basic position was completely confirmed at the All-Union Coordination Conference of the Scientific and Technical Commission of USSR GKNT and the Ministry of Reclamation and Water Management on territorial redistribution of water resources which took place in Tashkent in October 1981.

In view of the growing shortage of water resources, there will be a smaller increase in irrigated land (based on available resources) with all the concommitant consequences by as early as the 12th Five-Year Plan. Add to this that the population of Central Asia is growing rapidly, and therefore also the need for food crops, and it becomes obvious what difficulties may arise if the Siberian water is not delivered soon enough.

The calculations of our scientists and specialists indicate that capital investments for constructing the Siberia to Central Asia canal and for bringing new irrigated tracts under cultivation would be repaid in about 12 years, i.e., in standard periods. In the long-term future in Uzbekistan alone the irrigation and development of millions of hectares of presently barren land due to the Siberian water may give the nation an immense additional amount of cotton, especially fine-fibered, grain, corn and rice, vegetables, fruit, grapes and livestock thereby considerably increasing the republic's contribution to the wealth of the whole Union.

Diverting part of the flow of Siberian rivers to our region will entail both economic and social changes. The level not only of agricultural but also of industrial production will be raised. And, consequently, the living standard of the Soviet people will be raised.

BRIEFS

RUSSIAN TEXTBOOK FOR CHECHEN-INGUSH--A colorful primer--a textbook of the Russian language for the preparatory classes of Chechen and Ingush schools--has been published by the Republic Publishing House. The author of the primer is the candidate in pedagogical sciences and university docent G. Bermus. After the winter vacation the pupils in the elementary classes of the mountain district will begin to study from a new textbook. [Text] [Moscow IZVESTIYA in Russian 3 Jan 82 p 6] 2959

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service (NTIS), Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semimonthly by the NTIS, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

Soviet books and journal articles displaying a copyright notice are reproduced and sold by NTIS with permission of the copyright agency of the Soviet Union. Permission for further reproduction must be obtained from copyright owner.

U.S. AGGRESSION IN LATIN AMERICA SAID TO THREATEN PEACE

Moscow APN DAILY REVIEW in English 2 Feb 82 pp 1-2

[Text] "Perhaps, nowhere else the US' imperialist claims reveal themselves in such crude form as in Latin America," R. Tuchnin writes in IZVESTIYA, issued dated January 31.

The Latin American countries, the newspaper points out, are screened by Washington as it were: aid goes to the dictatorial and reactionary regimes, all-out discrimination and a threat of intervention against those who refuse to obey US diktat; and hints at possible sanctions or dollar hand-outs for vacillating countries (depending on their attitude to the USA).

Indicating that in the US' good graces are the blood-stained regimes in El Salvador, Guatemala, Honduras, Chile and Haiti, the newspaper goes on to say that the White House intends to use them for the promotion of its own interventionist plans, when it, much as it should like to, cannot dictate its will in inter-American relations, as was the case earlier.

In this instance, it is a matter of preparations by the USA for acts of armed aggression against Cuba, Nicaragua and the patriotic forces in El Salvador with the involvement of reactionary regimes in order to create at least some semblance of "inter-American participation."

Washington's numerous actions, the article reads further, produces a truly sinister panorama: the stepped-up rearmament of the dictatorial regimes in Central America; the intensified training on US territory of mercenaries sent to areas close to the borders of Nicaragua or for arms brandishing off Cuban coasts; continuous US military manoeuvres in the Caribbean; armed provocations by the USA itself off Cuba's shores and on the border with Nicaragua; the "variants" of military intervention being openly discussed in the Pentagon. What further evidence is needed for exposing planned international brigandage?

"Against the background of such an unrestrained whipping up of tension fraught with the outbreak of a dangerous international conflict in the region," the newspaper emphasises, "the attempt of the US administration to provide a propaganda cover for its interventionist designs with the aid of allegations about imaginary 'Soviet-Cuban intervention' looks utterly false."

INTERNATIONAL

U.S. SUPPORT FOR GUATEMALAN REGIME ATTACKED

Moscow APN DAILY REVIEW in English 4 Feb 82 pp 1-4

[Text] The struggle of the Guatemalan patriots against the military and police dictatorship is gaining momentum with every passing day. Guatemala is turning into yet another hot spot in Central America. This is drawing the world's attention to the situation in that most populous nation of the region (about 7,000,000).

A chain of dictators have been ruling Guatemala since the overthrow of her lawful President Jacobo Arbenz in 1954. Cruellest terror is the main, officially-sealed feature of the political system of that country headed by President Gen Romeo Lucas Garcia.

A special body, in whose work a US advisor is taking part, is in charge of staging kidnappings, executions and other acts of terror. Plans for reprisals, thoroughly elaborated by Pentagon and CIA experts, are carried out by the Guatemalan army and paramilitary bands which are on its payroll. Writes AFRIQUE-ASIE: "In effect, that country is sort of a laboratory for those who stage experiments on human suffering, a laboratory where new kinds of tortures are tested before being applied in other countries." The population is being conditioned to live in the atmosphere of mass-scale and routine terror.

The fascist regime represents the main stake of US imperialism in Central America. Direct US investment in Guatemala (more than 220 million dollars) is the biggest in Central America. The industrial and financial oligarchy of Guatemala, which is also the most developed in the region, is literally in the US pocket. However, the US regards Guatemala primarily as a bridgehead for suppressing liberation movements in Central America. Her territory is being used for gangster-like armed provocations against Nicaragua. The American NATION magazine likened Nicaragua to a burning fire, and Guatemala and El Salvador to dry windfallen trees. The priority task of US imperialism is suppressing the armed liberation struggle of Guatemalan patriots. The struggle for liberation is unfolding on a large part of Guatemala and is supported en masse by the driven-to-despair Indian peasants who constitute more than half of the country's population. The liberation struggle is carried out under the leadership of the insurgent armed forces, the guerrilla army of the poor, the organization of the armed nation and the Marxist-Leninist Guatemalan labour party.

The aim of President Reagan's Guatemalan policies is to drown in blood the liberation movement there at whatever the cost, above all, by giving unreserved support for the fascist regime. During his last year's trip to Guatemala US journalist Allen Nary arrived at the conclusion that President Reagan's immediate entourage was closely linked with mass-scale terror practised by the Guatemalan regime. The documentary report compiled by Allen Nary exposes the collusion between Reagan, on the one hand, and Guatemalan businessmen and officials linked with "death squadrons" on the other. Right after coming to power Reagan proposed resuming and invigorating the supply of arms to the regime and the military training of its police and army. He also suggested putting an end to the State Department's timid criticism of mass-scale human rights violations in Guatemala and proposed considering a perspective of US military intervention.

As early as in 1980, leaders of right-wing US groupings--the Young Americans for Freedom, the Moral Majority, the Young Republican National Federation, the American Conservative Union and the citizens of the republic, started making frequent visits to Guatemala. Activists of these groupings met with local officials and businessmen in order to prepare the groundwork for helping militarily the Guatemalan army and police of Reagan assumed office in the US. At the same time the association of the country's friends, uniting big businessmen, took part in funding Reagan's election race. Moreover, this association is monthly paying handsome sums to the American Deaver and Hannford company which is maintaining links with the public, or, to be more precise, is brainwashing the US public into support for the Guatemalan regime. Its director Michael Deaver is Reagan's confidant, who participated in his election campaign.

On top of the 120,000 dollars given to the Deaver and Hannford in the first half of 1980, the Guatemalan Freedom Fund transferred 35,000 dollars to the account of the MacKenzie Macgan firm, which had been advertising the Nicaraguan regime under Somoza in the US. Part of the multi-million profits pumped out of Guatemala by American corporations are used in the US for propaganda support of the anti-popular regime.

The Reagan group and the Lucas Garcia regime established contact in December 1979 during the Guatemalan visit by a delegation of the far-right militaristic organization called the American Security Council. The role of a go-between was played by its advisor John Trotter, a one-time director of a Coca Cola branch. He was proved guilty by documents of having asssassinated many Guatemalan workers' and trade union leaders. John Trotter also heads the Guatemalan Freedom Fund, a CIA-created pseudo-international organization backing the Lucas Garcia regime.

The delegation of the American Security Council was led by two close-to-Reagan persons--Gen John K. Singlaub and Daniel Graham. The latter co-chairs the coalition for peace from strength, a far-right organization of retired military men, working for a continuous growth of the military budget. General Singlaub, the former commander of US troops in South Korea, maintains close links with mercenaries who are taking part in suppressing liberation movements. Immediately after the visit of this delegation the number of assassinations in Guatemala sharply increased. Moreover, the ring-leaders of the regime declared that reprisals would toughen when Reagan came to power. Reagan's adviser on Latin American affairs Rodger Fontaine made two trips to Guatemala. He thee-and-thous the leaders of the regime and is in close contact with them.

Indicative is the lightning and emphatically rapturous reaction of the Guatemalan dictatorship to the presidential victory of Reagan. Said Guatemalan dictator-president: "This is something we like. If the US does not back us, one fine day it may find itself alone in the world." This blackmail by the puppet regime is just meant to persuade the public of its "independence." However, if it were not for the all-round support by American imperialists, the anti-popular Guatemalan regime would have been swept away by the wave of the liberation movement long ago.

HIGHER LIVING STANDARDS SHOULD NOT LEAD TO CONSUMERIST MENTALITY

Moscow SOVETSKAYA ROSSIYA in Russian 12 Jan 82 p 2

[Article by N. Mikhaylov, candidate of philosophical sciences (Chelyabinsk : "The Limit of the Reasonable"]

[Text] Scholars and journalists write about reasonable demands, they are discussed in workers' dormitories and students' lecture halls, and writers and dramaturgs are glad to raise this subject in their works, counting (and not without justification) on the interest of the readers and the viewers. This interest is no accident. It has been brought about by the objective changes that have taken place in the 1970's in the sphere of actual consumption and in the sphere of the orientation points of our lives.

Where Are The Boundaries Of Your Desires?

The changes in actual consumption are obvious: the population's consumer capacity has increased significantly during the past decade and abundance has entered confidently into the homes of the people.

In and of themselves the increased material well-being and the ensuant increased demands are phenomena that are undoubtedly positive and would not have aroused any controversy had they not been accompanied by negative changes in the mass consumer (and not only consumer) mentality· for some of the people, things, and above all costly things (and many of them) have become objects to be lusted after, almost the main meaning in life. Remnants of bourgeois psychology that have appeared, so-called "thingism," accumulation--all these go beyond the sphere of private consumption and leave their traces on the entire totality of the individual's values in life: his attitude toward labor, toward the people around him and toward the concerns of the country. Sociologists have not failed to express their alarm. The following fact was registered in Chelyabinskaya Oblast: 12 percent of the workers and engineering and technical personnel who were questioned were ready to forfeit the satisfaction of cultural demands for the sake of the consumption of things, and quite a few of them named things to be the main indicator of success in life and one of the main stimuli for labor activity . . . .

And so, on the one hand, we have increased incomes and demands, and on the other--symptoms of consumer psychology.

Is the former not the cause of the latter? It seemed that this conclusion made itself evident. So, perhaps, in the name of the society's moral health one should curtail growth of the population's income and stop producing costly things? Is this not the basis for the opinion that reasonable demands should be determined by some regulated selection of consumer values?

Some people have begun to consider reasonable those demands whose satisfaction contributes to the so-called "rational consumption norms," that is, the calculated number of calories and meters of dwelling space, the number of suits, shirts and shoes each person needs, and so forth and so on, right down to the number of visits to cultural institutions. Well, rational (scientifically substantiated) norms are guidelines for production, and planning agencies cannot do without them. But still, far from all of our desires can be measured by physical consumption. How can one determine the reasonable limits, say, of demands for knowledge and aesthetic values?

And one cannot, of course, translate the norm setting for consumption into the regulation of demands. For demands are our needs and desires. They can be formed, cultivated and satisfied, but there is no way to apply norms to them.

One does not make demands reasonable by limiting them. Asceticism is not our ideal, and demands develop along with the progress of production. According to calculations of specialists, about one million commodities and several tens of thousands of services have been created just to satisfy the material demands of modern man. And how many more will be created in the next 10-20 years? To try to stop the growth of demands is a task that is just as utopian as it is reactionary: the goal of communism, in the words of K. Marx, is a rich man and a rich human demand. And he does not have just spiritual wealth in mind. Sometimes we juxtapose spiritual demands to material ones too directly. The former, they say, are always lofty (and, it goes without saying, reasonable), while the latter foster within themselves bacilli of consumerism and bourgeois values. Are we not oversimplifying the problem? Demands for material goods reflect the vitally necessary conditions for the existence of man and society, and to deny that they are reasonable is absurd at best.

According To The Principle: What Do You Have and What Can You Do?

The problem of the contradiction between material and spiritual demands actually does exist. It should be solved, however, not through artificial limitation of material demands, but through the formation of socially farsighted demands whose satisfaction contributes to the development of the individual and to the progress of the society. The 26th CPSU Congress included the formation of the peoples' demands among the most important tasks of the party's social policy. If one were to follow the path of satisfying demands that arise spontaneously and let this process go uncontrolled, one could end up with a wild outburst of excessive material ambitions. The danger, of course, does not lie in the fact that people want to have color television sets and their own automobiles. These desires are completely understandable and natural. It is bad when these and other things become a means of rising above other people, symbols of personal prestige. Here we encounter not the satisfaction of personal demands, as may seem to be the case, but a perverted need for self-assertion through the ownership of things. In essence this is nothing other than a remnant of the so-called "status consumption."

We did not use the word "remnant" by accident. Status consumption is not basically a socialist phenomenon, but, through its roots, moves into the area of private property relations. The consumerist social symbolism has been developing long and purposefully in the society of class inequality. The market situation operates inviolably: things should indicate that a person belongs to a certain social segment. Status symbols multiply. Makes of automobiles, valuable jewelry, types of housing, kinds of entertainment, and sports all become status symbols.

What does the owner of "symbols that are in short supply" claim to be in our society? Not having the opportunity, or more frequently, the desire, to assert his authority through labor, capabilities or high spiritual qualities, he tries to assert his exclusiveness as a consumer. Applying this standard to everyone, he also divides up those around him according to the indicator of "who has what." He has his own idea of the society's social structure, his own "social stratification."

The paradox, however, consists in that in a socialist society the principle of "what do you have?" is inseparable from the principle of "what can you do?" After all, an expensive thing that is purchased is quite frequently, but, unfortunately, not always, not only a sign of material well-being, but also an indirect indicator of a person's professional qualifications, his value as a worker.

How Does One Determine the Quality of Demands?

There are demands that are reasonable and those that are unreasonable. . . . But is this really the way it is? After all, a demand is a need for something. Demands exist objectively, regardless of the individual. One hears ideas approximately like this fairly frequently. The simplest thing to do is to answer them by listing unreasonable demands--for religion, alcohol, self-interest and so forth. But everything is not this simple because the aforementioned phenomena can be based on completely normal human desires. Not a single person who has been caught taking a bribe admits that he had a need to take a bribe. He was simply trying to build a better life for himself: to purchase (including books), to rest (quite respectably), or to entertain himself (not necessarily with binges and orgies). What is unreasonable about these demands?

The demand and the means of satisfying it . . . are they really so independent of one another. Graduate students at MGU who study changes in the demands of people suffering from alcoholism noted that initially (before the disease developed) the consumption of alcohol concealed desires that were not at all reprehensible: to improve their spirits, to make contacts with people easier, to create a relaxed situation at a festive party and so forth. Hardly unreasonable demands. But it became a habit to satisfy them with the help of wine, and the initial demands subsided into the background. They were replaced by "one, but a flaming passion"--alcohol. An unreasonable means of satisfying demands gave rise to an unreasonable demand.

So you will agree that the way the demands are satisfied is certainly not unimportant. To help a person find the correct way of satisfying his demands is a task of exceptionally great social and educational importance. Reasonable demands can be formed only in reasonable activity.

There are 153,000 movie facilities, 600 professional theaters and 350,000 libraries in operation in the country today. The range of the spiritual interests of the Soviet people has increased. The research on the spiritual needs of the Magnitogorsk metallurgists can serve as an illustration of this. Each worker reads an average of three books a month, and 65 percent of the workers take books from the library although almost every one of them has a collection at home. And according to data of the Gallup Institute, half of the Americans never take a book into their hands and French sociologists state that three-fourths of French workers read no literature. The average resident of Magnitogorsk goes to the movie 22 times a year, to the theater--9 times, to concerts--8 times, to sports events--10 times, and to recreational events in the palace of culture--10 times. All this, of course, does not come about of its own accord. The city has arranged and operates an entire system of aesthetic education which involves practically all residents, young and old. By this I want to emphasize one thing: the material and spiritual capabilities at the disposal of the society do not form demands by themselves. A person can live within a five minutes' walk from the Tret'yakov Gallery and still not go there to see the treasures of painting.

It is thought that demands are outstripping the capabilities of production. But if this is actually true in the material sphere, the reverse is possible in the sphere of culture. Thus not every individual has come to embrace complicated kinds of art that require preliminary aesthetic preparation. Sociologists of the Ural Scientific Center of the USSR Academy of Sciences have drawn attention to such disproportions in the demands of youth: 38 percent of the girls and boys regularly attend variety shows, while only 4 percent attend symphony concerts; 63 percent go to the dramatic theater, and only one-fifth of them go to the opera.

We frequently speak about the quality of products, the quality of things and the quality of knowledge. But let us not forget about the qualitative content of our demands. After all, the kinds of demands indicate the kind of individual.

What Is Your Attitude Toward The Main Value?

This research was conducted in Leningrad. Sociologists approached people who were bedridden because of a serious disease. They had different attitudes toward ordinary values in life: that which previously seemed important and significant suddenly became trivial and frivolous; that to which no significance was attached frequently ended up to be the most important. The research consisted in revealing the hierarchy (significance) of the value guidelines of people who were in extreme situations. The people said that their main value, their greatest loss, was work. Their own ordinary work which, when they were healthy, they frequently cursed, which made them tired, in which they saw nothing special. But herein lies man's main need. But was this perhaps brought about by the unusual situation?

At the Cherlyabinsk plant for steel profile planks the sociologists asked the workers this question: "Would you go to work if you had the money to exist without it?" Having thought about the proposed situation, 92 percent of those questioned answered "yes." True, there were certain reservations in this "yes": 42.5 percent would continue to work at their own job, every third would have tried to find more interesting work, and 7.4 percent would have tried to find easier work. And only 8 percent of the workers said that if they had the means to exist they would stop working in public production. But a deeper analysis showed that their understanding of the need to work is fairly frequently related to their attitude toward their own production duties as to something secondary and not major.

Cultivation of a need for labor is, of course, not simply a production problem. Reaching the goals of the totality of social tasks, including the fight against unreasonable demands, depends on the degree of this cultivation. Labor is the main sphere of the individual's self-assertion. The main one, but not the only one. And if a person cannot find himself in labor, he seeks other ways of realizing his "I". This is well and good if he finds these opportunities in sports, in independent artistic activity or in the family. But it also sometimes happens that the only "outlet" for activity is drinking or antisocial acts. To reduce the struggle against these phenomena to simply organizing free time, as people frequently try to do, is to oversimplify the problem deliberately. The personality is formed above all in labor. Here one acquires one's high, universally valuable meaning of life, assimilates the interests and demands of the collective, and, through it, the demands of the society.

It seems that not so long ago the need for technical creativity was the prerogative of the engineering and technical intelligentsia. Thus in 1940 at the Magnitogorsk Metallurgical Combine workers comprised only one-fourth of the efficiency experts and the rest were engineering and technical personnel. Today the proportions have changed in favor of the workers: they comprise two-thirds of the overall number of the combine's efficiency experts. To be sure, in and of itself man's participation in technical creativity or socialist competition still does not show that these kinds of activity reflect the deep internal needs of a given individual. Frequently socialist commitments are made "under pressure" from the collective or at the demand of the management, or sometimes, even for the "company" of others. But even the very fact of responsibility to the collective, the desire not to fall behind one's comrades, the desire to coordinate one's activities with moral requirements prevailing in the brigade, section or shop--all this cannot but affect the establishment of individual demands. The path to the formation of individual demands runs through the stimulation of the demands of the collective.

But the collective can have various effects. Collective forms of activity in life become a condition for the formation of socially significant demands of people only if their content elevates the individual and serves as a sphere for revealing man's best qualities. And if the main value of labor amounts only to earnings, there is the danger of the revival of individualistic attitudes.

And What Are the Main Guidelines?

To satisfy as fully as possible the growing material and spiritual demands of the people--this task was set by the 26th CPSU Congress. To carry it out is not a simple thing. Many crucial problems were discussed in a businesslike way at the party congress, and concrete measures were earmarked to surmount them. While being concerned about the needs of man, the socialist society does not lose sight of another thing: the satisfaction of the growing demands of the workers is not a goal in itself, but a necessary prerequisite for the all-around and harmonious development of the individual. This, in turn, makes it necessary to resolve issues like the following: What should be the nature of consumption under the conditions of socialism? What are its characteristics, guidelines and criteria? Should a socialist society strive toward the consumer standards that are found in the bourgeois way of life? The answer to the last question is determined if only by the fact we find unacceptable much of that which is produced in the bourgeois West for the benefit of the competitive market. The issue is even broader and more essential than this. Should we strive for unlimited growth of consumption? One sometimes has occasion to read: "What is unreasonable in the desire always to have, say, fresh pineapples, bouquets of roses, a helicopter to go flying whenever you wish, and so forth? All these are quite reasonable demands, and our contemporaries would have nothing against satisfying them." Quite reasonable . . . . Really? It is known that for the essentially philistine, petty bourgeois psychology the word "enough" does not exist, for the philistine credo of life constantly cries out: "Give me more," "I do not have enough," "I want more than others have!"

One sometimes hears another opinion: the socialist model of consumption is necessary, but only as a guideline which shows the "lower limit" of satisfaction of demands. That is, to consume no less than a certain volume. And there is no upper limit, just as there is no limit to the development of production. No, there is no limit to the development of production. But the production of what? Nobody wants to dress everyone in identical suits, refrain from the diversity of beautiful and convenient things, or standardize tastes and desires. But it is within our power to produce consumer goods that will not stimulate and increase an excessive demand, whims, or consumer caprices, not to produce things which any of us could easily do without and not cause any kind of harm to ourselves.

Man's demands are satisfied by the society. But our society is not an endless source of goods which will provide anything just for the asking. One cannot but take into account the possibilities of public production which exist. But the socialist model of consumption has more than economic parameters. It is founded on the moral fundamentals of our life. They are developed by a collectivist psychology and constructed on the ideals of social justice. In the daily relations among people they are easily and customarily embodied in such concepts as "selflessness," "modesty," "orderliness," or "intelligence." The criterion of reasonable demands is also a moral criterion.

I repeat, we are speaking not about some previously established scale of demands and desires. No, our demands are limitless. In satisfying them man assimilates all the wealth of the material and spiritual world. But we do not assimilate them, like Pushkin's miserly knight in order to hide this wealth in our cellars, nor to build them into a "pedestal" in order to raise us above other people. The wealth of demands is the wealth of human manifestations of life, human feelings and human reason.

DEALING WITH DIFFICULT QUESTIONS AT PUBLIC LECTURES DISCUSSED

Moscow SOVETSKAYA ROSSIYA in Russian 19 Jan 82 p 2

[Article by Ye. Nozhin, doctor of philological sciences: "A Lesson in Logic"]

[Excerpt] In a public address one has to not simply say "yes" or "no," but be able to explain intelligently why "yes" or "no." Proof is the basis of the convincingness of speech. We find an excellent example of proof by analogy in one of L. I. Brezhnev's speeches: "For many years the ruling circles of the bourgeois countries did not want to recognize the Soviet state. They had to recognize it. They did not want to recognize the German Democratic Republic. They had to recognize it. They refused to recognize the Democratic Republic of Vietnam. Through its heroic struggle the Vietnamese people has now won for itself universal recognition. Some people are still clinging to the policy of economic and political blockade, and the non-recognition of socialist Cuba. They will have to recognize it, we say with confidence!" Next there is a generalizing conclusion: "Is it not time finally to extract one simple lesson from history: the movement to socialism is an objective process."

The conscious mastery of the laws of logic puts in the hands of the propagandist an extremely sharp polemical weapon which helps him to be victorious in arguments, to change the mind of somebody who is incorrect or brand him as wrong, and to demonstrate the invalidity of his judgments just at the moment when, willy-nilly-he is violating them. This is especially important in polemics with an ideological opponent who, while creating an appearance of logical validity for his judgments, deliberately undertakes to violate the laws of logic, for otherwise they would lead him to undesirable results.

Almost every day we encounter examples of logical invalidity in the practice of our ideological opponent. Thus, the assertion by Western politicians that an aggravation of the international situation was allegedly caused by the Afghan events was a flagrant violation of elementary logic. Meanwhile, a course that was hostile to peace was begun by the reactionary circles of the West long before the events in Afghanistan. Here, causal relationships are deliberately mixed up with the sequence of events.

Unable to prove the theses he puts forward, our ideological opponent goes in for all kinds of substitutions and jugglings, trying to switch the public's attention to a different issue. Thus, in the polemics between the social systems on democracy and on human rights the defenders of the capitalist system present the issue of the political system in such a way as if the distinctive feature of the socialist system is a "one-party system and dictatorship," while the distinctive feature of the capitalist system is a "multi-party system and democracy." But this is a clear thesis substitution, for we know that today among both the socialist and the developing capitalist countries there are those in which one or several political parties operate, but this in and of itself does not determine (democratic or non-democratic) the character of a system.

Thus, if a propagandist wants to have a serious influence on the mind and feelings of his listeners he must inevitably master logic--know how to construct his address in a logically correct way, to prove his ideas and theses which he has advanced, and to convincingly refute the arguments of ideological opponents.

APPEARANCE OF 'KRISHNA CONSCIOUSNESS' IN USSR DENOUNCED

Moscow SOTSIALISTICHESKAYA INDUSTRIYA in Russian 24 Jan 82 p 3

[Article by A. Motsov and S. Sadoshenko: "The Yogi With Blue Eyes"]

[Excerpts] In the fall of 1980 a health club was created at the Krasnoyarsk City Palace of Culture. It was born after a lecture by N. Malkina,"Our Organism's Reserves." During the lecture S. Yermolayev, a waiter at the restaurant "Sibir'", stated to the entire hall:

--Enough theorizing! It is time to go to deeds. Those yogis know how.

And he told that a yogi can drink a glass of steaming sulphuric acid and he is still alive and healthy. Or this kind of miracle: he lies on pieces of glass, and a five-ton truck rides onto his chest, and not one of the pieces of glass even scratches the yogi's bare back. And so forth: he can stop his heart, move a stool with a glance. . . . And also, S. Yermolayev issued a challenge, anybody can turn into a yogi, you only have to work at it stubbornly and comply with certain commandments. That is how you should improve your health.

So, by the time of their first exercise the "health specialists" were already morally prepared to swallow stories about the fabulous abilities of yogis. But to see a live yogi--this they did not expect! And the yogi, a shy youth with blue eyes named Tret'yakov, here he is!

The newly discovered yogi astonished everybody. Wearing a bright dhoti, he had beads on his neck, a tambourine in one hand, and religious beads in the other. Closing his eyes, he sat in the "lotus" pose and monotonously sang the mantra: "Hari Krishna, Hari Krishna. . . ." A real honest-to-goodness yogi!

A healthy person, Tret'yakov reasoned at the second meeting, is an active member of society. A person who cares about his health thereby brings benefit to society and to the state. And real health can be reached if you work on your yoga-mantra. And Tret'yakov explained that a mantra was specially selected words which had to be repeated. And he said that scientists are proving that the voice vibration connected with reading the mantra produces such changes in a person's psyche that he becomes impervious to all sicknesses.

--Yes, yes, yes!--Tret'yakov's mother, Tamara Nikolayevna, joined in the conversation.--After I began to read the mantra I began to feel excellent and there was clearness in my head. I even began to feel my biopole.

--So, let's begin!--Yevgeniy said, and under the vaults of the Palace of Culture there began to be heard: "Hari Krishna, Hari Krishna. . . ."

Adult people, many with higher technical educations, listened carefully and wrote down the words of the mantra.

Returning to the events of those days, we try time and time again to understand how this Hindu movement which was born in the middle of the first millenium before our era could today create enthusiasm in far from illiterate people.

First of all, the beautiful packaging has to be noticed. Tret'yakov and those like him have "modernized" the ancient "philosophy" and have set it on a "scientific" basis. Voice vibrations have been put into play, and changes in psychology and in the biofield, and the repetition of the name of God has been turned into a "specially selected composition of words."

And there is one more circumstance to which attention has to be called. Today, it is fashionable, for example, to perform medicinal fasting and to observe various kinds of diets, and yoga preaches vegetarianism. We are fighting against alcoholism and we condemn smokers, and yoga prohibits alcohol and nicotine. We hold philistinism and a love of things up to shame, but yoga summons us to asceticism and to a rejection of the external attributes of well-being. It is this which later made it possible for Tret'yakov to build a bridge: the philosophy of the yogis, he said, in no way contradicts Marxist philosophy.

And so, the Krishnaites continuedto meet, changing apartments from time to time. Some people were still hoping that at any moment Tret'yakov would adopt the "candle" pose or would wind himself into the "basket" pose, or would say such words as would immediately make it possible for people to turn into "real yogis," but everybody received only one instruction: "Read the mantra!"

The mantra had to be repeated 1,728 times a day, while fingering the religious beads. You could repeat it more times also. A. Murachenko, for example, a person with a higher education, repeated this nonsense regularly for two months.

The "devotees of Krishna consciousness" did not know yet that they were at the lowest rung as communicants. . . . At first the singing of the mantra in chorus as a possibility of severing oneself from earthly affairs and cares. Then a movement to more difficult things--the singing of fragments from the "Bhagavad-Gita" and an understanding with one's "purified consciousness" of the true essence of the prophecies taking place in the world. Those who had come to believe would be compelled to give up all socially useful activity and to forget about the interests and ideals of their people. All of that is earthly and superficial, but it is necessary to go deep, to God, singing the mantras aloud to oneself, amongst people, and in solitude. Sing, sing, sing. . . .

This is what awaited them. Meanwhile, "Krishna consciousness" had been grasped by the graduate of the Krasnoyarsk Polytechnical Institute V. Chepurnoy, the engineer at the local branch of the All-Union Scientific Research Institute of Hydro-Engineering G. Grinberg, the senior engineer at the laboratory of the All-Union Institute of the Aluminum, Magnesium, and Electrode Industry at the Krasnoyarsk Aluminum Plant A. Mal'tsev, and other enlightened people. They looked at themselves in the mirror, hoping to discover their biofields. Some of them had already "felt" it.

It will probably be of some interest for the readers to learn how Yevgeniy Tret'yakov became a yogi. What "brought him to the God Krishna"?

He had studied in three institutes. He was expelled from one of them for buying and selling foreigners' clothes and for speculation. He was expelled from another for amoral behavior. The third he himself left. However, let us give the floor to Yevgeniy.

"I studied without bad marks, but my health was nottoo good and I decided that I had to get some treatment. I became interested in various autogenetic systems of training and in yoga, through the practice of which, I had heard, one could make oneself healthy. At a lecture in Moscow in the summer of 1979 I became acquainted with A. Pinyayev.

Anatoliy Fedorovich invited me to his house to look at amateur films which had been made in the West. He strongly propagandized mantra-yoga. It was at his house that I heard lectures by the spiritual teacher who, as I was told, had come from Sweden. I also began to read a mantra. . . ."

The emissaries of the society actively try to recruit "devotees" in the socialist countries also. Here is how they do this. "At the 1979 International Book Fair in Moscow Pinyayev was the official translator for the Krishnaite publishing house 'Bhaktivedanta Book Trust' which was exhibiting its books. In order to attract visitors free "Indian sweets" were given out,--Tret'yakov recounts.--They were made by myself and the other devotees. 'Hari Krishna' music was playing, and there were bright book-jackets with mythological beings on them that caught one's eye. People who came up were offered order blanks to fill out for the books which interested them. The money, from 5 to 30 rubles, had to be paid immediately."

. . . both Pinyayev and Tret'yakov very quickly ceased to feel the need for work (for such people what could be more beautiful than religion which summons you to parasitism!). But one had to have something to eat, something to wear, and something with which to make missionary "work trips." And Pinyayev also had to satisfy his long-time passion: he could not pass by a commission store in which an Indian vase or an Arab candle-holder was being sold. Pinyayev did not advertise the source of his income, but he always had money. He did not conceal this from the members of the sect, although at the same time he preached asceticism. Sometimes the "Brahman" would show a movie film and would collect a hundred rubles a showing from the audience. He sold the books which he acquired at international book fairs.

The logic of the development of events according to Krishna inevitably leads to breaking the law, because the propaganda of social passivity leads to parasitism, and it, in its turn, gives rise to the necessity for getting money by illegal means.

Such is the true face of the admirers of Krishna. Most of them have already understood that they had submitted to an alien influence by swallowing the shiny lure of our ideological enemy. Some still have to understand this.

In Krasnoyarsk the group of Krishnaites has disintegrated. Their spiritual leader Ye. Tret'yakov has been convicted of parasitism.

KAZAKH GOSSTROY CHAIRMAN ON CONSTRUCTION PROBLEMS

Alma Ata KAZAKHSTANSKAYA PRAVDA in Russian 19 Jan 82 p 2

[Article by A. Bektemisov, chairman of Gosstroy Kazakh SSR: "Improve the Plans"]

[Text] The 26th congress determined that a fundamental task of capital construction is increasing the production potential of the country on a new technical basis, erecting new housing and facilities for municipal-consumer and social use. In this connection, many tasks were set which would have to be solved by builders at a much higher level.

It is no accident that at the November (1981) Plenum of the CPSU Central Committee the most pressing questions of economic construction and ways of solving them were disclosed with party adherence to principle. Special attention was directed to the need of achieving a higher efficiency of production and observance of the strictest possible regime of economy in the use of all forms of resources. The decisions of the Plenum, theses and conclusions contained in the speech delivered there by L.I. Brezhnev will play an important role in the fulfillment of the State Plan of Economic and Social Development of the USSR for the 11th Five-Year Period and for the 1982 national-economic plan approved by the sixth session of the USSR Supreme Soviet.

It should be noted that during the years of the 10th Five-Year Plan capital investment in the national economy of the republic amounted to 33.4 billion rubles, which is significantly more than during the preceding five-year plan. Special attention was concentrated on the start-up of capacities and facilities in ferrous and nonferrous metallurgy, machine building, coal, petroleum, chemical, food and light industry and on facilities of housing and cultural-consumer use.

Major tasks have been set before us in the 11th Five-Year Plan. Approximately 38 billion rubles of capital investment have been allocated for the national economy of the republic.

Their effective use depends to a significant degree on the work of the many-thousand army of planners.

Thus during the past five-year plan there were developed 12 schemes of general plans of industrial centers and schemes for regulation of industrial construction, uniting 258 enterprises of different sectors with a total estimated cost of

1.7 billion rubles. At the present time all oblasts and 193 administrative rayons are provided with schemes and drafts of plans; purposeful work is continuing on the development and correction of general plans of cities.

Much attention is being given to the elaboration of model plans of civil housing type. A total of 283 model projects has been developed providing for the latest achievements of science and advanced technology; considerable work has also been done on the revision of previously approved plans for the purpose of reducing estimated cost, material intensiveness (especially of metal) and the expenditure of fuel and power resources through the introduction of more efficient volume-planning and design solutions and the elimination of extravagances and other measures. But as a whole, the organization of planning and research work still lags behind the tasks set by the 26th CPSU Congress.

Despite the constant growth of the volume of corresponding work, many construction projects nonetheless have been carried out on the basis of unfinished and unapproved plans. At the same time, there has been a sharp growth in the number of planners who are not used in construction. On the average, each third one of them has not been put to work. Thus, at the beginning of the current year, the Kazakh SSR Ministry of Consumer Services possessed documentation on the construction of 108 facilities with an estimated cost of 46 million rubles, which created a four-year reserve. Naturally, under such conditions most of the plans become obsolete and require reworking, while the money spent on them—more than one million rubles—is just wasted. A similar situation exists at the Ministry of Motor Highways, the Ministry of Housing and Municipal services and at other ministries and departments.

For this reason, planning and research work plans were deprived of reliable long-term developments and turned out to be unstable. Thus the work regularity of planning organizations was upset, the normal technology of planning was not adhered to, and a situation of crash work was frequently created, leading to lower plan quality.

In this connection, it would be fitting to note that this year ministries and departments were not provided targets and initial data by the planning organizations of Gosstroy in the amount of 12 million rubles, and financing was not opened for 22 million rubles. This particularly applies to the Ministry of Motor Transport, the Ministry of Education, the Ministry of Housing and Municipal Services, the Ministry of Agriculture, the State Committee for Selkhoztekhnika and the Alma Atinskaya, Dzhambulskaya and Severo-Kazakhstanskaya oblispolkoms. It should not be forgotten that beginning with 1982 facilities whose construction has not been confirmed by five-year plans will not be accepted for planning and those lacking title lists--for credit extension.

Of course, defects in planning work do not boil down simply to questions of its organization. And the technical and economic level of many plans remains still unsatisfactory. Scientific-technical achievements and advanced experienced are far from always used in them. An example of this is to be found in the plans of silicate-brick plants in Ural'sk and Kzyl-Orda worked out by the NIIstromproyekt Institute. While going into operation in 1976-1977, the plants still have not reached their planned capacity as a result of committed blunders and mistakes. Because of their partial utilization, they are short 600 million bricks.

It is enough to say that on the basis of the stated and other reasons, of the 964 plans and technical and economic substantiations with a total estimated cost of 3.6 billion rubles, 426 were returned for further improvement or partial refusal. It is necessary to point out that even in many recommended and approved plans and technical and economic substantiations there were irrational solutions and errors whose rectification in the process of examination made it possible to reduce the estimated cost by 120.4 million rubles.

An effective way of improving the quality of construction and its industrialization as well as reducing planning time is typification of plan solutions. But serious defects still exist in this field. A number of model plans are still in effect with low technical and economic indicators, nonoptimal planning parameters and uneconomical designs. The stock of model plans is slow in being corrected or renewed.

A significant flaw in planning and estimating work is unreliable determination of the estimated cost of construction. During the years of the 10th Five-Year Plan and 9 months of 1981, Gosplan and Gosstroy Kazakh SSR were obliged to correlate increased estimated costs for 57 previously approved plans amounting to an average of 15 percent above their initial cost. A significant portion of the cost rises was the consequence of blunders and mistakes made by planning organizations as well as the low level of planning esimate discipline.

Serious oversights were found in plans that had passed through departmental examination and had been approved by ministries, departments and ispolkoms. During the years of the 10th Five-Year Plan, the republic Gosstroy as a form of selective check examined 350 plans; of these 238 were returned for further development. At the same time, the possibility was disclosed of reducing the cost by more than 6 percent and curtailing the expenditure of basic materials. Particularly many violations were found in plans approved by the Ministry of Local Industry, the Ministry of Consumer Services, the Ministry of Agriculture and the Ministry of Motor transport of the republic.

Considering that the indicated defects are to be found in the plans of all checked institutes and clients, there is reason to believe that excesses and mistakes in the planning of enterprises, buildings and structures cost many tens of millions of rubles, thousands of tons of metal, cement and other material resources. The struggle with these excesses and violations constitutes a big reserve of planners for the fulfillment of targets of lowering price and reducing the material intensiveness of construction.

Attaching an especially important value to the quality of planning in the 11th Five-Year Plan and subsequent years, the CPSU Central Committee and the USSR Council of Ministers adopted a special decree "On Improving Planning and Estimate Work."

The solution of this important task will make it possible to improve the technological structure of capital investment in the 11th Five-Year Plan and to reduce the relative share of construction and installation work in the total volume of capital investment to 51 percent versus 54 percent in the past five-year plan.

A new manner of evaluating the operational activity of planning and research organizations in regard to the turning over of completely finished documentation accepted by clients obliges ministries and departments to raise the level of supervision over subordinate organizations, to strengthen control over the rational utilization of funds for planning work, to ensure the active participation of collectives in the all-union and republic socialist competition and to direct them to the solution of the forced targets of the 11th Five-Year Plan.

The duty of planners is to fully utilize the new opportunities granted them by the party and the government, to provide construction projects of the 11th Five-Year Plan with modern and economical plans and to promote thereby the forward movement of our country and republic along the path of technical, economic and social progress.

We believe that the republic's ministries and departments, collectives of planning, research and scientific-research organizations will apply all their efforts to the solution of the tasks set by the 26th CPSU Congress in the field of capital construction and planning and estimate work.

KAZAKH CONSTRUCTION FOR 1982 REVIEWED

Alma Ata KAZAKHSTANSKAYA PRAVDA in Russian 3 Jan 82 p 1

[Article: "Kazakhstan in Construction"]

[Text] Kazakhstan is an enormous construction site. There is not a corner in our republic where constructive work is not being performed. The Kazakh SSR occupies one of the first places in the union for the growth rates of its capital construction. Thus, during the 9th Five-Year Plan, construction workers utilized 28 billion rubles. During the 10th capital investments came to 33.4 billion rubles. These enormous resources have been expended for a further development of the economy and for a rise in the material and cultural levels of the workers. Even more majestic is the program of constructive work which was mapped out by the 26th CPSU Congress for the 11th Five-Year Plan. According to the economic development plan, 35.5 billion rubles are slated to be assigned for these purposes--2.1 billion rubles more than during the 10th Five-Year Plan.

Take a look at this schematic map of our republic. Only a small number of the new construction sites of the current Five-Year Plan is indicated on it. But even this approximate scheme provides a quite clear idea about the diverse character of present-day construction. The realization of the program which has been mapped out for the 11th Five-Year Plan means that new enterprises in ferrous and nonferrous metallurgy and in the fuel, chemical, machine building, light, food, and meat and dairy industries will begin to operate, and new powerful electric transmission lines, comfortable residential houses, children's and school institutions, hospitals, and cultural and domestic and administrative buildings will appear.

The first year of the 11th Five-Year Plan has become history. What did it contribute to the work of creation on Kazakh land and what kind of baton did it hand over to the new year--the year of the glorious 60th anniversary of the formation of the USSR?

A week ago KAZAKHSTANSKAYA PRAVDA informed its readers that at the Yermakov Ferroalloys Plant the new super-powerful furnace No. 63 has been put into operation. This is a unique engineering installation which embodies the best achievements of modern engineering thought. Here for the first time in the world practice of the creation of such furnaces the tub has been made a rotating one. The experience and mastery of the construction and installation workers of

"Yermakferrosplavstroy," "Kazpromtekhmontazh," and "Kazelectromontazh" made it possible to successfully cope with difficult tasks. The furnace is operating well.

11. Industrial construction materials
12. Light industry
13. Food industry
14. Animal husbandry complexes

The past year has brought quite a few other major victories in capital construction. The third 500,000-power-bloc at the Ekibastuz State Regional Hydroelectric Power Station-1 has already been supplying the economy with electricity for more than 10 months. . . . The Ural River now has operating over it a guy crossing--a highly complex hydro-engineering installation which will make it possible to flood more than 35,000 hectares of the arid Aznabay-Taypak tract. . . . Around 500 petroleum and gas wells have gone into operation. . . . Thousands of kilometers of new electric transmission lines are already performing their silent but very important work for the national economy. . . . Polystyrol shops at the plastic plant in Shevchenko, zinc and battery shops at the Leninogorsk Polymetallic Combine. . . . Garment Factories in Petropavlovsk, Zyryanovsk, and Pavlodar. . . .

You cannot count them all. Suffice it to say, that last year more than 100 enterprises and large shops and capacities went into operation. In addition, the population received millions of square meters of well-built housing and many social and cultural facilities. In all, more than 6 billion rubles were spent for these purposes.

The successes which have been achieved are a good foundation for the fulfillment of the construction plan of the second year of the five-year Plan. This year will be somewhat unusual for construction workers in the sense that without any appreciable increase in the amount of capital investments it will be necessary to sharply increase the amount of fixed productive capital which is delivered for operations.

Touching upon this question in his report at the Fourth Plenum of the CC of the Communist Party of Kazakhstan, the member of the Politburo of the CC CPSU and First Secretary of the CC of the Communist Party of Kazakhstan comrade D. A. Kunayev noted that in order to achieve our goal the chief direction of all of the work of construction workers during the second year of the 11th Five-Year Plan has to become a concentration of forces and resources on the most rapid completion of those enterprises which are capable of ensuring the greatest increase in output, an acceleration of scientific and technological progress, the opening up of bottlenecks, and the elimination of disproportions.

In connection with this, serious tasks have been set before the collective of the republic's almost 700,000 construction workers. One of them is a maximum acceleration of work on the chief object which is represented by the Ekibastuz Fuel and Energy Complex. Here it will be necessary to ensure in the shortest possible time the efficient work of the 4th and to commission the 5th and 6th energy blocs of the Ekibastuz State Hydroelectric Power Station-1. A vast construction program will be carried out at other highly important objects of the Karatau-Dzhambul, Mangyshlak, and Pavlodar-Ekibastuz territorial production complexes. Measures are being taken to speed up the work rates in the construction of large capacities for ferrous and nonferrous metallurgy enterprises. In particular, if we are speaking about nonferrous metallurgy, this concerns above all the Zhayrem, Akchatauz, Achisay, and Dzhezkazgan combines. Ferrous metallurgy will obtain new capacities at the Kachar and Don ore enriching combines, the Yermakov Ferroalloys Plant, and other enterprises. The construction of the Shul'binsk Hydroelectric Power Station will be intensified. All of the start-up projects of the branches of group "B" have been taken under special control. In all, it is planned to commission more than 90 capacities and objects in 1982.

In addition, according to the plan for the year, it is planned to commission more than 6 million square meters of housing space, children's preschool institutions for 32,000 children, and general educational schools for 74,000 pupils. The hospital system will grow by 3,700 beds.

The annual total of capital investments will come to 7 billion rubles.

Through the will of the party and the people whole cities and settlements are rising up and the industrial map of the republic is changing radically. The successful realization of the construction program of the coming year will be another step forward in the social and economic development of Kazakhstan and a worthy contribution to the accomplishment of the tasks posed by the 26th CPSU Congress and the 15th Congress of the Communist Party of Kazakhstan.

REGIONAL

UZBEK ACADEMY OF SCIENCES PRESIDENT ON CENTRAL ASIAN DEVELOPMENT

Moscow IZVESTIYA in Russian 9 Jan 82 p 3

/Article by academician A. Sadykov, president of the Uzbek SSR Academy of Sciences, Hero of Socialist Labor: "Science and Creation"7

/Text7 In a strictly philosophical sense the universality of time lies in its length, nonrecurrability and irreversibility. However, in the sphere of human activity it is the chief judge of everything that exists and takes place and the criterion of all the truths--scientific, social and wordly--obtained with such difficulty and always fully concrete.

Time is measured by means of the most different hours. We in our socialist world reckon our existence according to the calendar of our revolutionary dates and see in them, in our living reality, the vivid expression and confirmation of our communist values and ideals.

In the new year that has begun the 60th anniversary of the formation of the Union of Soviet Socialist Republics will be such a memorable date and another big step to future progress. If, mentally glancing over our great homeland, one wants to find out what the chief thing, perhaps constituting the highest achievement of our system and of the Leninist national policy of the CPSU, is, one will put the inviolable fraternal friendship among USSR nations, continuously developing social relations and democracy of the Soviet system, which are our common pride, in one of the first places.

At one time bourgeois falsifiers of the history and reality of the Soviet state wasted piles of paper, trying to prove the unprovable, that is, that the soviets as a form of the new power did not meet the national ideals of the nations of Central Asia and that the latter were cheated of their rights and expectations. However, the sun cannot be covered with the palm of one's hand! Now the whole world knows that the republics of Central Asia--yesterday the national outlying districts of the tsarist empire--in the family of the republics of the Soviet Union have risen to the height of modern economic and cultural development and that the people of these republics--Uzbeks, Kazakhs, Tajiks, Kirghiz, Turkmens and Karakalpaks--appear before the whole world in all the beauty of their spiritual makeup. How can we not mention the prophetic words of V. I. Lenin, who, ardently believing in the bright future of the Eastern nations, wrote that the "popular masses of the East..., which thus far have been the object of the international policy of imperialism, which for capitalist culture and civilization have existed only as material for fertilization, will rise here as independent participants, as creators of a new life."

The Communist Party and the Soviet State, fulfilling Lenin's precepts, did not spare efforts for an accelerated advance of economically backward regions and attained this through the establishment of powerful industrial centers, cooperation of agriculture and performance of a cultural revolution here. All this began in V. I. Lenin's lifetime. I am closer to the sphere of science. Here too there are convincing examples confirming what has been stated.

In February 1920 from Moscow's Bryansk Railroad Station an unusual train left for Tashkent. This was the sanitary train No 159. However, not sick or wounded people occupied its compartments. Eighty-six professors, docents and pedagogs from Moscow and Petrograd universities. going to work at Turkestan State University, traveled on it (this university was officially established in September 1920 by V. I. Lenin's decree). In 65 railroad cars there were books, laboratory equipment and medical apparatus.

On the road the professors often sawed firewood for furnaces in order to transfer the fuel supplied steam engine to the opposing, really sanitary train. The train traveled to Tashkent for 55 days at an average speed of 2.5 km per hour. However, Lenin and the party wisely thought that it would initiate acceleration of scientific and technical progress for all Central Asia. And it turned out so. Turkestan University not only opened the door to higher education for all the nations of Central Asia, but rose, as a powerful tree, from the shoots of which specialized higher educational institutions began to develop one after the other. In only 12 years, by December 1932, when the 10th anniversary of the formation of the USSR was observed, there were 37 scientific research institutions and about 30 higher educational institutions in Uzbekistan.

The journal VESTNIK VOSPITANIYA, considering that less than 3 percent of the population in Central Asia knew how to read or write, in 1906 stated that 4,600 years would be needed to abolish illiteracy there. What could this period have been in reality? However, October burst forth. Helvetius said that the art of forming people was so closely connected with the form of government that any significant change in public education was hardly possible without changes in the state system itself. This fundamental change took place and in 20 years an end was put to the illiteracy of the population--the entire population up to the age of 45--in my republic.

The train of science, which traveled from Moscow to Tashkent through the glow of the civil war, became the bright torch of education and culture, which revolutionary Russia carried to outlying districts. Many progressive Russian scientists turned to their concerns and needs. For example, during those years I. Aleksandrov, A. Chaplygin, G. Rizenkampf and others did a great deal for the development of irrigation in Central Asia. For the first time tasks of local importance began to be closely connected with the general needs of the Soviet republics.

With the formation of the USSR the development of Soviet science took on a planned and extraordinarily efficient nature. Central economic and planning bodies were able to clearly formulate the fundamental practical tasks that required the maximum attention of scientists and their efforts were more fully concentrated on the solution, along with theoretical problems, of key national economic problems. A broad explanation of the fact that the entire life of Soviet society was built on a scientific basis was of tremendous importance for the political and professional education of local personnel.

The development of republic academies of sciences and their ever growing contribution to science and scientific and technical progress were the direct results of Lenin's national policy, the advances of all the Union republics and the strong organizing influence of the USSR on the country's entire life. I take the liberty of citing the example of Uzbekistan and its academies. Now in the republic there are 35,000 scientific workers, including more than 900 doctors and 14,000 candidates of sciences, dozens of scientific research institutions and 43 higher educational institutions, which along with personnel training are engaged in remarkable scientific research.

We realize that as yet not all of them work with the proper return. At the same time, the contribution of Uzbekistan's scientists to the development of fundamental and applied research is significant, was noted at the 26th CPSU Congress and has a tendency toward growth. Of course, cotton growing is in the center of attention of the republic's scientists. In the last 2 years cotton growers sold more than 12 million tons of raw cotton to the state. Their work was highly evaluated in Comrade L. I. Brezhnev's speech at the November (1981) Plenum of the CPSU Central Committee. Scientists, primarily breeders, helped to a considerable degree to reach such a goal. On the basis of the achievements of geneticists, botanists, chemists and biologists they were able to develop cotton varieties, which warded off the harmful effect of wilt approximately for a decade.

The next change of varieties is now needed. Their development is not an easy matter. However, scientists have something to offer practical workers. The scientists of the Institute of Experimental Plant Biology of the republic's Academy of Sciences developed and regionalized medium-fiber cotton varieties and fine-fiber varieties were bred at the Institute of Selection and Seed Breeding of Cotton of the USSR Ministry of Agriculture. Chemists developed new types of fertilizers including chemical elements deficient in the soil of a number of regions in our zone, as well as nontoxic defoliants and growth stimulators. Mechanics designed flow lines for plants specializing in the preparation of cotton seeds.

The concentration of the forces of the academy and other scientific centers in the republic on the solution of urgent economic problems specific for Uzbekistan and precisely for this reason of statewide importance greatly increased the efficiency of their work. The economic efficiency from the introduction of completed scientific research performed by the academy totaled about 1.5 billion rubles during the past five-year plan. Every ruble invested in science brought a fivefold return.

Nevertheless, the introduction of scientific developments is slower than one would wish. To accelerate it, in the last few years we have more and more energetically changed over to work according to overall object scientific and technical programs of the USSR State Committee for Science and Technology, of the Gosplan and of the USSR Academy of Sciences. A total of 8 programs are overall and 18, regional. They include a reliable long-term supply of water for irrigated land, development of new cotton varieties with enhanced technological fiber qualities, search for feed production potentials and so forth.

Let us dwell on the "Voda" /water/ program. To grow 1 ton of raw cotton, 6,000 cubic meters of water are needed. As compared with the prerevolutionary period the gross output of cotton increased 12-fold, while water sources in Central Asia remained the same. Furthermore, nearby there are millions of hectares of virgin land, which with artificial irrigation can produce a rapid effect felt for the entire country. Where is the way out? Of course, first of all, in the ability to save water. A sharp emphasis on this problem has already led to a practical result: Improved irrigation methods have been proposed. At the same time, the possibility of transferring part of the flow of Siberian rivers to Central Asia is studied in depth.

The recent success of natural sciences is largely due to the extremely extensive application of research by means of computer equipment and mathematical methods. On a broad plane the joining of efforts by scientists of the academies of the fraternal republics is ever more fruitful. Research on an increase in the feed productivity of desert and semidesert pastures in Central Asia was awarded the 1981 USSR State Prize. For many years it was conducted separately by scientists and production workers of the Turkmen and Uzbek SSR, but the problem was solved when they embarked on this work together.

Now on the basis of a creative agreement the academies of sciences of the Uzbek, Kazakh, Tajik, Turkmen and Kirghiz SSR have expanded very productive overall research on many regional problems.

Another example illustrates what it means to join efforts and to clearly define a goal. The country purchased a number of radio isotopes necessary for biological and medical research in England. However, for short-sighted political reasons its government stopped the delivery of these preparations to the USSR. This also happened before. It is well known how this ended. This time the physicists of Uzbekistan's Academy of Sciences and of the Siberian Department of the USSR Academy of Sciences united and quickly developed these isotopes. Their production has already been mastered. We doubly repay those who maintain good relations with us. But an attempt to boycott us is a futile endeavor. However, I would also like to stress another matter: The cited case once again confirms the profound correctness of the words uttered by Comrade L. I. Brezhnev at the 26th CPSU Congress that at times "we waste a great deal of money on the purchase abroad of equipment and technology, which we can fully manufacture ourselves and often of a higher quality."

We have entered a new year, the year of the 60th anniversary of the USSR, mobilized for the solution of not easy, but inspiring, tasks of the five-year plan and full of optimism. We deeply believe in our ideas, in our country and in the strength of labor. We are firmly confident that its daily fruits and future results will again and again confirm the lofty time tested truth that the path indicated by our party is the only correct path. We are proud and strong, because we realize that time is with us and works for us!

TURKMEN GOSPLAN DEPUTY DESCRIBES PLAN PROGRESS

Ashkhabad TURKMENSKAYA ISKRA in Russian 13 Jan 82 pp 1-2

[Article: "Turkmenistan Under Construction"]

> [Text] The labor of construction workers who make an enormous contribution to strengthening the economic might of our country is not easy, but it is thankful. They build plants and factories, animal husbandry complexes, petroleum and gas fields, and cities and settlements. They are changing the face of Karakum and expanding the borders of ancient farming oases. Turkmen construction worker collectives are faced with large plans in the second year of the Eleventh Five-Year Plan. The First Deputy Chairman of Gosplan of the Turkmen SSR V. V. Polyakov described the basic directions of capital investments in 1982 to the correspondent of TURKMENSKAYA ISKRA N. Sosnina.

Quite a bit was accomplished by our construction workers last year: enterprises were reconstructed, new ones were built, and residential houses, schools, and kindergartens were put into operation. However, the results of the first year of the Eleventh Five-Year Plan could have been much better if the contracting ministries and departments had been more energetic in changing the style of the management of capital construction in accordance with the demands of the time. Weak production bases, scattered manpower and resources, and shortcomings in the organization of labor prevented the fulfillment of commissioning plans for certain objects in industry and the fuel industry, housing, and others.

Debts have to be paid. The party is directing construction workers to a sharp increase in the effectiveness of capital investments. In comparison to past years, the procedure for distributing the capital which is invested in the development of the economy has been changed somewhat. There will be a substantial increase in the amounts of capital investments being directed to the reconstruction and re-equipping of operating enterprises. They will reach 64.4 million rubles and will be used above all in the branches which produce consumer goods.

More than 60% of the increase in output, for example, in light industry is slated to be obtained from operating capacities on the basis of a wide introduction of highly productive spinning machines, shuttleless weaving machines, and overall mechanized and automated lines in the knitwear, garment, and footwear branches.

The same purposes are being followed in the reconstruction of the Ashkhabad Cotton Textile Combine imeni F. E. Dzerzhinskiy, the "Krasnyy Molot" Gas Fittings Plant, and the Bayram-Aliskiy meat and fat combine and by the future reconstruction of the Maryskiy Meat Combine and Combined Feeds Plant, the Tashauzskiy Rice Plant, and many other enterprises. As a result of the re-equipping and expansion of production, fixed capital in the republic will increase compared to 1981 by 7.3%, and its average annual value will be 11.1 billion rubles.

The concentration of efforts on start-up and top-priority objects is a highly important task for all of the participants in the construction conveyor. It is here that equipment, people, and materials have to be brought together and skillful use has to be made of them in order to absolutely fulfill the plans. It should not be forgotten that today the payment of construction workers will be made not for amounts of fixed capital, but for capacities and buildings ready for operation. Life is forcing economic leaders to review the structure of the management of capital work and to eliminate serious barriers and hindrances--too many levels of management, parallelism, and departmental barriers.

Harmonious joint work--this is what is necessary now at all objects which are being constructed. And above all at those which define the face of our economy. I have in mind energy and the fuel industry. It is known that the party and government attribute paramount importance to the development of these branches. In 1985 it is planned to produce 78.8% more electric energy in the Turkmen SSR than in 1980.

The foundation for growth has been laid. The Krasnovodsk Heat and Electric Power Station and the Nebit-Dagskaya and Bezmein State Regional Electric Power Stations are being expanded and reconstructed, capacities are increasing at the Mariy State Regional Electric Power Station where the seventh and eighth blocks will be raised, and the Chardzhou Heat and Electric Power Station is being built in the settlement of Neftezavodsk. It is planned to complete the work on joining the Turkmen energy system to the Common Energy System of Central Asia by means of powerful electric transmission lines; and to expand distribution systems. The realization of the plans for new construction and re-equipping will make it possible to improve energy supplies for the republic and its neighbors.

The construction site map of the Turkmen SSR will be added to by many objects in the gas extracting industry. Whereas on 1 January 1981 the All-Union "Turkmengazprom" Industrial Association was working thirteen deposits, in January 1986 it will be working 23 of them. Operations are supposed to begin at the Severnyy Balkui, Uchadzhi, Seyrab, Shorkel', Vostochnyy Tedzhen, Davletabad, Samantepe, and Gugurtli fields, five of which will already be producing output this year. The amount of exploitation drilling will increase by 30.4%. The deposits of sea oil at the Chelekenskaya section of the Caspian are being worked at accelerated rates. The collective of the "Chelekenmorneftegazprom" will take three promising sites--the Prichelekenskiy cupola, Livanova-Vostochnaya, and Barinova. In this way, the republic's role in supplying the country with blue fuel and condensate will grow.

In 1982 the All-Union "Turkmengazprom" Production Association will have to utilize 244.3 million rubles worth of capital investments--not only in the southeast of Turkmenia, but also in the north of Karakumov where it is necessary to commission refrigeration installations in Kirpichli, Naipe, and Gugurtli. The realization of a strenuous gas construction program requires an outstripping development for its production base. This question is a crucial one on the agenda of the "Turkmenneftegazstroy" Association.

Unfortunately, the extraction of petroleum in the west of the republic is decreasing. The special conditions of the development of the petroleum industry at the present stage compels the investment in it of considerable capital. During the Eleventh Five-Year Plan 813.5 million rubles has to be utilized, with 114 million rubles of this amount used for construction and installation work. It is planned to build up the Erdekli, Ekizak, and Chikishlyar deposits, to build several gas pipelines, compressor stations, and production bases for drilling, to construct motor vehicle roads, and so forth.

The development of the petro-chemical complex of the Turkmen SSR has been assigned a large place in the plans of the second year of the five-year plan. In addition to increasing the capacities of the Krasnovodsk Petroleum Refining Plant, the construction of a large enterprise of the branch in Neftezavodsk will continue. When this work is completed the amount of petroleum refining in the republic will increase by 1985 by 1.4 times.

I would like to observe that the Turkmen South-East Territorial Complex is gaining strength. In Neftezavodsk, which will acquire the status of a city during the Eleventh Five-Year Plan, a large 124,000-spindle spinning factory is being built. The commissioning of housing will increase here. And in Gaurdak-Kugitangskiy Rayon, which is rich in minerals, it is planned to perform construction and installation work in the amount of 141.1 million rubles, with 40 million rubles worth performed this year. Sulphur, celestine, and plaster stone--much more of this output will be produced than last year.

Contracting collectives have to pay especial attention to the objects which have been defined by the Basic Directions for the Economic and Social Development of the USSR. We have already named the Chardzhou Petroleum Refining Plant and Heat and Electric Power Station, the Mary State Regional Electric Power Station, and the Ashkhabad Cotton Textile Combine. Next year we expect to have the first products from the non-fabric materials shop of the Chardzhou Cotton Wadding Factory, and in 1984 from the Bezmein Rug Combine. At the end of the Eleventh Five-Year Plan the Ministry of Construction Turkmen SSR has been bound to put the Turkmen Nitrogen Fertilizer Plant in Mary into operation.

The republic will begin such large construction projects as the non-regrindable hard alloy plate plant in Ashkhabad and the special graphitized electrode plant in Tashauz. They will give life to new branches of industry in the republic. There will be an increase in the fixed capital of the cotton ginning branch thanks to the commissioning of enterprises in Mukry, Deynau, and Sakar-Chaga.

One of the basic special purpose programs which was set by the 26th CPSU Congress--an improvement of the agro-industrial complex--is being accomplished. Almost 1/3 of the total state capital investments will be assigned to agriculture. Construction workers will begin the construction of the Tashauz branch of the Tuyamuyunskiy canal, egg and meat poultry factories, wine growing sovkhozes, and cotton and rice growing sovkhozes. There will be a continuation of land improvement work, the putting of new lands into use, the creation of irrigation systems, the flooding of pasture lands, and so forth. In addition, there will appear quite a few enterprises for the processing and storage of agricultural output--elevators, wheat combines, and combined feeds plants.

As always, at the center of our attention are tasks of a social character, an improvement of the well-being of the population. In 1982 1.14 million square meters of housing space will be commissioned, including 520,000 on the basis of state capital investments. More funds have been allocated than last year for the development of trade and domestic, medical, and cultural services.

As you see, the tendency toward a more rigid balancing of plans is becoming increasingly obvious. They take account of the needs of all of the branches of the economy. The participants in the republic's construction conveyor have to set this goal for themselves--to fulfill what has been planned, to prevent the lagging of any element, and to thoroughly help the harmonious development of our society. It is an entirely realistic task if we work skillfully and with high productivity and if we get rid of the shortcomings which were discussed at the November (1981) Plenum of the CC CPSU.

TURKMEN JOURNALISTS HOLD CONGRESS IN ASHKHABAD

Ashkhabad TURKMENSKAYA ISKRA in Russian 12 Jan 82 p 2

[Article by K. Kurbanov and V. Antonnenko: "Faithfully Serve the Party and the People"]

[Text] In the life of every collective there are noteworthy events. The Sixth Congress of the Union of Journalists of Turkmenistan was such for the workers of our republic's newspapers and magazines, television and radio, information agencies, and other information and propaganda mass media.

It is noteworthy that the congress took place in an atmosphere of great political enthusiasm by the workers which has been elicited by the tremendous plans of the second year of the 11th Five-Year Plan, the realization of the decisions of the 26th Party Congress and the November (1981) Plenum of the CC CPSU, and by the competition in honor of the forthcoming 60th anniversary of the formation of the USSR. This imparted to the work of the congress a special importance and responsibility for the work of all of the mass information media.

The delegates to the congress received the address by the secretary of the CC of the Communist Party of Turkmenistan comrade M. M. Mollayeva with great satisfaction. While welcoming the participants of the forum she emphasized the great role of the republic's journalists who are on the front lines of the ideological front in the development of Turkmenistan's economy and culture. True to its Leninist traditions, our press acts as a fighting collective correspondent, agitator, and organizer of the masses. The work of many of the republic's editorial collectives is marked by creative searches, and there has been an increase in the topicality and competence of publications and in their effectiveness.

Comrade L. I. Brezhnev said from the tribune of the 26th CPSU Congress: "Our party feels great confidence in the many thousands of Soviet journalists and places a high value upon their difficult work. Naturally, we are all interested in having our mass information and propaganda media always be a genuine tribune for party and public opinion." This high appreciation by the party inspires and obliges journalists to struggle even more actively for the party's cause and for the triumph of its ideals. The summary report of the board of the Union of Journalists Turkmen SSR and the addresses of the delegates were imbued with a consciousness of this.

The chairman of the board A. Mamedov noted that there is a large detachment of journalists at work in our republic. During the last five years of the reporting period their efforts have been directed toward the successful accomplishment of the tasks posed by the 25th and 26th CPSU Congresses, the 21st and 22nd Congresses of the Communist Party of Turkmenistan, and the subsequent decisions of the party.

The well-known decree of the CC CPSU "On a Further Improvement of Ideological and Political Educational Work," the instructions of the party congress on an overall approach to the education of the masses which were further developed in a number of decrees of the CC CPSU on the important problems of ideological work, and the books by comrade L. I. Brezhnev "Little Land," "Rebirth," "Virgin Lands," and "Reminiscences" have been at the basis of the work of the Union of Journalists. Guiding themselves by them, the creative collectives of the editorial boards of our newpapers and periodicals have been directing their efforts towards promoting a rise in the theoretical ideological level and professional mastery of journalists and their militancy and purposefulness. The professional training of journalists has been organized toward this end. They also study in the system of party education, and undergo retraining in the higher party school in Tashkent, in the Academy of Social Sciences at the CC CPSU, in the institute for advanced training for television and radio workers, and in TASS.

There are 16 creative sections and commissions attached to the Union of Journalists of the Turkmen SSR which render appreciable assistance to editorial collectives in carrying out their tasks and promote the creative growth of journalists, especially those with rayon newspapers. There has been a substantial strengthening of the creative relations of the republic's Union of Journalists with the journalists of foreign countries.

One of the basic directions of the work of the mass information media is to ensure the high effectiveness of published and unpublished materials. Diverse forms and methods are used in the struggle for effectiveness. Materials under the following rubrics have received the approval of readers: "Workers' Post Reports," "Although the Letter Was Not Published," "Returning to What Has Been Printed," "On the Tracks of a Letter," "Attention: A Formal Reply," "The Director Comments on Letters," "The Reader Continues the Discussion," "A Letter's Summons to Travel," and others.

The journalists of the youth newspapers YASH KOMMUNIST and KOMSOMOLETS TURKMENISTANA are struggling with a fighting spirit and with good Komsomol fervor for the effectiveness of their work. Quite a few interesting initiatives have appeared on their pages. A large contribution to the struggle to increase the efficiency and quality of work is being made by the creative collectives of the editorial boards of the newspapers EVENING ASHKHABAD, CHARDZHOU PRAVDA, MYDAM TAIYAR and by radio and television.

The periodical SOVET TURKMENISTANYNYN AYALLARY which recently marked its 50th anniversary has become a reliable friend and advisor for thousands upon thousands of the republic's workers. The size of the periodical has reached more than 140,000 copies, which speaks eloquently about its increased authority, close connections with its non-staff writers' collective, and about trust.

The problems of education are also a matter of concern for the creative collectives of such publications as MUGALLYMLAR GAZETI and the periodical PIONER. Describing the life and studies of the republic's pioneers and schoolboys and girls, and enlisting the cooperation of ardent and inquisitive youth correspondents, the journalists of our childrens' publications are doing important and necessary work and are educating devoted Leninists, patriots, and internationalists. Recently their own periodical appeared for the republic's youngest inhabitants--KORPE.

Seven republic, 10 oblast, 44 rayon, and 1 city newspaper and 23 periodicals and periodical-type publications are published in the republic. A number of newspapers and periodicals have been granted government awards for their great services to the communist education of the workers.

While giving a positive evaluation to the work of the Union of Journalists, the delegates to the congress at the same time took note of important shortcomings in its work and pointed to the poor contacts between the board of the Union of Journalists and party and trade union agencies. Oblast organizations show little initiative in their work with journalists and do not study the problems of editorial collectives, especially of the rayon echelon. A serious reproach was made against the Ashkhabad Oblast organization which does not make full use of the possibilities for developing the creative initiative of the journalists of the republic's capital and does poor work in organizing press conferences, disputes on journalism genres, and the work of creative sections.

What has to be done for every issue of a newspaper to be marked by inimitableness--both in content and in design,--to more fully reflect the pulse beat of the republic and the efforts of our labor collectives competing for production efficiency and work quality and for the advanced fulfillment of the annual plans and of the Five-Year Plan as a whole, and this without leaving the reader indifferent--these questions agitate every editoral collective and there was a professional discussion of them at the congress of journalists. The delegates who spoke in the discussions described their work experience and raised the problems that agitate them.

"The key topic of the newspaper SOVET TURKMENISTANY," said its editor B. Kerimi, "has been and remains a topic of the socialist competition of workers' collectives and a treatment of the anniversary watch under the motto of: 'For the Sixtieth Anniversary of the Formation of the USSR--Sixty Shock Labor Weeks.' In dealing with this topic we base ourselves on the experience gained during the 10th Five-Year Plan."

Materials are regularly published on the pages of this newspaper which describe the work experience of advanced collectives and analyze the reasons for the lagging of enterprises which do not fulfill their plans. The editors have armed themselves with the permanent rubrics: "Not A Single Laggard at our Side" and "We Will Increase the Production of Fine-Fibred Cotton." The creative efforts of the editorial collective are also directed toward unmasking the ideological diversions of imperialism, and the formation in the republic's workers of a scientific worldview, selfless devotion to the party, to communist ideals, and to proletarian internationalism and love for their homeland. Atheistic education and a struggle against survivals of the past in the consciousness of people are at the center of the attention of the editors.

The stage setting events of recent years have determined the basic work directions of the journalists of the newspaper TURKMENSKAYA ISKRA. With the power of their journalistic words they are helping the republic party organization to mobilize our workers for the fulfillment of their national economic plans and socialist commitments and are providing a broad display of the heroism of the workdays of our contemporaries, the Soviet way of life, the many-faceted activities of the party in economic and cultural construction, and its domestic and foreign policies.

"Our chief task," the editor of the newspaper Ye. N. Kurylev emphasized in his address, "is to bring the demanding, critical, and constructive spirit of the 26th Party Congress and the November (1981) Plenum of the CC CPSU to every work collective, and with our publications to increase the creative activeness of the masses, and to cultivate in them an intolerance toward shortcomings and toward any deviations from the Soviet way of life and from our morality."

What did the newspaper do in this direction? Immediately after the 26th Party Congress the following rubrics appeared on the pages of TURKMENSKAYA ISKRA: "Put the Decisions of the 26th CPSU Congress into Practice," "The Ideas of the 26th CPSU Congress--Among the Masses," "May the People's Wealth Grow," "For the Soviet Man," "The Economy--A Common Concern," "How Are You Doing, Team?," "Improve the Economic Mechanism," and others. Materials are published under these rubrics about how the workers of our towns and villages are realizing the party's plans for the intensive development of the economy, a rise in labor productivity, and the improvement of management and are introducing progressive forms of labor organization and payment.

However, not everything has been done yet. In the republic newspapers there is sometimes a lack of a fighting spirit and of aggressiveness, and they do not always manage to embody a topic they have raised in a clear and accessible form. This is the effect of a shortage of highly qualified journalist cadres, especially in the youth newspapers where basically the fighting reserve for the party press is trained. This, in particular, was talked about at the congress by the editor of the newspaper KONSOMOLETS TURKMENISTANA B. Gafurov. He raised the very important question of training young journalists in the central vuzes to which young men and women are assigned on the recommendations of newspapers, periodicals, and the radio and television.

In Chardzhouskaya . today two oblast and 12 rayon newspapers are published and a television studio is in operation, but there are not enough journalist cadres.

"Journalism graduates who come to Turkmenistan," the chairman of the board of the oblast organization of the Union of Journalists M. Nobatov said, "as a rule, get jobs in Ashkhabad. In two years three graduates from the central vuzes were assigned to the oblast newspaper LENINELY, but not one of them arrived at his destination."

Analyzing what had been achieved and speaking about what should be taken from the experience that has been gained and used in the future both the reporter and those who participated in the discussions--B. Karayev, the editor of the Tashauz Oblast newspaper KOMMUNIZM ELY; T. Sokhbetov, the editor of the Mary Oblast newspaper LENIN BAIBAGY; A. Akgayev, the editor of the Kirovskiy Rayon newspaper YAGTY EL; Ch. Annakurbanov, the chairman of the State Committee for Television and Radio Broadcasting; M. Malkis, the chief of the business department of TURKMENSKAYA ISKRA; Ye. Khodzhayev, the chairman of the State Committee for Publishing, Printing, and the Book Trade, and others--devoted their basic attention to unsolved creative and everyday social problems. There are still quite a few of them in the editorial collectives and it is the direct duty of the board of the Union of Journalists Turkmen SSR and its local organizations to solve them.

The member of the presidium of the Soviet Committee for the Defense of Peace and chairman of the Turkmen Republic Committee for the Defense of Peace, the People's Artist of the USSR I. Klychev, who was present at the congress, presented honorary certificates from the Committee for the Defense of Peace to the collectives of "Turkmeninform," State Committee for Television and Radio Broadcasting, and to the editorial boards of the newspapers KOMSOMOLETS TURKMENISTANA, the Chardzhou Oblast LENIN ELY, and VECHERNIY ASHKHABAD, and medals of honor and valuable gifts to certain journalists.

The congress adopted the appropriate decree and elected a new membership for the board of the Union of Journalists.

CHALLENGES TO IRAN'S ISLAMIC REGIME

Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 28 Aug 81 p 7

[Commentary by foreign affairs analyst N.Muhammadiyev in column "Commentator's Pulpit": "Iran: Internal Situation Growing Tense"]

[Text] Less than 3 years have passed since the overthrow of the 2,500-year-old regime of the shahs and the victory of the people's revolution in Iran. But, the internal situation in the country is becoming increasingly uneasy. Internal struggles, conflicts and acts of sabotage have sharply risen, especially in recent days.

It is well-known that a variety of political groups and social layers of the people contributed to the success of the revolution. Although their world views, aspirations and needs were diverse, they were united by a single goal--the overthrow of the detested Shah's regime that was based on oppression and violence and supported by foreign powers. But after the revolution, each of these groups and social layers pressed its own demands. As a result, the first disagreements have arisen. More than a hundred political groups and parties announced their existence in the first period of the revolution. Among them were organizations of progressive and democratic orientation, far right Americophile parties, Maoist and Trotskyite splinter groups, and reactionary religious associations. Most of them are still active today.

In the first days of the revolution, a program for building a just society with equal rights for all and free of oppression and despotism was announced. It was stipulated that this society would conform to Islamic principles in every respect. But, putting this into practice has brought about great conflict. One of the basic causes of this is the attempt to govern a developed society that has access to all the fruits of progress in accordance with medieval laws and principles. As a result, economic stagnation has occurred, and prices have risen. Of course, acts of sabotage by counterrevolutionaries and foreign intelligence agencies, and the war being waged with Iraq, also contribute heavily to this.

In recent days, the world press has been writing about the increasingly tense situation in Iran. Attempts are being made on the lives of government officials, assembly members, and "Islamic revolutionary guards" in central cities like Tehran, Meshed, Isfahan, Kerman, and Tabriz. Stores and government offices are being bombed. In leaflets and proclamations being disseminated in various cities, the population is being incited to fight against the present government and the religious political leaders of Iran. The government, in turn, is stepping up actions against counterrevolutionary and anti-government forces. In the last few days, more than 700 persons have been arrested. Hundreds of people have been tried and executed in the struggle against the government.

Foreign intelligence agencies and SAVAK agents, the former Shah's secret police, are playing an active role in inciting actions against the present regime and in heightening conflicts between factions. Their hand in the campaign of hostility and in various acts of provocation against Iran is increasingly evident.

In presidential elections conducted recently, former Prime Minister Muhammad Ali Rajai was elected president of the country. Doctor Bahunar, one of the active participants in the revolution, was appointed to the post of prime minister.

Numerous problems face the new government. Above all, the internal situation in the country must be returned to normal and the economy stabilized. The future will show whether or not the government can solve these problems.

GEORGIA INCREASES SCOPE OF ANTICORRUPTION CAMPAIGN

Tbilisi ZARYA VOSTOKA in Russian 7 Jan 82 p 2

[Article by A. Iosebidze: "State Interests Are Supreme"]

[Text] Big things, said Vladimir Mayakovskiy, are seen at a distance. . . . And, indeed, in order to see the true dimensions of a thing or a phenomenon it is necessary to distance oneself at least a little bit from them--in space or in time. . . .

We are leafing through the slightly yellowed newspapers of 1973: January--the bureau of the CC CPSU of Georgia examines the question of exaggerated reporting and abuses in Gardabanskiy Rayon; February--the bureau of the CC adopts the decree "On the Crudest Violations of the Rules of Soviet Trade, Exaggerated Reporting, Embezzlement, and Other Abuses in the System of Tsekavshiri"; April--on the bureau's agenda is the question of serious shortcomings in the work of the "Gruzneft" Trust; June--the CC of the CP of Georgia examined the question of serious shortcomings in the work of the Ministry of Trade Georgian SSR on carrying out the decree of the CC CPSU regarding the organizational and political work of the Tbilisi party gorkom; July--on the incorrect leadership style of the Tskhaltubskiy Rayon Committee of the CP of Georgia and the rayispolkom in working with economically backward kolkhozes; August--on measures to increase the effectiveness of the legal education of the republic's workers; October--on the work of the Institute of Philosophy of the Academy of Sciences Georgian SSR. . . . This, of course, is far from a full list of the problems which have come to the center of the attention of the republic's party organization; it is only a part of them, but from document to document, no matter with what problems it is concerned, there is, like a red thread running through them all, a demand: to battle--against negative phenomena, for negative phenomena--a shield, and for negative phenomena there is no place in our life!

The struggle against negative phenomena was already in progress, it was growing wider, and this development of it in width was quite natural, although in this case also there were "smart guys" who said that all that was happening was a clean-up, if one may put it this way, of the place for "their own" people and that they would place these people in jobs and everything would quiet down, everything would settle down. . . . The "smart guys" did not realize that any socio-political process has its own internal logic of development, and to a large extent it does not depend only upon objective but also upon subjective factors--

for example, upon the determination of those who stand at the sources of the process to bring it through to its end. One has to believe that the "smart guys" had a most serious sobering up after the adoption of the decree of the CC CP of Georgia "On the Struggle Against Protectionism in the Republic" (June 1974). This document brought to the court of public opinion a phenomenon which served as the foundation for everything that received the generalized designation "negative antipodal to the socialist way of life phenomena." Protectionism in this document was given an exhaustive class characterization: "Protectionism is most often connected with an incorrect and selfish use of power. This is convincingly proven by the facts which tell us that protectionism in the republic was implanted from above with the connivance of leading agencies and workers of various ranks, in many cases with their active participation. . . . Things in the recent past reached a point where influential business types and manipulators provided protection to unworthy people in getting jobs even in leading party and state agencies, and in getting promotions. There are cases when the protection took the form of a camouflaged bribe, for, as they acquired a responsible office and power and influence these people did not remain in debt to their protectors and gave them moral and other support. . . ." And immediately after this--a clear and unambiguous explanation of how such a situation could arise: "Protection, and assistance in arranging the most diverse matters in violation of the procedure for examining and deciding them which has been established by the law did not find the proper rebuff from communists in party organizations and from many labor collectives, which has to be regarded as a direct result of a lack of criticism and self-criticism, of a numbing of a sense of principle, and of an apathetic attitude by a certain section of communists to public interests and a loss by them of their fighter's qualities."

One has to possess considerable courage in order to just plain--without beating around the bush--openly and candidly name things by their names. The republic's party organization did have this courage, and this is what--this courage--can tell those who had set themselves up "in clover" and who had lost their fighter's qualities to undertake a strict review of their positions. One of the most important forms of this review became the mass return of workers to the enterprises which they had previously left, and of peasants to the kolkhozes and sovkhozes from which they had left--some for a neighboring construction project, and others for more distant places--to the numerous markets of Russia, the Ukraine, and Kazakhstan . . . . Steel workers returned to the Rustavi Metallurgical Plant, and hereditary corn farmers returned to their Abasha villages--they were responding to the courageous call of courageous people, and they were ready for this call because there was a confidence that lived on immutably in people: the day will come and the hour will come when the communists will initiate a struggle in the republic against everything that contradicts the lofty norms of the socialist way of life and that is incompatible with party ethics.

This day arrived. The struggle began, but it was important from its very first moments to help people to grasp the fact that it was not a month-long struggle against negative phenomena that was in prospect, but that what was involved was a large-scale and long-term party action in which painstakingness, a sense of principle, and consistency were especially important. And, of course, the coordination of the efforts of all those who joined in this struggle. Today, at the close of a decade of struggle by the republic's party organization for the successful accomplishment of the tasks put forward in the decree of the CC CPSU on the Tbilisi gorkom, you can see with especial clearness how our oblast, city, and rayon party organizations, gradually increasing the intensity of the struggle against negative phenomena, being enriched by the experience of this struggle, and soberly evaluating the successes and failures in it, have brought it out onto the main road of national life. Here is an account by the First Secretary of the Oktyabr'skiy raykom of the city of Tbilisi A. Azirov:

--From the very beginning we realized that the struggle for a high level of discipline and organization and for strict compliance with the norms of communist morality would not be a short-term campaign, but obligatory daily work upon whose effectiveness the moral and political climate in the rayon would wholly depend. This work would have to be conducted on a strictly scientific basis, calmly, without falling into extremes, without lurching from side to side, and, of course, basing ourselves on the support of the broad masses of the workers of the rayon. In addition, it was very important to orient the organizational and political work of our primary party organizations and of the rayon party organization as a whole in such a way that, while systematically developing and deepening the struggle against negative phenomena, they would constantly move from the solution of relatively simple to more difficult problems.

At first we concentrated our basic attention on the situation in trade and in the service sphere. I think that the choice of precisely this element was correct--for the assertion that the sphere of trade and domestic services was the most contaminated by negative phenomena is indisputable. The raykom of the party made the following calculation: the rayon had functioning in it administrative agencies, people's control agencies, and there are public workers' organizations which supervise the work of trade objects and domestic services enterprises--is it wise for them all to be operating separate from one another, and would it not be better and more beneficial to unite their efforts and, on the basis of this unification, to impart to their work a great purposefulness and, consequently, to achieve greater effectiveness?

In January 1977 the bureau of the raykom took the decision: to create a coordination commission for the strengthening of socialist discipline and the struggle against negative phenomena. It has to be said that the first measure of this commission already showed its promisingness: we were able to work out a plan for the systematic control of the work of trade and domestic services enterprises with the possibilities of all of the controlling agencies and services coordinated in such a way as to eliminate duplication or parallelism in work. But the first months of the commission's work showed that here also we had to go from the simple to the difficult: the tasks which were set by the 5th (1976) and 8th (1977) plenums of the CC CP of Georgia and the decree of the CC CP of Georgia "On Additional Measures to Strengthen the Struggle Against Violations and Abuses in the Republic's Trade and Domestic Services for the Public" which was adopted in December 1977 impelled us to impose the structure of the commission. It consisted of 15 people joined in 3 groups: one of them was charged with working on industry, construction, transportation, communications, and municipal services; the other--trade, the service sphere, and education; and the third--administrative agencies. It was found necessary that the commission organize its work on the basis of long-term and current plans that take account of the circumstances in the rayon and periodically inform the bureau of the raykom about its work. Thus, not only trade and domestic services, but practically all of the spheres of life of the rayon were in the field of vision of the coordination commission for the strengthening of socialist discipline and for the struggle against negative phenomena. This, in our view, was entirely logical since negative phenomena and a disregard of the norms of socialist discipline were taking place--and, unfortunately, still take place today--not only in the trade system. Now we had to clearly define the range of issues on which the commission was supposed to work--from a coordination of the actions of party, government, economic, and administrative and control agencies, and trade union, Komsomol, and public organizations in the struggle against the negative phenomena to the mobilization of public opinion for the national condemnation and censuring of the concrete bearers of negative phenomena. Having done this, the bureau of the raykom bound the raykom's sections, for their part, to activate the struggle against violations and abuses in their spheres, that is, to put it in other words, we charged the sections with setting up a system of control and performance verification for decisions which were made on the basis of the results of the measures of the coordinating commission.

Why am I going into such detail about the principles of the organization of the work of the coordination commission? In order to answer this question, let us turn to the materials of the November (1981) Plenum of the CC CPSU. Delivering a speech at it, Leonid Il'ich Brezhnev again emphasized that organization, efficiency, and discipline are important in each element of party, state, and economic work. It is absolutely obvious that the antipodes of these wonderful qualities are a lack of organization, slackness, and a lack of discipline, that is, precisely such things as in and of themselves serve as an excellent soil for the flourishing of all kinds of negative phenomena. This is why in working out the basic directions of the coordinating commission's work we devoted so much attention to its structure: in the work of the commission organization, efficiency, and discipline were supposed to become and did become, metaphorically speaking, the framework of its work style.

We have already talked about how seriously the rayon party organization went to work on the negative phenomena in the sphere of trade and domestic services--the commission worked in this direction, as they say, indefatigably: its excellent organization made it possible for it to very judiciously position and distribute the workers, employees, engineering and technical workers, and pensioners who had been enlisted in the checks: its efficiency ensured a deep analysis of the materials of the checks and the groundedness of the decisions taken on the basis of their results; its discipline made it possible for it to clearly control the execution of the decisions taken by the bureau of the raykom on the commission's measures. And, in total, all of this became a reason for the commission coming onto a very serious problem--I have in mind the degree of participation in the struggle with the negative phenomena shown by the leadership of our trade organizations and their primary party organizations. Having gone to work on this problem, the commission came up against a very unattractive picture: individual trade organization leaders and primary party organization secretaries not only did not stand in the way of the bearers of negative phenomena, but actually connived with them and sometimes even assisted them--what kind of struggle is there to talk about here? The commission submitted this question for the consideration of the raykom bureau, we discussed it in all of its aspects and punished the culprits in the proper manner, but it was not possible to stop with this and we had to engage in earnest such a global for our rayon problem as the position of the economic and party leaders of our enterprises, institutions, and organizations in the struggle against negative phenomena. We studied this problem in the "Tbilobuv'torg," in the passport division of the rayon department of internal affairs, in the "Tbiltabak" and "Gruzvinmash" production associations, and so forth. . . . Our approach was simple, but principled: an official has to answer for the work he has been charged with, and responsibility in the final analysis is measured by how one or another leader complies with state, national, and, this means, party interests. Who shall be the first to call him, the leader, to account? The party organization, of course. "The way communists work determines to a large extent the climate and the mood in labor collectives and, this means, their production indicators,"--says Leonid Il'ich Brezhnev, and we directly relate this statement to how communists are working in the field of the struggle against negative phenomena. And it is not only a matter here of having every communist actively participate in checks, in control measures, and in the discovery of various kinds of violations and abuses, although this, of course, is very necessary. The chief thing is that the party member in his way of life and in his manner of thinking personifies the non-acceptance of that which hinders our successful movement forward, which contradicts the norms of communist ethics. . . .

The ten years which passed after the adoption of the decree of the CC CPSU on the Tbilisi gorkom were for the communists and for all of the workers of the rayon a time of most stubborn labor and a time of strenuous struggle. Quite a lot has been said and written about our experience in waging an offensive against negative phenomena, but if we are to speak about the rayon party organization, it, with full reason for feeling this way, is far from satisfied with what has been achieved. For how much work did we do on the situation in the "Tbiltabak" Production Association and how much effort did we expend in order to close up all of the channels for theft and abuses, but the carriers, as the people call them, have still not become extinct here, the enterprise's communists are still not waging their struggle against thefts with sufficient sharpness, and, this means, that both the raykom of the party and its commission for coordinating the struggle against negative phenomena have missed something very important. What exactly? We will have to look into this, and we will without fail look into it: this is demanded by our common interests. I will make my idea more exact: we are not talking only about "Tbiltabak"--we are continuing to come up against recidivists of negative phenomena in other elements of the rayon organism also and, obviously, there is good reason for this, for we, like the other party organizations of the republic, have to deal with the psychology of the bearer of negative phenomena. It, this psychology, has to be broken and rebuilt--is it possible to put up a strict schedule by quarters or even by years here? I would say only one thing: we are optimists, and our optimism is based on the undoubted achievements of the republic's party organization in the struggle against negative phenomena. "We have succeeded," Leonid Il'ich Brezhnev said during the days of our anniversary celebrations,"in initiating a principled and uncompromising struggle against negative phenomena, for the strengthening of party and state discipline, and for a correct cadre policy. A great deal has been done to strengthen the positive processes in the economic and social life of the republic. . ." The conclusion from this proposition is exceedingly clear: a great deal has been done, but far from everything. While giving our workers a profound and comprehensive explanation of the supreme goal of our party which consists in a steady rise in the material and cultural level of the Soviet people, we in our ideological and educational work unswervingly oppose the fetishization of things, rightly unmasking all those who fall under the power of the "golden calf." And we are confident that everything will be done exactly as the party demands: the struggle which has been begun will be carried to a finish.

Negative phenomena have many faces, although, as has already been said above, at their basis lie private property tendencies and an endeavour to grab as much as possible from society while giving it nothing in exchange. But even the most sincere bearer of such tendencies, as was emphasized at a republic scientific and practical conference which discussed this question, has to have his own, permit me to say, "ideology," he has to justify his actions, and, as a rule, he undertakes this kind of justification within the framework of his customary concepts and categories. . . . Not weddings with hundreds of people with the purpose of monetary extortions, not crowded kelekhi with the same, in essence, purpose, not some kind of concealed bribes in connection with a housewarming, a birthday, or entrance into a job, but the observance of the century-old traditions of good neighborliness, mutual assistance, and mutual help--this is how the bearers of negative phenomena tried to present their endeavour to adapt themselves to the new conditions of existence. But here also the resolute intervention of the CC CP of Georgia gave many people a serious sobering up--we have in mind the situation of Zestafonskiy Rayon which served as the occasion for a big (we emphasize this--all-republic) discussion on harmful customs and traditions and on the fact that the party organization of the republic will not allow anybody to hide behind a sham solicitous attitude toward national values in the name of scorning general Soviet values.

I recall with what bitterness the First Secretary of the Zestafonskiy Raykom of the party Mamuka Aslanikashvili talked about how difficult it was to undo everything that had been done by the "preservers" of outmoded traditions and customs. But it was difficult not only in Zestafon'. In Abkhaziya, in Adzhariya, in South-Osetiya, and in other regions from time to time the kinds of situations arose in which the republic's party organization had to take the most decisive measures of an organizational character in order to moderate, to put it mildly, the ardor of those who with all means were trying, clothing their actions in a "new system of phrases," to leave everything as it had been in the past.

And here, probably, there is sense in again being amazed by the lack of widsom--let us call things by their names--of these people: they were unable to discern, they did not see how, sweeping away everything outmoded, the republic's party organization was stubbornly seeking possibilities of so combining the truly folk and truly traditional customs with the rapid current of our time and with everything new and auspicious that is born in our life from the creative work of the true workers and true preservers of national riches as a component part of general Soviet and human wealth.

The Shotaoba and Garedzhoba have acquired a new meaning, seeing young men off to service in the Soviet Army has become a real holiday of Soviet patriotism, and a symbol has risen of the organic membership of our people in the great historic community of people--the Soviet people--the memorial in honor of the Unknown Soldier in Tbilisi . . . . And the crown of all of this is the beautiful holiday in which the entire country is now participating--Tbilisoba.

But a struggle would not be a struggle if everything in it could be provided for to the last detail and to every concrete situation. All of us remember the story with the handful of gainlovers who made themselves a nest in the Ministry of Finance of the republic. People got in there who thought that they would be able to hide their true face behind a "new system of phrases."

It did not work. Because there is no notorious "system of phrases." There is a very complex and difficult struggle which at different stages gives birth to new problems against everything that contradicts communist ethics. And this struggle is being waged according to the strict laws of Marxist-Leninist dialectics. At the 25th Congress of the Communist Party of Georgia the coordination of the interests of the struggle against negative phenomena with the laws of Marxist-Leninist dialectics defined in the following way:

the first chief direction of the struggle consisted in strengthening the practice of observing Leninist norms of the organizational structure of the republic's party organization, that is, to sharply increase the fighting efficiency of the primary party organizations and to create normal conditions for the functioning of the middle echelon of party leadership--the raykoms and gorkoms of the party;

the second chief direction followed the main line of establishing Leninist norms regulating intraparty relations and determined by the principle of democratic centralism and above all--the elective nature and reportability of all party bodies;

the third chief direction in the field of the restoration and of observing Leninist norms of party life was connected with a regulation of the composition of the republic's party organization involving strict compliance with the rights of every party member and a simultaneous demand that there be an absolute fulfillment by him of his party duties.

The effectiveness of this approach to the struggle against negative phenomena and to the struggle for the restoration and republic-wide affirmation of Leninist norms of party, state, economic, and social life no longer gives rise to doubt in anybody today. In addition, it is important to emphasize the following: over the entire ten-year-long road of struggle for the accomplishment of the tasks put forward in the decree of the CC CPSU on the Tbilisi gorkom, the republic's party organization while separating itself from everything that is alien to us, did not break the connection of time and constantly insisted that separation from the negative is the best method of observing the principle of continuity with all that was positive in the past.

I remember one of the articles by the writer Guram Pandzhikidze on the pages of ZARYA VOSTOKA. In that article the writer supported with all of his passion the idea that one day the struggle which has been begun with the antipodes of the socialist way of life will be brought to a finish.

Life is confirming the profound party groundedness of this idea.

REGIONAL

BOOK ON RELIGION, EDUCATION REVIEWED

Tashkent SOVET OZBEKISTONI in Uzbek 15 May 81 p 3

[Review by M.Ozbekov, candidate of philosophy, of book "Ma"rifat va din" [Education and Religion] by Sobit Qurbonov, Uzbekistan Publishers, Tashkent, 1980, copies and pages not specified]

[Text] A developed socialist society was built for the first time in history in the Soviet Union, and it is alive and flourishing. The people's education is widely developed in this society. The Marxist-Leninist world view is solidly established. National and international solidarity and mutual ties in the work, culture and life of all Soviet peoples are growing stronger. Studying these fascinating features of a developed society and analyzing their influence on various aspects of life is of great importance.

The book of Sobit Qurbonov, candidate of philosophy, is intended for specialists working in the field of scientific atheism, teachers, graduate and other students at universities, lecturers on scientific atheism, and propaganda workers. It is devoted to an analysis of the problems of forming atheistic convictions during the process of advanced education. The book deserves attention as the first major work in this direction in the literature on atheism.

At the present time, more than 95 million people, or one out of every three persons in the USSR have been drawn to some form of study, and 121.5 million citizens have higher or secondary (full or imcomplete) education. More than 1.3 million scientific workers and 2.7 million teachers work in the scientific institutions and schools of the country. Completing a general secondary education is one of the great achievements of the Soviet people. From these facts cited in the work we clearly see that our developed socialist society is the best-educated society on the face of the earth. The investigator shows through a broad range of clear examples how important education and knowledge and in today's conditions and that their importance will increase in the future. The author stresses that knowledge is becoming a powerful factor in social progress, an important source of the progress and power of every country, and a crucial criterion of its maturity and level of development. Along with this, he explains the problem of knowledge and education, and that the topic of studying their role and place in social progress is important.

As the role and significance of education in social and scientific and technological progress has grown, its influence on the process of liquidating religion and developing atheism has grown stronger and deeper. That is why it is so necessary to study this field of scientific knowledge. The scholar considers this and shows how a higher level of knowledge and education creates and develops mass atheism, and also details the route and mechanisms of transforming scientific knowledge into atheistic conviction in a person.

The book consists of two sections entitled "Elevating the worker's level of knowledge and culture" and "The process of liquidating religion and the problems of increasing the worker's level of general knowledge and of forming a scientific atheistic world view." The nature, direction, character and substance of a scientific education are deeply analyzed, and its social significance and influence on a world view are examined from all angles. In our opinion, the author has convincingly revealed the rich atheistic potential of education. The author's rigorous and logical analysis, supported by facts drawn from life and sociological research, makes it possible to conclude that education is an effective weapon against religion.

A higher level of education positively influences the interest a person takes in his work and in sociopolitical and cultural matters. As the author rightly stresses, the creation of mass atheism and the triumph of the Marxist-Leninist ideology are the result of the victory of the socialist social regime, socioeconomic changes, the development of new social relations, and the great work carried out by the CPSU and Soviet government in educating workers in a communist spirit. Along with this, the creation of mass atheism is the result of implementing the cultural revolution in our country and of millions becoming familiar with its spiritual wealth. In his work, the author not only shows advances in the field of education, but also clearly expresses the changes that have taken place in the economic and cultural life of formerly oppressed peoples of the Central Asian republics, with emphasis on the example of Soviet Uzbekistan.

Another positive side of the work is that the author does not confine himself to proving that a higher level of education strengthens the atheistic activism of people, but he also shows the positive influence that possession of an atheistic world view has on a person's level of education.

The author also advances some interesting thoughts on the problem of transforming scientific principles gained in the course of education into atheistic conviction and on the role of special atheistic education in the formation of atheistic conviction.

A prominent place in the book is given to the critical analysis of bourgeois and religious educational systems, their one-sidedness, their limitations from the class and world view points-of-view, and the attempts of religious leaders to falsely portray the significance of such teachings in the development of learning, science and culture.

The work proves in a convincing fashion that the level of workers' education has great significance in the development of the spiritual life of a socialist society and in the abolishment of religious vestiges in the consciousness and life of a person. In a speech to the Central Committee of the CPSU at the 26th Party Congress, Comrade L I Brezhnev said: "We must do much work in the area of perfecting the socialist way of life and of destroying at its roots anything that hinders the formation of the new man." This book will doubtlessly play a big role in carrying out this important task.

We hope that this work, which is devoted to a profound analysis of the significance of scientific learning and education in the development of atheism and the elimination of religious vestiges, will awaken great interest in readers.

KAZAKH POLICE PAPER RESUMES PUBLICATION

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 1 January 1982 carries on page 4 a 200-word unsigned notice of the reappearance of the Kazakh police newspaper NA STRAZHE. In accordance with the statement of L.I. Brezhnev that "the responsibility of the Soviet police in strengthening socialist legality and the socialist legal system is very great," the KaSSR Ministry of the Interior has resumed publication of NA STRAZHE as of 1 January 1982. The paper will publish various materials on the heroism of police workers in guarding socialist legality and the socialist legal system and will assist in the struggle of the Ministry of the Interior, internal affairs administrations of executive committees of oblast soviets of people's deputies and of party and Komsomol organizations to strengthen socialist legality and actively propagandize Marxism-Leninism and party and government decisions.

COMMENTATOR DECRIES DISTORTION, RUSSIFICATION OF KAZAKH TOPONYMS

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 8 January 1982 carries on page 12, under the regular rubric "Some Thoughts To Be Shared," a 2,000-word article by Myrzabek Duysenov on phonological and semantic distortion of Kazakh toponyms on account of long-term misunderstanding and Russification. Starting in the 17th century, many European travelers and explorers gathered useful information on the lives and cultures of the peoples of Central Asia and Kazakhstan. There were, however, many misrepresentations of local toponyms and other words in the writings of these travelers and explorers due to misunderstanding, misconceptions and the inability to represent local phonetic peculiarities in foreign scripts. One would logically expect these errors to be corrected in modern times, but this has not been the case.

Duysenov takes the view that place, city and other geographical names in Kazakhstan usually derive from a definite locality, family or people and should be spelled so that the association is clear to Kazakhs. He provides examples of the problems involved. He seems to deplore Russian use of old, outdated and wrong names and the many distortions arising from Russian orthographic conventions that render many Kazakh place names incomprehensible. Some Russian spellings are not even close, but, he adds, the Kazakhs once spoke incorrectly of the Russian cities of Petrambor and Maskeu, (St Petersburg, Moscow). The time has come, he concludes, to change this. Duysenbekov also chides misuse of terms of Arabic and Persian origin and other specialized Kazakh vocabulary by younger Kazakh writers.

KAZAKHS DESCRIBE CAMEL AS POTENTIAL MEAT RESOURCE

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 1 January 1982 carries on page 5 a 2,000-word article by Khazhy Qorghanov on the camel as a potential resource for solving Soviet food problems. The Kazakhs traditionally herded sheep, cattle, horses and camels to provide most of the material needs of the herdsmen. These animals were thus celebrated in Kazakh oral literature. Camels, considered a sign of wealth, were assigned a special place among the four animal groups. Recently, however, the number of camels has declined in the Soviet Union and in the KaSSR (there were only 121,000 in 1981, less than in 1965) even though camels are on the rise worldwide (almost 17 million in 1979).

Qorghanov insists that this trend be reversed since the potential for increasing this valuable animal exists in Kazakhstan and since the camel could make a major contribution towards solving Soviet food problems. Qorghanov calls for further development of specialized camel breeding, which produces 1,500 tons of meat, 705 tons of camel wool and 4,250 tons of kumiss on the average in the KaSSR each year. The article discusses camel products in detail, noting the successes of some enterprises.

KAZAKHS DEFEND NEW RUSSIAN-KAZAKH DICTIONARY

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 6 January 1982 carries on page 4 a 2,200-word review by Professor F. Musabekova, head of the Kazakh Language Chair of the Kazakh Pedagogical Institute imeni Abay, Professor S. Isaev, head of the Kazakh Language Chair of the Qyzdar Pedagogical Institute, and N. Ualiev, junior research worker at the Linguistics Institute of the KaSSR Academy of Sciences of the recently completed two volume "Oryssha-Qazaqsha Sozdik" (Russian-Kazakh Dictionary), Qazaq Sovet Entsiklopediyasynyng Bas Redaktsiyasy, Alma-Ata, 1978, 1981. It is clear that the Russian language is of the utmost importance for the Kazakhs as for other fraternal nationalities of the USSR since this language is a great weapon for bringing about knowledge, understanding and mastery of the spiritual treasure of the Russian people and the cultural legacy of the peoples of the world and for acquainting the peoples of the world with superior examples of our national art and literature. The Russian language has also acquired progressive significance in terms of internationality and international relationships; thus the growing interest in Russian everywhere.

In connection with this interest the language institute of the KaSSR Academy of Sciences and the Chief Editorial Board of the Qazaq Soviet Encyclopaedia have published a new, two-volume Russian-Kazakh Dictionary. The review responds to the highly critical review of the work by Qasym Sharipov published in the 24 July issue of QAZAQ ADEBIETI. Sharipov complained of numerous errors, outdated and obsolete usage, artificially derived terminology and the inclusion of large numbers of native Kazakh words with Russian spellings among the dictionary's "Russian" entries.

Musabekova, Isaev and Ualiev, on the other hand, see many of these problems as virtues. The Kazakh words with Russian spellings, for example, the reviewers claim as examples of the many Turkic loan words in Russian, while the derived terminology, in their view, mostly represents current usage and, in any case, such "standard" terminology is useful in providing established translations for widely used expressions while "free" translations might be confusing. The reviewers also note that some features of the dictionary criticized by Sharipov are standard practice for Turkic bilingual dictionaries and that the dictionary must also be judged in terms of its audience, the users for which it was intended, and not in narrow lexicographical terms. They obviously regard Sharipov as a nitpicker for while they admit there are problems, the dictionary is, in their view, highly useful and meets a major need.

ERRORS AND DEFICIENCIES IN ZHAYREM DEVELOPMENT

[Editorial Report] Alma-Ata PARTIYNAYA ZHIZN' KAZAKHSTANA in Russian No 11, November 1981 carries on pages 49-53 a 2,600-word article by K. Uteulin on the many problems plaguing Zhayrem development, specifically the problems of water removal from the mines, inadequate repair and parts bases for mining equipment, labor shortages and an acute deficiency in housing and other facilities in the Zhayrem miners settlement. For centuries Zhayrem was the land of the antelope with only an occasional visit by man and no one had any conception of the riches lying beneath the soil. Serious geological exploration began only in 1969 when, in search for iron, other mineral riches such as lead, zinc, barium, and manganese were discovered. Since then a major facility has developed. The area is considered the largest nonferrous metals base in the republic.

Tremendous efforts have been and are being made to develop Zhayrem resources. Many of these exertions could have been spared but for miscalculation, interagency confusion and direct mismanagement by organizations and authorities responsible for developing Zhayrem. A major problem is ground water accumulation in the mines, a problem that will worsen as mines deepen. It seems that geologists totally neglected to consider this problem when planning the mines, and the error was repeated when the mines were laid out. The water table was just below the surface, instead of an estimated 15 meters deep. Thus when digging began, urgent measures had to be taken to remove rapidly accumulating mine waters. (Excavator operators are described as literally swimming in their cabs.) Most ad-hoc measures have either proven ineffective or have actually compounded the problem. For example, pumps were introduced that were unable to withstand the corrosive mine waters (no one had bothered to test the waters or theorize their possible influence on metals). Waters that were pumped out were delivered to a rapidly growing bitter sea of poisonous water located too close to the mines with the result that as much as one-third of the millions of cubic meters of mine waters removed found their way back to the mines through underground seepage. Although the scope of the problem has finally been understood, measures to provide ultimate solutions of the problem have been put off, seriously hampering development.

Zhayrem also has an inadequate repairs base (particularly because of chronic parts shortages) and idle equipment (up to one-half of all dump trucks at any one time). Causing both problems is the labor shortage--especially skilled labor--because the lack of experienced drivers and operators takes a huge toll on equipment.

The labor shortage itself is not caused by shortage of Zhayrem applications. Applications are being turned down in every skill category. The labor shortage is caused by the acute shortage of housing for workers already on the site. Uteulin discusses this problem in detail, noting a complete lack, initial planning to the contrary, of any order in the building of the Zhayrem workers settlement. The settlement has poor housing by any standards and facilities totally inadequate to meet workers needs. Furthermore it is situated in a very harsh environment. Zhayrem is a mess because of the official decision to produce ores as rapidly as possible regardless of the consequences of this decision for other areas of Zhayrem development. The author concludes, however, that despite the many problems, advances are still being made. He praises the efforts of party cadres in bringing this about.

IRANIANS TOUR UZBEK ENERGY SITES--An Iranian delegation, which is on a foreign tour in connection with the third anniversary of the Iranian revolution, is becoming acquainted with life in Uzbekistan. Heading the delegation is Hasan Ghafuri-Fard, the Iranian minister of energy. The guests examined a number of the republic's energy sites and familiarized themselves with the sights of Tashkent. The delegation will complete its trip in Bukhara. On 13 February members of the delegation were received by A.R. Khodzhayev, deputy chairman of the Uzbek Council of Ministers. Participating in the talks were N.A. Lopatin, USSR deputy minister of power and electrification, who is accompanying the guests on their tour of the USSR, and A. Kh. Khamidov, Uzbek minister of power and electrification. [Text] [Tashkent PRAVDA VOSTOKA in Russian 14 Feb 82 p 1]

KISELEV ON MORAL TRAINING OF YOUTH

Moscow PRAVDA in Russian 24 Jan 82 p 3

[Article by T. Kiselev, first secretary of the Belorussian Communist Party Central Committee: "Moral Development of the Youth"]

> [Text] The complexity, novelty and scale of the tasks of communist building are making high demands on the level of man's education and qualifications and his political and moral qualities. These do not, as is known, come about of their own accord but are shaped from youthful years and developed throughout life. This is why our party, sacredly abiding by Lenin's behest, is striving to ensure that the entire business of the education and upbringing of the younger generation be the inculcation of communist morality.

We are rightly proud that a splendid replacement shift is growing up in our country whose spiritual wealth is the ideological-moral values of developed socialism. They were forged in the fire of revolution and the civil war, in the labor routine of the 5-year plans, in the harsh trials of the Great Patriotic War and in the difficult years of postwar revival. Today also they are being multiplied in shops and at construction grounds, in the fields and at the farmsteads and in scientific laboratories and planning institutes.

"The young people who are today aged 18-25," Comrade L.I. Brezhnev observed at the 26th CPSU Congress, "will tomorrow from the backbone of our society. Contributing to the formation of a generation of politically active, knowledgeable people who love labor and know how to work and who are always ready for the defense of their motherland--this is the most important thing, the main thing in the work of the Komsomol."

The party and Komsomol organizations, the general educational, secondary specialized and higher schools and the broad public of Belorussia are performing diverse work in this direction. Problems of the moral development and maturation of the young men and women occupy a central place in the ideological activity of the republic's party committees and in the young people's preparations for the next Komsomol congress.

Particular attention is being paid to the labor conditioning of our replacement shift. And this is natural. The degree of a man's moral-political maturity is judged by his attitude toward labor in the Soviet society. The formation of the ideological-moral stimuli to labor has naturally become a most important field of the education of the new man. This is eloquently attested by our entire reality, particularly the patriotic movement "The Youth's Shock Labor, Knowledge, Initiative and Creativity for the 11th Five-Year Plan". More than 1.3 million young men and women are participating in this movement in the republic. Every second one of them is working on personal creative plans for an increase in labor productivity and one out of every three is manufacturing products bearing the Symbol of Quality. In socialist competition for a fitting greeting of the 60th anniversary of the formation of the USSR and the movement for a communist attitude toward labor young people are embodying the party's plans in reality, conditioning their willpower and character and acquiring political and moral maturity.

Komsomol-youth shops, brigades and links are becoming increasingly numerous in the republic. The party and Komsomol organizations are displaying daily attention to them and showing concern to ensure that the youth collectives be headed by the most experienced and authoritative people, and this is contributing to their successful work and cohesion to a large extent. Here are a few examples.

The Komsomol brigade led by the communist Ivan Prudnik (the "Beloruskaliy" Association) is well known in the Belorussian miners' city of Soligorsk. Every person with his needs and requirements is in the sights of all here. The healthy moral climate contributes more than anything else to the successful accomplishment of production tasks. In the first year of the 5-year plan the brigade hoisted to the surface more than 50,000 tons of above-plan ore.

Ivan Sinitskiy has headed the Komsomol-youth link for potato cultivation on Minskaya Oblast's "Zagal'skiy" Sovkhoz for 6 years now. He was a delegate to the 26th CPSU Congress and is a member of the Lyubanskiy Raykom Bureau, holder of the Orders of Labor Glory Class II and III and Komsomol Prize winner. In the first year of the 5-year plan his link harvested 420 quintals of potatoes per hectare. An exceptional result! This small, but efficient, cohesive collective has become an excellent school of professional skill and the labor conditioning of young machine operators. Former link members Nikolay Plyshevskiy and Vasiliy Kolodinskiy themselves now head potato-cultivation links and are scoring good successes.

Big opportunities for an improvement in the education of the younger generation are opening up in the process of the practical implementation of the party's demands that our economy be made economical. A proprietorial attitude toward public property and zealous concern for the rational use of material resources is both a production and moral problem. A person's civic activeness, his interest in multiplying the society's wealth and an endeavor to be useful to his people are manifested here.

The Minskiy Gorkom recently supported the initiative of the city's Komsomol members and young people with respect to the organization of competition for economies and thrift. Each participant has a "Thrift Log" in which economized raw material, fuel and electric power is recorded. The progress of the competition is being illustrated by the large-circulation newspapers and visual agitation. Spot checks are carried out regularly whose results are given extensive publicity. The young men and women have already saved the state more than R2 million.

Labor is a moral category. It is with good reason that the people say: "Labor both teaches and feeds". For this reason it is very important to accustom each person to socially useful activity as early as possible. And, conversely, delay could prove detrimental to the individual and, consequently, to society. V.I. Lenin repeatedly recalled the need to educate "everyone from a young age in conscious and disciplined labor".

From this viewpoint the Soviet family has a great part to play in the younger generation's moral education. It provides the child with its first labor skills, shapes habits, determines the thrust of feelings and thoughts and fosters scrupulousness and selflessness and benevolence and responsivenes. Leonid Il'ich Brezhnev writes in his book "Vospominaniya" [Reminiscences] that "it is precisely here that the sources of a person's character and his attitude toward life lie". And it is gratifying that the republic primary party organizations have begun to involve themselves more purposefully in a strengthening of the moral-psychological climate in the home and are increasing its responsibility for children's upbringing.

We cannot, however, also fail to see certain flaws in family upbringing which are sometimes distressingly reflected subsequently in young people's fate. Certain parents confine their duties with respect to children merely to feeding them as fully as possible and clothing them as handsomely as possible and later "arranging" a prestigious cushy job for them. They argue here approximately thus: we had a difficult childhood, but now may the children have a happy life. And they often thereby complicate the life path of their charges. It is as if it never occurs to such parents that happiness resides not in possessions, although they also are created for people and for the embellishment of their everyday life. But when a person becomes a slave to possessions and when he counts on proceeding through life by easy, well-trodden paths, this could prove a moral catastrophe for him.

The rudiments of diligence are taught, together with the family, by the school and the pioneer organization. A system of the work training and vocational guidance of the younger generation has evolved in the republic combining the efforts of the family, school and production collectives. Various forms of labor instruction extend to practically all student youth. Industrial-training centers, of which we have 232, student production brigades and other forms of labor education are employed to this end.

The educational process is really effective when it is conducted continuously and in line of ascent. Is this always observed by everyone? Let's face it, elements of formalism are permitted in certain schools and in VUZ's even in labor training. Sometimes it does not go beyond injunctions and arguments about the benefit and necessity of work. We see these shortcomings and are adopting all measures to overcome them as quickly as possible.

A particularly great deal of work has to be done to retain young men and women in the leading sectors of agricultural production. After all, the number of machine operators remains low on a number of kolkhozes and sovkhozes. For example, in Verkhnedvinskiy, Krichevskiy, Braslavskiy and certain other rayons there are far more tractors on the farms than tractor drivers. And the reason for this situation is the high turnover of young personnel. Considering the acuteness of this problem, the republic Communist Party Central Committee has outlined concrete measures to bring all farms up to full strength with specialists in the mass occupations and create suitable conditions for their fruitful work.

A paramount concern of the republic party organizations was and remains cultivation in the young people of a Marxist-Leninist world outlook, which is the principal source of communist moral ideals. In assimilating the ideas and studying the policy of the party the young men and women begin to comprehend in greater depth their social calling and their place and role in communist creation and to realize their personal responsibility for the general cause.

Particular relevance is attached to the molding in the young men and women of communist conviction in connection with the exacerbation of the ideological struggle in the international arena. The ideological adversary understands what the force of socialism in the consciousness of the masses and in their conscientious labor and ardent patriotism and socialism internationalism is. For this reason imperialist propaganda is making truly unprecendented efforts to erode the class consciousness of the working people of the socialist countries, particularly the young people.

A determining role in the youth's ideological-moral development belongs, as is known, to the propagandists. The overall level of the class leaders working in the Komsomol political enlightenment system is quite high here: 91.4 percent are communists and 94.3 percent have higher education. More than 75 percent of the propagandists are leaders and specialists of the economy. But the demands made on them today are also very high: it is their duty to arm the students with the necessary sum of theoretical knowledge, reveal in greater depth the historic advantages and achievements of socialism and the heroic spirit of our time and assert in word and deed the high moral values of theSoviet way of life.

The majority of propagandists of the Komsomol political enlightenment system is coping successfully with these responsible tasks--classes in the schools and seminars are conducted on a high ideological-theoretical level and are lively and interesting. The senior comrades conduct direct and candid discussions with their students and do not shun the keen questions disturbing the young people. This is, so to speak, as a whole. But, unfortunately, a formal attitude toward this important matter is still encountered. Verbal blather, groundlessness and a monotonous repetition of copybook maxims and truisms make their presence felt. We are orienting the party committees toward more emphatically eradicating such relapses into a stereotyped approach to training.

Study in all our general educational schools, colleges, tekhnikums and VUZ's of the fundamentals of Marxist-Leninist ethics and communist morality contributes to the intensification of the world-outlook training of the Komsomol members and young people and the more extensive propaganda of the standards and principles of communist morality. The 350 people's universities of moral training and education which have opened directly at the republic's enterprises have given a good account of themselves. Moral-ethical subject matter in television and radio broadcasts and in the paper has increased considerably. The new "Yunatstva" Publishing House, which publishes literature for young people, has been built.

The republic Komsomol meeting "Moral Purityand Spiritual Riches for Each Young Person" and a scientific-practical conference on the further intensification of the struggle for communist morality and law and order were devoted to the problem of the young men and women's upbringing. These questions were discussed at a Belorussian Komsomol Central Committee plenum. They are now also the focus of attention of the reports and elections under way in the Komsomol.

The revolutionary, combat and labor traditions of the Communist Party and the Soviet people reliably serve the moral upbringing of our young contemporary. Making them a part of the heritage of the Komsomol members and young people engenders in the youth a deep sense of pride in our multinational Soviet power and develops and strengthens class self-awareness and political vigilance. Party, war and labor veterans, Soviet Army warriors and production pacesetters and innovators participate actively in heroic-patriotic education here.

The pioneers, Komsomol members and youth of Belorussia have joined everywhere in the all-union "Great Patriotic Chronicle" expedition. In the course of it more than 2,000 previously unknown names of warriors who fell during the liberation of Belorussian soil from the fascist aggressors have been established. The young men and women have created and renewed the exhibits of 400 public museums, rooms and corners of combat and labor valor and restored on tourist routes over 200 partisan dugouts. The young patriots act as the patrons of war invalids and the families of former front-line soldiers, partisans and members of the underground. They hear and record for themselves and their descendants the moving stories of the participants in unforgettable battles.

Striving to ensure that the illustrious traditions of the party and the people help the young people appreciate our heroic past and present and get their bearings correctly in the current situation and that each set an example of conscientious labor in the name of the motherland and be ready at the party's first call to come to its defense--such, in short, is the purpose and main goal of the heroic-patriotic education being conducted by Belorussia's party and Komsomol organizations. It has to be said that this also helps in the preparation of young men for service in the Soviet Army.

An important place in the young people's spiritual development is occupied by Soviet literature and art. The diverse activity of the cultural-educational establishments and the sports organizations, which are intended to cater for the youth's meaningful leisure time, also contributes to an improvement in moral education. The party and Komsomol committees and ideological establishments of Minsk, Novopolotsk, Pinsk and a number of other of the republic's cities and rayons are endeavoring to have their influence extent to every microrayon, quarter and homestead, cater for the youth's useful and intelligent use of free time and achieve an objective counteraction to all deviations from the standards of communist morality.

The experience of the party, trade union and Komsomol organizations of the city of Lida of Grodnenskaya Oblast is instructive in this respect. Paramount significance is attached here to work at the working people's place of residence. Enterprises, establishments and educational institutions acting as patrons are assigned microrayons. Everything is done with a view to involving people in interesting pursuits, molding correct tastes and interests and uncovering and developing personal capabilities. The young citizens readily participate in the youth clubs, creative-arts associations, sports-convalescent sections and technical creativity groups functioning under the auspices of the house management offices. And it is not fortuitous that there has been a marked reduction in Lida in the number of breaches of discipline and public order and the rules of socialist community living.

Educational work at the place of residence is also being stepped up in the countryside. The more precise coordination and unification of the efforts of the cultural centers, libraries, museums and other organizations on the grounds of the kolkhoz, sovkhoz and rural soviet is contributing to this. Working in accordance with unified plans, these establishments are raising the spiritual life of the countryside to a higher level.

All that has been said by no means signifies that everything is fine in questions of the young people's education here. The formalism, stereotyped approach and vapidity which are displayed here and there in the work with the young people are alienating certain young men and women and leaving them to the care of the "street". And futile time-killing frequently erupts in such relapses into vulgarian mentality as drunkenness, hooliganism and violations of public discipline and law and order.

Our morality is forged in a constant, uncompromising struggle against its antipodes. Everyone should be liable for amoral behavior. But formalism, passiveness and a laissez-faire attitude in the business of education also demand emphatic condemnation. In the same Grodnenskaya Oblast, for example, the Lida people's interesting experience in work at the place of residence has yet to be applied everywhere. The Belorussian Communist Party Central Committee Bureau recently drew the attention of the oblast's party committees and organizations to the need for the more active enlistment of young men and women in cultural-mass work (participation in the amateur arts and special-interest associations) and also for increased supervision of the work of discotheques and an improvement in cultural services for small and remote centers of population.

The youth's moral upbringing is a responsible and, plainly speaking, difficult business. It consists of many ingredients. It is perfectly obvious that the directives of the 26th party congress and the CPSU Central Committee November (1981) Plenum on an increase in work quality in all spheres of human activity are also of tremendous significance in the education of our young replacement shift.

The party, soviet, trade union and Komsomol organizations and all personnel of the republic are concentrating efforts on ensuring the unity of ideological-theoretical, political-education, organizing and management work. This is the key to the solution of the crucial problem posed by Comrade L.I. Brezhnev in his speech at the reception in honor of his 75th birthday: "It will be necessary to raise to a new level the civic awareness of all Soviet people, their attitude toward work and socialist property and their discipline and culture in work and social and domestic life."

STATUS OF RESEARCH ON FACTORIES, INDUSTRIAL INFRASTRUCTURE REVIEWED

Moscow VESTNIK MOSKOVSKOGO UNIVERSITETA: SERIYA ISTORIYA in Russian No 6, Nov-Dec 81, pp 3-15

/Article by A. M. Panfilova: "Study of the History of Factories and Plants in the USSR's Universities"/

/Excerpts/ In order to get an idea of the study of the history of factories and plants in the USSR's universities, we drew up a special questionnaire and sent it out to the history departments of 67 universities and also two pedagogical VUZ's. We received responses to it from 32 universities and the Bashkir State Pedagogical Institute.[6]

Thus, almost half of all the country's universities sent us information about the study of the history of factories and plants; moreover, it was done very effectively. This fact vividly testifies to the importance of the problem and the high degree of interest on the part of the universities in analyzing and summing up, as well as in propagandizing the accumulated experience in this field. We extend our most profound and sincere acknowledgement to all those universities which sent answers to our questionnaire.

Geographically speaking, the universities which responded to our questionnaire encompass the entire country--from Uzhgorod, Gomel, Vilnius, and Kaliningrad to Vladivostok, from Petrozavodsk and Syktyvkar to Dushanbe. Information was sent here by 19 of the RSFSR's universities, including 8 universities of autonomous republics, which is particularly important, 7 out of the 9 universities in the Ukraine, as well as the universities of Vilnius, Tartu, Gomel, Tajik and Karaganda.

It must be emphasized that the information received reflects the status and level of study of the topic. From those universities where this work has been undertaken on a genuinely widespread basis we received the greatest amount of material and the most interesting from the viewpoint of contents. With regard to the volume and quality of materials first place must be awarded to the Urals University. We should also single out the universities of Syktyvkar, Far East, Kemerovo, Chuvash, Checheno-Ingush, and Lvov. The remaining universities sent us brief answers to the questions included on the questionnaire, while a few sent only a list of their graduate projects (Perm and Simferopol).

On the whole, the posing of the questions in the questionnaire has proved to be extremely productive and justified. The information received has revealed with sufficient completeness the experience and principal directions of the study of the history of factories and plants in universities; it has allowed us to understand the future prospects and ways to improve this work.

Based on this methodology, specific social research studies have been successfully conducted at enterprises in the Kuzbass, particularly in connection with working out the problem designated as "The Socio-Economic Development of Individual Detachments of the Working Class and the Peasantry of Siberia." As far back as the initial period of conducting such research studies their importance was underscored as follows: "Research has shown that such a mass source as the personal cards of workers, ITR's /engineers and technicians/, and office employees of enterprises contain exceptionally valuable information for resolving the various questions regarding the history of factories and plants."[11] Also of importance is the fact that, under the direction of scholarly mentors, graduate and undergraduate students are included in this research, and they are accorded the opportunity of publishing the results of their studies, carried out at a high level. This constitutes a powerful means of educating by using creative work. The employment of new methods for processing mass sources has aided us in overcoming a narrowness of approach to scientific problems and has opened a new page in the study of the history of the USSR. Now the problem range of social studies has been significantly broadened by the new methods. They have been developed extensively in academic institutes and many universities.

In research activity the laboratory has implemented broad scientific ties with the Institute of History, Philology, and Philosophy of the Siberian Division of the USSR Academy of Sciences, based on a treaty for creative cooperation concluded between this institute and the Kemerovo University in March 1976. Furthermore, in preparing collective monographs and collections, the laboratory has developed purposeful contacts with the Problems Council entitled "Social Problems of Siberia's Industrial Development," the Kuzbass Polytechnical Institute, the State Archives of Kemerovskaya Oblast, and plants.

Analysis of the experience of studying the history of factories and plants at institutions of higher learning has allowed us to draw a number of important conclusions. In the first place, that at most universities a great deal of well-planned and multi-faceted work is being carried out on studying the "History of the USSR's Plants," into which major scholarly and student efforts are being drawn. This has significantly broadened the mass base of the movement to create a history of factories and plants. In the second place, this past decade has been characterized by an intensive growth of creative contacts between university history departments and production groups, which has facilitated the strengthening of ties between historical scholarship and life itself. A trend towards actively developing such contacts has become for many universities a most important element in perfecting scientific and educational work. In the third place, extensive creative contacts between universities, enterprises, academic institutes, other VUZ's and institutions of learning have come to comprise one of the determining characteristics of the contemporary movement for creating the "History of the USSR's Plants" at the present-day stage. In the fourth place, progress in studying the history of factories and plants at universities and the strengthening of the party's influence in this field have been stimulated by the internal needs of society, by the increased role being played by the social sciences in solving the problems of the national economy and the communist education of the working people. Successes in studying the history of enterprises at universities constitute an achievement by all the USSR's institutions of higher learning. They vividly testify also to the considerable achievements in the study of the history of the Soviet working class. In the fifth place, the experience gained in studying the history of plants in the USSR's institutions of higher learning is likewise of great international importance, especially for the countries of the socialist community.

In conclusion, it must be said that it is high time for a broad-based summing up and exchange of working experience regarding the study of the history of factories and plants at various levels of higher education and a more effective solution to the problem of publishing prepared works on the history of enterprises.

FOOTNOTES

6. Interesting information on the study of enterprises' history at the republic state university was included in the Bashkir Pedagogical Institute's response to the questionnaire.

RUSSIAN NATIONALIST PAINTER PRAISED ON JUBILEE

Moscow IZVESTIYA in Russian 7 Feb 82 p 3

[Article by V. Novikov: "A Multicolored Talent--Commemorating 25 Years of Work by Il'ya Glazunov"]

[Excerpts] In Soviet contemporary fine arts, it would perhaps be difficult to find another artist whose work has attracted so much interested attention and elicited such consistent interest as the work of Il'ya Sergeyevich Glazunov.

His exhibits both in our country and abroad inevitably become social events. And despite the fact that his work has gained such broad recognition, arguments about the works created by him do not die down. What does this primarily attest to? Without a doubt--to the originality of his talent, on his ability to touch upon problems disturbing our contemporaries.

Lovers of fine art became first acquainted with works by I. Glazunov just 25 years ago in Moscow, at the Central Palace of Art Workers, where an exhibition of his works opened in February 1957.

This exhibition provoked a broad response, although opinions about it were quite contradictory. But one thing became perfectly clear: a bright, unordinary personality stood at the threshold of great art. Only a few years after this exhibit, the outstanding Soviet poet Nikolay Tikhonov called Il'ya Glazunov a man of disturbing, audacious talent and gave the following evaluation of his work: "Il'ya Glazunov is undoubtedly talented. I believe that he continues in a talented way the traditions of Russian national painting. The light approach is alien to him, a subject of his is always deep, sharply delineated; man's inner world is extremely important for him...."

Such words committed him to much. But they have been justified. Today it would be impossible to think of our fine arts without the pictures of I. Glazunov "A Russian Icarus," "Two Princes," "Prince Igor," "A Russian Beauty," a series of canvases dealing with the 600th anniversary of the Battle of Kulikovo or without the brilliant illustrations for the works of Dostoyevskiy, Leskov, Goncharov, Nekrasov and other Russian writers or without the portraits of V.I. Lenin and outstanding political figures of contemporaneity, builders of the BAM and Nurek.... He has been awarded the high title of USSR People's Artist and is a laureate of the Prize imeni D. Neru, the oldest academies of arts of Europe--those of Madrid and Barcelona elected him as their honorary member. His exhibitions enjoyed tremendous success in many capitals and cities of Europe as well as in Vietnam, Laos and in Chile under the people's government of S. Allende....

More than 600,000 visitors visited just one of his most recent exhibitions--at Moscow's Central Exhibition Hall.

I. Glazunov's work is illuminated with the truth of life and a high feeling of the Motherland.

This feeling in its breadth can be compared with the boundless character of Russian expanses and in depth is commensurate with the depth of the being of the Russian people and their glorious history. This is where this persistent and inexhaustible interest of the author in historical subject matter comes from--it is his wish to restore and visually to embody decisive moments in the fate of the Motherland. For, as a well-known truth states--to love means to know that it is impossible to love what one does not know.

But a knowledge of history, philosophy, culture of the past is needed not only when working in the field of historical subjects. A philosophical interpretation of reality, historical examination of thought, consideration of the moral and esthetic experience of the past constitute essential conditions for the creation of works of art even relating to contemporary material. In the work of I. Glazunov, these requirements are expressed with enviable plenitude. He does not permit himself to simply "respond" to this or that phenomenon of contemporary life on the basis of fixation of only its external features. He reveals the inner tension of action, and creates each composition while basing himself on spiritual values accumulated over many generations, testing today's affairs and deeds with high ideological, moral and esthetic criteria. For this reason his heroes are those of today building a new life while speaking of the past, the present and the future.

I. Glazunov astounds one with the uniqueness of his way of seeing the world and the bright imagery of his compositions. Formalistic investigations and uninspired naturalism are alien to him. The painter sees the way to perfection to lie in the continuation and development of realist traditions of Russian art. The many sides of the painter's personality are astounding. I. Glazunov in his autobiographical book "Doroga k tebe" [The Road to You] discloses a new and unexpected side to us. He is disclosed as a master of painting with words, as a man of penetrating observation, of graphic, precise language. In depiction of landscapes and people, he is able in a few words to create a visual feeling as though of a finished picture.

And with what love and knowledge does the painter deal with events of Russian history and monuments of national culture! The breadth of his broad creative aspirations stems from this spiritual richness: I. Glazunov is also known as an artist of the theater and as the author of architectural projects. On the invitation of the Berlin State Opera, he, together with costumery artist, N. Vinogradova-Benua, and producer, USSR People's Artist Boris Pokrovskiy, created productions of "Prince Igor" and "Queen of Spades." On the basis of his plan, done in collaboration with architect A. Polikarpov, an art museum building in Palekh will be built. He is the artistic director of the plans for building the Soviet embassy in Madrid.

Faith in the Motherland's bright future, in the transforming power of art and his rise to new heights permeates all the painter's many-sided tireless creative and public activity. For this reason he devotes tremendous attention to the education of creative young people.

"Patriotism and civic spirit and the highest artistic quality of the works of the great Russian artists of the 18th-19th centuries," Il'ya Sergeyevich says,"had a solid foundation--a school. A school means a philosophy of life raised to the level of mastery. Without a school art is transformed into amateurish activity and comes to a dead end."

NEED TO ELEVATE IMPORTANCE OF YOUNG WRITERS

Young Forces of Literature

Moscow SOVETSKAYA ROSSIYA in Russian 22 Nov 81 p 1

[Article by Aleksandr Mikhaylov: "The Young Forces of Literature"]

[Text] Already more than two decades have passed since the time when Leonid Sobolev said at the First Founding Congress of the Writers of the Russian Federation: "Concern for the creation of our young generation of writers will constitute one of the main obligations of the leadership of the new union."

The young creative generation is confronted with an honorable and responsible task: To create new works worthy of our socialist reality, to extend and perfect the most valuable experience of Soviet literature, to reflect the many-sided activity of the party, of the entire Soviet people, to tell with inspiration about the glorious deeds of our youth, to reveal the spiritual world of the Soviet people--our contemporaries, and to step forward as convinced fighters for the triumph of communist ideals.

On the whole the situation in regard to the publication of the works of the young--the most gifted ones among them--is not bad now. In the large publishing houses, special editorial boards have been created to work with the books of the young authors. Yet, one does not always encounter qualified editors here. Nevertheless it is precisely on these editorial boards that the most experienced, word-sensitive, and unselfish editors must work instead of literary failures who are compensating for their meager creative potential in literature by obtaining additional opportunities to publish their works and do translations through their status as editors.

In the presence of the general favorable picture it is necessary to point out some shortcomings. These shortcomings are seen in the careless selections of works for publication or the sometimes hurried or, conversely, unjustifiably protracted introduction of a young author to the reading public.

At one time, for example, the publication of Yuriy Kuznetsov's "A Distance In and Around Me" was delayed. Something similar happened with the prose writer A. Kim. For three years now the critics, magazines and, of course, readers have evinced much interest in the talented T. Rebrova; publishers eagerly invite her to their literary evenings, but her books have not yet been published. Is this fair when the books of average authors are being published?

While reading the prose of the young--either in books or periodicals or the stream which flows to the editor's office--one is glad that Russian talent has not dwindled, that somewhere in the depths of that prose sometimes one or more sparks light up which are capable of kindling the fire of creative inspiration and make you expect something great and significant. Talent is rare and the basic condition for the existence of a person in literature. But how inadequate talent alone proves to be in practice for establishing a writer!

We know quite a few cases in which a slim book of poems or stories or a novella may serve as a fairly good advertisement of the future while not revealing serious creative potential. These works may remain "visiting cards" for many years while the authors do not do better because kind-hearted critics greeted their initial efforts as something perfect, as literary phenomena. Is it surprising after this that in the Union of Writers there develops a certain category of people full of strength and energy who are constantly in conflict with the journals and publishing houses which turn down their dull works, a category of people who in the prime of life become dependents of Litfond [Literary Fund].

Apparently there is a general error in the system of work with the young writers. This work, in point of fact, is carried on to the time when the young author becomes a member of the union. The receipt of a membership card of the USSR Union of Writers, as it were, mechanically elevates him into the rank of the master who understands all complexities of existence and secrets of the art of the word. The young writer after this is left entirely to his own devices, his fate, as it were, no longer interests anyone.

In perfecting the forms and methods of work with young writers, it will obviously be necessary in the future to turn attention to this second stage, already inside the union. It is no less important than the first.

If we talk about literature as a whole, its background is reminiscent of a mountainous locality, where there are plains, plateaus and summits. The prose of Vasiliy Belov and Viktor Astaf'ev, Sergey Zalygin and Daniil Granin, Valentin Rasputin and Mikhail Alekseyev, Evgeniy Nosov and Ivan Stadnyuk, Anatoliy Ivanov and Petr Proskurin, the poetry of Mikhail Dudin and Rasul Gamzatov, Vladimir Zhukov and Mustay Karim, Fedor Sukhov and David Kugul'tinov, Vadim Shefner and Kaysyn Kuliyev . . . I want to name the works of the most recent period which I consider as highly artistic; these are: "The House" by Fedor Abramov, "The Shore" by Yuriy Bondarev, "And the Day Lasts Longer Than a Century" by Chingiz Aytmatov, and the poems of Yegor Isayev "The Distance of Memory" and "The Verdict of Memory". The reality of life shown in these works in new artistic quality, shown with the fearlessness and courage of people who are well aware of what great moral and spiritual values are being threatened today, where and at what all of our efforts must be directed in order to safeguard these values, in order to safeguard life on the earth itself against the catastrophies threatening it.

Against such a background it is not easy for the young writer to show his worth and become established in literature, but, on the other hand, it is precisely by orienting oneself by the summits that one must build his path into great literature if one wants to attain serious success.

Currently the stream of stories and tales about the village and rural life found in the prose of young people shows no signs of drying up. This fact is not of itself worthy of criticism. It reflects, of course, the powerful influence of the above-mentioned authors, but one cannot fail to take into account also the--

external!-- fact that the problems of the development of the village and of agriculture create tension and disturb all of us.

By the way, participating in recent years in some international discussions, I sensed a yearning for literature about the countryside on the part of the writers and critics of the West.

The gravitation of many young writers towards rural subjects must not surprise us at all. The young Petr Krasnov, not yet having attained the age of thirty, but already noticed by readers and critics, succeeded in speaking his unborrowed word about the village, without having repeated the venerable predecessors. Very likely I can say the same about Ivan Evseyenko. Our attention must be aroused by something else: The fact that many young writers of prose begin with the imitation and not with the creative apprenticeship of the masters, and bake, like pancakes, variants of the "eccentrics" of Shukshin, the old women of Rasputin, etc, not noticing their own contemporaries, today's Pryaslins, not noticing that life has posed new problems and that F. Abramov's Mikhail Pryaslin has undergone an evolution in character in the 1970's.

It cannot be said that the young prose writers have avoided dealing with social and moral problems. But it is also impossible to say that they occupy their proper place in the creative work of the young writers.

Our publishing dealing with the development of agriculture and the life of the village is gathering strength; it is supplied in especially keen and contemporary form, in my view, in NASH SOVREMENNIK [Our Contemporary], OKTYABR' [October], NEVA [Neva] and LITERATURNAYA ROSSIYA [Literary Russia]. But again, the young publicists somehow are not visible, it is mostly the experienced veterans, having grown gray in battle, who play on this field. The youth, as a rule, links its ambitions with the story and the novel, well, at first with the tale, underrating the essay and journalistic writings, completely forgetting that these are traditional genres of Russian literature not at all shunned by its most outstanding representatives. The books and memoirs of L. I. Brezhnev may serve as a remarkable example of party journalism.

It seems to me that we must by every conceivable means support the initiative of our council for essay writing and journalism, which holds seminars for young essayists and journalists. The journal LITERATURNAYA UCHEBA [Literary Studies] undertook and will undertake something along this line. In particular, we held a joint "round table" of the editorial board and the faculty of journalism of Moscow State University with the participation of outstanding essayists and journalists. Jointly with the Kolkhoz imeni Il'ich of the Lukhovitskiy Rayon of Moskovskaya Oblast, three prizes imeni V. Ovechkin were established for young essayists and journalists writing about the problems of development of the Russian Nonchernozem.

During this year the Literary Institute succeeded for the first time in forming a creative seminar for essayists from the new admission. We will hope that all of this will bear fruit and turn the attention of the young writers to important, energetic and forceful genres of literature.

I believe it is not necessary to present special proof that the experience of essay writing and journalism, important and necessary in itself, serves as a fine school for the writer and in the creation of large works, a novel, for example, or a story. The direct, first-hand contiguity with the concrete facts and events of will help the young to free themselves from literary reminiscenses and from repetitions.

It is time to reconsider, to make more flexible the demands of publishing houses and journals to young writers, to orient them towards a creative, contemporary approach to the comprehension of the social and moral problems of our life. Then, in the artistic diversity, perhaps, a literary personage will arise, a type that will embody partially, to a greater or lesser extent, the ideal of our time.

The same thing, it goes without saying, we expect also from prose about the working class, about the intelligentsia, and about the youth engaged in study. . . Here the power of inertia does not hang over the young writers because the immediately preceding experience did not exert such a strong influence on them.

In recent times I have had to express myself a number of times exceedingly critically about contemporary poetry. Evidently many agree that in our time it is strongly inferior to prose in its influence on the reader. But this is not the Issue. I am ready to name the names of outstanding poets who today find themselves in a fine time of creative maturity, write remarkable poems, publish books and collections of works. I am talking about the lowering of the social and civil fervor of poetry, about its--to see it as a whole--certain pacification, uniformity, evening pensiveness. There is a lack of wrestling of passions, scale of thought, world vision, and keen feeling of our contemporary era, of the kind of thing by which Vladimir Mayakovskiy changed our conception of the poet and poetry.

We must not forget that of which the 26th CPSU Congress reminded us once again: "The Party was not and cannot be indifferent to the ideological direction of our art." And, you know, this is also the position of our reader, the serious reader, who opens a book not only with the desire to enjoy the art of the word, but also with the desire to extract a moral lesson for himself, to enrich himself spiritually.

The poetry background of our literature, in the presence of many talented and even very talented artists, nevertheless is somewhat uniform since poetry, it seems to me, echoes the events of inner and world significance more obscurely. This uniformity and a certain orderliness also distinguish the poems of the young poets. Among them are exceedingly gifted ones, sometimes giving hopes with their first published works. In the lyrical character which takes shape today--if one has in view the positive experience of poetry development--his attraction to the soil, his love of the soil, of the fatherland, his patriotic feeling and national pride are perhaps perceptible above all--and this is fine.

The other day a guest meeting of the secretariat of the RSFSR Union of Writers took place in Voronezh, at a session of which questions relating to the work with young writers were discussed. This agenda was no coincidence. Neither was it a coincidence that leading writers of Russia, who had took part in the discussion, participated with interest, not smoothing over the existing acute problems.

Every year constantly new young writers make themselves known with works about contemporary life, and every year brings to readers the joy of the encounter with books heated with the breath of youth, with young passion. Is not the tomorrow of literature, its future, in this, in the constant renewal of literature, the constant flow of fresh forces and young talents into it!

Formation of Young Writers

Moscow PRAVDA in Russian 30 Nov 81 p 3

[Article by Ernst Safonov: "Up With the Epoch: On the Formation of Young Writers"]

[Text] From Vladimir came a package addressed to me. The author sent his book with an obliging autograph.

Although this book, composed of small tales and stories, is the author's first, to call him a young writer will hardly be appropriate: He, like myself, is already past forty, but the main thing is that the collection contains serious works with respect to subject matter and artistic principles.

This book at once compelled me to recall the stormy, holiday-elated and at the same time exacting and tough discussions, debates and conversations in the atmosphere of which the 7th All-Union Conference of Young Writers took place. Among the participants of the seminar, of which I was one of the leaders, was the author of the future collection, who had come from Voronezh. How he and one other age-cohort of his from Krasnodar succeeded in "penetrating" the conference of the young, bypassing the barrier of age limitation (only those were admitted who had not turned thirty-five), I do not know. Most likely this was a last desperate attempt, when they put up a stake: Either--or. . . but if they only will see me, listen to me, and discuss my things!

The manuscripts of these comrades received a most detailed assessment at the seminar, and if it happened before that among our "five" leaders, wisely directed by the elder among us--Vasiliy Bykov, there was not always complete unanimity of opinions on one or another work being discussed, here we reached agreement at once. Exchanging impressions later, I remember, we lamented the fact that somewhere "in [high] places" they do not always treat our beginning writers with the necessary understanding and solicitude, frequently they compel even the capable authors, who have proved themselves well in creativity, to go "tc the boys" until they have gray hair at the temples. . .

And here is one book, published by "Sovremennik"--and before me is a second one, a novel by the fellow from Krasnodarsk--to be published by the same publisher, whose nature, I will note, it is to discover new names in literature.

I remember how at the same All-Union Conference it was said that for a writer there is no more fascinating and noble task than the discovery of a truly heroic character in daily reality. I remembered the words of the critic Kuznetsov: ". . . in order for the writer not to walk past the hero in life, he must hear him morally, hurt from his trials and tribulations, rejoice in his joys, he must at least be equal to his hero in terms of the level of his political, social, and civil self-consciousness."

And this "at least", used with caution, is very justified here. First of all, the words are addressed to the young writer who has embarked on the creative path, who is going to have to perfect himself persistently in professional practices; secondly, we are talking about a true hero, the bearer of the spiritual values of the epoch, an active fighter for progressive ideas, exalted in his moral and ethical searches, and, finally, an individual preoccupied with the state. . . And to understand such a personality, to represent it in a work in its full stature, with all peculiarities, which at times seem contradictory, that only an author can do whose talent allows him to feel deeply and to realize the deepest, future-directed moral discoveries of our socialist society.

To be on a level with that kind of hero of his--does not mean for a young writer to follow on his heels, but to be able to see together with him the perspective of the century, to go farther by himself, to the artistic exposure and affirmation of the most serious, socially significant questions. It is no problem if the author just marks time on petty themes and remains an apprentice, showing no signs of growth despite every encouragement. No one is dragged by the ears into literature--literature is the kind of work which demands one's whole strength and spiritual energy, as well as a--forgive the epithet--brutish capacity for work. But when a writer through his first stories and tales demonstrates that he is "on a level with his hero," is able to show him without indifference, and possesses indubitable abilities, and when this writer is not noticed for a long time and is not received where he ought to be received, he, like a lone craftsman, rushes with his manuscript from door to door, losing his spiritual balance and perhaps his faith in himself and in his work--this already develops into a problem.

Let's look at some recent events:

Telling me how in the frosty snows and high-water quick grounds they "raised" structures weighing thousands of tons, how quickly and reliably the industrial giant was built on the unstable swamps and wild marshes of the northern Taiga, how many examples of selflessness and non-ostentatious heroism there were, the secretary of the party committee of Syktyvkarskiy Lumber Industry Complex imeni Leninskiy Komsomol, Vladilen Nikolayevich Vaneyev noted with a sigh:

"Do you know what I regret? That among those who erected the complex no writer from the ranks of the workers turned up. They experienced such days--every one of them could form the basis for a separate chapter in a story or novel.

Our conversation was then joined by the general secretary of the Lumber Industry Complex, Nikolay Nikolayevich Balin, whose judgments, remarks and rejoinders revealed a person not only well-read, but someone who attentively follows the contemporary literary process. Our dream to have "our" writer develop in the enterprise, he said, is not of a consumer nature, we do not want to read personally about ourselves--so much is written about us in the press, we are not treated badly with attention. . . We are expecting a talented, sensible book on the "plant" subject, without the sort of scheme in the subject which already made the readers' mouths sore: Here is the innovator--there is the conservative, here is the progressive method--there is routine. On such pages the human spirit, the feelings of the individual are joined to production matters and questions, like merely certain additional stimuli--and that is all! And really if there is love, then the woman must unfailingly choose: Yielding to inclination, leaving for the handsome frontline worker or, being obedient to duty, remain with the disgraced conservative, in order to help him recognize his mistakes, stand on his feet. . . It would not be out of place to ask such an author: Does his beloved, when he "winds up" a weak story or play, also quickly leave him for a more successful "author"?

This is how we talked then, and I, deliberately, it goes without saying, refer to what I heard and what I recall there, in Syktyvkar.

It was precisely this conversation, during which it became suddenly and unexpectedly clear that in the plant environment they "long for" their own, home-grown writer (such a curious symbol of our time!) and the collection here received from Vladimir lead me to the reflection: Why, for all that, the young prose writer (as we frequently call him, but better said--the writer who enters the world of literature with his first publications and his first book) has noticeably "aged" during the past few years? And we do not need statistics. It is sufficient to leaf through the journals which introduce new names of authors and to examine the collections of tales and stories representing an author hitherto unknown to the readers to become convinced: Those who are not thirty years old are rare.

Besides, we can turn directly to statistics. At a guest session of the secretariat of the management of the RSFSR Union of Writers which recently took place in Voronezh, the following data were cited: The Union of Writers of Russia has now 4,411 members, among them there are only 128 who are under age 35, i. e., 2.9 percent! Here are prose writers and poets, playwrights and critics--representatives, all in all, of all literary genres.

One can see this "aging" also in the creative association of prose writers of the Moscow writers' organization. At a regular meeting of the bureau of the association, we examine each time eight to ten acceptance files. Those who are young in age are the exception. But who is among the candidates? The famous producer. . . a corresponding member of the Academy of Sciences. . . a colonel. . . an assistant to a minister. . . a director of a large enterprise. . . All, naturally, with books composed of articles, essays, "memoir-type" stories. "Authorship" for the majority of these comrades, each of whom has given up many years to conquer the peaks of his basic profession and has become an authoritative and useful worker in it, is already an element of prestige, as it were. Here, they say, I have in the main achieved everything, and now there is the possibility and time "to write"--they say, I've had a certain success, perhaps I can turn my hand to writing.

But what are the reasons for the "late ripening" of the prose writers of today? Why are there few of them under age thirty or slightly past thirty who past the admission commissions of the writers' organizations? To come up with a simple answer here is hardly possible. Among these reasons, probably, are those which are determined by the character of the very time in which we live, by its high exactingness. Determined also by the socio-national regularities which are difficult to discover even by specialists in literature who have become accustomed to "internecine" arguments. We know that suddenly during certain years the genre of the story flourishes in an unprecedented way; then--when there is a slump in interest for the story--the renaissance of the novel ensues, the great narrative, with gravitation towards the epic sound; and somewhere, "in a flash", as if illuminated by one long-awaited and sudden light, the "stars" of poetry rise on the sky of poetry--a whole galaxy of names, after which there is once again calm .

This is the way it is. But there are, however, also visible reasons. Given their "habitualness", they do not appear to be extraordinary, that is why our attention has become dull towards them.

One of them, which has been the subject of frequent discussion in the press and at writers' congresses, is the excessively long road from manuscript to book. In the case of the professional writer who is well-known to the staff members of the publishing house, who are well-disposed towards him and his work, a minimum of two, three or four years pass from the moment that he puts the manuscript down on the editor's desk and the time when it, having successfully overcome all the links of the publishing house "machine", hits the counters. But in the case of a novice this time period most often drags out to five or six years. But, as a rule, the Union of Writers does not admit people with one published book, they must wait for the appearance of the second or third book. Year after year and, you see, already ten years have accumulated--here it is and there is gray hair at the temples.

But where have the "little libraries" of all kinds (libraries of stories, short narratives, "leaflets" under the name of "Young Voices", etc.) vanished, which were in vogue in the publishing practice of the 1960's? These inexpensive and "mobile" publications made it possible to acquaint a wide circle of readers with a new author relatively quickly, after his very first journal publications. Now the prose writer, who has timidly opened the door of the publisher's office with a small manuscript running to five or six author's sheets, is told: "You have very little thus far, we publish only thick books. . ." In connection with this I would like to mention with a good word the journal MOLODAYA GVARDIYA, which has begun to publish an appendix, "its little library", of small format and volume, in which beginning authors will be published. For the time being it is difficult to talk about their quality: We shall see what we shall see, the undertaking at the moment is at the very beginning, but the intention of the journal is really worthwhile and beneficial.

And if it were not for the weekly LITERATURNAYA ROSSIYA, faithful to the rule of supporting without fail the rubric "A New Name" and "Let Us Continue Our Acquaintance" in its pages, then, leafing through our thin journals, one could think: Really and truly disappeared, the young story-teller "has pined away"; it is only for this reason, surely, "because of the great need", that in these journals, issue after issue, the stories and novels of "distinguished" authors are published with endless continuation, so that when one work is not yet finished, a new one is launched with beginning pieces, again for a month or two or three, and this is how it goes the whole year. The whole journal, thus, from fragments and scraps! But, you know, at one time, we remember, a decade and a half or two ago, it was precisely the thin journals, in particular OGONEK, which were the cradle of the short contemporary story, they were the first to discover for the readers the young, who with a loud and confident voice announced themselves in Russian novel writing: Sergey Nikitin from Vladimir, the Muscovite Yuriya Kazakov, Nikolay

Voronov and Stanislav Meleshin from the Urals, Anatoliy Tkachenko from Sakhalin, the Muscovite Georgiy Semenov, and some others. Or have the journals now also "aged" and forgotten to listen to young voices?

With reluctance, for the most part in a condescending tone, on the level of hasty annotations, our critics write about the first books of the prose writers. With what kind of incomprehensible short-sightedness it stubbornly calls writers "young" who behind their shoulders have already five to ten books to their credit. What is more, in the "iron ring" of such "young" the same list of names is included in article after article. . .

Questions, questions. . .

In the pages of periodical publications for writers discussions are perpetually started which deal with literary problems. Some of them are distinguished by depth and are interesting in regard to their form and content; others are similar to the shedding of the leaves in the fall: A great deal of noise--and no use. . . But if there were, let us say, a discussion on the following subject: "Why is the young writer not young?"--these articles in the literary press would be both timely and useful. In a key that a thorough discussion can take place both of the successes and the positive experience in local writers' organizations in regard to work with the young writers and the important problems existing here, which have arisen in the movement of life itself and have been set by the time. You know, the lines of the well-known party document, adopted five years ago by the CPSU Central Committee--the decree "On Work with Creative Youth"--retain their timeliness, as before, for all of us.

LIFE IN CITY AND COUNTRYSIDE COMPARED

Vilnius SOVETSKAYA LITVA in Russian 31 Jan 82 p 4

[Article by L. Voskresenskiy: "City and Village: The Quality of Life Is Equal"]

[Text] Where to live -- in the city or the village? Many millions of people in the country are posing this question, and more than 4.5 million people annually set out on a journey from the village to the city or from the city to a village when they have made their choice and decided.

Changing one's living surroundings is a matter no less risky and psychologically difficult than, for example, changing one's profession or settling down as a married man. Essentially a man is making a sharp change in his personal fate. In the final analysis, the fate of the country also depends to no small degree on these individual and particularly personal decisions taken in toto.

A second demographic slump, which has arisen as a result of the events of the Forties, is now taking place. It is known that the victory over German fascism was achieved by our people at a great cost -- 20 million human lives. The birth rate fell during the Forties, and the influx of people, who were entering into active life, decreased correspondingly by the end of the Seventies. The reduction in the influx of labor resources is one of the factors which is complicating the present economic development of the country. Industry and construction -- in a word, the urban sphere of labor -- is experiencing an ever sharper need for working hands. The village has actually become the only source for replenishing the urban contingent of workers. However, the village also needs working hands.

What The Statistics Say

The population of the USSR reached 267.7 million people on 1 July 1981, about 98 million of them were rural inhabitants. The agricultural population, that is, those working on kolkhozes and sovkhozes together with their dependents, children, pensioners, etc., is 63.7 million people. More than 24 million people are directly engaged in agricultural production.

Ten years ago the proportion of urban and rural population looked differently: 243.9 million (USSR as a whole) composed of 138.8 (urban) and 105.1 (village).

As we see, the rural population is actually decreasing, but not because its natural growth is decreasing. As a rule the birthrate in villages is higher than in a city, the death rate in both is identical, and the life expectancy of rural inhabitants -- in any case -- is no less than in the cities. The decrease in the rural population is the result of migration.

During the Seventies, almost 3.1 million people migrated annually from the villages to the city; there was a counterflow of approximately 1.5 million. Thus, the annual migration balance was 1.6 million people.

As a result, the rural population decreased by seven million people during the ten years despite an active natural growth, and the contingent of those engaged in the economy's agricultural sector decreased by a million workers.

Scientific and technical progress and the increase in labor productivity in the rural economy (by 15 percent during 1976 - 1980) has compensated the village for the losses in manpower. However, has it done so fully?

Speaking generally, the decrease in the contingent of those engaged in the rural economy with the simultaneous growth in productivity is an indicator of the intensity of the country's development. The Soviet Union has still not achieved those proportions in the distribution of manpower between branches, which are typical of countries with a highly developed industry and agriculture; and therefore, the migration from the village to the city is a justified and natural phenomenon.

The Geography of Demographics

The density of the rural population in various republics is extremely different. For example, it reaches 150-200 people per square kilometer on the oases of Central Asia, 70 in fruitful and warm Moldavia, 20 - 30 in the Ukraine and Belorussia, 10 -20 in the Baltic republics, and 3-5 people in the livable zones of Siberia and the Far East.

The rates of natural increase of the rural population are just as unequal. For example, a rural family having three - four children is considered a large family in the Ukraine or in Russia, but six - seven children is a normal phenomenon in an Uzbek family.

From a demographic respect, the most satisfactory regions of the country are Estonia, Latvia, a large part of the Ukraine, Moldavia, the European south of the Russian Federation (the steppes along the banks of the Kuban', Don and Terek), the Transcaucasus, the southern part of Kazakhstan, and also the environs of such large cities as Moscow, Leningrad or Alma-Ata. The villages in these areas, in giving up part of their inhabitants to the city, have compensated almost completely for the losses in manpower at the expense of other regions. Here and there, the number of rural inhabitants is decreasing; but here and there it is even growing -- however, within permissible limits.

What Does the Migration Barometer Show?

An analysis of the migration processes during the second half of the Seventies when compared with those during the first half shows that the situation on the whole is beginning to change for the better.

Favorable changes are being observed in the Nonchernozem Zone of the RSFSR. After the state special purpose program for the complete development of this region's agriculture began to be implemented, the absolute outflow of the rural population was diminished and the percentage of migration losses was reduced in each of the 29 administrative oblasts and autonomous republics of the Russian Nonchernozem Zone.

During the middle of the Seventies the number of those arriving in Siberia exceeded the number of those leaving. The situation in the Siberian village improved.

The outflow of people from Belorussia has been sharply decreased. Arrivals exceed the departures of people from Central Asia.

Finally, the intensity of the outflow from villages has been considerably lessened for the country as a whole, although it has not been reduced to the optimum level.

As we see, the changes have affected the most vulnerable -- from a demographic viewpoint -- regions. Although it is impossible to think that the migration processes in Central Asia, in some rayon of Siberia and Kazakhstan and especially in the Chernozem area of the RSFSR have been completely normalized.

Nevertheless, it is possible to state that the evidence of the migration barometer unequivocally testifies to the correctness of the policy which the Soviet state is following in the village.

The Bringing Together of Work and Living Conditions

Soviet agrarian policy provides for two interconnected goals: The growth in the productivity and -- at the same time -- an increase in the standard of living of the rural population.

The incomes of rural inhabitants have sharply increased recently, especially after March 1965 when the program for the intensification of agriculture was put into operation. However, it is not only a matter of the size of earnings. The main thing is that the quality of life in rural areas is drawing near to urban standards.

This was reflected in the "Basic Directions of the Social Economic Development of the Country During the Eighties," which were adopted by the 26th CPSU Congress, and in the Five -year plan for the years 1981 - 1985.

For example, the volume of sales of personal services will increase approximately 1.4 - 1.5 -fold for the country as a whole; however, higher volumes are being provided for in rural areas.

The program for housing construction is extensive (to construct housing with an overall area of 530 - 540 million square meters); however, workers in newly created enterprises and the inhabitants of areas,which are being developed, and of rural areas must be provided with housing first. The opportunities for the individual construction of dwelling houses are being expanded in the village.

A lot of attention is being devoted to expanding the rural population's facilities with various types of transportation.

One of the most important reserves for the growth of the Soviet economy during the Eighties is the economic, rational and effective use of all existing resources: Labor, fixed capital, fuel, raw materials, and the output of the fields and farms. It is no secret that we must now economize literally in everything. In particular, the state no longer has the capability of increasing the proportion of investments in the agrarian sphere (they have reached 27 percent of the investments in all the branches of the national economy). However, in trying to achieve a policy of savings, the state does not consider it possible to economize on expenditures which have the goal of raising the quality of the rural population's life.

In carrying out the policy to draw living and work conditions in the village and the city closer together, our state is searching for ways to regulate internal migration and to optimize the distribution of manpower between the branches of the national economy without damaging any one of them.

This is one of the clear examples of using the social factors of economic growth in the practices of the Eighties.

BRIEFS

STATISTICAL METHODS FOR PARTY WORKERS--Moscow POLITICHESKOYE SAMOOBRAZOVANIYA in Russian No 12, December 1981, carries on pp 113-120 a 5800-word article by V. Levashov and G. Papoyan titled "Quantitative Analysis in Sociological Research." According to its authors, this article should give organizers of party education and propagandists the mathematical tools to conduct their own analyses of sociological materials. It provides these party workers with operational definitions of nominal, rank-order, and interval scales; arithmetic means, and standard deviations. [Editorial Report] [COPYRIGHT: Izdatel'stvo "Pravda", Politicheskoye samoobrazovaniye", 1982]

PARTY EDUCATION IN ESTONIA SURVEYED--Moscow POLITICHESKOYE SAMOOBRAZOVANIYE in Russian No 12, December 1981, carries on pp 36-60 a series of articles under the rubric "The Propagandist--Chief Figure in Party Education: From the Experience of Party Organizations of Estonia." In a 6500-word article titled "Towards High Effectiveness in Propaganda Work," K. Vayno, first secretary of the Estonian CC CPSU, describes the system of party education in Estonia and gives figures on the current size of this effort. His article is followed by a series of short reports on party education in the workplace, in the village, among scientists, among cultural workers, and among factory workers. [Editorial Report] [COPYRIGHT: Izdatel'stvo "Pravda", Politicheskoye samoobrazovaniye", 1982]

STATISTICAL SOURCES FOR PARTY WORKERS--Moscow POLITICHESKOYE SAMOOBRAZOVANIYA in Russian No 1, January 1982, carries on pp 125-131 a 5800-word article by G. Kiperman titled "How To Use Statistical Information." The article describes statistical sources available to party workers and ways in which they can be used. In addition, it provides guidance on certain basic statistical operations which the party officials can perform in order to make better use of the published materials. [Editorial Report] [COPYRIGHT: Izdatel'stvo "Pravda", "Politicheskoye samoobrazovaniye", 1982]

OBKOM SECRETARY ON LEADERSHIP QUALITIES--Moscow PRAVDA in Russian on 3 February carries on p 2 a 2000-word article titled "The Word and Task of a Leader" by Ye. Ligachev, first secretary of the Tomsk oblast party committee. In this article, published under the rubric "Party Life: The Quality of Ideological Work," Ligachev argues that leaders need to be continually attentive to the ideas and opinions of their collectives and also must strive to establish a "morally pure milieu" for them. He notes that the party's requirement not to avoid difficult questions means "not only" that such questions must be answered when they are asked "but also" that steps must be taken to resolve the issues raised in them. Ligachev reports that his obkom has established such a system and also a procedure for evaluating the work of public lecturers through audience research. [Editorial Report]

AZERBAIJAN SSR SUPREME SOVIET PRESIDIUM MEETING

Baku BAKINSKIY RABOCHIY in Russian 31 Dec 81 p 2

[Information item: "A Meeting in the Presidium of the Supreme Soviet Azerbaijan SSR"]

[Text] A regular meeting of the Presidium of the Supreme Soviet Azerbaijan SSR has taken place under the chairmanship of comrade K. A. Khalilov.

According to comrade K. A. Khalilov, the meeting examined the question of the results of the fulfillment of the plan of basic measures which was mapped out for execution in the Supreme Soviet Azerbaijan SSR for this year, and the work plan for 1982.

The Presidium discussed the course of the fulfillment by the ispolkoms of the Lenkoran City and the Tauzskiy Rayon Soviets of People's Deputies of the decree of the CC of the Communist Party of Azerbaijan, the Supreme Soviet Azerbaijan SSR, and the republic's Council of Ministers "On a Further Increase in the Role of the Soviet of People's Deputies in Economic Construction." It was noted that in executing this decree the executive committees of these soviets under the leadership of local party agencies have carried out a number of organizational measures aimed at a further strengthening of the role of the soviets in economic construction and an improvement of the executive committees' own work in the light of the demands that the 26th CPSU Congress and the 30th Congress of the Communist Party of Azerbaijan and the statements contained in the speeches by comrade L. I. Brezhnev on the fundamental issues of the party's economic policy and of work by the soviets.

However, the ispolkoms of the Lenkoran City and Tauzskiy Rayon Soviets of People's Deputies have not brought about the realization of a number of very important points in this decree. In particular, substantiated proposals on the transfer to local subordination of enterprises located on their territories whose output is used primarily to meet the needs of the populations of these soviets, or of neighboring rayons, have not been developed and have not been presented to the appropriate superior agencies.

There has been no practical implementation of the very important principles in accordance with which the Title Lists of construction projects, regardless of their departmental subordination, which deal with the construction of residential houses, municipal, cultural and domestic, and environmental protection facilities are subject to being agreed to by the executive committees of the rayon and city (republic subordination) Soviets of People's Deputies at the location sites of the construction projects in order to coordinate their construction by expenditures and commissioning schedules with the construction of production purpose facilities. These questions were not brought up for discussion at sessions of the soviets and at the meeting of the ispolkom, and a plan of practical measures to realize them has not been worked out.

In the decree which was adopted the ispolkoms of the Lenkoran City and Tauzskiy Rayon Soviets of People's Deputies, and also the ispolkoms of all of the rayon and city (republican subordination) soviets of the republic are given concrete commissions on the practical implementation of the points contained in the decree of the CC of the Communist Party of Azerbaijan, the Presidium of the Supreme Soviet Azerbaijan SSR, and the Council of Ministers of the republic "On a Further Increase in the Role of the Soviets of People's Deputies in Economic Construction."

The chairman of the Commission on Public Education and Science of the Supreme Soviet Azerbaijan SSR, the deputy I. A. Ibragimov, delivered a report at the meeting of the Presidium containing information on the state of the training of qualified worker cadres by the educational institutions of the State Committee for Vocational and Technical Education of the Azerbaijan SSR.

During the examination of this question it was noted that during the years of the 10th Five-Year Plan the republic's vocational and technical schools were graduated from by 256,000 young men and women who obtained qualifications in 223 occupations. Quite a bit has been done to develop the network of vocational and technical schools, to expand their profiles, and to improve the quality of the training of the new labor shift.

In addition to this, attention was called to the fact that there are serious shortcomings in the training of qualified worker cadres in the republic. Thus, the specialist training plans which are established by the State Committee for Vocational and Technical Education for its subordinate educational institutions are frequently greatly overstated compared to the needs of enterprises, which makes it difficult to find jobs for the specialists in accordance with the occupations they have received. In a number of cases enterprises have taken several times fewer graduates of vocational and technical schools than they themselves agreed upon in their requisitions. Every year a substantial number of graduates of the day schools who are assigned to industrial enterprises and construction organizations do not arrive at their destinations. Sometimes the professional level of the training of worker cadres leaves something better to be desired.

Poor vocational orientation work, the lack of the necessary attention by the administration and public organizations of enterprises and construction projects to making young people permanent in production, and also frequent cases of violations of the established procedure and of the granting of privileges to the graduates of vocational and technical schools leads to the fact that labor turnover among them is higher than among workers of the older ages. Unfortunately, the State Committee for Vocational and Technical Education and the ministries and departments are not making a deep study of the reasons for this situation and are not taking the necessary measures to eliminate them. The material and technical base of the vocational and technical schools lags sharply behind the present technical level of the economy. The educational institutions of the State Committee for Vocational and Technical Education do not have enough modern machinery, mechanisms, tractors, and metal-working machine tools, which lowers the level of the students' mastery of practical knowledge. Often worker cadres are trained in isolation from production conditions. Many rural vocational and technical schools do not have their own land plot, or have very saline land at their disposal. Despite the shortage of standard educational buildings, year after year the plans for the construction of new vocational and technical schools of the State Committee for Vocational and Technical Education are not fulfilled.

There are important miscalculations in the selection and placement of cadres of teachers and production training experts. To a definite degree this is a result of the fact that the training of teachers and experts for the vocational and technical educational system is not performed in the public's higher and secondary specialized educational institutions.

During the course of the discussion of this issue serious defects were also pointed out in the political educational and mass cultural work among the students of the vocational and technical schools with the result that there are frequent instances of violations of study and labor discipline and of law and order.

In the decree which has been adopted the State Committee for Vocational and Technical Education and the republic's ministries and departments have been given commissions aimed at improving the training of young worker cadres in the light of the tasks facing the republic in the 11th Five-Year Plan.

An examination was also conducted on the question of the work of the commissions for the affairs of minors and of the observation commissions attached to the ispolkoms of the Nasiminskiy Rayon (Baku) and Yevalkhskiy City and Rayon Soviets of People's Deputies, and other questions on which the appropriate decrees were adopted.

The following took part in the discussion of the issues examined at the meeting of the Presidium of the Supreme Soviet Azerbaijan SSR: the Presidium members A. A. Aslanov, F. R. Mustafayev, and M. D. Nasirov; the Minister of Internal Affairs D. D. Veliyev; the Minister of Education E. M. Kafarova; the republic's Procurator A. M. Zamanov; the Deputy Chairman of Gosplan F. A. Faradzhev; and the deputy ministers: of industrial construction--S. I. Grushetskiy, of rural construction--K. D. Khudiyev, and of agriculture--D. M. Nabiyev; the Deputy Chairman of the State Committee for Vocational and Technical Education Z. S. Abdullayev; and others.

UZBEK PEOPLE'S CONTROL COMMITTEE ON CONSTRUCTION

Tashkent PRAVDA VOSTOKA in Russian 16 Jan 82 p 3

[Article: "The Thorny Path of an Automatic Telephone Exchange"]

[Text] The committee noted that the ministries of communications, construction, and land improvement and water resources Uzbek SSR, the Glavtashkentstroy, the "Sredaztransstroy" Trust, and the Tashkent Construction and Installation Administration of the "Soyuztelefonstroy" Trust have not been satisfactorily fulfilling the established assignments for the construction and commissioning of communications facilities. Every year they fail to make use of the appropriations which are allocated for these purposes, and they do not stay within the normed construction schedules.

During the past two years more than 24 million rubles were appropriated for the development of the means of communication in Tashkent. Only two-thirds of the allocated resources were used. Stations with a capacity of 13,700 numbers were not put into operation.

When they build communications facilities many construction organizations do not show concern for high work quality, and unfinished jobs are not completed for years. Thus, the Ministry of Land Improvement and Water Resources Uzbek SSR was supposed to commission the building of the automated telephone station-74 last year. But to this day work has not been completed on energy supplies, ventilation, water supply, heat supplies, and plumbing. The construction of a building for the automated telephone station-58 in Sergeliyskiy Rayon which was begun by the "Sredaztransstroy" Trust five years ago has still not been completed.

But the biggest debtor is the Glavtashkentstroy. Last year the construction and installation work plan was not fulfilled at a single one of the seven communications facilities being built by it. Construction is being performed unsatisfactorily by Trust No. 11 on a post office and radio-television transmitting station. For the fourth year construction completion schedules are being missed on the base amplifier station on the Severnyy Ob"yekt Tract which is being conducted by Construction Trust No. 4, and which today is not ready for commissioning.

For two years the new building of the automated telephone exchange-42 which was built by the 159th trust has been in use. But to this day it has not been accepted with a deed from the state commission because the construction workers have not removed work left undone.

The committee has pointed out to the first deputies of the Ministries of Construction and Land Improvement and Water Resources Uzbek SSR comrades Abbaskhanov and Kadyrov, and to the first deputy chief of Glavtashkentstroy the lack of discipline and the slow construction and commissioning of communications capacities in Tashkent.

In view of the fact that the Tashkent City Committee for People's Control has imposed punishments on the managers of Trusts Nos. 4 and 159 comrades Akhmedov and Tulyaganov for serious shortcomings in the organization of construction work, the republic committee limited itself to a warning.

For failing to commission the automated telephone exchange-54/55 and line installations, and also a number of other communications facilities, the chief of the Tashkent Construction and Installation Administration of the "Soyuztelefonstroy" Trust comrade Sergachev has been given a reprimand.

The leaders of the Ministry of Communications and of the Main Administration for Capital Construction of the Tashkent gorispolkom had their attention called to the lack of supervision of plan fulfillment and the quality of construction and installation work.

PARTY MEMBER DEFENDS RIGHT TO VOTE 'NO'

Moscow SOVETSKAYA ROSSIYA in Russian 15 Jan 82 p 2

[Article by Ye. Yeremeyev, section chief at the technical department of the Tolyatti division of the "Promstroyproyekt" design institute (Kuybyshevskaya Oblast): "Why Did I Vote 'Against'?"]

[Text] At an open party meeeting which had discussed the results of our design organization's work, I voted against the resolution. I turned out to be the only one. It meant that I'd opposed myself to the other communists. It's not easy to find oneself in such a situation. I won't discuss my feelings. I do, however, think it necessary to explain my stand: behind it lay long observations, reflections about the life of our party organization, its activities and the quality of work.

In my view, a meeting's resolution must be judged according to its party spirit, that is, whose interests it reflects--national, popular interests defined by party directives, or parochial, departmental interests prompted by a kind of group egoism. After all, it does happen that even in a party collective one can find defenders of such interests, and the main thing in such cases is not to let them set the rules. In our institution, it seems to me, the egoism of such people, who have managed to subordinate other communists to their interests, has lately been taking the upper hand. For that reason I feel that the decisions being passed are not aimed at the unswerving and effective implementation of party directives; on the contrary, they as it were legalize the old order, which was so convenient for a trouble-free existence.

I recall, for instance, our discussion of how to save energy resources. What should it have been about? Apparently, about how the projects we draw up provide for savings of heat, fuel and electric power, what keeps us from suggesting the most economic solutions and reducing power intensity wherever possible. But no, the debate was sidetracked to why the heating system of our building is poorly regulated. Of course, you can, as they say, "dance" from there: we spend three times more energy than we should: on the upper floors it's too hot, we open windows and let the heat out into the street; on the lower floors we freeze and turn on electric heaters. Bad management, in short!

But for some reason no one recalled that the building's heating system had been designed by our own technical sanitation department, that the low quality of the design is a reflection of the department's style and level of work, that the mismanagement built into the design wasn't accidental either: it stems from the negligence and irresponsibility of our employees. The resolution states: to set up a commission with instruction to set the heating right. In other words, the whole force and prestige of the party organization's collective will was targeted on the solution of an isolated everyday question reflecting the narrow, purely consumer interests of the collective. Incidentally, in the 2 years since the heating commission was set up it has achieved nothing. Can such a decision be considered truly principled?

Or take such a fact. On the eve of preholiday workdays collective "lunches" are often organized. As a rule, there are drinks. Then everyone proceeds to a solemn meeting, which is followed by singing and dancing until the end of the workday. After that, when everyone is merry and relaxed, they all go home. I, for one, consider this impermissible and blasphemous: turning work into feast. But, I'm told, it's done everywhere now. Not everywhere, I venture. In any case, It's something for the party organization to think about. At one meeting, where we were discussing strengthening ideological and educational work, I denounced the practice of holiday lunches. But neither the management nor the party bureau supported my appeal. Nor did the meeting: it's resolution contained not a word about this unseemly practice. In fact, I saw condemnation in the eyes of many: look at that goody-goody speaking out....

At the meeting where I voted "No" the question had been that we hadn't fulfilled our profit plan. We had economized on wages, but then irresponsibility and waste had reduced the savings to naught due to overexpenditure on another item: "Expenditure of materials for production." It would seem that logic should suggest that the communists must concentrate their attention on fostering thrift and responsibility and rally all efforts for the fulfillment of the profit plan. But no, once again the initiative was taken by those who think of their own good rather than that of the community. They suggested including an item in the resolution which would denounce, not waste but wage savings. I couldn't remain silent and insisted on its deletion. But even so, my own suggestion to oblige communists--chiefs of departments to personally control the expenditure of materials was not supported and the resolution was purely declarative and non-obligatory in nature. I was therefore compeled to vote "against" it as against a half-measure....

Why do philistine attitudes sometimes prevail in our organization? I wouldn't undertake to list all the reasons, but there is one I'd like to single out. I think that "number mania" has become much too widespread nowadays and the state of affairs is judged not according to actual accomplishments but according to their appearance as reflected in an index, in a percentage point. Accordingly, a leader, including a party leader, is regarded as more capable if he can "produce" the right number, flash an index, create an appearance of well-being. For a long time I didn't venture to raise my voice against the majority: I felt awkward about setting myself in opposition to the collective. But then I realized that it was wrong to confuse the collective with a group: a collective is an association of people inspired by a common lofty purpose, but what we have so far is simply a production group with misconceived goals and notions. Many of our communists think like I do, but they prefer to be silent so as to appear nice to all. But I refuse to! The honor of a communist is more to me than friendship with those who besmirch it. I vote against them.

REGIONAL

INTERNATIONALIZATION OF STUDENTS CONCERN OF 'ROUNDTABLE'

Tallinn MODODEZH ESTONII in Russian 13 Jan 82 p 2

[Article by A. Zaytseva who conducted the discussion: "It Is Impossible To Change the Place of the Meeting"]

> [Text] Let us stipulate right away that the "Roundtable" at which we have assembled ten interested persons today, is particularly relative. These conversations with the competent people took place at the various tables and at various times. However, you see, neither the place nor the time of a meeting but the common task -- the common problem -- in whose solution they are engaged, unites people in the final analysis. The question concerns the international indoctrination of school boys, the system of contacts between peers in a school which trains them in the Russian and Estonian languages.

E. I. Vyari, inspector of schools for the Estonian SSR Ministry of Education: If I may define the three primary avenues in the problem as a whole. First of all, it is the training of personnel as teachers of the Estonian language for schools with training in the Russian language; next, it is the improvement of the instructional methods base; and finally, it is the instilling of the appropriate attitude towards the subject. These tasks are closely interconnected and are subordinate to the overall goal: Improving the role of the Estonian language as a means of access to the national culture and as a means of instilling a concrete sense of internationalism. Of course, the importance of this work must be first of all realized by the school leadership, the director and the teachers.

O. N. Silina, an instructional methodologist in the Tallinn instructional methods office: A school director determines the reference points in indoctrinational work. I had occasion to work with a director for 17 years, and all these years we tried to consistently give the children access to the republic's cultural life and to strengthen the bonds between schools.

V. P. Rayapuu, director of the 52d Secondary School: I think that access to the republic's culture is the direct task of a school. For example, we continuously invite lecturers for the teachers -- on Estonian literature. Let a new book appear on the sales counter -- we tell the children about it and recommend it to them. And if there is no special measure to talk about, each day and each lesson provides an occasion to address the republic's life, you see.

Z. S. Panteleyeva, the organizer of work in out-of-school hours for the 52d School: Stands entitled "Estonia Is Your Native Land", which we renew, permanently hang on our third floor. Five years ago, we set up a museum entitled "Lenin and Estonia".

I. A. Sepp, an instructor of the Estonian language in the 52d School: Once, a young boy, an excellent student, asked during a lesson in the 6th class seemingly as a joke: Why do they say we should study Estonian? And you know, the children began to "bite" on it; I did not have to intervene with educational speeches. This is the main thing, I think: That the children themselves understood why.

V. P. Dikovich, an instructor of the Estonian language at the 53d Secondary School: A serious mission has been placed on an instructor of the Estonian language. Teaching to read and talk -- this is not enough. It is necessary to teach them to think and to arouse their spirit. The subject, which is designated in a text book, is -- so to speak -- an occasion for a discussion. We begin to study Estonian literature in the seventh class, and the children are obliged to read Luts' "Vesna" [Spring]. They read Smuul in the eighth class. I bring books to the lessons. And there is a discussion about art after visits to an exhibition. Each year, we write papers about the old and the new city and about writers and artists.

T. P. Soboleva, the 53d School's training department manager: Our children often select a topic on Estonian literature for a graduation paper, and -- you know-- they write well. Svetlana Borisovna Leont'yeva has conducted an elective on Estonian literature at our school for several years. In general, we are trying to keep the children in the modern literature course, especially in the 10th class.

Correspondent: We are still talking about the everyday life of a school, about the painstaking daily work that takes place within a school building. And it would be possible to say a lot more about this. For example, the children are learning a song in the Estonian language during the singing lesson in the 50th School. This is also taking place only within the walls of the school. However, perhaps here -- during a singing lesson -- the walls are breaking?...

I once was looking through the records of the Tallinn international friendship clubs. The following phrase hit me in the eye: "We consider personal contact to be the most effective way to bring about friendly bonds. A report that every summer the members of the International Friendship Club in this school travelled to Schwerin for personal contact with their German friends, followed after this. This wording was imprinted in my mind. However, a seditious thought arose: Is this "effective form" not only applicable to Schwerin but also to Tallinn? It is somewhat closer....

O. N. Silina: A system of lively contacts between the children is quite necessary. In my opinion, any new school must begin its indoctrinational work with this. Contacts are needed at all levels and at the adult one especially.

T. P. Sobolev: We had such contacts with the 44th School for a long time. The Pioneer detachments, Komsomol groups, teacher collectives, and party organizations were friends. Our colleagues came to us for lessons -- not only in Estonian, but also for a lesson in physical training or in military affairs, for example. In our turn, we adopted their experience. Discussions and instructional methods conferences were held. We had open general party meetings once a year. And the children were on friendly terms. We had joint sport contests, Pioneer rallies and Komsomol meetings. In general, we were together both on work days and on holidays.... And then a new school was built near us. Someone somewhere had reasoned that it would be easier for close neighbors to be on friendly terms. They said that they would be shoulder-to-shoulder. Although it is not easy to begin everything from the beginning, we are preparing for this now. Experience is a blessing....

N. Ya. Perova, the 52d Secondary School's training department manager: Our children are friends with two schools -- the 32d and the 44th -- beginning with the junior classes. We draw up joint work plans. We usually meet once a month without fail. For example, our younger students spent a story evening at the 44th School. They put on the play "Cinderella" for them. It has already become a tradition that we celebrate 8 February -- the day of the young anti-fascist hero -- in our school and we invite them as guests; and we spend V. I. Lenin's birthday at our friends. We are proud of the fact that, as guests, our children speak and perform successfully in Estonian....

V. G. Ess, the 50th School's international friendship club director: We planned a friendship evening with our neighbors in the 43d School in December. The children prepared diligently. There was a concert and entertainment, but the guests... did not come. It is difficult to find the guilty ones. Perhaps they had not made arrangements as they should have. However, it is clear that contacts must be organized at a serious level.

E. R. Boronil'shchikov, an inspector for the city department of education: Yes, many difficulties arise in this work. Nevertheless they will be overcome if a search is made in the correct direction. When speaking about instilling a sense of internationalism, one cannot fail to mention a certain -- not quite true -- orientation in some schools. The subject of the friendship is selected according to the principle -- the further, the more interesting. They travel on trips to other republics, but they do not know Estonia. They study the sights of remote cities using booklets and postcards, but they have not been to a museum in their own city. Evidently, a section on the national republic is needed in the international friendship club of the Pioneer Palace.... Most of all, formalism is terrible. Artifical mutual relations and measures for the sake of checking something off are capable of bringing only harm. You see, everything is started so that the knowledge of the language will be mutual and so that the children will be able to use the knowledge, mastered during a lesson on the Estonian Language, in practice. If the guests from the neighboring school speak to us in

Russian, we in our turn will speak Estonian when we go to them. This, besides everything else, is common politeness. If we have imparted the correct content to our indoctrinational work, it will acquire correct forms. Each school can solve on its own and creatively how to organize a meeting and a friendship evening. Let there be the desire to search....

E. I.Vyari: What does the essence of the problem,which we are discussing, consist of? The essence is that indoctrinational work and contacts between schools speaking different languages are most often carried out at the level of individual measures. It is time to think about a system, about joint planning, about results. We are satisfied with too little. In order to provide access to culture, it is in no way sufficient to read two- three classic works. Contemporary Estonian literature has acquired an authentic scope and it has great importance in our Soviet multinational literature, but what do the senior class children know about it? It is worthwhile to look at how Estonian literature is represented in school libraries and at how familiar teachers, training department managers and the school director are with it. As soon as we talk about the need for contacts between schools with training in the Russian and Estonian languages, the level of the contacts here is determined by concrete knowledge -- the knowledge of the literature, art and culture of the republic. Inter-subject ties must not play a minor role here. Each lesson and each subject must contribute to the formation of the students' correct world outlook so that a pupil will be able to evaluate this or that social political phenomenon in an ideologically correct way. The instilling of a correct vital position and of a sense of internationalism and -- in the final analysis -- the formation of the personality is the task of each teacher regardless of the subject, be it history or literature or work done outside of class hours. The children must understand why they need these contacts, they must be deeply aware of how vitally important they are for them, and they must be prepared for these contacts. Yes, I emphasize once again that the question concerns not a number of individual measures-- even the most successful ones -- but a combined approach to the solution of the problem, the creation of a system.

The first republic olympiad on the Estonian language for the 9th class students in schools with instruction in the Russian language must become a very important form for attracting attention to the Estonian language, giving access to the republic's culture, and creating friendly contacts. The olympiad's slogan is: The Main Thing Is Not Victory But Participation. We selected the 9th classes because they already have a sufficient knowledge of the language. The olympiad is being conducted in three rounds. The first round, the one between the schools, was held on 16 December. The children wrote a competitive work about their native land. The overall topic was "The Estonian SSR". The second round, the city or rayon one, will be conducted on 30 January; and the third, the republic one, -- on 24-26 March. The basis, of course, is the material which has been passed in. What is particularly important? The third round will be conducted jointly with students in Estonian schools. An olympiad -- literature, Pushkin -- is also being held in them. It is planned that meetings with the students and then a general evening will be conducted. It is important that each school raise the overall seriousness of this work so that it will become an important stage in the indoctrinational process.

T. P. Soboleva: As soon as we received the instructions about holding the olympiad we duplicated and distributed them to the Estonian language teachers, to all of them regardless of what classes they taught, so that they could orient themselves on the future. They decided that everyone would write. The main thing is participation. On the day of the olympiad, they solemnly opened an envelope with the contest subject. The children were not especially frightened because they had prepared so excellently. They wrote during the second lesson. Our 9th class had physics, mathematics and literature during the second class. These teachers became assistants. Valentina Pavlovna Dikovich and I went about the classrooms. The children were writing in absolute silence, almost calmly. Then they began to read to Valentina Pavlovna and she says: "I am satisfied!".

V. P. Dikovich: We began to prepare for the olympiad literally as soon as we found out about it. We reviewed the program material and wrote several written works. The majority wrote the competition interestingly and emotionally. The three best were the works of Layne Kiyn from 9C, and Nelya Sharonova and Vanda Perevozchikova from 9A. Layne knows the language better than the others, although not quite as fluently as could be concluded from her last name; and Nelya and Vanda -- on the scale of the school program. In addition, we want to commend in general the three best ones from each class. Their names were posted on a stand so that the entire school would know them. Publicity! Of course, we hope for victory, who does not hope for it?...

Correspondent: The olympiad continues, we have still to name the winners, and we will still continue the discussion. However, our meeting at the imaginary "round table" has come to an end. It is not proper to sit too long when work awaits. If one were to sum up results briefly, it is important that the sharp angles of the "round table" have been designated. The animated and specific experience which the participatnts shared, is even more important. Experience in such a complicated sphere of moral development has no price.

Concerning the title, it defines the subject of the discussion quite accurately. The meeting of a juvenile with the culture of his republic, with a peer from a neighboring school and with life must take place in school. It is impossible to change the place of the meeting.

TAJIKS REVIEW PETITION, COMPLAINT PROCEDURE

Dushanbe KOMMUNIST TADZHIKISTANA in Russian 31 Dec 82 p 2

[Report: "In the Presidium of the Supreme Soviet Tajik SSR"]

[Text] There has been a meeting of the Presidium of the Supreme Soviet Tajik SSR at which the question of the state of work on examining the applications and complaints of citizens and their reception in the system of the republic's Ministry of Fruit and Vegetable Enterprise was discussed. The Minister K. Sufiyev delivered a report.

As has been noted, definite work in this direction is being carried out in the ministry and its subordinate organizations and enterprises and this has promoted a certain improvement in the branch. In recent years the production of vegetables, fruits, melons, and potatoes has increased in the republic, the capacity of storage units has increased, the trade network has been expanded, and supplies for the population have improved.

However, it was emphasized at the meeting that when what has been achieved is measured against the tasks put forward for the branch by the 26th CPSU Congress a great deal still has to be done. Organizational work, particularly, an examination of the letters and applications of citizens plays a role of considerable importance in improving the work of the branch. For, as a rule, most of them are motivated by state interests and are aimed at a maximum use of reserves and the elimination of shortcomings. As a check has shown, the practice of examining the applications and letters of workers is still marked by important violations, in recording citizens' letters and oral presentations. Sometimes they are not registered on time. Schedules are not always observed in the examination of letters. A substantial number of the statements and complaints which were received this year was elicited by violations of the rules of Soviet trade, unsatisfactory storage, and, this means, low output quality. However, radical measures were not taken in all cases, which, naturally, gives rise to repeat complaints. The branch's leading workers underestimate the importance of such a form of work with citizens as the personal interview and exercise poor supervision over the fulfillment of the party's and government's decisions regarding work with workers' letters and statements. During the course of the year these questions were not considered a single time at the board. In its decree the Presidium of the Supreme Soviet Tajik SSR called the attention of the leadership of the Ministry of Fruit and Vegetable Enterprise Tajik SSR (comrades K. Sufiyev, S. Khaknazarov, M. Kasimov, N. Ya. Zyu in, A. Kadyrov, S. Radzhabov) to the existence of serious shortcomings in the work on examining the statements and complaints of citizens and on providing them with personal interviews, and also bound it to discuss this question at an expanded meeting of the board and to map out and execute concrete measures to eliminate these shortcomings, guiding itself strictly by the decree of the CC CPSU "On Measures to Further Improve the Work with the Letters and Suggestions of Workers in the Light of the Decisions of the 26th CPSU Congress."

It has been recommended that there be a systematic generalization and study of citizens' applications and complaints and that the necessary measures be taken to eliminate the causes which give rise to them; to strictly comply with examination schedules, permitting no formalism or red tape; to exercise constant supervision over the correct and punctual consideration of applications and complaints at subordinate institutions, organizations, and enterprises and to periodically hear information from their leaders at the board. The leadership of the ministry has been charged with taking measures to improve output quality. The Presidium of the Supreme Soviet Tajik SSR has also heard information from its Permanent Commission on Industry on the results of an examination of the question of the work of the republic's ministries of light and local industry and of the enterprises of the Ministry of Social Security and Consumer Cooperation on increasing the production of consumer goods from local materials and production waste. Other questions were also examined. The Chairman of the Presidium of the Supreme Soviet Tajik SSR M. Kh. Kholov spoke at the meeting.

PRICE IMBALANCE BETWEEN KAZAKH AGRICULTURE, INDUSTRY

Alma-Ata KAZAKHSTANSKAYA PRAVDA in Russian 3 Feb 82 p 2

/Article by Sh. Mukhlisulin, candidate of economic sciences and head of the Department of Economics and Production Organization at the Kazakh Scientific Research Institute of Karakul Breeding, Chimkent: "Rayon Control Element"/

/Text/ The link between industry and agriculture is becoming stronger with each passing year. However, at the present time it would appear that there is no community or unity of interests in the economic relationships of enterprises within this agroindustrial complex. The development of farming and animal husbandry is still unilateral in nature and associated only with the production of definite types of products. This is explained by the fact that the conditions for a partnership between the producing and processing branches have not been created. Responsibility for the final results of the complex has been assigned only to agriculture. Thus, when animals are delivered to meat combines from fattening farms and enterprises (by means of transport or especially livestock drives carried out over extended distances), each sheep loses from 2 to 4 kilograms or more in weight. Owing to the absence of integration, the meat industry does not bear responsibility for these losses. A privileged position in this regard is occupied by the karakul plants, by factories for the primary processing of wool and by other industrial enterprises engaged in the processing of agricultural products.

In solving the food program, the principal role will be played by agriculture. However, many sovkhozes and kolkhozes are sustaining losses, while at the same time the service and processing enterprises are earning profits and bonuses. For example, let us take a specific branch such as karakul breeding. The principal product of karakul breeding -- pelts. The majority of the karakul breeding sovkhozes engaged in the production of pelts sustain losses even after the procurement prices have been raised. On the other hand, the karakul plants and fur combines are realizing tremendous profits from the sale of these products. Thus, during the past few years the Chimkent Karakul Plant has been realizing an annual profit of more than 5.5 million rubles merely for the dressing of pelts, with one half of this amount being above-plan profit.

During the past 10 years alone, the profit of all of the procurement organizations doubled and that of the meat and dairy industry tripled.

What is the explanation for this? I do not believe I am revealing a secret when I state that at times the quality of the agricultural products is low at the time of sale. The specialists have calculated that a reduction of just one tenth of one percent in the fat content of milk will result in losses amounting to 80,000 tons of products at sovkhozes and kolkhozes throughout the country. Meanwhile the enterprises, as a result of this, will receive 27 million additional rubles, with no noticeable increase in expenditures or services to agriculture.

Moreover, a determination as to the quality of individual types of products is carried out organoleptically in agriculture. Thus the arbiter of karakul quality at the present time is a sorter at a plant, who is guided only by his experience. The same holds true in the case of vegetable, fruit and potato procurements: they are accepted "by eye." This is why the maintenance of roughly the same effectiveness in various elements of the agroindustrial complex requires further improvements in economic relationships. Corrections must be introduced into the price mechanism aimed at achieving an equivalent exchange between agriculture and the industrial elements. The additional profit accumulated in the processing industry should be distributed, in accordance with the norms, among the agricultural enterprises.

But this is minor. Over the past few years, a number of intermediate administrative elements have been created and this has led to dissociation in the management of farms. For example, let us take Kzylkumskiy Rayon in Chimkentskaya Oblast. There are seven specialized karakul breeding sovkhozes in this rayon, but three of them are included in the structure of the Karakul' Scientific Production Association and are not subordinate to local organs. A similar situation prevails in Suzakskiy Rayon in this same oblast, where two out of ten karakul breeding sovkhozes are directly subordinate to the branch main administration of the republic's Ministry of Agriculture. Similarly, dissociation among the karakul breeding farms is also occurring in Dzhambulskaya, Kzyl-Ordinskaya, Gur'yevskaya, Ural'skaya and other oblasts.

Dissociation is also taking place in other branches of the republic's agriculture. This is complicating production planning and control and logistical support and it is also promoting an increase in the size of the administrative apparatus. Thus, prior to 1978 the administration of karakul breeding operations in the republic was carried out by the branch main administration of the Ministry of Agriculture for the Kazakh SSR, which consisted of nine individuals. With eight farms being made subordinate to this main administration, the size of the administrative apparatus increased by a factor of more than five. The expenses for maintaining this apparatus are borne by the farms. The Production Department of the Karakul' Association, consisting of 30 individuals, is also maintained by the 10 sovkhozes included in the structure of this association. In addition, the sovkhozes pay the wages for 9-10 workers attached to newly created karakul breeding departments of the oblast agricultural administrations. Pedigree animal husbandry inspections have been created in the oblasts and these too are being maintained at the expense of the sovkhozes and kolkhozes.

All of these factors are bringing about an increase in production costs, they are disrupting the principles of cost accounting and they are complicating the management of agricultural production. In such a situation, the rayon agricultural administrations are unable to exert an effective influence over the production activities of the rayon's sovkhozes and kolkhozes. And the higher organizations are also unable to direct the production operations in an efficient manner.

Accumulated experience testifies to the fact that growth in agricultural production must be achieved within the framework of a single rayon agroindustrial complex.

The rayon organs are closer to the production operations, they maintain direct contacts with the farms and enterprises and they perform administrative functions associated with the planning of product procurements and the use of land, capital investments and material and labor resources.

We are of the opinion that there must be a single agroindustrial association in a rayon. Its structure must include, in addition to sovkhozes and kolkhozes, procurement, processing, service and other enterprises.

Thus the rayon organs must be converted over from administrative to economic-administrative organs. And their enterprises must be cost accounting facilities with complete centralization of production and procurement planning, the processing of products, logistical supply, the distribution of profits, capital construction and so forth.

The overall final production results must be based upon the economic relationships of those participating in the rayon's agroindustrial complex. Towards this end, they are extended the rights of interdepartmental control and they are assigned responsibility for the operational results of the kolkhozes and sovkhozes and procurement, service and supply enterprises located within the rayon. The operational experience of an agroindustrial association in Vil'yandiskiy Rayon in the Estonian SSR, in Abashskiy Rayon in the Georgian SSR and a number of others reveals that the effectiveness of such a method of agricultural integration is sufficiently high.

In such a specific branch of agriculture as karakul breeding, agroindustrial integration on a republic scale based upon cooperation between rayon and oblast production associations is considered to be most advisable. The development of a model for a rayon agroindustrial enterprise, for the production of karakul breeding products on an industrial basis, can be carried out based upon 10 of the largest karakul breeding sovkhozes in Suzakskiy Rayon in Chimkentskaya Oblast, where more than 550,000 sheep are concentrated. In the process, the task of some farms will consist of reproducing the herd, others will be tasked with raising replacement young stock and still others will be responsible for the industrial fattening of older ewes and obtaining Persian lamb pelts. Substantial improvements can be realized in feed production through the more intensive use, for this purpose, of underground waters for oasis irrigation.

According to our calculations, with the creation of the Suzakskiy Rayon agroindustrial association the yield of products per sheep will increase by 34.2 percent, labor productivity will be raised by a factor of 1.6, the profitability level will reach 63.3 percent and the capital investments will be repaid within 7.3 years. High indicators are being achieved owing to improvements in the structure of one-time expenditures. The principal proportion of the capital investments is being employed for those measures which will promote the conversion of the branch over to a progressive technology and raise the productivity of the animals. Thus, one third of the capital investments -- 30.4 million rubles -- will be used for the fencing of pastures, 18.4 million rubles will be employed for the intensification of feed production and 3.26 million rubles will be used for introducing a mechanical milking system for the ewes and for processing the milk.

The creation of a single agroindustrial association according to the branch principle will make it possible to reduce coordination and accelerate the process of further collectivization of production. In addition, it will bring about the use of forms and methods for controlling the branch's economy that will conform with the modern conditions for the development of scientific-technical progress and this in turn will promote growth in production efficiency.

TURKMEN ATHEISM COUNCIL WORK DESCRIBED

Ashkhabad SOVET TURKMENISTANY in Turkmen 13 Sep 81 p 2

[Article by K. Shamyradov, chairman of Scientific Atheism Council under Tel'man Raykom of the TCP: "The Influence of Atheistic Education"]

[Text] The 26th CPSU Congress put forth important duties in educating the man who is the builder of the communist society. One of these duties consists in giving an atheistic education to the workers. The party raykom and the primary party organizations, taking direction from this, always keep the strengthening of atheistic propaganda among the population and conducting consequential individual education among religious believers at the center of their attention. The question has been planned and conducted through an expanded bureau council of the party committee. In giving a communist education to the workers and strengthening the struggle against harmful remnants of the past, definite measures have been announced on strengthening the role of atheistic propaganda.

With the goal of providing leadership to scientific-atheistic propaganda a scientific atheistic council consisting of 7 people has been set up under the TCP raykom. The atheism section of the "Bilim" society has been joined to it. Experienced atheists and veteran teachers who make use of their authority and respect among the masses, soviet and Komsomol workers have been appointed to the council. Atheistic councils have been established in all the kolkhozes and sovkhozes of the rayon.

Twenty two atheist-lecturers are in the atheist soviets; they are giving relevant lectures and talks in the branches of production. Other than this, there are 12 lecturers and political reporters who are not on the staff, 24 members of the "Bilim" society, 34 agitators and 34 political informers who actively participate in talks and lectures on atheism. From the beginning of the year more than 130 lectures and political reports were read with their help and close to 200 talks and oral analyses took place.

Speeches and lectures were given by atheist-lecturers Olmez Chasemova, secretary of the TCP raykom, on "The Women of Soviet Turkmenistan--Diligent Builders of Communism," Merjen Artykova, secretary of the raykom LKSMT, on "Islam and Women," and Arazbay Khalbaev, secretary of the Kalinin kolkhoz party committee, on "Religion--The Ideological Weapon of the Imperialists," all of which had a great influence on the workers.

With the goal of improving the expertise of the atheist-lecturers, the TCP raykom opened a two-year school for atheists. In it 31 people are studying--atheist-lecturers, chairmen of atheistic soviets, chairmen of commissions to implant new traditions--and are raising their expertise. Also, 5 from our rayon have completed the one-year atheistic school of the TCP Dashkhovuz obkom.

The work conducted by rayon cultural administrations on atheistic propaganda has recently improved. Student conferences and question and answer evenings on atheism are taking place in libraries, clubs and houses of culture; book displays are being set up; students' meetings with people who have broken away from religion are taking place. Books and pamphlets about scientific atheism are widely propagated. Also, satirical performances, interludes and anecdotes adorn the repertory of the rayon peoples' theater.

Great work is being done in giving scientific-atheistic education to students in the rayon schools. In most of the schools atheistic corners, stands and book exhibits about atheism have been set up. With the help of the appropriate subjects the work of giving an atheistic education to students has been put on the right road.

The raykom of the party and the primary party organizations show daily concern in diligently taking part in widely implanting new traditions and significantly speaking out against the harmful remnants of the past among the women. At present commissions are working to implant new traditions in 11 enterprises of the rayon.

The commissions are involved in giving contemporary names to newly born children in the rayon, celebrating the acceptance of young people into kolkhoz membership and sovkhoz work, the granting of pensions to the old, youths joining the ranks of the Soviet army and the holding of Komsomol celebrations.

The question of implanting new traditions has been considered 5 times in bureau conferences of the party raykom and 20 times at meetings of party organizations in the last two years.

The women's oral journal CHEMEN and a number of womens' clubs, "Guncha," "Gulalek" and "Ayna" are functioning. They are playing a significant role in educating the women and in struggling against harmful remnants of the past.

Work along this line by party and Komsomol committees of the Kalinin kolkhoz are especially worthy of praise. The commission is conducting its work of implanting new traditions in this kolkhoz on the basis of a specially worked out plan. It is implementing its work by meeting with party and Komsomol organizations of the kolkhoz, the kolkhoz administration and the atheistic council. Ajebay Meredova, chairman of the kolkhoz trade union committee and a communist with higher education, chairs the work of this commission. The commission is doing much work to strongly implant new traditions in the life of kolkhoz workers and to eliminate old traditions whose time is past. The work conducted and implemented to spread the atheistic education given to the workers is bearing fruit. As a result, the number of religious believers is diminishing from year to year.

However, some party organizations and their atheistic councils have opened the road to passivity in giving an atheistic education to the workers. They are not approaching this work according to the demands of the day. Insufficient attention is given to structuring atheistic education in a relevant militant manner according to the demands of the time.

In the ranks of such councils one can name those of the "Leninism" and "Turkmenistan" kolkhozes and the "Kommunism" sovkhoz as examples. Thus, one can run across people who are religious believers, practice its traditions and go to the so-called "holy places."

Giving an atheistic education to workers and strongly implanting new traditions are questions demanding the conduct of complex and multi-faceted work. Party organizations and similar social organizations which think about this positively, by working according to the decree "On the Further Improvement of Ideological and Political Education Work" are constantly perfecting the forms and methods of educational work conducted among the masses and implementing effective means for firmly implanting new traditions in the life of the workers.

KAZAKH TEACHER CITES NEED FOR KAZAKH-RUSSIAN DICTIONARY

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 22 January 1982 carries on page 13 a 300-word letter by reader Tortay Basibekov on the urgent need for a new Kazakh-Russian dictionary to meet the needs of the schools. Basibekov relates his own difficulties as a teacher due to the lack of such a dictionary and proposes reversing the recently completed two volume "Oryssha-Qazaqsha Sozdik" (Russian-Kazakh Dictionary) to produce a Kazakh-Russian dictionary.

KAZAKHS DEVELOP NEW PHOSPHORITE MINES

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 21 January 1982 carries on page 1 an unattributed 100-word notice of progress in opening new phosphorite mines at Shilisay in Aktyubinskaya Oblast. Work is going forward rapidly at the Shilisay phosphorite mines, one of the major projects in Aktyubinskaya Oblast in the current five-year plan. Section one of the mines began production last year and a solidification chamber, a food refrigeration unit, a compressor station, a service rail line and headquarters buildings have been constructed at a total cost of 1.4 million rubles.

KAZAKH FORESTS, MANAGEMENT DESCRIBED

[Editorial Report] Alma-Ata MADENIET ZHANE TURMYS in Kazakh No 11, November 1981 carries on pp 8-9 a 700-word article by Smaghul Makhmutov on Kazakh forests and the Kazakh forest management system. The article is published under the regular rubric "Cherish Nature."

Trees give meaning to the natural environment. The KaSSR is second in the Soviet Union to the RSFSR in forested area with 21.5 million hectares. Some 8.6 million hectares of this are forests. Forests are concentrated in Alma-Atinskaya, Taldy-Kurganskaya, Chimkentskaya, Dzhambulskaya and Vostochno-Kazakhstanskaya Oblasts while much of western and central Kazakhstan is essentially unforested.

Makhmutov lists the many uses of forests in terms of the environment and the republic's economy and describes Kazakh forest management. Under the current system, Kazakh forest are divided into three use categories. Category 1, 19.1 million hectares, is comprised of natural reserves, park and recreation areas, trees along roadways, near factories and in urban areas. This category is strictly controlled and protected; tree cutting is allowed to take place only under specified circumstances. Category 2, .8 million hectares, is comprised of watershed. While

Category 2 is also controlled and protected, limited cutting is allowed annually. Category 3 is made up of industrial forest and includes 1.7 million hectares.

The purpose of the forest management system is to restore forests, prepare tree stocks, raise seedlings and expand forested area to achieve proper forest use, Makhmutov recalls that 1,114,000 hectares are hand-planted in state forest reserves alone and that many trees have been planted by individual sovkhoz and kolkhoz as well to prevent soil erosion by wind and water. Some 293 tree farms currently operate in the KaSSR.

BRIEFS

NOVOSIBIRSK FOOD PROGRAM CONFERENCE--A joint meeting of the presidiums of the Siberian Branch of the USSR Academy of Sciences, the Siberian Branch of VASKhNIL [All-Union Academy of Agricultural Sciences imeni Lenin] and the Siberian Branch of the Academy of Medical Sciences was held in the agricultural science township of Krasnoobsk near Novosibirsk. The scientists discussed the problem of supplying the population with food products, which was called "the central problem of the whole 5-year plan" at the November (1981) plenum of the CPSU Central Committee. On instructions of party and local government agencies, the scientists drew up the principles of the food program for Novosibirskaya Oblast. This work will serve as the basis for drawing up the food program itself. It contains recommendations on considerably intensifying agricultural production, defines the fields of most effective utilization of capital investments and presents estimates of variants and ways of solving the problem. NEW DETAILS ON ROGINSKIY CASE

Leningrad VECHERNIY LENINGRAD in Russian 12 Feb 82 p 2

[Article by P. Grigor'yev: "How Canards Are Born or the Story of a 'Gifted Researcher,' 'Well-Known Writer' and So Forth"]

[Text] There is probably no Leningrader who is not proud of his "Public"--the State Public Library imeni M. Ye. Saltykov-Shchedrin. We enter this temple of wisdom and unique, priceless repository of world literature with quivering emotions.

Books, books.... Any, even the slightest, encroachment on them--our common national property--would seem implausible and blasphemous. But families have their freaks, as they say....

According to L.A. Shilov, director of the Public Library, the theft of books of the greatest value has been on the rise recently, unfortunately. Many people remember, of course, when a certain V.A. Aslanov, in conspiracy with a group of persons, illegally removed from the library collection about 900 books worth more than R14,000. Thanks to the timely actions of the militia, the bulk of these books was confiscated and returned to the library depositories. Aslanov was deservedly punished. And now another recent example. A.I. Parakhin, an engineer at the "Krasnogvardeyets" Association, had ruined 39 issues of a magazine obtained by overseas subscription for foreign currency. Parakhin explained his criminal acts--he cut color photographs of cars out of the magazine--by his desire to assembly a photograph album of all makes of cars. The "collector" had to pay the library a sizable fine. S.N. Merkulov and M.B. Nurtazina were also detained attempting to remove books from the reading rooms. They lost their readers' rights.

Leonid Aleksandrovich spoke bitterly about this. But his face assumed an expression of disgust when the talk came around to A.B. Roginskiy.

The story began long ago, and even today it is impossible to calculate the extent of the damage done to our society by this 35-year old of no fixed occupation.

Roginskiy would call at the "Public" frequently; he did not stand out in any way among the other readers. But this was only how it appeared. And then....

A foreigner had "rid himself" of a dangerous load during a customs inspection at the border and left a book entitled "Pamyat'" [Remembrance] beneath the hall bench. Having established that the book was a collection of articles published in 1978 by the American Chronicle Press, the border guards sent it for evaluation to the Public Library. The workers of the Manuscripts and Rare Books Department discovered that the collection contained material from the department's collection. How could it have reached a U.S. publisher? They ascertained to whom this material had been issued. It proved to be Roginskiy....

His "activity" became a subject of investigation by the prosecutor's office's investigating authorities. It was established that he, a graduate of Tartu University's History-Philology Faculty, had been engaged in teaching from 1970 through 1977 and had taught at Leningrad correspondence and night schools and subsequently, up to June 1981, was the secretary of Ya. S. Lur'ye, research fellow of the USSR Academy of Sciences' Institute of Russian Literature (the Pushkin Center). All very decent, seemingly. But highly "piquant" features also turned up in Roginskiy's biography. For example, he was officially cautioned in 1977 for the systematic storage at his apartment of literature of anti-Soviet content and for disseminating it. Two years later he was brought to court and barred from teaching for actions incompatible with the high title of teacher (article 254, paragraph 3 of the RSFSR Code of Labor Laws). But, as can be seen, he did not draw the conclusions from this.

The investigation naturally could not have failed to have been interested in a further very significant question: how had Roginskiy gained access to unique archive material? Circumstances quite out of a detective story were revealed here. The very first written request from Saratov State University to the USSR Geographical Society Archives for Roginskiy to be admitted for work with manuscripts examined by specialists proved to be a forgery. Considering that this fact came under article 196 of the RSFSR Criminal Code, the prosecutor's office of Leningrad's Oktyabr'skiy Rayon instituted criminal proceedings in July 1981. As it turned out, the sphere of Roginskiy's "research" activity was quite extensive. Let us read the criminal information: "...In the period 1971 through 1978 A.B. Roginskiy visited the archives of the cities of Leningrad and Moscow, where he familiarized himself with manuscript material for the purpose of its publication in Soviet and foreign publications. In order to gain access to the archive material, he used knowingly counterfeit documents, a considerable proportion of which he had forged himself. Thus on 30 December1971 Roginskiy submitted to the Central State Archives of the October Revolution and the highest organs of state power and organs of state control of the USSR a knowingly counterfeit document--an application on a form of the Saratov State University.

"On 4 March 1974 on a form of the NEVA editorial staff Roginskiy wrote out an application for admission to the State Historical Archives and forged the signature of S.A. Lur'ye, a worker of the editorial staff. The counterfeit document was submitted to the archives on 26 March 1974...."

And so on and so forth. Altogether, according to the investigation data, Roginskiy, who presented himself as a contestant of Saratov University, submitted to the archives 17 counterfeit memoranda from institutes and the NEVA journal editorial staff.

The words "counterfeit," "forged signatures" and "criminal offense"--attributive terminology of a serious violation of the law--were heard most often in the information presented to the court. In December 1981 the court gave the criminal his just desserts--Roginskiy was sentenced to 4 years' imprisonment.

It would be fitting here to ask: how did the swindler manage to obtain the forms of the establishments and have a thorough knowledge of and so skillfully forge officials' signatures? After all, this is difficult without someone's assistance. This question was raised in the courtroom also. But no answer was obtained. More, the above-mentioned S.A. Lur'ye, who was a close acquaintance of Roginskiy, could not "recall" whether or not he had given him forms of the NEVA journal and whether he himself had signed them or not. He did not want to let his friend down. Recourse had to be had to expert testimony.... Contrary to the truth, a certain V.V. Pugachev, an employee of Saratov University, attempted to prove that Roginskiy was a graduate student of this VUZ....

But everything was perfectly clear: a person had committed a crime and was punished for it. Alas, this fact was perceived differently by "ideologists" from the emigre rabble, who earn their bread by serving their Western masters. How could they let slip such a "titbit"! How could the West not make Roginskiy, an inveterate swindler, "a fighter for human rights in the USSR (do not laugh!), a "scholar with a world name" and a "Russian historian of world renown"!

The emigre ragsheets joined in the lamentation for the new "victim". They speak out "emphatically" in defense of Arseniy Roginskiy," demand, appeal, bay.... It is claimed, contrary to the facts, that he is the "author of a multitude of scientific articles" (true, there is continual confusion as to how many--sometimes 10, sometimes 15 and sometimes more than 20 even). They rely particularly on the following inveterate lie: the purpose of Roginskiy's persecution was an endeavor to prevent his research activity. "He was not given an opportunity in the USSR to study as a graduate student." The gentlemen do not give a damn, to put it mildly, about the fact that Roginskiy never even attempted to register for a single course of graduate study.

The dependable lackey of the special services, Radio Liberty, is also zealously active. It gives the microphone to such renegades as V. Maksimov, who publishes an anti-Soviet magazine on Springer money, and S. Dedyulin, who works in the emigre press, a friend of Roginskiy's back in Leningrad days, who left the USSR by way of the emigration channel for Israel and who is now part of the chorus of provocation. Calling on the public of the West to take part in the campaign in "defense" of Roginskiy, they all ascribe to him the titles of "scholar-linguist," "well-known writer" and "literary historian". This "well-known writer" is somehow unknown to the Soviet reader!

All have been outdone, of course, by VOA, which is maintained by the CIA. It calls Roginskiy "one of the most gifted researchers of the Decembrist movement in the USSR." No more, no less!

Speculators from certain quite respectable Western publications are also attempting to elevate themselves on this wave, which is absolutely steeped in lies. For example, the newspaper LE MONDE claims that "Roginskiy sought permission to emigrate, but was refused." When? How? But about this--not a word. Quite, since this was not the case! And one outwardly respectable journal went as far as to say that in 1976 Roginskiy had been placed in a lunatic asylum. Even Roginskiy, however much he might have liked to have such a "winning" fact in his biography, could surely not have hit on this!

The story of A.B. Roginskiy is a typical example of how ideological provocations are born and anti-Soviet canards are fabricated in the West.

OBKOM SECRETARY ON HANDLING LETTERS

Moscow PRAVDA in Russian 4 Mar 82 p 2

[Article by V. Nikulin, first secretary of the Kalmytskiy Obkom: "Addressed to the Committee"]

[Excerpt] What characterizes the obkom's mail? It touches on all aspects of sociopolitical life and economic and cultural building. More than 1,000 letters are received annually. In addition, 500-600 verbal petitions are registered. Their subject matter varies. There are difficult problems. Housing, for example. Many houses are being built in Kalmykia. But people's requirements are growing also. For this reason questions connected with the affairs of the construction collectives are frequently on the agenda of obkom bureau sessions. Violations of housing legislation are encountered. The guilty parties receive their just desserts in such instances.

Letters which criticize individual leaders and their unwarranted decisions and actions are checked particularly closely. Each such warning signal is thoroughly investigated. The consequences vary. Leaders who have not justified the trust placed in them have to be dismissed. This was the case with A. Lazarev, director of Sarpinskiy Rayon's "Arshan'-Zel'menskiy" Sovkhoz. Letters to the obkom noted that he was unenterprising. Replacing the director made it possible to rectify the situation on the farm.

We analyze the work with letters locally. Recently, for example, the obkom secretariat received a report from I. Drozdov, secretary of the Yustinskiy Raykom, on this issue. Why had such a need arisen? There had been an increase in warning signals about the fact that people's opinion was sometimes being ignored here. There were many flaws in the work of the municipal and consumer service enterprises and cultural establishments, and measures to improve matters were not being adopted. The leaders of a number of organizations did not have reception days, and it is difficult to get to see them. The raykom's attention was brought to the impermissibility of such a situation, and a fundamental reorganization of work was demanded.

It is gratifying that many letters raise problems of great importance and broad significance. The author displays a personal interest in the common cause and as a citizen has a right to expect that he will receive unreserved support. We comment extensively on interesting letters on political briefing days, which are practiced constantly in the oblast party organization.

In a word, it is important to know how to work with letters. And he who is thoughtful, patient and consistent is successful here. A simple truth, seemingly. But not one that is assimilated by all, unfortunately. Haste in judging the nature of verbal and written petitions was displayed, for example, by workers of the Kaspiyskiy Raykom, including First Secretary N. Reznikov. Whatever the warning signal, for them it was a "trifle" and "bagatelle". It is clear that such an attitude toward matters testifies to a superficial approach to assigned work. N. Reznikov had to be corrected in the obkom. Both he and the raykom machinery are improving their work style.

And what if a committee receives a minimal number of letters? Is this good or bad? Some people have been inclined to believe that this testifies to a happy situation. I do not believe that this is entirely so.

Incidentally, I should also mention the fact that there are letter writers who slander behind people's backs for selfish purposes. B. Boval'dinov, for example, engaged in this for many years here. He was once an employee of the Kalmytskiy Scientific Research Institute of Stock Breeding for Meat and later transferred to a job in the autonomous republic's Ministry of Agriculture. And everywhere he hatched petty intrigues and considered himself unappreciated and passed over for promotion. He therefore began to discredit those who were performing their duties impeccably, sending disparaging "warnings," unsigned, of course, to various addresses.

In order to catch the slanderer out the aggrieved parties--and there were many of them--had to appeal to the RSFSR Prosecutor's Office. He was summoned to the people's court and received what was coming to him.

But this case was, nonetheless, exceptional. More often than not the malfeasance of the writers of the letters, which, following a check, are transferred to the archives as unreliable, remains unpunished. This is wrong, I believe.

KUNAYEV ON LABOR, LITERATURE

Moscow LITERATURNAYA GAZETA in Russian 24 Feb 82 p 2

[Interview with D. A. Kunayev, member of the Politburo of the CPSU CC, first secretary of the CP of Kazakhstan CC, by correspondent Aleksandr Samoylenko: "The Traveler Masters the Road..."; date and place not specified; passages enclosed in slantlines printed in boldface]

> [Text] /"The party's course of intensifying social production, taking all measures to increase its effectiveness, requires a high degree of organization, a businesslike quality, and discipline, as well as a precise and well-ordered functioning of the administrative system, and the development of creative initiative among the masses."
>
> [From the CPSU CC decree entitled "On the 60th Anniversary of the Formation of the Union of Soviet Socialist Republics"] /

[Question] /Dinmukhamed Akhmedovich, for our republic the present, 11th Five-Year Plan is characterized by new, high levels in the national economic plans. A significant growth is planned for the indicators, and we know that there is an entirely genuine basis for this. It was not by accident that at the 26th Party Congress Leonid Il'ich Brezhnev stated that Kazakhstan is experiencing a period of a genuine flowering in its economy and culture.

In preparing for this interview with you, I once again attentively reviewed the statistical materials of the last 20 years. I was also shown a considerable amount of interesting data in the sections of the CC of the republic's Communist Party. I remember what things were like 20 years ago, and I have seen how, literally before my eyes, the appearance of my native land has altered so strikingly. A distinctly dynamic progress may be traced in the accelerated, outstripping development of many sectors of Kazakhstan's national economy.

Of course, one could evaluate the results which have been achieved with more restraint, but in this given instance, you will agree, it is not just a matter of emotions./

/Answer/ It is not, of course, just a matter of emotions but, if I may say so, it is a matter of itself, or, more precisely, a question of many matters, of which a wide-scale panorama has taken shape of accomplishments in all fields of life--without exception. Indeed, has so much time passed since work was begun on Ekibastuz and the Yermakovskaya GRES, Kazakhstanskaya Magnitka and Central Kazakhstan's "route of life"--the unique Irtysh--Karaganda Canal? And here now everything about which we have spoken in the future tense, thanks to the working people, has become a reality which possesses such an attractive force that it must be remarked upon not only by our genuine friends but also by our most persistent opponents abroad. Together with the entire great Land of the Soviets, Kazakhstan has risen to such a height which, it seemed, not even the boldest imagination could have predicted. The republic's present-day appearance is the most convincing illustration of the rate of progress in our Soviet life. Now, when we are observing the 60th Anniversary of the formation of the USSR and the 250th Anniversary of the voluntary annexation of Kazakhstan by Russia, the socialist reality affirms the justification of Lenin's words to the effect that socialism "creates new and higher forms of human communal living, when the legitimate needs and progressive aspirations of the laboring masses of /every/ nationality will, for the first time, be satisfied within an international unity...." As was particularly emphasized in the decree of the CPSU CC, entitled "On the 60th Anniversary of the Formation of the Union of Soviet Socialist Republics,"/"the creation of the USSR was a living incarnation of the ideas of Vladimir Il'ich Lenin and of the Leninist principles of nationality policy."/

You recalled the appraisal which was given to Kazakhstan at the 26th Party Congress. It was also there that the Accountability Report of the CPSU CC stated that during the 10th Five-Year Plan alone in our republic more than 250 modern industrial enterprises, large workshops, and production lines were put into operation, that a large Kazakhstan grain crop has become usual, a crop which, together with the grain harvests of the Russian Federation and the Ukraine, comprises the foundation of the country's stock of foodstuffs.

This appraisal is pleasing to hear, but it also lays an obligation on us. And the people of Kazakhstan have already done a considerable amount to carry out the decisions of the 26th CPSU Congress; this is testified to by the results of the first year of the 11th Five-Year Plan in most sectors of industry, capital construction, transport and communications, agriculture, further increases in the prosperity of working people in urban and rural areas.... Any achievements are not simply statements of good results. As is known, a goal is achieved by hard work. And it is very important to see objectively whether we have attained a goal as it was planned, whether everything was done with sufficient efficiency, with a minimum of losses.

/Question/ /Every year brings its own lessons, and still..../

/Answer/ And still the foundation, the principal point of departure of our present-day heights, to a great extent, was, of course, the Virgin Lands epic. And even prior to it Kazakhstan contributed a significant amount to the Motherland. Recall the first few five-year plans, recall the harsh wartime years, when the republic, at the party's will, affirmed in a most convincing manner its role as a mighty arsenal for the front, and recall the post-war years, when this republic aided the country in all manner of ways. But the Virgin Lands epic, which was conducted within an unprecedentedly brief time period under the direct leadership of Leonid Il'ich Brezhnev, contained the beginning of our new maturation, the sources of everything in which our republic is now rich.

Just take, for example, this past harvest time's feverish work in the Virgin Lands. Unprecedented difficulties were experienced by Kazakhstan's grain growers. After an extremely promising Spring an unusual drought ensued. But the people were still able to harvest the crop, and the Motherland obtained a large grain yield from the Virgin Lands. Of course, to do this also takes experience, the Virgin Lands system of agriculture, as well as heavy-duty equipment and precise organization. All this is so, but the foundation of these results is a distinctly evident feeling of responsibility to the country as a whole.

Yes, grain has always been a criterion of social values. It is our principal concern. And it is precisely with regard to grain that people's best thoughts and qualities make their appearance, along with their creative potentials and aspirations.

The chronicle of the multi-year Virgin Lands epic comprises not only the heroism of a large grain harvest--that of yesteryear and now. It is also the creation of a high-capacity industry, a precipitously developing science and culture. It is the working class in the rural areas. It is also a type, new in principle, of a zealous master of the land, and the monolithic, international community of representatives of the country's more than 100 nationalities and ethnic groups.

We are fully justified in being proud of the fact that today Soviet Kazakhstan is renowned for the bounty of its upturned Virgin Lands, its mighty industry, the treasures of its inner depths, and the talents of its people. But the most important trasure and richness of the Kazakh people is its indissoluble brotherhood with all the peoples of our large and integrated Motherland--the Union of Soviet Socialist Republics. Now our indissoluble friendship, nurtured by the Leninist nationality policy, is rising like a mighty, miracle-working tree whose firm roots are the unforgettable events of the past and whose wonderful fruits are the remarkable accomplishments of the present.

The lessons of the Virgin Lands have become a school of courage, brotherhood, labor, and international education, as well as social optimism. Everything planned was accomplished thanks to the efforts of all the peoples of the USSR and primarily thanks to the great Russian people. We remember and value this always.

The very names of the Virgin Land sovkhozes and settlements--Moskovskiy, Leningradskiy, Baumanskiy, Kiyevskiy, Dnepropetrovskiy, Minskiy, Ivanovskiy, Kurskiy, Odesskiy--resound as symbols of friendship among the peoples, while the present-day reality of the Kazakhstan Virgin Lands, imbued with present meaning and true beauty, convincingly affirms the undoubted advantages of our Soviet way of life and the correctness of the CPSU's Leninist nationality policy.

When one turns to Leonid Il'ich Brezhnev's wise book, entitled "Virgin Land," each time one feels with renewed force the scope of the following remarkable words:

"The Virgin Lands gave a powerful impetus to the development of Kazakhstan's productive forces, the growth of its economy, science, and culture. Very large industrial complexes began to appear, and 90 new cities sprang up, including the following, which have become well known throughout the country: Rudnyy, Ekibastuz, Yermak, Kentau, Arkalyk, Shevchenko. The republic extracts and produces coal and petroleum, cast iron and steel, non-ferrous metals, mineral fertilizers, the latest machine-tools, machinery, and tractors. And nobody is surprised any longer that in once-backward Kazakhstan a fast-neutron reactor has been put into operation."

This is what the Virgin Lands has given us. And its chief capital, its genuinely golden reserve consists of people--with a well-developed feeling of duty, a responsibility for the task entrusted to them, for the destiny of the state.

/Question/ /In speaking about the characteristics of the type of personality which has been shaped by the Virgin Lands school you evidently not by chance have particularly singled out such a quality as responsibility..../

/Answer/ Of course. Responsibility for one's own work, for the destiny of the state--this is what every Communist, every working person must consider to be the main thing within the complex of those world-view qualities which shape the progressive, pioneer-type of thinking so necessary today. And this is not just a speculative conclusion. This conclusion has been determined by all my life's experience, by many years of practice in party work.

Indeed, how could we have attained the present-day levels, if our people, together with their occupational competence, had not also possessed the courage of responsibility? Moreover, it is a matter of responsibility from top to bottom, all-encompassing in its social nature. I have become convinced of the following: not even the most ideal material provisions, nor the highest occupational and technical training will ensure labor success fully--without the active participation of persons who are determined and capable of functioning creatively.

There has been a manifold growth in a person's civic responsibility under present-day conditions. Look at the materials of the 26th Congress, the Plenums of the CPSU CC, and the 15th Congress of the Communist Party of Kazakhstan. Whether it is a matter of improving party work, perfecting the administration of the economy, re-structuring certain sections of ideological activity, strengthening the atheist education of working people, firming up the patronage ties between the creative unions and production groups, or natural and environmental protection, we constantly note the role of personal responsibility. What does this mean in practice?

This means, as was emphasized particularly at the 26th Party Congress, that we must organically combine performance and discipline with bold initiative and a sense of enterprise, practical and business-like qualities with strivings toward large goals, a critical attitude toward shortcomings with an unshakable confidence in the historical advantages of the path which we have chosen. We strive toward such a style of work, and it is precisely such a style which has a responsible attitude.

[Question] /As the poet calls upon us: "Be zealous in the task which you have chosen...."/

[Answer] This is a fine call, when the task is genuine, provided with a valuable initiative, and not separated from life. By the way, one can also be zealous in an old-fashioned way, but whether such zeal is always useful--that is the question. How much we suffer due to the fault of sluggish people who do not have a sharpened feeling for what is new and who do not bother with social responsibility! And it is not at all by chance that the party and Leonid Il'ich Brezhnev personally are constantly drawing our attention to the following: the cause of many shortcomings and unsolved problems consists in the fact that the force of inertia and habit have not been fully overcome, factors which were formed during the period when the foreground was occupied not so much by the qualitative as by the quantitative aspect of the matter at hand.

[Question] /Party decisions have also noted on more than one occasion that the style of economic activity and economic thought, the methods of planning, and the system of administration should be re-structured more energetically..../

[Answer] Not only more energetically but also with more groundwork, taking into consideration everything valuable which has been accumulated by practice and by the requirements of the foreseeable future.

In speaking about our achievements, about the fact that they have become possible thanks to the widespread manifestation of the best moral and political qualities of the working people, I am far from thinking that everything is ideal here in our republic, or that we have achieved everything which we wanted. Yes, we do have things to be proud of. But a responsible attitude toward the matter at hand, I repeat, is also expressed in the fact that, while giving our achievements their due, we must, with all clarity, see and resolve the existing problems, with Leninist implacability struggle against everything alien and imposed which hinders the creation of the new world.

The principal master in our republic was, is, and will be the working person. To him belongs everything in which /we/ are rich and powerful. But at times we forget about the high responsibility of the very position to which he has been allotted. For, of course, to be a master means, in the first place, to hold responsibility, to share in duties, and not just to complain to someone about a lack of order or this or that difficulty.

Nothing harms a cause like a striving to consider oneself a little person, a "cog," and to shift responsibility off on someone else. It has become a common practice to place responsibility onto the party secretary, the soviet, trade-union, or Komsomol worker, or the minister or director. But do we often hold a specialist responsible for poor plant or agricultural production? Moral and political qualities essentially depend upon such important circumstances as style of work, as well as the degree of responsibility shouldered by an employee for his own work.

[Question] /In connection with this, one recalls the situation at the Aktyubinsk Chemical Plant, about which you spoke at one of the Plenums of the CP of

Kazakhstan CC. Did not the director's style of work there become the cause of many problems?/

/Answer/ On the outside, perhaps, everything looks precisely that way: a new director arrives at the plant, and after a certain length of time the enterprise, instead of moving forward, loses its position. But this is only the external viewpoint. To see only this means not to understand the situation in all its depth. In any case, one cannot agree that the breakdown in which the plant found itself for a certain period could be explained by the poor work merely of one director.

In analyzing this situation, we came to the following conclusion: not only the director but also many other comrades did not find within themselves the courage to see and evaluate in a party way their own measure of blame and responsibility. For some reason the director alone was blamed for all the errors, as well as those who had appointed him director.

/Question/ /Indeed, when I flew into Aktyubinsk in order to study this situation in greater detail, practically all the responsible employees involved in it merely complained about the director, considering that he had not justified their trust and hopes..../

/Answer/ I do not understand what hopes they could have been talking about if there was a deliberately un-thought-out attitude toward the candidacy of the director?! Certain of our responsible comrades for some reason consider their own opinion to be some kind of truth not subject to error, supposing that it is their business to appoint and dismiss, to praise and punish. No, to be a director means to bear responsibility for everything: for both the good and the bad....

Of course, miscalculations in life are not ruled out. But how important it is to correctly understand the causes of this or that failure, to estimate one's own measure of blame, and, consequently, the responsibility for what has happened! The danger of the situation about which we are talking lies first off in the lack of the necessary self-criticism. But the trouble goes further than this. It is thought that the workers' group, its party, trade-union, and Komsomol organizations, along with the deputies groups and people's control, had every possibility to influence the events which were transpiring and to correct everything in time without waiting for the intervention of the higher authorities. In the given case, however, they showed an overwhelming indifference and an inexplicable calm, whereas the enterprise lost the positions which it had gained. I am sure that what happened at the chemical plant will help not only the Aktyubinsk workers to draw the correct conclusions.

In naming the workers' group as the principal master of the situation, it is impossible to relieve it of responsibility for the lot of the task at hand.

Nevertheless, nobody relieves from responsibility the director either for the state of affairs in the section which has been entrusted to him. It is impossible to decrease the role and authority of the director in any labor group, creative organization, or scientific institution. And we try, when necessary, to help them, or, in some cases, to hold them strictly accountable.

Thus, in Karagandinskaya Oblast not everything has gone well in the recruitment of management personnel. At a session of the CP of Kazakhstan CC Bureau a serious discussion took place concerning the facts of the uncritical approach to the appraisal of their business, political, and moral qualities. Let's say that an immature person, lacking in experience in organizational and political-educational work, was appointed as chief of one of the rayon associations of Sel'khoztekhnika. It is not suprising that he entered upon the path of a crude manner of administration. Within two years more than half of the association's personnel had been replaced. And it was only after a group complaint that the party raykom took appropriate measures.

It is perfectly obvious that such directors inflict great moral damage on the cause. But are we right to limit ourselves merely to a statement of the facts? No, we should always give them our most principled appraisal. Successful work depends on a responsible attitude toward it on the part of every participant in it, and I emphasize that it would be naive to suppose that the poor work of one person could fail to be reflected in the total results or that collective responsibility could spare someone from individual responsibility. Every Communist must be implacable toward any manifestations of social parasitism, toward the desire to correct matters by means of other persons.

/Question/ /But, you know, in real life it is not always easy to reveal those moral and political qualities about which we have been speaking..../

/Answer/ Agreed. However, regrets on that score, in my opinion, are inappropriate. The vital assertion of genuinely progressive civic qualities has always taken place and will take place in a sharp clash with the psychology of yesterday, with the living vestiges of the past, with neo-philistinism and time-serving in all its varieties. Such is the utterly unchangeable dialectic of the struggle between the new and the old, between the more improved and the outmoded and obsolescent.

/Question/ /And, nevertheless, many situations are created in life which are difficult to explain. For example, the following.... In one of my own trips to the Virgin Lands in an interview with progressive combine-operators I was suprised to find out that Rostsel'mash had delivered to them new combines with many plant defects. But I was doubly astounded by the fact that the machines delivered to the Virgin Land workers had supposedly been inspected!/

/Answer/ Unfortunately, the situation about which we are speaking is not unique. Our Virgin Land workers frequently make justified claims not only against combine-builders. And here again we have an acute and fully blown example of that same problem of responsibility. Everyone who personally takes part in the creation of any machine or mechanism must answer for the quality of his own work to his own conscience, to our morality, and, finally, to the law; they are called upon to assist and intensify the labor process, to fill it with the joy of creation.

We have all the possibilities such that everywhere the struggle for the honor of the production trademark, for the work quality, should become everyone's top-priority requirement. This pertains to all spheres of industry, capital construction, agriculture, and here to the infantile attitude toward one's own duties on the spot.

Is it possible to "adorn" the activities of the economic managers, planners, and creators of a situation similar to that which took shape on the Sovkhoz imeni Kirov in Tselinogradskaya Oblast? A livestock-breeding complex was built here which cost the farm three million rubles. Half a million was allocated for the purification structures. And here at the height of construction the Tselingiprosel'khoz Institute designers informed the sovkhoz that the builders were trying in vain, the structures would not operate, and everything had to be re-done. One cannot call this a state type of approach to the task at hand!

/Question/ /By the way, one more important problem. This is not the first year in which specialists, the press, and television have spoken about the need to put in order the production of a complex of wide-scale, anti-erosion implements, for which our rural areas have a very acute need. Within the context of our interview could you tell us how this problem is being solved?/

/Answer/ Actually, a conversation about the need for regular production of a complex of wide-scale, anti-erosion implements for agriculture, and primarily for that of the Virgin Lands, has been going on for a long time. In areas where there is suitable such equipment agricultural operations are being conducted with high efficiency and with a minimum of losses in time and production.

All the specialists responsible for solving this problem, as well as directors of institutes, enterprises, and sectors, seem to understand its importance, and at various conferences they complain about the lack of this equipment; they call for it to be put into mass production as soon as possible. To this very day, however, this matter has remained on hold, although it requires neither large financial means nor organizational-technical efforts. There are even the necessary production capacities--Tselinograd has an association under Union administration for producing anti-erosion equipment; it is under the USSR Ministry of Tractor and Agricultural Machine Building. There is an obvious under-estimation here, a sluggish attitude toward very responsible action for the national economy.

And what is remarkable, moreover, is not so much the rare situation which has taken shape: everybody understands everything, the conditions for solving the problem do exist, but the problem remains. But, you know, it is not for nothing that we have the following saying: "The traveler masters the road...."! Here it would be appropriate to recall how sharply Vladimir Il'ich Lenin criticized those who "...give out the most splendid advice and guiding directions but prove to be ridiculous, /inept/, shamefully "clumsy," incapable of implementing this advice and directions, of promulgating /practical controls/in order to turn words into deeds."

/Question/ /Dinmukhamed Akhmedovich, I am turning over in my memory the facts and examples from life about which you are speaking now and which you mention in your recent books entitled "Soviet Kazakhstan" and "The CPSU's Leninist tionality Policy in Action," and I am thinking that, you know, this is very rich material not only for a party worker but also for a worker in the field of literature..../

/Answer/ You are probably right, for behind every fact of life there are quite a few moral aspects, human destinies, psychological conflicts, alarms and disturbances, defeats and victories. Socio-psychological slices of such phenomena, along with the dynamics and dialectic of their development, constitute an inexhaustible source for our literature, whose role in the communistic education it is difficult to over-estimate. I do not intend to categorically judge about the successes or shortcomings in the literary sphere, but I will say that I personally like best those works where the main place is occupied by urgent problems, those feelings and deeds by which our contemporary lives, the person of labor and intensive thought, intellectually rich, a fully entitled heir to the revolutionary past of the Soviet people, a convinced defender and one who carries on the great cause of Lenin, responsible for everything which takes place in our complex world. In the contemporary literature of Kazakhstan--Kazakh, Russian, Uyghur, Korean, and German--there are more and more such works, and this gives cause for hope.

We are also placing quite a few hopes on further activating the socially creative work of our literary people, the leaders of the theater and the cinema, artists, and architects to take all measures to consolidate the alliance between labor and art.

Recently at one of the sessions of the CP of Kazakhstan CC Bureau we examined the question of the repertory policy of the republic's legitimate theaters. Every year they stage more than 10,000 performances, which are seen by more than four million spectatos. As you can see, the audience is representative. We have quite a few fine productions. They have earned praise far beyond the borders of our republic. Nevertheless, what kind of ideological message can be carried, for example, by such shows as "An Amoral Story," "My Mother-in-Law," and "Bridegroom by Advertisement"...? The important thing here is not, of course, in the titles themselves but rather in the low quality of the contents of these and many other plays, in weak producing and directing, in chasing after "picturesque writing," aimed at a somewhat low level of taste, and in the passivity of theatrical criticism. It happens that even acknowledged works en route to being staged become stereotyped, doleful, and at times simply potboiling. One cannot speak about creative joys and successes in such cases.

/Question/ /And so, would it be correct to speak again and again about a responsible understanding of the importance of the problems confronting the playwrights and the theater, about a very exacting attitude toward it? And, evidently, therein must lie the key to solving all urgent problems. Am I right?/

/Answer/ Yes, it is precisely such a view on life, on the economy, on literature and art which can facilitate the successful implementation of the decisions of the 26th CPSU Congress, at which a particular emphasis was placed on the task of attaining a situation whereby "everything surrounding us bears upon itself the imprint of beauty and of good taste."

We Communists are obliged always to know, in Lunacharskiy's words, "where society is heading, what it is calling upon us to do." And any critical appraisal, a Lenin-like demanding and exacting analysis of shortcomings against the background of undoubted and scarcely automatically multiplying achievements is to be explained by one thing--a striving to eliminate bottlenecks, to greater heights, and to move forward.

The socio-economic, political, and public life of the republic, like that of the entire country, is permeated with vital creative thought. Our potentials are great. And we are confident that there is not nor can there be any problem which we could not handle or which could stop our onrushing movement forward. And this confidence is nourished to a considerable degree by the extremely valuable experience of the last 20 years, experience which is founded on the wise lessons of the ploughed and mastered Virgin Lands; with every passing year the latter increase their strength and disclose new, very rich potentials and reserves.

The Virgin Lands have become an irreplaceable school for us. Its lessons have a beginning, but they are continuing and will continue. That which was created yesterday faithfully serves us today as a reliable support on the pathway to tomorrow. I would like to think that our work, our quests and discoveries will likewise turn out to be good experience for the foreseeable future, for its plans and new real discoveries, for the sake of which people of all generations and occupations are working in such an inspired manner. This organic heritage contains not simply a symbolic meaning but also a guarantee of the solidity of new achievements.

What has been accomplished up to the present time?

If we are talking about the production sphere in particular, then we have made headlong progress in enhancing the industrial and technical potential of each of Kazakhstan's 19 oblasts. Thus, the southern part of the republic, renowned formerly only for having generous amounts of sunshine and fruits, has become one of the major centers of large-scale chemistry, thanks to which Kazakhstan today provides within the All-Union production totals 90 percent of the phosphorus and 80 percent of the mineral fertilizers. In the eastern part of Kazakhstan, in the formerly remote taiga territory, an industrial region has been created which now provides most of the non-ferrous metals produced throughout the entire country. Great force is being gathered by the unique Pavlodar-Ekibastuz territorial-production complex, which has an extremely bright future....

These locations and characteristics in no way exhaust the results of the work which we have accomplished. We have learned a great deal, in the first place, how to work energetically, vocationally, and creatively, that is, with such a degree of civic and party responsibility so as to meet the highest requirements. On the moral and political level this has been our most important gain. And a unique role was undoubtedly played here by the growing self-awareness of the republic's working class.

The style and the social-moral contents of the present-day activities on the part of the republic's party organization and all its units also determine, understandably, the process of the formation of the new person, his active outlook on life, as well as the creation of a healthy moral-psychological climate in the groups. This is why we are striving to study profoundly, to give practical support to workers' initiative and socialist enterprise.

Thus, in the CP of Kazakhstan CC Bureau we have given a thorough analysis and a worthy appraisal of the work by the group and the party organization of the Pavlodarskiy Oil Refinery, where, as likewise is the case at many other enterprises, a comprehensive system of product quality control is being introduced. And if one talks about the quality and labor efficiency of Kazakhstan's entire working class, then it is extremely indicative that in recent times the number of lagging production groups in the republic has been cut in half. This has, undoubtedly, been facilitated by the improvement in organizing socialist competitions, the movement for Communist labor, the support and dissemination of the experience of Leading production workers and innovators, improvement of the economic mechanism, increasing the militancy of workers' meetings and that of the standing production conferences, as well as strengthening the monitoring controls on the observance of the labor laws.

But this does not by any means signify that we have successfully captured all the heights and that we can rest on our laurels. Far from it. There is, as they say, an uncharted realm of wealth with respect to future useful tasks, including further improvement in the forms and methods of ideological work, especially among working youth, students, and pupils, in enhancing the role of the press, radio, and television, in a thorough intensification of check-ups on performance, not allowing a discrepancy between our words, plans, and their practical implementation.

Reality has convinced us of the fact that today in our political-educational work, no matter where it may be conducted--at all levels, beginning with the primary party organizations--we must, proceeding from the spirit of the party's demands and the specific positions adopted by the 26th CPSU Congress and the 15th CP of Kazakhstan Congress, with equal persistence pose and solve the problems of the quality of personal and group responsibility, of the unity of words and deeds, of the most determined rooting out of dull mediocrity, showing off, jabbering, and vulgar over-simplification.

In accordance with the well-known decree of the CPSU, ideological and political educational work should be militant and aggressive in nature, provide clear and well-argued answers to the questions which arise, boldly propagandize the Soviet way of life and the achievements of a developed socialist society, competently wage an implacable struggle against bourgeois, petit-bourgeois, and Maoist propaganda, as well as against any and every ideological intrigues by our overt and covert adversaries.

We have a considerable amount. And we must know how to handle this in an economical, intelligent, and effective way, with the necessary perspective. In accordance with the demands of life, the party has posed for the society of developed socialism such problems as cannot be solved merely by intensifying our work and thought on current tasks. We Soviet people are responsible for the destiny of our country, for that of the entire socialist community, for social progress, and a firm, lasting peace on Earth. Our party has been consistently and purposefully working toward this goal, along with its Politburo, headed up by that outstanding political and state leader of our present time, Comrade Leonid Il'ich Brezhnev.

This is a noble and manly duty. It is within the capacities of the Communists and all working people. But every one of us must remember all the time that any obligation also assumes a responsibility. Responsibility is the highest test.

AFGHAN DELEGATION IN TURKMENISTAN

Ashkhabad SOVET TURKMENISTANY in Turkmen 26 November 1981 p 3

[Turkmeninform: "Afghan Guests in Turkmenistan"]

[Text] A group of guests from the Afghanistan Democratic Republic touring in the republic continue to familiarize themselves with the work of workers' collectives of party and soviet organs.

They have familiarized themselves with the work of oblast party organizations in Mary and Chardzhou oblasts, the Bayramaly and Chardzhou party raykoms, and the Mary and Chardzhou ispolkoms of peoples' deputies.

The guests have been in the '50th Anniversary of the USSR' GRES and the Central Asian Shipping Administration in Mary, the group of silk enterprises and the wool spinning and weaving factory of Chardzhou. They also went to the 'Ashkhabad' kolkhoz in Mary rayon, the 'Karakum Canal' sovkhoz in Karakum rayon and the '20th Congress of the CPSU' kolkhoz in Chardzhou rayon. They became acquainted with beautiful places in the oblast centers.

The guests coming from the Afghanistan Democratic Republic were received at the TSPS [Turkmen Republic Trade Union Council] and the CC LKSMT [Lenin Communist Youth of Turkmenistan], O. Y. Ishangulyeva, Candidate Member of the TCP CC Buro and TSPS Chairman gave a talk on work conducted to implement the decrees of the 26th CPSU Congress and the 22nd Congress of the Turkmenistan Communist Party. The Afghan guests went to the TSSR Academy of Sciences, the A. M. Gor'kiy Turkmen State University and the main factory of the 'Turkmenkhaly' organization.

The Afghan guests will leave Turkmenistan on 26 November

OBKOM SECRETARY ON CRITICISM, OPENNESS AT PARTY MEETINGS

Moscow SOVETSKAYA ROSSIYA in Russian 11 Feb 82 p 2

[Interview with B. V. Konoplev, first secretary of Permskiy CPSU Obkom by V. Ogurtsov; passages enclosed in slantline printed in boldface]

[Text] [Question] Boris Vsevolodovich, this is the first time I have had occasion to be present at such a detailed report by the Permskiy CPSU Obkom. I would like to determine why such a mode of conducting the plenum was selected. Usually you have informed the obkom members about the bureau's work very concisely, haven't you?

[Answer] So, perhaps this is bad... I agree that, at the plenums, criticism has more often come from the top down, as it were, and has been conducted quite spiritlessly in the opposite direction. And why, in fact? Or is the obkom apparatus always so infallible?

Yes, the past year's results may, in general, be acknowledged as positive. But there are also considerable grounds for concern. For example, the rates of growth in production volumes have dropped; the mastery of capacities put in operation is lagging. Speaking of agriculture, the old anxieties are being felt.... What is the matter? Have we started to do poorer work? No, the people are the same; the mood is as militant. You return from practically any enterprise in a better mood than you went there. But here the final results force one to reflect. Of course, the objective causes--transport, energy and weather problems--cannot be disregarded, either, but then how can we explain the fact that people and collectives in relatively identical circumstances are achieving different results?

In short, the time has come to take a good look around. And first of all, the obkom bureau decided to evaluate its own work critically and look at its efforts "from a detached view." As you have seen, the plenum actively supported this effort, which, by the way, stems in fact from the very nature of our party, its genuinely democratic character. And the Central Committee is constantly directing our attention to seeing that the elective governing bodies, the party committees and the bureau report on their work systematically, know how to accumulate collective experience and actively support the communists' creative initiative and energy. It's too bad that this is not always done.

We understand what responsibility for conducting party policy locally is incumbent on the obkom. Our sphere of influence extends to all aspects of the oblast's economic, political, social, spiritual life and to the mass worker organizations. How can a real influence on this situation be achieved everywhere in all these fields? That is the question.

[Question] At the plenum many touched to some extent upon the long-term comprehensive special purpose programs relating to acceleration of switching the national economy to the track of intensive development. Concern that as yet they do not always result in the desired progress was also expressed.

[Answer] Nonetheless we have been combining practical implementation of the decrees of the 26th party congress with the implementation of just this type of program. Each of them is of major importance. Let's say that the urgency of mechanizing production can be evaluated by the fact that there are presently more than 200,000 workers engaged in manual labor in industry alone. And at the same time, if we talk about planned work volumes, there is a shortage of 25,000 qualified workers in the oblast. The municipal and rayon party committees, the primary party organizations, and approximately 5,000 economic experts have developed a mechanization program. Manual labor inventories are being taken everywhere; 320,000 work places have been investigated using a common method. Implementation of the contemplated measures will make it possible to /free more than 15,000 workers, mechanize and alleviate the work of 60,000 persons/ and considerably reduce the share of manual labor. I also note that special-purpose programs are already being successfully realized at a number of enterprises.

Agricultural development issues have an important place in the obkom bureau's work. With each year capital investments in this sector are growing, average gross annual production is increasing, and the material and technical base is being strengthened. We have begun to solve social problems better. As a result we have not only succeeded in stopping the drain on, but also in increasing somewhat the number of, rural workers.

And all the same, I cannot say that we have succeeded in achieving the necessary attitude to basic economic issues on the part of all production managers and executives of party organizations. Why? Those who spoke at the plenum probably were correct in explaining this by the imperfection of our style and method of working. And it is no coincidence that the communists have expressed serious concern about the fact that the bureau, secretariat and staff of the party obkom are still often taking it upon themselves to solve many economic and operational problems, replacing the Soviet and economic bodies. What, in fact, don't we deal with! At the same time, our workers sometimes take upon themselves administrative and operational functions which are completely extrinsic for them, naively assuming that only in this manner can success be achieved. Such an approach, even produced by good motives, seriously weakens the party committee's position as an organ of political leadership. Moreover, we minimize the responsibility of the organizations and of those managers whose direct responsibilities we assume, and we ourselves drown in a sea of petty cares and economic commotion.

The significance of this plenum is perhaps primarily that we have taken a detached look at ourselves, as it were. I will illustrate this idea if only with the example of capital construction. Up to now I myself have felt that we are justified in giving so much attention to it. And suddenly I hear another opinion. Isn't the obkom /watching over/ this industry too much? Isn't there a Main Administration for Construction in the Western Urals with a large staff of experts, headed by a member of the obkom bureau, Comrade Lipatov. He should be made primarily responsible. But what happens in fact? The obkom interferes in all routine matters at the construction projects, often examines the pettiest problems and /loses sight of long-range problems;/ it deals poorly with /the strengthening of labor collectives./ By making decisions on many individual problems relating to the central board's competence, the construction division and the secretary of the party obkom Comrade Petrov, who is personally responsible for this area of work, essentially lose, if not the ability, then in any event the moral right, to evaluate the immediate managers' actions. If he himself made the decisions and gave hasty instructions, who then can be made responsible?

It is not hard to cite such examples in other areas of our activity. And it was convincingly demonstrated to us at the plenum that such a practice panders to the passivity of industrial administrators and other executives, develops in them the habit of looking around every once in a while and teaches them to complain about trifles. This is how far things have gone: every year the obkom receives more than 4,000 requests of all kinds for assistance in the investigation of economic conflicts. Just take a look at this telegram, which I just received from the director of the Aleksandrovskiy Machine-Building Plant: "Appeals to Neftesnab [The Main Administration for Transport and Supply of Petroleum and Petroleum Products] are still unanswered. The compressor house is stopped for lack of KS-19 oil. Request you take prompt steps to supply oil. Machine-Building Plant. Pasynkov." As the saying goes, commentary is superfluous. Unquestionably in some situations measures of party influence can and should be applied, but this should not become the rule.

[Question] Both in the report and the discussions, special mention was made of the oblispolkom's work and Party leadership of the soviets.

[Answer] Many critical remarks have indeed been made concerning the oblispolkom: it is slow in solving the oblast's social development problems and is tolerating serious shortcomings in agricultural management. The participants in the plenum proposed to Comrade Malafeyev, the chairman of the oblast council ispolkom and a communist, that he take a more exacting approach to evaluating the work of management and the divisions and of his deputies. It was also correctly emphasized that many of the ispolkom's decisions are prepared carelessly and are not reinforced by organizational work or strict responsibility for their practical implementation. For this reason alone the obkom bureau was recently compelled to examine the issues of the unsatisfactory water supply to the cities of Perm' and Krasnokamsk and operation of the children's homes and boarding schools. It is entirely obvious that they fall completely within the ispolkom's competence. And we were forced to punish Comrades Adaryukov and Bagin, the oblispolkom vice-chairmen; Comrade Kalinkin, the Permskiy gorispolkom chairman; and Comrade Tikhonovets, the head of the oblast section for popular education, who bear personal responsibility for solving problems in their departments. They handled the local situations poorly and evidently did not make use of all resources to restore order. The participants in the plenum, as you will recall, did not limit themselves to criticism of the soviet organs but also required that the obkom bureau develop an effective, continuously operating system for party control of the work of oblispolkom executives, divisions and administrations.

[Question] Since our talk has turned to control, something must be said concerning such a key problem of party leadership as personnel selection and placement. In particular, doesn't the claim heard at the plenum, that the shortcomings in the economic and social development of the oblast are caused chiefly by mistakes in personnel policy, seem too categorical to you?

[Answer] This is not an easy question to answer. Of course, we always see to it that the most important sectors are headed by politically mature, creative organizers who know their business. There's no escaping the above facts, however. So I completely agree that the analysis of unfinished work with personnel /must begin with the obkom bureau itself and with the secretariat./ We ourselves do not always set the example of a thoughtful approach to determining people's practical qualities and often condone impermissible misbehavior by them. Unfortunately, the comrades are also correct in saying that the bureau lacks trained, effective reserves in many listed positions, and this means that there is no clear-cut system in work with executive personnel, no systematic investigation or testing of them in practical matters.

Recently we had to dismiss a whole series of executives who lost initiative and started to tolerate an irresponsible attitude to the work entrusted to them. It 's vexing, but among them there proved to be some high-ranking party workers, let's say, such as Comrades Yakimov and Lozhkov, the first secretaries of Il'inskiy and Bol'shesosnovskiy Raykoms. And it must be said frankly that the obkom secretariat condoned their bad work for too long, although alarm signals had long been received from localities. As a result, up to the present the rayons have been painfully experiencing the consequences of the former executives' "activities", especially in this same work with personnel.

Sometimes, having promoted a worker, we forget to give him help and support in beginning work, when he encounters the first difficulties and test of authority. Then we take an easier path--we replace a failed executive and do not always take this failure as referring to ourselves. The speech of Comrade Saranov, the party committee secretary of Pamyat' Zlygostev Kolkhoz made a good impression on me. The man came to party work and with a fresh eye saw the most acute problem: executives are often left to themselves and select a style of leadership at their own responsibility and risk. We know how this ends. During the 10th Five-Year Plan more than 350 kolkhoz and sovkhoz executives and nearly 4,000 intermediate link leaders were replaced.

Apparently, it is no coincidence that the plenum participants took a very critical approach to the most diverse aspects of the bureau and secretariat's work. For example, many of the bureau's decisions on different issues have provoked unfavorable criticism.

What can be said here? When we take a particular document, it does not seem unwarranted to us; the interests of the affair influence us, as it were. But possibly we are /disregarding our personnel's ability/ for independent solutions and in essence are paralyzing the party committees' initiative. Now I remember decisions which turned out to be ineffective, and I see that they suffered from such a sweeping and declarative nature and consisted of general phrases. Sometimes, too, in striving for greater specificity in economic leadership, we sometimes make a decision which is very reminiscent of management directives. Sometimes the party obkom decision "is put together" as if "for all occasions of life," without taking specific conditions into consideration. And the diffusiveness and vagueness of party documents is sure to result in irresponsibility by executives, reduce the authority of the decisions made. In my opinion this results from the fact that many of our workers basically have learned only how to "reveal" and "expose" shortcomings, which is not difficult. And not everyone thinks about how to eliminate these shortcomings.

[Question] Boris Vsevolodovich, here I should also like to return to the speeches of Hero of Socialist Labor M. N. Nazarov, the first secretary of Chaykovskiy CPSU Gorkom, and People's Artist of the RSFSR I. T. Bobylev, the main director of Permskiy Drama Theatre, about improving and refining the means of influencing contemporary man.

[Answer] It is hard not to agree with them, as with other comrades who have touched on this complex topic. Contemporary man cannot be aproached using the patterns of the day before yesterday.

I should also like to direct attention to the following. Unfortunately, one encounters many party workers who, on the whole, know the plan or kolkhoz fairly well as an /economic unit/ and only then /as a collective/ consisting of different people, experts, individual lives and aspirations. And the saddest thing is they themselves never strive for daily and many-sided contact with people. In some places they have managed to dry up and formalize even common political days and meetings of party and economic executives approved by the collectives "without an agenda" to the point that willing participants in them are not easily found. It is not all that simple to irradicate the habit of evaluating life according to certificates.

From my own experience, I know that /nothing is a substitute for being able to look the person you are talking to in the eye/ or for suddenly answering a question that has not been "tidied up," and which arises in direct, confidential contact with people. A serious thought subtly and precisely interpreted in a live interview loses both depth and emotional coloring, even in the most conscientious transmission round the departments.

And I will say frankly that it was somehow uncomfortable to hear reproaches at the plenum concerning some of our comrades who advocate some "staff" form of work, which allegedly obviates for executives of such rank the necessity of personal contact with communists at enterprises and construction projects, on collective farms and in non-production organizations.

I think that each of us will draw the correct conclusions from the basic talk which took place. I haven't mentioned that everyone has a lesson to learn, because for completely apparent reasons it was impossible to reflect and take into consideration in the decree enacted all remarks made concerning the bureau and secretariat. In the near future, when the proposals heard at the plenum have been studied and generalized, we intend to make serious amendments in the style and method of our work, taking them into account. I also feel that it would be advisable to conduct such plenums in the party gorkoms and raykoms. Only I would very much not want them to lead to discussion of this conversation of ours and the omissions revealed in the activity of the obkom bureau and secretariat. It would be better for each party committee and each party organization to try to take a fearless and self-critical look at the activity of /its own/ authorities. I am sure that this will help us to achieve better and more successful solutions of the goals set by the 26th CPSU Congress.

TWELFTH KAZAKH TRADE UNION CONGRESS OPENS

Alma-Ata KAZAKHSTANSKAYA PRAVDA in Russian 19 Feb 82 p 1

[Article: "The 12th Congress of Kazakh Trade Union"]

[Text] The 12th Kazakh Trade Union Congress opened on 18 February in Alma-Ata in the Kazakh State Order of Lenin Academic Theater of Opera and Ballet imeni Abay.

Its presidium consisted of Comrades K. M. Aukhadiyev, Ye. F. Bashmakov, V. A. Grebenyuk, S. N. Imashev, Z. K. Kamalidenov, O. S. Miroshkhin, N. A. Nazarbayev, and D. T. Yazov-- members of the Kazakh Communist Party Central Committee Bureau; and V. T. Shevchenko, a candidate member of the Kazakh Communist Party Central Committee Bureau.

I. I. Gladkiy, the AUCCTU Secretary; A. P. Plotnikov, chairman of the Kazakh SSR Supreme Soviet Presidium; E. Kh. Gukasov, Sh. Zh. Zhanybekov, K. D. Kobzhasarov, and T. G. Mukhamed-Rakhimov-- deputy chairmen of the Kazakh SSSR Council of Ministers; progressive production workers; trade union activists; and scientific and cultural figures were also on the presidium.

An honorary presidium composed of the CPSU Central Committee Politburo headed by Comrade L. I. Brezhnev was elected to stormy and prolonged applause.

The following agenda was approved:

1. Report on the work of the Kazakh Trade Union Council and the tasks of the republic's trade unions in light of the decisions of the 26th CPSU Congress and the 15th Kazakh Communist Party Congress.

2. Report of the inspection committee of the Kazakh Trade Unions.

3. Election of the Kazakh republic trade union council and inspection committee.

K. T. Turysov, chairman of the Kazakh Trade Union Council, presented its report.

The report of A. N. Tasybekov, chairman of the inspection committee, was also heard.

T. K. Bedel'bayev, chairman of the Alma-Atinskaya Oblast Trade Union Council; D. Ya. Brusnik, chairman of the Kustanayskaya Oblast Trade Union Council; K. N. Ospanbayev, a power shovel operator in the Turgayskoye Bauxite Directorate; N. P. Voronin, chairman of the Vostochno-Kazakhstanskaya Oblast Trade Union Council; R. K. Kenbayev, chairman of the trade union committee in the Balkhashskiy Order of Lenin Mining Metallurgical Combine imeni the 50th Anniversary of the October Revolution in Dzhezkazganskaya Oblast; Ye. P. Antoshkin, the leader of a brigade of power shovel operators in the Sokolovsko-Sarbayskiy Mining Separation Combine imeni V. I. Lenin and a Hero of Socialist Labor; Zh. Kabidoldanov, a milk maid on the Kolkhoz imeni Kuybyshev in Kirovskiy Rayon of Paldy-Kurganskaya Oblast; V. P. Zimenok, the leader of a brigade of "Aktasskaya" miners in the "Karagandaugol'" Production Association and a Hero of Socialist Work; T. I. Yashina, a construction electrician at the "Aktyubrentgen" plant; G. P. Kolomiyets, a spinner at the Chimkentskiy Cotton Combine; K. A. Vaygenzhin, chairman of the Volodarskiy raykom of the trade union for agricultural workers in Kokchetavskaya Oblast; L. Ya. Beloglazov, the leader of a tractor field brigade on the "Nikolayevskiy" Sovkhoz in Severo-Kazakhstanskaya Oblast and a Hero of Socialist Work; R. S. Yegizbayev, chairman of the Ural'skaya Oblast Trade Union Council; M. Utegenova, an operator in the "Komsomol'skneft'" Oil and Gas Extraction Directorate in Mangyshlakskaya Oblast; M. G. Motoriko, the Kazakh SSR minister of agriculture; A. Akhmetov, the leader of a combined field team at the Kzyl-Ordinskaya Zonal Machine Testing Station and a Hero of Socialist Work; I. I. Gladkiy, AUCCTU secretary; M. Yu. Davydova, a worker in the "Gur'yevrybprom" Production Association; G. V. Dosobayev, chairman of the republic committee of the trade union for motor transport and railroad workers; V. V. Chaykin, a shop metal worker in the hydraulic engineering building of the Yermakovskaya GRES [State Regional Electric Power Station]; and G. O. Aubakirov, chairman of the Republic VOIR [All-Union Society of Inventors and Rationalizers] Council, spoke during the debates.

The congress delegates greeted representatives of the youth in the capital of Kazakhstan.

The report of the credentials commission, whose chairman -- G. S. Mostovshchikov-- presented it, was heard and approved.

The 12th Kazakh Trade Union Congress is continuing its work.

KAZAKH TRADE UNION CHAIRMAN DEFINES GOALS

Alma-Ata KAZAKHSTANSKAYA PRAVDA in Russian 19 Feb 82 p 2

[Speech by K. T. Turysov, chairman of the Kazakh Trade Unions, to the 12th Congress of the Kazakh Trade Unions in Alma-Ata on 18 February 1982]

[Excerpts] Comrades! All of us, the delegates and participants in the 12th Congress of the republic's trade unions have looked through the warm and hearty greetings of the Kazakh Communist Party Central Committee with great attention. In it, a high rating is given to the activity of the trade union organizations during the reporting period and new and critical tasks in improving their role in further developing the republic's economy and culture and in implementing the historic decisions of the 26th CPSU Congress and the 15th Congress of the Kazakh Communist Party and the goals of the 11th Five-Year Plan are defined.

Permit me, comrades, in your name and in the name of all the members of the republic's trade unions to express sincere thanks and gratitude to the Kazakh Communist Party Central Committee for its constant attention and concern toward the trade unions and assure it that the trade union organizations will henceforth be true helpers of the party in carrying out the majestic tasks in the construction of communism.

The 12th Congress of Kazakh Trade Unions has convened at an important time. Under the direction of the Communist Party, the Soviet people are working inspiredly to implement the social and economic program, which was outlined by the 26th CPSU Congress, and are preparing to greet the 60th anniversary of the formation of the Union of Soviet Socialist Republics in a fitting manner.

The very rich experience of creative work is a priceless national property. We must consolidate everything that was achieved during the past year in organizing competition and develop and multiply it for effective work in the future.

As Comrade D. A. Kunayev pointed out during the 15th Congress of the Kazakh Communist Party, at the same time the republic's trade union organizations are still permitting formalism in work rivalry and are not reinforcing it organizationally everywhere. For example, as the report of the DzhambulskayaOblast trade union council (its chairman is A. Zh. Zhunisaliyev) pointed out to the Kazakh Trade Union Presidium in September of last year, competition conditions have not been reviewed for years, competition results are not regularly summed up, and indicator boards remain empty in many oblast enterprises. Workers and kolkhoz farmers often do not know the obligation of their work collectives. Questions on improving production efficiency and work quality have not been examined a single time during the past three years by the oblast trade union presidium.

One cannot rebuke the republics committee of the construction and industrial building material workers trade union (its chairman is T. G. Lytkin) for a small number of decisions adopted on competition questions. However, it checks on its resolutions poorly. As a result, the trade union's committees only set the time lag of many construction organizations. This style of general and superficial direction of competition is inherent in several other councils and republic, oblast, factory, plant, and local committees of the trade unions.

Many deficiencies are also being permitted in the practice of adopting socialist obligations. At times they are understated without a consideration for actual reserves and capability. Thus, the Republic Trade Union Committee and Ministry of the Meat and Dairy Industry adopted obligations during 1980 and 1981 for an above-quota sale of products which were substantially over-fulfilled during the first three months. Similar cases were also permitted in the Ministries of Non-ferrous Metallurgy, Light Industry, the Fish Industry and a number of others.

The system for summing competition results requires improvement. The ten-day and weekly determination of its winners and those who are lagging behind, especially in brigades, work shops, departments and on farms, is still not being practiced everywhere.

Publicity and comparison of results, an effective moral and material encouragement, are not always being insured. Individual republic trade union committees, ministries and departments are permitting violationsof its basic principles when summing upthe results of work competition. The republic trade union committees and the Ministries of the Construction Materials Industry, of Geology and of Highways recognized as winners and awarded prizes to 33 enterprises and organizations based on the results of branch competition during one of the years of the last five-year plan; however, they had not carried out the plans according to the basic indicators. Naturally, the question arises: Who awarded these prizes?

Initiative-mania has still not been overcome by us. The presidium of the Dzhezkazganskaya Oblast Committee of the Construction Worker Trade Union approved almost two dozen initiatives during the past five years. However, not one of them has been disseminated, and the oblast committee of the trade union has no idea about the fate of many "initiatives".

In this connection, it is not out of place to recall the words spoken by Comrade D. A. Kunayev in his report to the 4th Plenum of the Kazakh Communist Party Central Committee: "There is now only one initiative desirable -- to work in the spirit of the requirements of the party and its 26th congress, in a business-like and Leninist manner, urgently and competently, with a full expenditure of effort in each sector".

The movement to develop and adopt counterplans is a powerful lever for developing the work initiative of the masses and an effective form for their broad participation in solving production questions. It is necessary to point out that the tendency to decrease the number of enterprises who adopt such plans has been noted in a number of oblast and branches. Guided by Leonid Il'ich Brezhnev's instructions that "counterplans and other similar undertakings along the line of 'from the bottom up': worker, brigade, enterprise, branch, must be regarded as of paramount importance", it is necessary to take urgent measures to eliminate the shortcomings in this work.

In connection with this, the brigade form of organizing and stimulating work, which must become the basic one during this five-year plan, requires more intense attention. Unfortunately, in a number of cases they approach the creation of brigades without sufficient thought, without the appropriate reorganization of planning and logistic support and without the payment for work using a common job authorization.

Definite experience in the competition of adjacent workers based on the "worker relay-race" principal has been acquired in the republic. However, the speaker says, in a number of branches a significant part of the enterprises is not fulfilling delivery quotas. This binds the initiative of collectives in adopting counterplans. Thus, the enterprises of the "Soyuzfosfor" Association stood idle for 18 working days last year only because of a failure to deliver coke, basically by the Karagandinskiy metallurgical combine.

The competition to work without laggards received definite development. At the same time, there are still many enterprises lagging behind in the construction materials industry, in the state purchasing system for the rural and fruit and vegetable economy, and in the industries of the Dzhambulskaya, Karagandinskaya, Tselinogradskaya, Vostochno-Kazakhstanskaya and Aktyubinskaya Oblasts. The republic trade union committees of the mentioned branches and the oblast trade union committee have not reinforced the call "To Work Without Laggards" with the necessary organizational work.

One of the very important sectors of trade union work is the struggle for a steady growth in labor productivity based on accelerating scientific and technical progress. Our republic was recognized as the winner of the all-union competition and was awarded the Red Banner of the State Committee for Science and Technology and the VOIR [All-Union Society of Inventors and Rationalizers] Central Council for the best organization of inventor and rationalizing work during the 10th Five-Year Plan. At the same time, many republic trade union councils and committees and NTO [scientific and technical society] and VOIR councils and boards are not exerting the necessary influence on incorporating new technology and innovator proposals, and are poorly developing the competition based on personal and collective creative plans.

During its 26th Congress, the party put forward the requirement that the "economy must be economical". During the reporting period, the trade union councils and committees actively participated in the all-union review of the effectiveness of using raw materials, and fuel and energy resources. However, the competition to lessen the material and energy intensiveness of production is being conducted poorly at many enterprises still. Trade union organizations must intensify the struggle to improve the quality of produced goods by developing and incorporating advanced combined quality control systems, and must instill in the workers a sense of high responsibility for the honor of the plant's trade-mark.

During the reporting period, the attention of the trade union organization was intensified on improving the forms and methods for involving workers in production control. In this task, the role of the permanently operating production conferences is great. Almost 10,000 such conferences are now operating in the republic's enterprises. They contain more than 400,000 individuals of whom 70 percent are workers. The practice of concluding and checking on the carrying out of collective agreements has continued to be improved. However, many production conferences are working poorly and their sessions are conducted on a hit or miss basis.

The republic's trade union organizations often do not display the necessary tenacity in questions concerning the carrying out of collective agreements.

The oblast councils and the republic committees of the trade union must involve the workers more broadly in the control of production, keeping in mind that it is the guarantee for the successful carrying out of the party's economic and social program.

During the reporting period, the republic's trade union performed definite work in satisfying the material and spiritual needs of the workers under the direction of the party organization and in close cooperation with local soviet organs. During the last five-year plan, payments and privileges from public consumption funds reached 28 billion rubles for the republic as a whole. They grew by one-third in comparison with the previous five-year plan. The average monthly salary of workers and employees increased by 13.5 percent and the wages of kolkhoz farmers -- by 19 percent. In accordance with the overall plans, 2.4 billion rubles were expended on improving working conditions and safety and on medical and sanitation measures. This was one-third more than during the Ninth Five-Year Plan.

The budget for state social insurance grew by almost 20 percent and is now 830 million rubles. During this time, the minimum size of pensions for workers, employees and kolkhoz farmers were raised. The material and living conditions of the participants in the Great Patriotic War were improved. Grants for children from families of scanty means and additional benefits for mothers were introduced. Housing, cultural, and personal services construction was developed at high rates. Almost seven billion rubles were spent for these purposes during the 10th Five-Year Plan. Almost every fifth inhabitant of the republic gave a house-warming. Many pre-school institutions, schools, hospitals, and polyclinics were put into operation. The volume of sales of personal services grew 1.4 -fold during the five-year plan, and the retail goods turnover -- by 24 percent. The number of seats in the workers' dining halls increased.

The trade unions and the state and economic organs devoted a great deal of attention to the carrying out of the five-year combined plan for sanitation measures and to the improvement of work safety. At the same time, a continuous and strict checking for the observance of work safety norms and safety technique rules and for the elimination of the reasons which give birth to production injuries and professional illnesses, is not being insured everywhere. The provision of medical and personal services premises is low in a number of branches of the national economy. Thus, rural workers are being poorly supplied with sheepskin coats and felt boots by the republic's Ministry of Agriculture, the Kazakh Union of Consumer Societies and the State Committee for the Supply of Production Equipment for Agriculture.

The checking by trade union organs for the observance of labor laws was improved. However, the struggle against violations of labor laws is still being conducted poorly in many collectives. Trade union councils and committees must react sharply to any attempts to infringe upon the legal rights of workers and employees and take exhaustive steps to eliminate the reasons for a violation of work laws.

During the reporting period, special attention was paid to organizing the worker's medical and resort treatment and rest. Approximately 40 million rubles were expended on improving, reconstructing and organizing the public services and ammenities of trade union health resorts.

However, the level of work of many trade union health resorts and tourist establishments still does not satisfy the growing demands of the workers. This evokes numerous and justified complaints. A further expansion of the trade union health resort network in the republic is being provided for. A total of 39 million rubles is being directed toward their construction and reconstruction. However, the construction of sanitorium and tourist installations is taking place poorly. The speaker says that the appropriate ministries and organizations on the spot must pay more attention to them and turn over the trade union project on time and with high quality. He gave an analysis of the state of affairs in the expansion of the sanitorium and dispensary network. The development of Pioneer camps, public catering and public health establishments requires greater attention.

It is necessary to solve housing and personal services better, especially in the system of the Ministry of Construction of Heavy Industry Enterprises, the Ministry of Nonferrous Metallurgy, and the Ministry of Power and Electrification. We must not loose sight of the operation of housing assets and the maintenance of houses. It is necessary to expand further competition under the slogan: "House of Exemplary Maintenance","The Best Worker Settlement", and "The Best City in Public Services and Amenities and Medical Upkeep".

During the year of the 10th Five-Year Plan, the output of consumer goods increased by more than one billion rubles and has now reached six billion rubles. However, the demand of the population for them is still not being fully satisfied. For example, the enterprises of the light, local and food branches of industry in Semipalatinskaya Oblast did not fulfill the five-year plan for the production of goods because of a lack of the necessary attention on the part of the oblast council of trade unions and the oblast trade union committees. Here is a broad field of activity for trade union organizations.

In solving all the questions which are connected with improving the prosperity of the workers, the work of the trade unions organically merges with all the social activity of our state. The decision of the 26th Party Congress and the decree: "Concerning the Interaction of the Councils of Peoples Deputies and the Trade Union Organizations of the Kazakh SSR in Carrying Out the Social Program Outlined by the 26th CPSU Congress", which was recently adopted by the USSR Supreme Soviet Presidium, have confirmed this once again. This decree has exceptionally important significance for the activity of the trade unions and is a new demonstration of the party's and state's attention and concern for their successful execution of the broad powers given by the USSR Constitution.

The question: He who wants to live better, must work better and more, must not be removed from the agenda of the trade union. Therefore, when developing the conditions for awarding prizes based on the results of competition and when distributing housing, passes to sanitoriums and rest homes, and other benefits, the trade union committee must primarily consider the interest of those who are disciplined and who work well. In the struggle against violations of public order and work discipline, it is necessary to make wider use of such tested methods of collective influence as meetings of collectives, councils of workers honor and comrades courts; and to improve the mass nature and effectiveness of the movement "For a Trade Union Group of High Work Discipline". The internal affairs organs must provide active assistance in further strengthening public order.

The work of trade union organizations among young workers needs to be significantly improved. Attention is still not being devoted everywhere to improving their cultural, technical,general educational, and professional level. It is necessary to have greater concern for the indoctrination of youth who are living in hostels, to develop tutoring more actively, and to help the school, the family, higher and secondary specialized training institutions, and professional and technical schools to rear the rising generation.

When talking about cultural services, the speaker in particular pointed out the need to watch that the content of club work be fully responsive to the growing spiritual demand of the workers and be directed toward the formation of a Marxist-Leninist World outlook and a high sense of Soviet patriotism and internationalism. At the same time, it is necessary to pay more attention to the maintenance of clubs, libraries, reading rooms, and sports structures and to the training of personnel for cultural establishments.

A variety of work was performed during the reporting period to expand physical culture and sports. More than two million individuals are now involved in regular physical training classes. More than half a million of them annually perform the GTO [Ready To Work for and Defend the USSR] norms. At the same time, the required attention is not being devoted everywhere to the expansion of physical training and sports. The trade union organizations and the committees for physical training and sports are responsible for many of the shortcomings. It is necessary to see to it that physical training and sports truly develop a mass character. It is also necessary to strengthen further the active sponsorship bond with troop units and DOSAAF organizations.

The republic's trade unions have grown numerically and have become stronger organizationally. After the 11th Congress of Kazakh Trade Unions their membership increased by more than one million and now embraces 6,835,000 workers, kolkhoz farmers and employees.

The campaign to hear reports and elect officials, which preceeded the congress, was an exacting review for the republic's trade union organizations of their work in light of the requirement of the 26th party congress, the 15th Congress of the Kazakh Communist Party, and the November 1981 CPSU Central Committee Plenum. The reports and elections basically took place in an organized and business-like manner and in an atmosphere of broad criticism and self-criticism.

During the 26th Party Congress it was pointed out that the trade union organizations frequently lack initiative and steadfastness in using the broad rights and powers which have been granted to them. Actually, as the report of the republic committee of the electrical power station and electrical equipment industry workers' trade union pointed out to the presidium of the Kazakh Trade Union Council in June of last year, many oblast, factory and plant committees of the trade union are not using their rights satisfactorily. Questions about improving the social and living conditions of the workers are seldom posed to the management organs. There are similar shortcomings in the trade union organizations of a number of other branches of the national economy and republic oblasts.

Improving the style and methods of work and raising the responsibility of personnel and the aktiv for the task entrusted to them are very important conditions for the successful work of trade union organizations. The majority of the republic's trade union organs are operating creatively and energetically. Instances of formalism and paper generation have become fewer, and the control and checking of execution noticeably improved. However, some trade union councils and committees are slow in improving their work. For example, this is the way matters stand in the Vostochno-Kazakhstanskaya and the Taldy-Kurganskaya Oblasts. The carrying out of their own decisions are poorly checked here.

The special attention of the oblast councils and republic committees must be directed toward improving the militancy of the primary trade union organizations, the workshop trade union bureaus and trade union groups. It is necessary to pay more attention to the vital organizational and indoctrinational work with the people, to strengthen bonds with the masses skilfully using such a vital channel as letters and proposals by workers for this purpose, and to be continuously engaged in satisfying their needs and concerns. It is necessary to disseminate positive work experience more energetically.

KAZAKH TRADE UNION CONGRESS CLOSES

Alma-Ata KAZAKHSTANSKAYA PRAVDA in Russian 20 Feb 82 p 2

[Article: "The Work of the Trade Union -- On a Par With the New Tasks"]

[Excerpts] The 12th Congress of Kazakh Trade Unions has ended in Alma-Ata. In noting the enormous achievements in the development of the republic's economy, science and culture and the further improvement in the people's well-being, its delegates talked about the broad scope of the socialist competition to successfully carry out the decisions of the 26th CPSU Congress and the 15th Congress of the Kazakh Communist Party and the tasks and duties for the year and for the five-year plan as a whole. They underscored the need -- in light of the tasks assigned by the party -- to raise even higher the role of the trade unions in social, political, production, and cultural life and to strengthen everywhere the concern for observing the worker's interests and rights and for their working and living conditions.

Hero of Socialist Labor Ye. P. Antoshkin, the leader of a brigade of power-shovel operators in the Sokolovsko-Sarbayskiy Mining and Separation Combine, devoted his presentation to the problems of developing this enterprise. The combine's miners and separators fulfilled the tasks of the 10th Five-Year Plan and last year according to all the primary indicators. Ye. Antoshkin's brigade is working for the third five-year plan with an excess of design output. And this dispite the significant deepening of the open pit, an increase in the distance for hauling the mine material and the reconstruction of the entire Sokolovskiy mine.

Nevertheless, the machine operator pointed out, some lowering in the efficiency of the mining and transport equipment is being registered at the combine. One of the primary reasons is the wear and tear on a significant part of the power-shovel park. Expenditures for the repair and maintenance of the machines in a working condition have already exceeded the cost of a new EKG-8 power shovel. The bulldozer equipment mounted on the S-100 and K-700 tractors is not sufficiently productive. With the arrival of more powerful dump trucks in the pit mine, it is not capable of coping with the growing volume of work. Things are poor also with respect to spares for them. The enterprises of the State Committee for the Supply of Production Equipment for Agriculture provides from the repair assets only the "Kirovets", which work in agriculture. To solve these problems means to improve the efficiency of an important branch of industry.

The chairman of the Ural'skiy Oblast Trade Union Council, R. S. Yegizbayev, said that the activity of the oblast trade unions is directed toward solving the main task of the 11th Five-Year Plan-- improving the workers' well-being by means of high production efficiency and work quality. Every other worker is fighting for the title of shock worker of communist labor, the movement "To Work Without Laggards" is acquiring ever wider scope in industry, and brigade contracting is in construction and transport. A total of 50 enterprises, organizations, sovkhozes, and kolkhozes; about 500 shops, sections and brigades; and more than 20,000 progressive workers of the oblast fulfilled the two-month plan by the opening day of the 12th Congress of Kazakh Trade Unions.

The speaker cited examples of the constant concern of the party and government for improving the Soviet people's well-being and for further bettering their way of life. More than 10,000 workers and specialists improve their health annually in local sanitariums, dispensaries and rest homes. Concrete measures are being carried out to expand the network of health resorts and cultural centers. However, the oblast builders still do not have their own sanitarium, dispensary, Pioneer camp, polyclinic, and palace of culture and sports. The delegate further emphasized the importance of improving design work and of providing the rural builders with modern designs for production, living and other buildings. Too many, he says, directives come down to us from higher trade union organs. The abundance of paper does not contribute to improving the effectiveness of trade union work.

M. Utegenova, an operator in the "Komsomol'skneft'" oil and gas extraction directorate, told about the major successes of the Mangyshlakskiy Territorial Production Complex. She said that an especially large contribution to the development of the region was made with the putting of the new deposits on the Buzachi Peninsula into operation. Their opening up was provided for by the decisions of the 26th CPSU Congress. The collective of the "Komsomol'skneft'" directorate is confidently speeding up the tempos for extracting the "black gold". The brigade form of work organization and the competition for the maximum yield from the oil wells contribute to this. Based on last year's results, there was not a single brigade in the directorate which lagged behind, and the quality of the oil shipped improved almost threefold.

The directorate's collective intends to fulfill the five-year program for the extraction of oil by 7 November 1985.

The delegate asks that attention be strengthened on improving the production base in the Kalamkas and Karazhanbas deposits and on building a settlement here, and that the construction of housing and the water supply of the work shift settlements be improved.

M. G. Motoriko, the Kazakh SSR minister of agriculture, emphasized in his presentation that the role of Kazakhstan in the country's rural economy is steadily growing. More capital investments are now being put into this branch than during the previous five-year plan. Thus, the opportunities for increasing the production and sale to the state of field and farm products and for completely satisfying the worker's growing demands for varied and high quality food items are being expanded for the sovkhozes and kolkhozes.

The speaker said that the economy of the farms, which is growing stronger from year to year, permits social changes to be carried out in the village on a broad scale and completely. Sovkhoz and kolkhoz settlements are being created which answer the high requirements based on their architectural and planning solution and the level of public services and amenities. The minister mentions the settlements of the Kustanayskiye sovkhozes imeni Michurin, imeni Timiryazev and imeni Kozlov; those of the Tselinogradskiye sovkhozes "Shortandinskiy" and "Shuyskiy"; the Kolkhoz imeni 30 Anniversary of the Kazakh SSR in the Pavlodarskaya Oblast and many others as examples of such building.

The speaker then dwells on the problems of agriculture and animal husbandry, of rural construction on the whole and on the expansion of personal services, health care and trade. It is planned to expand significantly the network of enterprises in this sphere on the farms in the near future. At the same time, a number of questions about supplying rural catering, trade and personal services; schools and kindergartens with various equipment and material has still not been solved. Farm directors, local councils and trade union committees must be more concerned with improving services for the workers and kolkhoz farmers.

Hero of Socialist Labor A. Akhmetov, a field team leader at the Kzyl-Ordinskaya Zonal machine testing station, pointed out in his presentation that the achievements of science and progressive practices are helping the farmers to improve the fertility of the rice field. On an area of 850 hectares the station receives 60 quintals [one centener equals 100 kg] per hectare, but on the fields of the team in which the delegate works -- 72 quintals of rice from each hectare. It has become traditional that the gathering of the harvest is completed in 15-20 working days.

The trade union organization is playing a large role in the life of the collective. It is actively participating in the planning of production and in the material and moral encouragement for good work, it is concerned about safety techniques and it conducts mutual inspections between competing brigades with a subsequent discussion of the results during general meetings of the trade union members and during sessions of the trade union committee. A lot of attention is being devoted to the medical treatment and rest of the workers and specialists.

The delegate addressed critical comments to the designers of agricultural machines. It is necessary to develop seeding machines and other equipment which would lessen the losses in the sown material and which would help to mechanize labor intensive processes on a broader basis.

V. V. Chaykin, a metal worker in the work shop of the hydraulic engineering building at the Yermakovskaya GRES[StateRegional Electric Power Station] says that the collective of his station is working under this slogan "For each shift -- a steady planned load". This contributes to the carrying out of socialist obligations. However, the medical and production conditions at the enterprise are not completely responsive to modern requirements. The modernization of equipment, which is not suitable for processing Ekibastuzskiy coal is taking place slowly in the boiler and turbine work shops. At the GRES which was put into operation 30 years ago, much unfinished work has still not been eliminated and necessary installations have not been put into operation.

The delegate said that they have hostels, dining rooms, a palace of culture and technology,a rest home, a standard Pioneer camp, hot-house farming, and a garden society. This is good. However, it requires an acceleration in housing construction. The fuller satisfaction of the collective's needs will help to eliminate the turnover in personnel, raise technical and economic work indicators, and carry out the socialist obligations which have been adopted by the collective.

L. A. Litvinova, the director of Secondary School No. 20 in the city of Semipalatinsk, emphasized that speaking to the trade union congress in the name of thousands of republic teachers is a great honor and responsibility. The teaching collective and trade union organizations of the city's schools are doing a lot to implement the party and government decisions on improving the work training of youth and those on a combined approach to the ideological, political and moral indoctrination of the students. Our trade union organization and the sponsoring trade union committee of the flour grinding and animal feed combine are devoting a lot of attention to the training workshop base and to the organization of the students' production practices. The inter-school training production combines have done a lot.

The delegate then talked about the expansion of the movements "Sheep-Breeding Is Work for Young Hands" in the Semipalatinsk Irtysh area. Teachers are also making a definite contribution to this important work.

O. S. Miroshkhin, the second secretary of the Kazakh Communist Party Central Committee made a large speech to the congress.

The congress unanimously adopted a resolution which called upon trade union members and all workers in the republic to expand even wider the work of mobilizing efforts to carry out the majestic program for the construction of communism, which was outlined by the historic 26th CPSU Congress, under the direction of party organizations.

An appeal from the Heroes of Socialist Labor and USSR and Kazakh SSR state prize winners-- the delegates to the 12th Congress of Kazakh Trade Unions, to all the republic's workers was adopted.

A new Kazakh Trade Union Council and inspection committee was elected.

The congress delegates adopted with enormous enthusiasm a letter to the CPSU Central Committee and Comrade L. I. Brezhnev, general secretary of the CPSU Central Committee and chairman of the USSR Supreme Soviet Presidium.

KAZAKH FISH INDUSTRY MANAGEMENT UNCOORDINATED

Moscow SOTIALISTICHESKAYA INDUSTRIYA in Russian 24 Feb 82 p 2

[Article by V. Burenkov, SOTIALISTICHESKAYA INDUSTRIYA special correspondent: "A Carp From Another Department: Why Don't the Fishermen of Kazakhstan Have A Single Master?"]

[Text] How beautiful Zerenda Lake is early on a spring morning! The sun's rays paint the waves a rosy color. White clouds float high in the sky. A light breeze blows from the forested shores around a face flushed with work. It smells of grass and sticky leaves. The thoughtful representatives of the Kazakh SSR Ministry of the Fish Industry had observed how the schools of northern fresh water salmon flashed in grey streaks on the sand bars. The representatives experienced bliss. It was they who had helped nature. It was they who had restocked the wonderful lake by their efforts. It only remained to wait for the results. However, they saw how the nimble launch cut like a knife through the mirror-like surface of the water. Its crew dressed in protective outer garments, began to pour something into the water.

The ministry representative asked: "What are you doing, men?"

They answered from the launch with pride: "We are restocking the lake! Not with something, but with fresh water salmon!"

"But who are you?"

"We are from the Kazakhrybvod!"

The ministry representatives were worried: "Why are you restocking Zerenda? We have already restocked!"

The Kazakhrybvod workers replied with dignity: "You have your plan and we have ours".

They do not say for nothing that you will not spoil porridge with butter. Zerenda and Beloye Lakes in Kokchetavskaya Oblast were over-stocked with fresh water salmon. This radically undermined the feed base of the reservoirs. The fish grew poorly on the starvation rations. Zerenda and Beloye became crowded with them. For all that, many other lakes remained unstocked.

Two organizations in Kazakhstan are engaged in one and the same task -- to renew fish assets. However, for some reason they do not want to coordinate their actions. Otherwise, what can explain the fact that two incubation shops are side by side in Severo-Kazakhstanskaya Oblast-- one belonging to the republic's ministry of the fish industry and the other to Kazakhrybvod? There are none in Aktyubinskaya and Semipalatinskaya Oblasts. There are quite a few similar examples.

All told, six laboratories of the Kazakh Fish Industry Scientific Research Institute are conducting careful scientific observations of the fishing reservoirs in the republic. The control and observation station and six control points of the Kazakhrybvod are performing exactly the same observations. It seems that the more people that are engaged in the same work, the greater is the benefit. In practice it turns out quite differently.

Six more organizations are engaged in "fishing matters" in the republic beside the Ministry of the Fish Industry and Kazakhrybvod. They are the "Kazakhrybpromsbyt", the Kazakh Department of the Water and Fish Project Institute, the Kazakh Department of the Automated Control System Fish Project Institute, the Kazakh Zonal Ichthyological Inspectorate, the Alma-Atinskiy self-supporting assembly and repair section of the All-Union "Rybremspetsstroymontazh" Association, and the Aralo-Balkhashskaya State Fishing Fleet Inspectorate. All of them are completely independent.

So many organizations! So many directors! It is possible to think that the counters of all trade points in Kazakhstan are piled up with fish. However, the statistics, alas, talk about something else. The catch has systematically fallen during recent years in the republic's internal reservoirs. Whereas, 50,000 tons of fish were caught in 1965, last year it was only 30,000.

Under such conditions, it should have been necessary for everyone to exert themselves, gather their forces into one fist and strike the fish problem. However, it was not so. Each one diligently pulls in his own direction. I. M. Utegaliyev, the chief of Kazakhrybvod, expressed ponderable words to me.

"I have been in this system since 1946. I have worked as the minister. I know everything. It is necessary to unite! However, our farms are fulfilling the plan. The ministerials are crammed full all the time. Is it at our expense that they want to correct matters? Perhaps, it would be better to begin the unification with 'Kazakhrybpromsbyta'? It would be handier...."

M. T. Tairov, the chief of "Kazakhrybpromsbyt", also expressed weighty words:

"I know this sytem excellently. I worked as a deputy minister. It is necessary to unite! But not us. Our enterprises are not working badly. However, the renewal of fish stocks... it is necessary to subordinate Kazakhrybvod to the ministry without fail!"

Let us look a little more attentively at the interrelationships between the Kazakh SSR Ministry of the Fish Industry and "Kazakhrybpromsbyt".

Both of these organizations are engaged in the production and sale of fish products. They have located approximately identical production capabilities in the same places and are servicing the same customers. Only their plans are different -- and, of course, uncoordinated with each other. Each one tries to carry out his own, and frequently to the detriment of the other.

They are straining the trade network with the same products. The stores are not able to accept all this. That is when the telephones become red hot in individual ministry enterprises. The plant managers are looking for buyers and are requesting railroad cars which are in short supply. Each year, they have to dispatch 700-800 tons of product beyond the limits of the republic without funds. Fish goods jolt over the rails for hundreds and thousands of kilometers to Saratov, Kuybyshev and Cheboksary. This in no way improves either their taste qualities or the appearance of the goods.

It is also curious to see how the resources, which have been allotted to the development of the branch, are being used. The republic's Ministry of the Fish Industry and "Kazakhrybpromsbyt" can create identical or almost identical installations in the same city. It would seem that it would be better to unite their efforts and construct one work shop or plant, but a good one -- large and modern. The two organizations prefer to produce parallel plants -- diminutive,but for all that their own.

The Dzhambulskiy Fish Plant of the republic's Ministry of the Fish Industry replaced a sturdy curing workshop which was able to easily satisfy the demands of all urban lovers of "kopchushki" [small smoked fish]. The Ministry did not get this workshop for a kopeck-- but for almost a half million rubles.

"And we, are we worse than the ministry do you think?" They burned in the "Kazakhrybpromsbyt" Association. "We will tear down our own workshop!"

And they did "tear down". Here in Dzhambul. And they also invested quite a bit of money in construction.

They say that bad example is catching. The ministry undertook the construction of a fish processing plant with a curing workshop in Semipalatinsk. "Kazakhrybpromsbyt" was also not found wanting -- it is erecting its own curing workshop. During the 11th Five-Year Plan, such parallel construction is planned in Kokchetavskaya, Turgayskaya and Severo-Kazakhstanskaya Oblast.

They are not considering money here. You see, it is not their own -- it is the state's.

Specialists are convinced that the uniting of all the independent organizations in the republic's food industry system would permit the number of administrative and management personnel to be decreased by more than 250 people, and their annual wage fund by almost half a million rubles. I do not know whether it is necessary or not to combine, but if one combines -- then who with whom? The directors of the branch must decide this. One thing is clear: it is time to put an end to the administrative open field system. Otherwise, parallel works, which duplicate each other, will grow like mushrooms.

Perhaps, they do not know about the situation in Kazakhstan in the union ministry? They know. However, they have not done anything practical to send swans, crayfish and pike over a single line. B. D. Monakov, the deputy minister of the USSR fish industry, arrived in Alma-Ata in December of last year. During a meeting of the aktiv, he pointed out that all the organizations in the USSR Ministry of the Fish Industry system, which are located in Kazakhstan, have been called upon to solve the tasks of developing the republic's fish branch; and must organize their work in close contact with each other under the immediate direction of the Kazakh SSR Ministry of the Fish Industry. However, these correct words have not been echoed here.

In order that these words become a reality, it is necessary that legal force be attached to them. Only the USSR Ministry of the Fish Industry can do this.

KAZAKH KARAKOL INDUSTRY INEFFICIENT

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 5 February 1982 carries on page 3 a 1,800-word article by regular commentator Saytqazy Dosymov on problems of the Dzhambulskaya Oblast karakol industry. The article, published under the regular rubric "Problems, Suggestions, Proposals," is the first of two on the subject and looks at the problem from a regional perspective.

There are three karakol-raising rayons in Dzhambulskaya Oblast, Talas, Sarysu and Moyynqum. Each is desert or semi-desert with essentially similar environmental conditions.

There were 831,000 karakol in the three rayons at the beginning of the 10th Five-Year Plan but only 745,300 at the end of 1981. Thus the three rayons suffered a loss of 85,700 sheep at a time when republic herds as a whole grew by 194,000. Moreover, it is clear that there was a qualitative as well as a quantitative loss since present herds contain a higher percentage of young sheep than those of the past and are now poorly structured for efficient karakol raising. Seeking explanations for the declines, Dosymov discovered a local karakol industry that is highly inefficient and badly run.

KAZAKH MARKET FRAUD WIDESPREAD

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 4 February 1982 carries on page 1 a 1,000-word boldface editorial titled "Let Us Observe Trade Regulations Strictly." The living standards of the people were considerably enhanced during the last five-year plan. Much has also been achieved during the current five-year plan and consumer goods production has been increased, product quality improved and products made more marketable. There remain, however, many deficiencies in trade and trade services.

Trade services workers are part of a key economic sector and bear major responsibility since they have such an immediate impact on the public. They must maintain trade regulations strictly, but things are quite different in this area than they should be.

Among abuses that have been discovered are under-the-counter sale of goods to some but not to other customers, artificially created shortages and the distribution of goods in high demand through secondhand stores at high profit, bribe-taking for preferential treatment, particularly in rural areas with but one trade outlet and unwillingness on the part of store operators to submit to audit.

The editorial calls on trade services workers to eliminate these abuses and obey the rules and demands increased responsibility and control. The editorial also sees the need for a general improvement of trade services, particularly the goods distribution system, and a greater effort towards marketing research.

KAZAKH LIBRARIES RESPOND TO MULTIETHNIC POPULATION

[Editorial Report] Alma-Ata MADENIET ZHANE TURMYS IN Kazakh No 12, December 1981 carries on page 5 a 700-word article by N.V.Lyubovenko, director of the Sayram Rayon (Chimkenskaya Oblast) centralized library system. The article is entitled "Work With Young Readers" and is concerned with the multi-ethnic character of the local population and the needs of young readers.

Representatives of 43 ethnic groups live in Sayram Rayon of Chimkenskaya Oblast; of 82 schools there 39 are taught in Uzbek, 26 in Kazakh, 5 in Russian and the remainder are mixed schools. Much is being done by the rayon library system to respond to this ethnic diversity in meeting the needs of young readers; such things as ethnic surveys of school age population to structure library collections properly.

There are now 118 libraries in the rayon working with these goals in mind, some 60 in villages and around 50 in schools. They have 200,000 volumes in their collections including 45,000 in Kazakh, 70,000 in Uzbek and 86,000 in Russian. Some 34,000 library users account for a circulation of 500,000 volumes a year.

Lyubovenko discusses efforts to select books not only to correspond to the ethnic mix of library users but also to accord with differences in age as well. He also reviews the educational and ideological work of his library system.

KAZAKH PRAISES MOTHER TONGUE

[Editorial Report] Alma-Ata MADENIET ZHANE TURMYS in Kazakh No 12, December 1981 carries on pages 14-15 a 1,200-word article by Omirzak Aytbaev on the importance of preserving the linguistic riches of the Kazakh tongue. The article is entitled "Mother Tongue-Great Tongue" and is published under the rubric "Spoken Culture."

Language is a most remarkable expression of man's culture and intellectual life, a fact noted by the Marxist philosophers; language is also a school in values, one that is not to be taken lightly.

Aytbaev calls for proper use of the Kazakh mother tongue through preserving its purity, using native Kazakh vocabulary for old and new ideas and guarding the cultural riches of the language. Proper language use, he says, is also the sign of a man's knowledge and culture. Throughout the article Aytbaev emphasizes the people as a fountainhead of linguistic riches, as in the proverb used in the title of the article, for example.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service (NTIS), Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semimonthly by the NTIS, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

Soviet books and journal articles displaying a copyright notice are reproduced and sold by NTIS with permission of the copyright agency of the Soviet Union. Permission for further reproduction must be obtained from copyright owner.

WESTERN DECADENCE SOURCE OF POLISH TROUBLE

Moscow PRAVDA in Russian 15 Feb 82 p 6

[Article by Aleksandr Krivitskiy: "White Scorpions"]

[Text] This story begins in the mid-sixties. I was standing alone on the platform at the Warsaw railroad station; they had not come to meet me. I picked up my suitcase and was struggling with it to the exit when suddenly off in the distance on the gray strip of the asphalt I caught sight of a man rushing along, necktie flying out like a banner. In two or three seconds he had reached me, cast an astonished glance over me, and without a pause hurried on by. The hope vanished even before it had surfaced. But perhaps.... I shouted after him.

"Are you looking for me?"

"Who are you?" he cried in answer, moving away from me at unbelievable speed.

I loudly shouted my name and walked slowly on, but after a few seconds I heard heavy breathing at my back and I turned. The stranger had caught up with me. He was in tears. And he could not stop immediately so he went flying past and then, changing his gait, he turned through 180 degrees and we found each other face to face.

"I am the one you want," he puffed, and took out a handkerchief. The tears turned out to be beads of perspiration.

I did not know the man. It turned out that the Moscow Pole whom I knew well had telephoned him and asked him to meet me at the station. We had hardly taken a step along the platform when the man who had met me asked worriedly: "Tell me, why don't they publish Kafka in your country?"

He was, as they say, all in a lather because he had been running and wanted to be at the station in time. I looked at him and decided that I should be as informative as he. "Excuse me, you were hurrying so much. Did you fear you would not be able to ask me the question about Kafka?"

He replied persistently: "Oh, yes, that too. It's a very important question...."

But I did not have to answer him. He quickly found a taxicab, helped me to load in the suitcase, glanced at his watch, excused himself, shook hands and whirled away at the same pace I had seen in the station. I never saw him again.

In the evening a small group of writers gathered in my hotel room. Among them was a striking fair-haired woman of about 35. Her porcelain-china face was spoilt by her thin lips and unattractive eyes. But she was wearing lipstick and from time to time there was a trace of expression in the eyes. I had barely passed round the delicacies from Moscow to treat the guests, when she exclaimed: "I would like to ask you a question! A political question. May I?"

"Of course."

"Why do you not publish Kafka?"

I looked at her with unconcealed curiosity. It seemed that someone had decided to play a trick on the newcomer by asking various people to set him the same question. But there was no sign of friendly jest in her eyes. They had turned from blue to steel and were looking daggers at me.

"I'll answer you, of course. But tell me, please, is the publication of Kafka in the USSR of such concern for Poland?"

"Yes!" The blond answered decisively.

"No, no," the others protested. "It's not a problem... We have more important things...But if the question has been asked, it would be interesting to hear the answer. For sport, just for sport!"

"You are all having a joke," I suggested to the guests. "As for Kafka, well I have read an anthology of his stories in Russian, published long before the war, I think in the 'University Library' series, the ones in the greenish covers. The anthology was called 'Cockroach' after one of the well-known story titles."

"That was ages ago!" the blond retorted impatiently and unreasonable. "What about now?"

"Now it is in a new one-volume book. It will soon be published, and the name of the story has been translated differently: 'Metamorphosis.' Do you have any objection?"

Everyone smiled.

"If you are telling the truth and the volume really is going to be published, then that's OK." The blond gave her highest approval. "But why so long?"

"Enough," the others interjected. "We want to take our guest to dine at 'Krokodil.' He has answered you... What more do you want? Some kind of interrogation?"

"Just a moment," I said, "Things are getting serious. Let me answer my interrogator-inquirer. You know, darling, the Russian intelligentsia has its own specific character. In particular, it has always tried to get justice for its favorite writers. If defended Pushkin and Lermontov against the rabble at the doors; Blok from his monarchist colleagues on the one hand and the Proletkult maximalists (a literary group formed in 1924--ed) on the other; Mayakovskiy from the disgusting aesthetes and the RAPP (Russian Association of Proletarian Writers--ed) dogmatists; Furmanov from the arrogant purists and zealots of the 'pure' genre--those who did not recognize 'Chapayev' as a story of 'Myatezh' as a novel, who did not see precious spark in the jewel of the new Soviet prose; Bulgakov and Platonov from the one-line dimwits who tried to find in his creativity something that obviously was not there. There was a time when your Yesenin was poorly published, and now he is one of the most read poets. The hopeless world of Kafka has evidently not been to the taste of our readers, otherwise his books would have been published more often."

"You don't know that that is so. You'll have to prove it" shouted the blonde. "Not so? It is, and for a very simple reason. In Russia there is Dostoyevskiy. In answer to man's question to himself 'What am I, a trembling little beastie of Napoleon?' Kafka answers 'a trembling little beastie.' But Dostoyevskiy says: 'No, I must find the man within the man.' He was a great realist, but Kafka, although I saw the teacher in him, is a talented decadent. And a profoundly unhappy personality. Dostoyevskiy's hero had to arrange not his own life but the destiny of the entire world. He is shown in a bitter but also passionate struggle. In Kafka, with hanging head man substitutes his own view for the iron yoke of the unknown, or, as in 'The Trial,' he sees in the corner of the dock a narrow butcher's knife hanging over him."

I am no literary expert. I said it just as I myself understand it, and was probably a little forceful. That is how it is, especially if you are a little angry. They listened to me attentively and someone shouted "Bravo." This cry was encouraging, since it meant that I had some support in the argument from my small audience.

The blond scorpion was forced to smile, and truth to tell, the smile suited her. I thought once again how often in life the form is not the same as the content.

"Well, one volume of Kafka has been published," I continued. "So let us check that the population of the Soviet Union is not upset by this phenomenon. And you, most likely, are so upset, madam, that some radio somewhere or someone somewhere has whispered something in your ear and swung the censer so hard that now you can see nothing else but its smoke."

"Have you?" an old litterateur whose translations of the Russian classics have earned him recognition both in Poland and the USSR, asked the blonde Kafka freak.

Madam pursed her lips and glancing at me gave me the full benefit of those evil eyes.

"You fear what is different. Everything is standardized with you and there is no spiritual elite. Why do you not publish Spillane?"

"Ah, straight from Kafka to Spillane. Because it is just pornography. Our laws do not allow it...."

"Everything should be permissible, everything should be allowed."

Here I put forward a supposition.

"So perhaps your god is not Kafka? Perhaps you are a Nietzsche person, a 'superman'? You yourself say that everything should be permitted. Well, the ideologues of absolute permissiveness would like Kafka's characters under their control--those that are resigned to their fates, those that are doomed. But he who banks on permissiveness should not suggest that nothing is defensible."

She wanted to object, but from all sides came shouts of "We are taking our guest to dinner, let's go." At the hotel entrance the blond mischief-maker said goodbye to us with a general nod and left, tapping along the sidewalk on her pointed heels for all the world like a military march. While we trooped off in a happy crowd to Stare myasto, to the "Krokodil." There it was noisy and jolly.

"You really did not like that blonde, did you?" A young poet put the question as he sat down beside me.

"What can I say? She had a beautiful face and all that white hair. But I saw something else. In politics and ideology ever since Burbonov's time and even earlier white has been the color of reaction. And that is what she was, evidently: white through and through."

When at the end of the meal the efficient waiter brought our coffee he came up to me, and after a moment's silence, pressing a German silver tray to his chest, he asked:

"Is the gentleman from Moscow? Excuse me, Sir, do not be offended, but please tell me why you do not publish Kafka?"

That evening I somehow understood particularly keenly the refined methods of those who wage psychological warfare against us. They personify the direction they want in some name or other in a short and apparently easily accessible formula, and importunately repeat it as if it were not senseless and false, and intrusively thrust it into the soul of the uninformed person. The repeated refrain is lodged in the excited consciousness and works away at it like a worm, gnawing away all the time. This method has been borrowed from the arsenal of American advertising and is called forced mobilization of the attention, forcible development of a purposeful reflex.

We issued from the jaws of "Krokodil" in one piece. Our entire small company went with me. A light spring shower had already done its job, refreshing the air and filling it with the aroma of a heavenly perfume. The little puddles on the sidewalk glistened, reflecting the warm fires of the smart store windows along Marshalovskaya Street. From behind the half-open doors of the bars a honey-red half-darkness could be seen and the sound of mellifluous music heard. Despite the fact that it was a weekday evening the crowd on the street had not thinned. Sweet little Warsaw girls flirted with their escorts outrageously, and their laughter could be heard above the hubbub of the avenue.

"But you made a mistake, you see," the young poet told me when we returned again to the subject of the dialogue in the hotel. "You thought that she was a victim of malicious propaganda. Quite the contrary, she is an active part of the mechanism. To tell the truth, it was I who brought her to you. And it was precisely today that I clearly saw her role. She could not care less about Kafka. Her friends will seize on any pretext to model spiritual life in your country and mine in a distorted shape...." He lingered a while, and then added: "I know several of her friends and I hate them. It was I who cried 'Bravo'... But I like her a lot.... Of course, she has not even read Kafka. I know this for sure."

He spoke with real pain. His drama was seen briefly from a confused soul and a few vital lines had been quoted, right from the heart. Like Russians, the Poles have never been able to cut short those evening conversations, and we all went back to my hotel for another hour or so.

A year or two later I discovered that this woman had left Poland.

....Many years passed. Quite recently, twiddling the knob of my transistor I stumbled by chance across some transmission in Polish from across the ocean. I am willing to swear that it was her voice, husky and warm. I recognized the insistent intonation, now somewhat muted by professional training in the ingratiating tone of the announcer. She was urgently encouraging the extremists from "Solidarity," and I could almost hear her question:

"Ah, is that you? Why do you not publish Kafka in the 'Romangazet'?"

Kafka, however, seemed to have been removed from the agenda. It has to be something different each time. Lies and slander do not make it difficult for themselves with bothering about what they choose.

I turned the knob of the receiver and there was music, a little more, and I heard a French voice, then German, and our station was reporting a gymnastics competition... The world was turning on its axis, something was creaking, grinding, wheezing. The enormous world breathing in a small box: singing, educating, thundering out jazz, gossiping malignantly, playing the violin....

Epilogue. Deep in the depths of the U.S. International Communications Agency project "Truth" was born. The chief of this office, Charles Wick, has openly stated that all means are good in psychological warfare. The constant repetition of fables, forced mobilization of people around false names and problems will receive a new momentum. Many times in the history of mankind a noble concept picked up by Washington for the name of a project has been used for mean purposes. But, it seems, this is the first time that it has been done so openly and coarsely. Project "Truth" usurps the sense of this word, changing it into something that is completely its opposite--lies! Project "Lies" is designed to urge on all forms of U.S. foreign policy propaganda and exacerbate its aggressiveness in full accord with the course of the White House.

And this means that we should expect a new outburst of demagoguery in the international information coming from the United States. With a new fervor they will start to make other criminals into heroes. Defenders of dictatorial regimes, theoreticians of "limited nuclear war," the nigger-haters and the ideologues of the lockout, the persecutors of the striking air traffic controllers, frontmen for gangsters--the Brazinskasov father and son who murdered a Soviet stewardess aboard one of our aircraft, and the child abductor Polovchakov--will all begin with new force to hypocritically befuddle people's heads with "human rights."

Today I would also like to personify the baseness of U.S. propaganda by recalling the recent polemics about the former U.S. presidential aide for national security Richard Allen. In our newspapers his haughty expatiation on the downfall of communism was repeatedly ridiculed. And now this state figure has been removed from the Washington scene since Allen was accused of bribe-taking. These are the kinds of opponents we have to deal with. This is one of those who prophesy our doom and who try to sting us and teach us morals, conduct and ethics. Poland today is one of the main targets for project "Lies." On 17 December President Reagan stated: aid to this country is being curtailed. Let us keep that date in mind. On that day the White House acknowledged that it was supplying the counterrevolution and was arrogantly indifferent to the needs of the people. Thus the faces of the villains look out of the windows of the virtuous. Project "Lies" is hastily making them out to be defenders of freedoms and democracy and inciting the extremists to outrages. The "supermen" from Washington think that they can do anything, that anything is permitted. But they are seriously mistaken in thinking that mankind is made up of indefensible Kafka characters. The white scorpion--that is the true cast of American propaganda. In contrast to the scorpion, it is found not in the desert but is spread where people live. Its poison glands like independently targeted warheads, are open at the end of a sharp hooklike thorn stinger. But the radar is there, vigilant, to detect in good time the rapacious designs of the scorpion and to drive off its long switch.

SHEVARDNADZE ATTENDS GEORGIAN 61ST ANNIVERSARY CELEBRATION

Tbilisi ZARYA VOSTOKA in Russian 26 Feb 82 p 1

[Gruzinform report: "In the Mighty Community of Nations: Solemn Session in Tbilisi Dedicated to the 61st Anniversary of Soviet Georgia"]

[Text] A solemn session of the Tbilisi City Soviet of People's Deputies, held jointly with representatives of the city's party, soviet and public organizations and military units of the Tbilisi garrison, was dedicated to the 61st anniversary of Soviet authority in Georgia. The session was held 25 February in the State Academy Theater of Opera and Ballet imeni Z. Paliashvili.

In the presidium were Comrades E.A. Shevardnadze, G.A. Andronikashvili, P.G. Gilashvili, G.N. Yenukidze, A.N. Inauri, O.F. Kulishev, T.N. Menteshashvili, Z.A. Pataridze, D.I. Patiashvili, T.V. Rostiashvili, S. Ye. Khabeishvili, N.A. Chitanva, Z.A. Chkheidze, T.I. Mosashvili and I.N. Ordzhonikidze.

The solemn session was opened by Chairman of Tbilisi Gorispolkom G.D. Gabuniya.

The state anthems of the USSR and the Georgian SSR were played.

To the accompaniment of tumultuous applause by those present, there was a unanimous election of an honorary presidium made up of the Politburo of the CPSU Central Committee headed by General Secretary of the CPSU Central Committee and Chairman of the Presidium of the USSR Supreme Soviet Comrade Leonid Il'ich Brezhnev.

A report on the 61st anniversary of the victory of Soviet authority in Georgia was given by First Secretary of Tbilisi Gorkom T.N. Menteshashvili.

Throughout its history, Soviet Georgia, under the leadership of the Communist Party, traveled a path that is equal to centuries, the speaker said. Side by side with the great Russian nation, in fraternal cooperation with the other nations of our multinational motherland, there has been constructed in our republic a genuinely free and democratic society, which possesses a highly developed culture and economy.

Every year in the life of our party and nation has its special tokens, its unrepeatable content. The confident step taken by our republic along the path of achievement, the path set down by the 26th CPSU Congress and the 26th Congress of the Communist Party of Goergia, provides inexhaustible power, a mighty impetus for the confirmation of the achieved successes and the attainment of newer and higher goals in economic and social development.

The communists and workers of Georgia, like the rest of the Soviet nation, are marking by their shock labor the glorious 60th anniversary of the formation of the USSR, guaranteeing unconditional fulfillment of the plans and pledges for the second year of the 5-year plan and preparing to worthily greet the 200th anniversary of the Georgiyevsk Treaty--the manifestation of the friendship and brotherhood between the Russian and Georgian nations. Closely consolidated around their beloved Communist Party and its Leninist Central Committee, and in the single fraternal family of the nations of our motherland, our republic's workers are firmly resolved to strive for greater and greater successes in all sectors of communist creativity and to do everything to assure that things will always go well in Soviet Georgia.

The solemn session is declared closed.

The state anthems of the USSR and the GSSR are played.

A large concert with performances by Georgian performing artists was held for the participants of the solemn session.

SHEVARDNADZE ADDRESSES GEORGIAN CENTRAL COMMITTEE PLENUM

Tbilisi ZARYA VOSTOKA in Russian 3 Mar 82 pp 1-3

[Speech by E.A. Shevardnadze, candidate of the CPSU Central Committee Politburo and first secretary of the Georgian Communist Party Central Committee, at republic party-economic aktiv meeting on 1 March 1982]

[Excerpts] Dear Comrades!

Dear Guests!

A year has elapsed since the congress, and for the republic it has been filled with glorious deeds and great events. The most memorable and most important event was, of course, Comrade Leonid Il'ich Brezhnev's arrival in Tbilisi for the celebration of the 60th anniversary of Soviet Georgia. All this time our people have lived and worked under the impression of the party congress and the jubilee festivities. All this time the republic's communists have been guided by the instructions and propositions contained in L.I. Brezhnev's report at the 26th congress and his speeches in Tbilisi.

It is to you people of labor to whom L.I. Brezhnev's warm words of greeting conveyed to us today by Comrade Guriy Ivanovich Marchuk, deputy chairman of the USSR Council of Ministers and chairman of the USSR State Committee for Science and Technology, are primarily addressed. We are pleased to welcome Guriy Ivanovich, who is a great friend of our republic, to our soil, where he is well known as an outstanding scientist and prominent state figure and major organizer of Soviet science.

The high rate of the republic's socioeconomic development is largely the result of the acceleration of scientific-technical progress. And we are grateful to our union State Committee for Science and Technology and Guriy Ivanovich Marchuk personally for the assistance which they are constantly rendering us in this important matter.

We are now putting great hope in science, and for this reason I would like to see the further development of our friendly relations and business and creative contacts.

Our joy is increased immeasurably by the fact that it is being shared together with us by our dear guests from the fraternal republics of Azerbaijan and Armenia. We wholeheartedly welcome the delegations of our friends headed by deeply respected Gasan Azizovich Gasanov, secretary of the Azerbaijan Communist Party Central Committee, and deeply respected Grant Mushegovich Voskanyan, secretary of the Armenian Communist Party Central Committee. Permit me, dear comrades, to convey through you the very best wishes to the Azerbaijan and Armenian peoples and all working people of the fraternal republics and to congratulate them on the latest victory in all-union socialist competition and conferment of the CPSU Central Committee, USSR Council of Ministers, AUCCTU and Komsomol Central Committee challenge red banners. I congratulate you! We exchange experience constantly. Friends' successes always gratify us and impart an additional stimulus to work. Our traditional fraternal rivalry is largely contributing to the fact that the socioeconomic development rate of the trans-Caucasus region is currently one of the highest in our country.

I

For the Georgian SSR the first year of the 11th Five-Year Plan was, as it were, a concentrated expression of the tremendous efforts which our party organization is making in fulfillment of the CPSU Central Committee decree on the Tbilisskiy Gorkom and subsequent party and government decisions.

It was completed pretty well, on the whole, comrades. National income increased 6 percent, industrial production increased 5.1 percent and the gross agricultural product grew 4.3 percent. With an increase of capital investments in the economy of 2 percent, 10 percent more fixed capital was introduced than in the previous year, which corresponds fully to the party's fundamental goals and L.I. Brezhnev's instructions in the sphere of capital investments policy.

Positive changes occurred in the business of raising our population's living standard. Real income per capita increased 4.6 percent, the average wage of workers and employees increased 2.2 percent and kolkhoz members' pay increased 2 percent. The social consumption funds and retail commodity turnover and consumer services increased at a preferential rate.

The scientific-technical revolution assumed extensive proportions. Approximately 60 new models of machinery, equipment, instruments and means of automation were created in the year. Approximately 200 mechanized, flow and large-scale transfer lines were installed and 80 sections, shops and works were switched to comprehensive mechanization and automation in industry. Approximately 25,000 inventions and production efficiency proposals were introduced to the national economy.

It is gratifying that all the autonomous formations and practically all major industrial centers and cities of the republic coped successfully with the fulfillment of the industrial production plans. Dozens of labor collectives reported fulfillment of their socialist pledges ahead of schedule. Last year produced the names of hundreds of new heroes and people who are winning renown for themselves with conscientious, heroic labor.

It is most gratifying that the rural workers coped successfully with their quotas. After all, in all three previous 5-year plans we began, comrades, with disruptions precisely in agriculture and subsequently had to compensate for them at a price of tremendous efforts. It is sufficient to recall what an exertion of forces it cost us in the 10th Five-Year Plan to reach the planned frontiers in the grape harvest.

On this occasion the gross agricultural product increased 4.3 percent compared with the record year of 1980 even, and if compared with the average annual indicators of the 10th Five-Year Plan, the growth constituted 10 percent.

Another distinguishing feature is the broad scale of capital construction. In the first year of the 11th Five-Year Plan the commissioning of fixed capital was 82 and 42 percent higher respectively than the 1971 and 1976 levels. Considerably more of the most important facilities were commissioned than at the start of the 10th Five-Year Plan, and this affords favorable opportunities for the continued confident buildup of Georgia's economic potential.

Finally, the first year of the new 5-year plan was characterized by a further improvement in people's work and social conditions and the confident development of the sociocultural sphere. It is sufficient to mention that commodity turnover increased almost 30 percent in the last 5 years, while this indicator has increased by a factor of 1.7 compared with 1971.

The tasks for the 5-year plan here are very complex, comrades, and, consequently, we must regard every year, precisely every year, of it as decisive. We must completely rule out an easygoing atmosphere. We have repeatedly warned our party, soviet, management and other leaders that the fulfillment of socialist pledges and the extent to which the results achieved ensure that we reach the frontiers determined by the decisions of the 26th party congress will be considered the main criterion in the evaluation of the activity of this collective or the other.

In this connection I would like here at the aktiv meeting today to attentively analyze certain important processes and trends which most directly influence the fulfillment of the quotas of the 5-year plan as a whole and the accomplishment of the arterial tasks confronting the republic's economy in the next few years.

II

The republic's lagging behind the union-average indicators of economic development was observed mainly in the 1950's-1960's, when, as a result of a certain slackening of political, organizing and educational work and deviations from Lenin's standards of party life and leadership of the economy, there was a considerable deceleration of the rate of development of all the leading sectors of the economy.

In the period 1951-1970 industrial output increased almost sevenfold in the country on average, but little more than fivefold in the Georgian SSR. The republic lagged behind considerably in the growth rate of:

capital investments (by a factor of 1.25);

labor productivity in industry (a factor of 1.26); and

production of the most important agricultural products, particularly the production of meat (a factor of 1.3), milk and eggs (a factor of 1.5), wool (a factor of 2.2) and so forth.

By the time of the adoption of the CPSU Central Committee decree on the Tbilisskiy Gorkom the gap between the most important republic and all-union economic indicators was even more perceptible than at the start of the 1960's.

It increased thus in 1960-1970:

from 26.8 percent to 28.6 percent in the production of aggregate social product per capita;

from 24.1 percent to 27.1 percent in the production of national income per capita; and

from 2.2 percent to 17.6 percent in fixed production capital per capita.

It is understandable that a fundamental turnabout was required throughout the republic's economic and sociopolitical life. The CPSU Central Committee decree on the Tbilisskiy Gorkom was this turning point. After it was adopted, the rate of growth of the republic's economy grew sharply and there was a marked increase in its economic and industrial protential. In the past decade the Georgian economy outpaced the union-average rate in its development. And this was achieved thanks to the constant assistance of the CPSU Central Committee, USSR Council of Ministers and Gosplan and other union authorities. In the words of the CPSU Central Committee decree "60th Anniversary of the Formation of the USSR," our republic's economy now "occupies an important place in the social division of labor and is making an increasingly impressive contribution to the country's national wealth."

Thus in 1971-1980 the republic's relative significance grew as follows:

from 1.4 percent in the country's national income to 1.75 percent;

from 1.2 percent in the gross industrial product to 1.4 percent; and

from 1.25 percent in the average annual gross agricultural product to 1.6 percent.

There was a corresponding reduction in this period in the republic's lagging behind the union-average level in production per capita:

from 28.6 percent in the aggregate social product to 17 percent;

from 27.1 percent in national income to 8.8 percent;

by 11.7 points in industrial output; and

by 20 points in the average annual agricultural product.

Thus we may note with satisfaction that the communists and working people of Georgia are confidently overcoming the republic's comparative lagging behind the country's level of socioeconomic development and that successes have indisputably been achieved in this very important matter in 10 years of which we can be proud.

At the same time, comrades, we still have sufficient problems and unaccomplished tasks, and much remains to be done.

There is still a considerable gap in industrial production per capita. We lag 24 points behind the union-average level, including 37 points in the production of producer goods. There is a pronounced lag in the indicators of agricultural production per capita--15.7 points--social labor productivity--14.7 points--retail commodity turnover--16 points--and so forth.

All this testifies that the achievement of union-average parameters remains the strategic direction of our work. Of course, its forms and methods are changing and being streamlined. We must now raise the matter of ensuring that this entire process be managed skillfully and with knowledgeability. It is necessary to create a system similar to that with which we manage the 17 main parameters of the republic's socioeconomic development. That is, it is a question of the need for more plan-oriented work.

We should not be oriented indiscriminately toward union-average and sectorial-average indicators. First, in some respects our republic has its own specific features, and for this reason not everything in a row may serve as a reference point for us. And, second, the level of certain sectorial-average indicators is insufficiently high for us to take them as being the standard. In some instances it is already time for us to orient ourselves toward the best enterprises and organizations in the sector and the best, if you will, world standards.

In a word, it is essential that we have great clarity, specificity and a strictly differentiated approach here.

There was serious discussion of this matter recently in the Georgian Communist Party Central Committee at a meeting of the work group on the development of the major enterprises and sectors of the economy. The republic Gosplan was entrusted with drawing up a list of the main socioeconomic indicators in which we have to pull ourselves up in order that each indicator might be under constant supervision and that specific officials, work groups or commissions be responsible for its formation.

Much is being done by the Tbilisskiy Gorkom and other party committees. Literally a few days ago the gorkom bureau approved the initiative of the collective of the Aviation Plant imeni Dimitrov "Every Enterprise Among the Best in the Sector, the Republic and the Country!"

Our republic has sufficient natural and labor resources and sufficient production and scientific-technical potential to fully overcome the current lag behind the union average in all the most important socioeconomic indicators in the next decade and thereby raise its role in the all-union territorial division of labor. For this it is essential that we continue to plan a higher rate of development of the main economic parameters than the average for the country. Here is a most important condition of the achievement of the planned strategic goal.

One of the main causes of the republic's lag behind the union average in the past was a certain limitation of the resources necessary for expanding production and also the insufficiently skilled use thereof. In the last 20 years the gap between the capital investment per capita indicators has increased 24 points.

The situation is alleviated merely by the fact that the use of fixed capital improved in the republic in the last 10 years. Thus whereas in 1970 the output-capital ratio here constituted 82.8 percent of the union-average level, in 1975 it constituted 93.1 percent and in 1980 some 113.3 percent. This indicates more intensive use of fixed capital in the republic than in the country as a whole, which is a very good, promising trend.

Undoubtedly, it is necessary to continue to improve its use, but, together with this, it is necessary to monitor particularly the indicator of our economy's capital-worker ratio.

The Georgian SSR was in first place in the country in the 10th Five-Year Plan in social labor productivity growth, surpassing the union-average indicator by a whole 18.2 points. At the same time we still lag behind the union-average level considerably in absolute terms.

This is why the accelerated buildup of industrial production, primarily in the sectors determining technical progress in the economy, in every possible way is now the main, determining direction of our strategy in the sphere of realization of the party's economic policy.

Certain steps have already been taken in this direction. An analysis of the activity of a number of enterprises and ministries testifies that despite the high indicators of output per worker, output-capital ratio and certain others, which are not below the sectorial average, we at the same time lag behind considerably in the use of production capacity, in terms of the shift-work coefficient and others.

Serious analytical work has begun in the republic ministries of light and food industry and in the food sectors as a whole. It has shown that these sectors are seriously lagging behind in the level of mechanization and automation of production processes because we are still dealing with this matter inadequately. Despite the very high production growth rate, losses of work time at light industry enterprises were 1.5 times more than the union-average indicator last year. Just halving them would enable the ministry to produce an additional R15 million of output approximately without increasing the number of workers.

Particular economic and political significance is currently attached to an improvement in the basic indicators of the activity of such a most important sector as agriculture. Our agriculture's arrival at union-average frontiers is not, of course, a matter of a single year and a single 5-year plan; we understand this. A tremendous amount of work is being performed in the countryside. In the 10 years that have elapsed since the CPSU Central Committee decree on the Tbilisskiy Gorkom the increase in the average annual gross agricultural product in the GSSR has constitute 59 percent, whereas in the country as a whole it stands at 23 percent. Almost twice as much gross output is produced per 100 hectares of agricultural land in the republic than the average for the country, and we also produce more meat and milk here. However, we should not flatter ourselves with these indicators. Ultimately the main criterion here is satisfaction of the population's food requirements. And we all recall full well the justified criticism of Comrade L.I. Brezhnev, who reproached us for not yet producing sufficient agricultural products, particularly animal husbandry products, per capita.

Labor productivity in agriculture here is almost less than half the average for the country. A great deal of work has to be done to increase the yield of a number of agricultural crops and animal husbandry productiveness. Thus in reaching the union-average indicator in cow milk yield we could increase annual milk production by more than 100,000 tons without an increase in the herd! This is almost one-third of the milk produced on the republic's public farms.

Huge potential is revealed by the better use of improved land. Securing the union-average per hectare yield of a number of crops here, the republic's rural workers could right now additionally obtain approximately 80,000 tons of cereals, 70,000 tons of vegetables and so forth.

Speaking of the union average, we must not overlook such an important sphere as science and scientific-technical progress.

Our successes here, comrades, are well known. In the 10th Five-Year Plan the savings for republic Academy of Sciences' institutes constituted R140 million and were twice the level achieved in the previous 5-year plan. Great progress, indeed. Many of the most important indicators of the activity our leading academic establishments like, for example, the institutes of metallurgy and mine engineering are on a par with the country's best scientific research institutes. And we are proud of this.

Nonetheless, we know full well that many of our institutes are still far from this level, are often running idle and are not concerning themselves with the practical introduction of developments. I suggest that this question requires the closest attention and serious study.

Preparations for a plenum on science and scientific-technical progress are now almost complete here, a plan for the development of scientific-technical progress both in the republic as a whole and in individual sectors for the next 10 years is being developed and the main goal-oriented programs are being shaped. You know that it is not the first year that we have done such work. In a word, we know what tasks to set and what frontiers to chart.

III

Having embarked on the second year of the 11th Five-Year Plan, we should highlight particularly certain of its distinguishing features about which L.I. Brezhnev spoke at the 26th party congress and, primarily, emphasize the need for the formulation of a fundamentally new approach and fundamentally new attitude toward all economic work.

"The economy must be economical"--these words of L.I. Brezhnev should be for us a long-term action program. It has to be said plainly that the present style and methods of management have largely taken shape by proceeding from the fact that our country is very rich in every conceivable mineral and other natural resources. We are frequently very, very extravagant and sometimes simply barbaric in our treatment of our resources and organize all business without thinking of the economic aspect and the final result.

Yet the present scale of the economy's development reminds us increasingly often that raw material, fuel-energy and other potential cannot be unlimited even in such a rich country as ours. In addition, the production of many resources is shifting increasingly to regions which are difficult of access.

Thus the point today should be that we cannot evaluate our economic planning with the former yardsticks, caring only for the quantitative aspect of the question. Something else is now of importance together with this: the factors and the price at which the high production growth is secured.

"The intensification of the economy and its increased efficiency consist, to transfer this formula to the language of practical deeds," Comrade L.I. Brezhnev said at the 26th party congress, "consists primarily in ensuring that the results of production grow more rapidly than expenditure thereon and that while involving comparatively fewer resources in production it be possible to achieve more."

Particular relevance is attached to this proposition under the conditions of our republic, where resources are to a certain extent limited and the material consumption of production is quite high. The proportion of raw materials and intermediate products (including auxiliary materials) in the structure of expenditure on industrial production in 1980 constituted 74.3 percent here compared with 66.7 percent for the country on average, and it amounts to 95-96 percent in such sectors as viniculture, tobacco and certain others. Specific features are reflected here, in the main, but there are our own mistakes also. It has been calculated that just a percentage reduction in material outlays in the republic's industry would signify a savings of approximately R80 million. And this is the equivalent of the volume of output of such an enterprise as the Gori Cotton Works, which employs several thousand highly skilled workers.

This is why we set our entire party organization, every communist of the republic and every worker a task of tremendous national economic significance: securing the planned rate of production development and producing the biggest increase in output with the least expenditure of material, labor and financial resources.

We draw the attention of all participants in our party-economic aktiv meeting to economies and the need for zealous management. Remember that we can no longer develop the republic's economy continuously, rhythmically and proportionately without the strictest economies in resources. We appeal to all of you, comrades, to join actively in the struggle for the strict observance of the practice of economies and to make this struggle truly universal.

Unfortunately, not everyone everywhere is treating questions of the economical and rational expenditure of material resources with due party responsibility and scrupulousness. Thus there has been considerable overexpenditure of rolled ferrous metal at the Rustavi Foundry and "Tsentrolit" Plant, in the Tbilisi Tool-Building Production Association, at the Sukhumi Gas Fixtures Experimental Plant, the Batumi "Bytmash" Plant and other enterprises.

Or what kind of economies can we talk about at all when, for example, in breach of the established rules, the Ministry of Rural Construction's Ferroconcrete Products Plant No 2 sold on the side more than 800 tons of metal, over 900 tons of cement and roughly 3,000 tons of sand and broken stone? The impression is created that the managers here are not managing but lording it. I believe that the Ministry of Rural Construction and Comrade I.A. Kharatishvili, minister of rural construction of the republic, should investigate the activity of this enterprise in greater depth. It is also necessary to get to know in detail the state of affairs at certain other enterprises of which such trends are characteristic.

A big role is assigned our supply organizations, primarily the republic State Committee for Material-Technical Supply, in the business of increasing the efficiency of the use of material resources. It is not fortuitous that Comrade A.I. Buadze, chairman of the Gosplan, was appointed chairman of the Interdepartmental Commission for Economics in and the Rational Use of Material Resources and coopted onto the republic Council of Ministers Presidium. This commission's first steps implant the hope that it could be a truly fighting body directing the struggle against lax management, extravagance and the uneconomical expenditure of material resources.

Unfortunately, many of our managers have a quite abstract idea of financial activity and sometimes display dependent sentiments and a dependent attitude toward state resources. Financial discipline is particularly inadequate here at certain enterprises, on kolkhozes and sovkhozes and in construction. There are many organizations which, having obtained bank credit, do not even think about returning it and have become accustomed to having their debts written off. We can no longer tolerate such a situation.

The financial state of many of our organizations is a cause for serious alarm and concern currently. I recently visited the Georgian office of the USSR Gosbank. And I was convinced that our party workers and economic planners take a look at the banks and financial and statistical bodies rarely and to no purpose. Go there a little more often, they would provide you with many useful conclusions, and you would learn much of interest. What the bank workers told me induced profound reflection. It turns out that on the one hand we have a high rate of industrial development and agricultural production and processing industry growth, the assimilation of capital investments is increasing unswervingly and so forth, but, on the other, the financial situation, financial status of enterprises, farms and organizations is deteriorating from year to year. Under different social conditions many enterprises which we consider progressive would have been forced to declare themselves bankrupt long since. Nor would it harm us also, incidentally, to be a little stricter.

A considerable number of business entities are eating up not only their own but also borrowed working capital. This means that if such an enterprise or such an organization were to auction off, as they say, all its property--buildings, installations, equipment, production stock, finished products--this still would not be enough to pay off the debts. We cannot manage like this.

The Ministry of Construction, Ministry of Rural Constuction, Ministry of Construction Materials Industry and Ministry of Local Industry system alone had more than 50 such enterprises, and the shortage of working capital was in excess of R17 million.

Comrade Z.A. Pataridze confirms that we annually pay for the faults of almost every ministry. This amounts to several tens of millions of rubles a year. A very grave financial situation has taken shape at enterprises of the metallurgical, chemical and certain other sectors of industry. Comrade O.N. Suladze, director of the Rustavi Foundry, and other enterprise leaders should go to the bank and find out why they are incapable of providing themselves with their own resources and are living mainly on bank creidt, paying a higher-than-usual interest on it.

This is a very serious problem. It also confronts agricultural enterprises and organizations in all seriousness. Merely owing to the late return of credit, the republic's farms incurred losses in 1980 of the order of R21.6 million and of R32.2 million in 1981.

On some occasions almost all the indicators at an enterprise are high, and we consider it progressive, but when we start to look a little closer at its financial activity, we find a complete mess. It is with good reason that it is said that finances are a mirror of an enterprise's management activity. And we are reflected in this mirror in far from the best light as yet.

Essentially it transpires that we have not yet learned how to count money and we treat credit recklessly, taking without thinking about the fact that it has to be returned. And we take because we are sure that when the time comes to pay it back, the state will write off all debts.

It is for this reason that we say that a revolutionary turnabout in the style and methods of management activity, in the agro-industrial complex also, is literally essential now.

Certain of our comrades manifestly have a selfish departmental understanding of the humanism of our state and do not think about the fact that it cannot be unlimited and that sooner or later it will hold every leader accountable for the use of state resources. We should give thought to sharply raising in every instance the responsibility of financial services, ministers and deputy ministers in charge of finances, chief accountants, financial-economic administration leaders and so forth. These are very important components of economic management.

Recently for some reason or other we have stopped paying attention to the formation of such an important economic indicator as production costs. It was believed for a long time that since profit and profitability were the evaluative and fund-forming indicators, production costs would be regulated of their own accord, mechanically.

But this idea proved mistaken. Life and practice confirmed once again that under the conditions of the operation of objective economic laws each economic category has its own part to play in management activity and that for this reason it is necessary to treat each of them with the utmost attention. As soon as we abandoned control of the process of the formation of production costs, the stable trend toward their reduction ceased to be traced in practically all sectors of the economy and the stable decline in expenditure per unit output came to a halt.

According to the results of last year, 156 of the republic's industrial enterprises or one out of every five almost failed to cope with fulfillment of the plan for production costs and overspent the mark by R86 million.

The Rustavi Foundry permitted an increase in product costs of R14.4 million and the Rustavi Chemical Plant an increase of R22.6 million. Compared with the 1980 figures the number of industrial enterprises which exceeded planned commodity product prime costs increased by 31, and their proportion rose from 14.1 percent to 17.2 percent.

The prime costs of the main agricultural products are increasing. Thus whereas in 1975 the production of 1 quintal of corn on the republic's sovkhozes cost R17, in 1980 it cost R23. A similar trend can be traced in other crops. It may be explained partially by objective factors, but it mainly all boils down to the fact that far from full use is yet being made of available potential.

Production costs are growing in other sectors of the economy also. And the impression is that not many people are that concerned. No one has attempted to analyze the state of affairs in skilled manner and on a high professional level and to introduce constructive proposals on this score.

The level of financial planning, on which both the successful fulfillment of production programs and economic results largely depend, is impermissibly low in many ministries and associations and at enterprises.

For 1981 the Ministry of Fruit and Vegetable Industry planned a profit for the "Gruzkonservprom" Association without regard for an increase in production costs in connection with the increased purchase prices on a number of types of agricultural raw material. As a consequence of such a languid approach or incorrect planning and also because of other reasons the planned profit was undercalculated here by more than R14 million. And this profit is part of the balance sheets not only of the ministry but of the entire republic also. This year the same "Gruzkonservprom" had had planned for it a profit increase of 67 percent! It is incomprehensible what is to occur here for profit to increase in a year in such proportions. If this could be the case and the comrades convince me of this, then we have an utterly irresponsible attitude toward the formation of plans, financial included.

Or, another example. The Ministry of Rural Construction has planned to obtain 80 percent of the annual profit and all 100 percent of payments into the budget in the second half of 1982. It is, of course, difficult to understand what has guided the comrades here, but even now there is no doubt that by the end of the year the ministry will find itself confronted with insurmountable financial difficulties.

I would like to mention in this connection that no one, of course, is insured against mistakes. And it is not fortuitous that it is said that people learn from mistakes. But the trouble is that the mistakes from which certain of our managers are learning are costing our society and our people too dear. We should evidently learn from positive experience.

It is necessary to perform work better on increasing production profitability and liquidating unprofitability in the republic's agriculture, and in other sectors also, particularly construction.

A new form of equalization of the economic operating conditions of kolkhozes and sovkhozes located in different natural-economic zones was applied in the republic at the start of the 1970's. Approximately R30-40 million was built up annually in a special account in the Georgia Ministry of Agriculture from deductions from the purchase prices of highly profitable crops. The economically weak kolkhozes and sovkhozes were paid subsidies from this account. In a word, instead of the debts being paid off from state resources, a certain mechanism was found for the redistribution of net proceeds between the highly profitable and unprofitable farms, to which belonged the mountain kolkhozes, in the main. As a result approximately 200 unprofitable kolkhozes became profitable and more than 150 farms improved their financial position on average annually.

Furthermore, following a decision of the Georgian Communist Party Central Committee and the republic Council of Ministers, subsidies were sometimes allocated for a specific purpose--the construction of production premises and the planting of perennial plantations and also replenishment of the working capital of the interfarm organizations.

It has to be said bluntly that far from all specialists and leaders of farms and rayons of the republic and not all scientists consider this method of equalization of economic conditions optimal and warranted. Without disputing this argument I would nonetheless like to mention that the comrades have not, unfortunately, proposed anything better. And in the meantime this system is helping us raise the economy of the loss-making farms considerably.

The opinion, on the other hand, that the forms of equalization of economic operating conditions being applied in the republic do not contribute to an increase in production on the unprofitable farms and engender a dependent mood is mistaken. Graphic corroboration can be cited: the gross product and gross revenue on the economically weak farms increased more than 6 percent in 1980 compared with 1977, and an even higher rate was achieved for certain crops and leading sectors.

Furthermore, the republic's agriculture as a whole is a sector which is working profitably, and this is, of course, a big achievement of our rural workers.

At the same time the Georgian Communist Party Central Committee considers that the existing form of work requires further refinement, particularly now, when we have created in the rayons new highly competent management authorities in the shape of agroindustrial enterprises.

It would evidently be correct for the republic Coordinating Council for Administration of Agroindustrial Complexes with the participation of all interested authorities to analyze in detail the work done in this field and to submit its proposals to the republic government by this June.

The growth of production costs and the nonfulfillment of profit and profitability plans, comrades, testifies to the low level of economic thinking of certain leaders and an inability to manage intelligently and with regard for the economic conditions taking shape. Accounting and accountability is organized unsatisfactorily, an in-depth analysis of economic-financial activity is lacking and financial control is inadequate at many enterprises and in many organizations. After all, it is precisely here that the sources of the variety of transgressions and, sometimes, crimes which are of serious concern to us are to be found.

Pay attention! Workers of financial and economic services were involved in all the major embezzlements which have been uncovered in recent years in the republic. And they took advantage of the fact that certain of the republic's ministries and departments are still not paying due attention to questions of an improvement in the organization of accounting and planning and economic work and are being impermissibly slow to introduce progressive methods and forms of accounting.

In a number of organizations, accounting and accountability has been so neglected that it is impossible to conduct an audit even without their preliminary regulation. Where the accountant does not stand on guard of the law, the conditions are created for the misappropriateion of socialist property. It is not fortuitous that we consider that Soviet society has entrusted to the accountant a very responsible and humane function--that of preventing and forestalling crimes and transgressions.

Exposing and punishing--this is not all, it is not even the most important thing. The main thing is preventing transgressions and not bring matters to the point where it is necessary to resort to punitive practice. For this reason we attach particular significance to financial control, which has been entrusted mainly to the workers of the accounting offices and planning-economic and financial services of the enterprises and organizations. Where these services are on top of their situation and are performing their duties fully, there are virtually no transgressions. This is why it is important that the office of accountant, economist, planner and financial expert may be held only by a worker whose moral makeup is not in doubt. We must all together give thought to the training of these cadres again and again. We do not have enough of them, and, furthermore, their knowledge does not correspond to current requirements. It is evidently necessary to support the corresponding proposals of the republic Ministry of Higher and Secondary Specialized Education on this question.

An examination of the income and expenditure balance sheets of the economic authorities at various levels should be an effective instrument of an improvement of the financial activity of ministries and departments and enterprises and organizations. Positive experience in this respect has been accumulated in certain agrarian-industrial associations. All balance sheets here are given a preliminary thorough analysis with the participation of qualified specialists, a conclusion is drawn with respect to them and only after this are they passed. Such an examination of the balance sheet is undoubtedly useful and effective.

Unfortunately, however, this is being done far from everywhere. Even in the system of such a competent and authoritative body as the Ministry of Finance, where serious steps have been taken recently to rectify the situation, certain local services permit formalism. The economic authorities' balance sheet is analyzed superficially. It amounts, as a rule, to someone making a little noise and criticizing half-hearted managers a little, and as a result, all debts are paid off from state pockets.

This is why we demand that this entire work be switched to a new channel. It is essential that the Georgian Communist Party Central Committee departments and republic Council of Ministers give careful thought to the question of the preliminary study of ministry, department and association balance sheets with the obligatory enlistment of chiefs of the appropriate administrations and Gosplan, Stroybank and Ministry of Finance executives.

We emphasize once again: it is necessary to educate people so that they know how to count each kopeck and each ruble of state resources. We have no other more practicable sources now for enhancing the people's well-being.

IV

Exceptional importance is attached to an improvement in enterprise and organization financial activity in the process of reorganization of the economic mechanism. A regenerated economic mechanism presupposes the strong financial position of each organization.

This work has begun in the republic. Comrade Z.A. Pataridze spoke about it in detail in his report. It is now important to strive for the utmost acceleration of the measures being implemented.

In this connection I would like to emphasize that any improvement in the economic mechanism, wherever this process may be under way--in industry, transport, construction or in the agroindustrial complex--there is not the least diminution in the party committees' responsibility for the state of affairs in this sphere.

It is natural that there is a considerable increase in the responsibility of the party authorities.

First, following the transition to the new evaluative criteria and indicators, there is an immeasurable increase in the significance of economic initiative and a creative approach to matters and one's duties. The party committee and party organization must, accordingly, be able to spot in good time the shoots of everything new and useful in the collective, support a necessary undertaking, not kill people's thirst for independent thinking and contribute to the manifestation of socialist enterprise. Enormous tact, a keen sense of what is new and the highest competence are required here.

Under the conditions of an improvement in the economic mechanism a big role is beginning to be performed by such public forms of production management as collective contracts and permanent production conferences, and socialist competition is acquiring a more solid foundation. And all this with, undoubtedly, an indispensable strengthening of party influence of the most varied spheres of the life and economic activity of the labor collective.

Second, the development at the enterprise of new forms of the organization and remuneration of labor, primarily the brigade form, is enhancing appreciably the role and significance of the local party elements--the primary and shop party organizations. Under the new conditions the brigade is not only a production but also social organism. Through this organism and through the party groups in the brigades the party committees have a chance to reach each member of the labor collective and raise the level of political education.

Third and finally, a fundamentally new approach to the organization of all managerial activity takes shape with the transition to the new evaluative indicators and criteria. The task of the transition from volitional to professional, scientifically substantiated methods of management arises in full measure. The party committees are called on to contribute in every possible way to an increase in the practical authority of the managerial bodies and the streamlining of management in all components of production, as far as the brigade. After all, the brigade leader, comrades, is now an important leader and important organizer of production.

At the same time the party authorities are acquiring a chance to view problems more broadly and tackle them more confidently, having an impact on an increase in efficiency and work quality not by economic but purely party methods of management, and to pay more attention to ideological and organizational support for economic activity and the increased awareness of each worker.

The reorganization which we are currently effecting in each rayon's agrarian-industrial complex is also essentially connected with the streamlining of the economic mechanism. We have spoken repeatedly of the need for the creation in the rayons of a finely tuned mechanism via which it is possible to control and influence the state of affairs in economic activity. And now, we believe, such a mechanism is being created here in the shape of the rayon agro-industrial associations. This is a real force and real level of management.

The party committees' tasks not only are not simplified but, on the contrary, become more complex here with the creation of new management systems in our rayons. They are obliged to create the necessary conditions for the development of the independence and initiative of the newly created associations, prevent petty tutelage and not substitute for them in work. A new approach to party work in principle is needed, as is the reorganization of party leadership of all business organizations.

The raykoms are relieved here of a number of functions connected with coordination of the activity of various subdivisions, from the need to intervene in practical organizing activity and so forth, which is perfectly natural. They influence the state of affairs via the associations.

As the experience of Makharadzevskiy, Abashskiy and certain other raykoms shows, there is a corresponding increase in their responsibility in the formulation of the long-term directions of the development of agricultural production and the entire agro-industrial complex, in the selection and assignment of executive personnel, in the exercise of systemic supervision of the fulfillment of party directives and plan quotas, a rise in the level of leadership of the primary party organizations and so forth.

The raykom acquires additional opportunities to assist the growth, formation and training of managers. It should be remembered that under the present conditions the manager must possess an impeccable sense of what is new and an ability to see the long term, take an intelligent risk and display creative approach to work and initiative, socialist enterprise and professionalism.

It has to be said that questions of party work under the new conditions have not yet been studied in sufficient depth. They undoubtedly merit the most serious attention and theoretical generalization and careful scientific processing. And it is time we tackled this problem.

We attach particular significance today to bring ideological work closer to economic building. As has already been emphasized, the high awareness of each worker and each leader is a most important condition of the reorganization being effected in industry, construction, transport and agriculture. It is essentially a reorganization of the entire economic philosophy of life.

The skillful management of production and the universal implementation of the practice of economies largely depend on the direct producers of physical assets--our workers--on the level of their awareness and responsibility, on the extent to which a sense of duty and a proprietorial attitude toward socialist property has been cultivated in each of them and on the moral and material stimulation of good work.

The successful solution of the problems of the broadening of economic initiatives and the efficient use of material, labor and financial resources are inconceivable without an improvement in the economic thinking and a rise in the level of the economic training of leaders, specialists, workers and kolkhoz members. This is why today we must sharply raise the demands made on the system of the working people's economic training and economic studies.

At the same time we should continue to step up in every way possible the quest for new, more efficient forms and methods of raising the level of our workers' economic thinking and awareness.

In the years which have elapsed since the adoption of the CPSU Central Committee decree on the Tbilisskiy Gorkom we have come to find a common language with people far better and have learned to be truly candid and to consult with them and persuade them. We have understood that in order to raise the workers' creative activeness it is first necessary to create all conditions for its manifestation and to provide abundant soil for initiative and creativity. The possibilities of the man of labor are truly unlimited. His energy and devotion to the cause are really capable of working miracles. And all 10 years of the work of our party organization on fulfillment of the decisions of the CPSU Central Committee with respect to the Tbilisskiy Gorkem are the most graphic and convincing confirmation of this.

CSO: 1800/998

LENINGRAD CITY, OBLAST INDUSTRIAL PERFORMANCE

Leningrad LENINGRADSKAYA PRAVDA in Russian 16 Feb 82 p 1

[Article by I. Strogov, economic observer of LENINGRADSKAYA PRAVDA: "The Competition is Producing Impressive Results: How We Performed in January" under the rubric "Economic Survey"]

[Text] January is a particularly responsible month. It is then that, as a rule, Soviet workers complete the drafting of their yearly socialist pledges and counter-plans, defend them, adopt them, and commence to implement them. Now the pledges and the calculations substructing them have been worked out not only for the consecutive year 1982 but for the entire 11th Five-Year Plan. They have become a living and effective response to the decisions of the November (1981) Plenum of the CPSU Central Committee and the laws adopted by the Sixth Session of the USSR Supreme Soviet. A prominent role in implementing the tasks they pose belongs to the workers of Leningrad and the oblast, who are called upon to assure during the current five-year plan period, as during all the preceding such periods, a high growth rate of scientific and technical progress.

And while they tangibly influence the growth of the national economy by their participation in the fulfillment of scientific and technical programs and through the introduction of up-to-date types of equipment, the workers of the Leningrad industry also expand their own industrial potential--they put into operation new production capacities, modernize enterprises, and increase output on improving its quality and technical level. As pointed out at the meeting of the aktiv of Leningrad and the oblast held last January, the industry of Leningrad has every possibility for overfulfilling the targets for higher production in 1982 and in the first two years of the five-year plan. The plan provides for a 6.1 percent (cumulative) increase in output, but the pledges made envisage an increase of at least 6.4 percent. Given the current scale of production this seemingly small difference of three tenths of a percent means tens of millions of rubles in additional output.

In January the industrial enterprises of Leningrad and the oblast provided the national economy and the population of this country with varied output exceeding the monthly target. Compared with January of last year, the mean daily volume of output increased by 3.2 percent. This should not, however, obscure the negative aspect of the performance of the industry of Leningrad.

Unfortunately, the old shortcomings resurfaced in the new year. The principal shortcoming is the violations of plan discipline. For January as a whole, 85 enterprises of Leningrad and the region underfulfilled the planned output targets. Eighty-six associations, combines, plants, and factories failed to attain the targeted level of labor productivity.

Are the targets excessive and unrealizable? Even if that had been so, economic managers are still responsible for failing to balance at the right time the requirements of the plan with the real possibilities of the enterprises and hoping that this would be achieved through subsequent revisions. As a rule, however, this is not the point. In most cases the causes of underfulfillment are attributable to oversights and miscalculations in the organization of management, production, and labor, underestimation and weak utilization of advanced knowhow, and omissions in political-educational work.... It is a party directive that not a single instance of underfulfillment of targets should be ignored, that the specific causes of such underfulfillment should be thoroughly analyzed, operative steps should be taken to eliminate them, and the energy and initiative of the labor collectives should be mobilized to avert future lagging.

In this connection, concern for the near future dictates that the errors of the previous years should not be repeated, that the serious exertions to fulfill the plan should not be postponed until the second half, or even sometimes until the concluding fourth quarter of the year. The "Nevskiy Zavod" Association imeni V. I. Lenin is now acting farsightedly in this respect; there the yearly plan of marketable output has been broken down into quarters of the year in proportion to the number of work days in each quarter. An even greater foresight is shown if emphasis is placed on producing ahead of schedule in the calendar periods, as is besides, properly speaking, required by the socialist pledges.

With each year the scale of co-production increases and economic links broaden and multiply. This is a natural and progressive process. It is natural as well that the requirements posed to those who carry out and direct this process are increasingly tighter. This applies especially to the workers of Leningrad enterprises whose products are utilized in every branch of the national economy and in every kray of our vast country and, as a rule, influence their technological and economic development. The prompt shipment of equipment, facilities, and instruments ordered from Leningrad builders and industry people is often essential to the on-schedule activation of new shops, plants, power stations, and productive capacities; the on-schedule deliveries of consumer goods in the necessary variety are often essential to the uninterrupted supply of these goods to broad masses of the population.

It would seem a simple rule that customers and recipients should be provided with /what is needed and when it is needed/ [in boldface]. Unfortunately this rule is far from being followed by all and always. Last year in Leningrad and the oblast roughly every second enterprise (from among those reporting on this indicator) did not adhere to the schedule for delivering its products in the variety specified in the contracts and orders placed with it. Last January the number of such enterprises did diminish but little. Altogether the shortfall in the planned volume of supply to their customers amounted to 7.4 percent.

In its relations with its partners, every enterprise acts as both a supplier and a customer. Thus, in their capacity as customers, the Leningrad enterprises often experience on their own what it means to wait for delayed shipments of the raw and other materials, machinery, instruments, tools, components and elements, and products that they need for their own production.... This was not the least of the reasons why the fulfillment of the output plan in January was complicated. This affected the performance of, for example, the Elektroapparat Association, the factory imeni V. Slutskaya, and certain other enterprises.

Delivery discipline is an organic ingredient of plan discipline. It is not enough to fulfill or even overfulfill the output target in terms of its financial value; what is also needed is to provide the particular products expected by the customers. Otherwise, disruptions in operation are inevitable not only among the closest co-producers but also, in their turn, among their customers. Hence and quite justly the responsibility for violation of economic contracts and for delayed and incomplete fulfillment of the orders of customers has been tightened, and material sanctions for failure to deliver have been made more severe.

A great event in the socio-political life of our country is nearing--the 17th Congress of Trade Unions of the USSR. Trade unions are the principal mass organization of workers. In the widely known terse and yet exceptionally capacious definition provided by Lenin: trade unions are the school of communism.

On the eve of their 17th Contress, the trade-union organizations are promoting with renewed strength the nationwide competition for a worthy welcome of the 60th anniversary of establishment of the USSR. In Leningrad and the oblast more than three million people are competing under the tried and tested slogan, "From the high quality of the work of each to the high effectiveness of the work of the collective!" The economic substance of this competition lies in an efficient and purposive utilization of all resources--manpower, material, energy and financial. It represents, as it were, the confluence into a single channel of the efforts of all participants in the campaign for an economical economy, who enhance personal and brigade output, save metals, fuel, cement, cotton and electricity, activate new productive capacities ahead of schedule, and operate existing equipment under greater loads....

Many workers strive to celebrate the 17th Congress of Trade Unions in a purposeful manner by improving the quality of their performance and increasing production efficiency. Thus, in Leningrad and the oblast 150,000 workers resolved to fulfill their plan targets for the first quarter of the year by 16 March--the opening day of the congress.

We are now in the middle of the first quarter. The fulfillment of the related plans and pledges largely hinges on the results to be achieved in February. This shortest month of the year contains, however, at present as many work days as there were in January. All workers of the industry of Leningrad are called upon to fully utilize each of these work days for highly productive work and to produce in February more than has been achieved in January. Their exerted efforts and creative endeavors will serve to translate into reality the socialist pledges adopted for the second year of the five-year plan--for the year of the 60th anniversary of establishment of the Soviet Union and the 65th anniversary of the Great October Revolution.

UNION PARTY OFFICIALS ADDRESS 14TH KIRGHIZ TRADE UNION CONGRESS

Report on Proceedings

Frunze SOVETSKAYA KIRGIZIYA in Russian 19 Feb 82 p 1

[Text] An increasingly large role in our country's political system and the development of socialist democracy is being performed by the trade unions--an influential public force. Under the leadership of the CPSU, they are successfully carrying out their high assignment--being a school of control, a school of management and a school of communism in which thousands and thousands of working people are coming to grips with the science of production management and learning to live and work like Lenin. The trade unions' entire multifaceted activity is geared to a reorganization of social relations on the basis of communist principles, an unswerving upsurge in the Soviet people's well-being and an improvement in their living and working conditions. An important contribution to the successful accomplishment of this noble task is also being made by the trade unions of Soviet Kirghizia.

The 14th Congress of Kirghiz Trade Unions opened 18 February in Frunze, in the Kirghiz Communist Party Central Committee Political Education Center. From shops and mines, construction sites, fields and farmsteads, scientific laboratories and educational institutions, state establishments and creative organizations have come emissaries of the republic's most populous public organizations to collate experience in organizational and educational work in the struggle to implement the decisions of the 26th CPSU and 17th Kirghiz Communist Party Congresses and chart new paths to the further development of nationwide socialist competition for an increase in production efficiency and work quality and a worthy greeting of the 60th anniversary of the USSR.

The congress was opened by E. Abakirov, chairman of the Kirghiz Council of Trade Unions.

The delegates elected a presidium for the congress.

The seats in the presidium were taken by T.Kh. Koshoyev, A. Duysheyev, V.A. Makarenko, K.N. Kulmatov, A. Dzhumagulov, P.I. Naumov, P.M. Khodos, N.G. Minich, K.M. Moldobayev, A.M. Masaliyev and N.P. Lomov, members of the Kirghiz Communist Party Central Committee Bureau; Dzh.Ch. Tashibekova and V.K. Dolmatog, candidate members of the Kirghiz Communist Party Central Committee

Bureau; AUCCTU Secretary L.A. Zemlyannikova; S.Z. Shpilevoy, exeuctive of the CPSU Central Committee; leaders of the republic's party, soviet, trade union, Komsomol and management organs; and figures of science and culture, labor veterans, production pacesetters and trade union activists of the republic.

The CPSU Central Committee Politburo headed by Comrade L.I. Brezhnev, general secretary of the CPSU Central Committee and the chairman of the USSR Supreme Soviet Presidium, was elected honorary presidium unanimously and with tremendous enthusiasm.

The delegates elected the secretariat and editorial and credential committees of the congress.

The agenda and time limits were passed. The following questions were presented for discussion at the congress:

1. Report on the work of the Kirghiz Council of Trade Unions and the tasks of the trade union organizations in light of the decisions of the 26th CPSU Congress.

2. Report of the Kirghiz Council of Trade Unions' auditing committee.

3. Election of the Kirghiz Council of Trade Unions.

4. Election of the Kirghiz Council of Trade Unions' auditing committee.

5. Election of delegates to the 17th Congress of USSR Trade Unions.

The report of the Kirghiz Council of Trade Unions was delivered by E. Abakirov, chairman of the Kirghiz Council of Trade Unions.

The report of the Kirghiz Council of Trade Unions' auditing committee was delivered by committee chairman A.I.Shevchenko.

The following participated in the debate on the reports: K.A. Abdyrazakov, chairman of the Oshskaya Oblast Council of Trade Unions; A.T. Tokoyev, arc welder of the Frunze Auto Assembly Plant; M.O. Konurbayev, KiSSR minister of local industry; Ye.S. Povorova, chairman of the republic Committee of Education, Higher School and Scientific Establishment Workers Trade Union; R.V. Ivanchenko, miler at Alamedinskiy Rayon's Sovkhoz imeni Karl Markx; T.A. Luchko, chairman of the republic committee of the Textile and Light Industry Workers Trade Union; Ch.T. Aytmatov, chairman of the KiSSR Cinematographers' Union; G. Duyshenaliyeva, machine operator of Kochkorskiy Rayon's Tendik Sovkhoz; M.V. Yendovitskiy, chairman of the KiSSR State Committee for Labor; K. Kadyrbekov, chairman of the republic Council for the Management of Trade Union Resorts; O.D. Alimov, vice president of the KiSSR Academy of Sciences; K. Kadyrov, driver at the Przheval'sk Head Motor Transport Enterprise; Kh.A. Akeneyeva, chairman of the republic Committee of Food Industry Workers Trade Union; L.V. Bogacheva, weaver at the Osh Cotton Production Association imeni 50-letiya Oktyabrya; V.I. Ugarov, director of the Frunze Instrument Building Plant imeni 50-letiya Kirgizskoy SSR; and O. Turgunbayev, KiSSR minister of health.

The congress received and approved the report of the Credentials Commission delivered by K. Dyykaibayev, secretary of the Kirghiz Council of Trade Unions.

Participants in the congress were greeted by Pioneers from the republic capital.

The congress received numerous greetings from trade unions of the fraternal union republics, trade union central committees and other organizations and the labor reports of labor collectives and production pacesetters.

The 14th Congress of Kirghiz Trade Unions continues on 19 February.

Union Council Chairman's Speech

Frunze SOVETSKAYA KIRGIZIYA in Russian 19 Feb 82 p 2

[KirTAG abridged report on speech by E. Abakirov, chairman of the Kirghiz Council of Trade Unions, at 14th Contress of Kirghiz Trade Unions 18 February 1982]

[Excerpts] For the trade unions of Soviet Kirghizia, as for the trade unions of the entire country, there is no more important task than being the party's dependable support among the masses and contributing in every possible way to the implementation of its wise domestic and foreign policy.

The republic's working people coped successfully with 10th Five-Year Plan quotas. Total industrial output increased 27 percent in the 5 years, R220 million worth was sold over and above the plan and the national income in this time increased by R3 billion. R4.7 billion in capital investments were assimilated, and 58 new industrial enterprises and shops were commissioned.

The republic's trade unions also contributed considerably to the successes. Socialist competition was and remains a principal avenue of their influence on an upsurge in the economy. These questions are regularly examined at plenums and meetings of the Presidium and Secretariat of the Kirghiz Council of Trade Unions and in the trade union councils and committees. A Scientific Council for Problems of Further Improving the Organization of Socialist Competition is operating under the auspices of the republic Academy of Sciences, and corresponding recommendations have been formulated in conjunction with the KiSSR State Committee for Labor.

More than 1.11 million persons are currently participating in socialist competition. There are more than 630,000 persons in the ranks of the participants in the movement for a communist attitude toward labor. Approximately 60,000 specialists and more than 200 scientific research institutes, planning design organizations and industrial enterprises are competing on the basis of creative personal and collective plans and in accordance with cooperation contracts.

At the same time, the speaker said, there are many shortcomings and gaps in the organization of socialist competition in light of the requirements of the

26th party congress, the decisions of the CPSU Central Committee November (1981) Plenum and the instructions of Comrade L.I. Brezhnev. The Kirghiz Council of Trade Unions, individual trade union councils and committees and factory-plant and local committees are still reconciled to formalism in this important matter. The role of competition as an effective means of developing the working people's creative initiative and activity has declined and the competitors' are not concentrated on achieving high final results in certain labor collectives. Pledges are frequently adopted without regard for potential and without economic substantiation and are not supported by organization-technical measures. This is one of the reasons why, in the 10th Five-Year Plan, 20-25 enterprises failed to cope with the production plans annually.

Despite the instructions of the 26th CPSU Congress that counterplans should be compiled as the basis of labor rivalry, work on their compilation has deteriorated in recent years. This is a serious shortcoming both of the republic ministries and sectorial trade union committees and the Kirghiz Council of Trade Unions. Guided by the CPSU Central Committee, USSR Council of Ministers, AUCCTU and Komsomol Central Committee decree "All-Union Socialist Competition for Successful Fulfillment and Overfulfillment of the 11th Five-Year Plan Quotas," it is a paramount task of the trade unions to provide for the close interconnection of planning and competition and, in conjunction with managers, to quickly complete the development and adoption of counterplans for the current year.

A paramount concern of the republic's trade unions and the scientific-technical society and inventor and production efficiency expert society organizations under their jurisdiction, the speaker continued, has been concern for an increase in labor productivity.

In the 10th Five-Year Plan, scientific-technical society members carried out approximately 30,000 measures with respect to the mechanization and automation of production processes, and a savings of R336 million was obtained from the introduction of inventions and production efficiency proposals.

But the scientific-technical society and All-Union Inventor and Production Efficiency Expert Society organizations so far do not link their work sufficiently with concrete tasks of an increase in production efficiency and work quality, fail to actively assist the fulfillment of plans for the introduction of new equipment and the best use of production capacity and do not participate sufficiently in the elaboration of a set of measures for the mechanization of laborious processes and a reduction in manual labor.

As before, the republic has a large number of enterprises that are failing to ensure fulfillment of the labor productivity growth target. At many enterprises production capacity is being used in the 70-80 percent range, the equipment shift-work coefficient is low and much equipment is lying like dead weight in warehouses, becoming obsolete.

It needs to be constantly remembered in this crucial area of trade union work that in the current 5-year plan 85 percent of the increase in output is to be obtained thanks to an increase in labor productivity.

The struggle for an increase in labor productivity is inseparably connected with the rational use of work time and a strengthening of labor discipline. Much has been done in this direction in recent years. Measures to implement the CPSU Central Committee, USSR Council of Ministers and AUCCTU decree "A Further Strengthening of Labor Discipline and a Reduction in Personnel Turnover in the Economy" have been elaborated and are being implemented in conjunction with the State Committee for Labor. A republic staff for monitoring the use of work time was set up following a decision of the Kirghiz Communist Party Central Committee Bureau.

Thanks to the measures that were adopted, losses of work time were reduced 4.8 percent in the last 5-year plan. But they remain quite considerable for the republic as a whole.

Meanwhile, the material content of each man-day lost in the republic's national economy is increasing continuously and now constitutes approximately R89 in industry and R37 in construction.

It is the task of the trade union councils and committees, in conjunction with management authorities, to ensure daily, purposeful work to prevent absenteeism, reduce personnel turnover and use work time more efficiently.

A principal task set by the party for the 11th Five-Year Plan is to increase output quality. In conjunction with the management authorities, the republic's trade unions have implemented measures to introduce a comprehensive product quality control system. In the 5-year plan, the proportion of industrial products certified in the highest quality category increased 11.5 percent. However, this is considerably less than the average for the country. There are many enterprises in the republic that systematically fail to meet the targets for the manufacture of output bearing the official Symbol of Quality. The quality of construction and installation is still low. Many projects are being handed over with great amounts of work left undone. The quality of products manufactured by engineering, light, food and local industry enterprises is also giving rise to many complaints.

The slogan proclaimed by the party--"The Economy Must Be Economical"--has won nationwide support, the speaker continued. The struggle for the rational use of raw materials, intermediate products, fuel and electric power has become an important part of the republic trade unions' activity. Surveys of the savings of material and energy resources at each place of work are conducted annually in conjunction with the KiSSR State Committee for Material-Technical Supply, the Komsomol and the people's control authorities. Some 700,000 persons participated in such a survey last year alone. And more than 114,000 proposals aimed at strengthening the practice of economies were received from the working people in the 5-year period.

However, many enterprises still permit lax management and extravagance, output's material consumption is not being reduced quickly enough and insufficient use is being made of secondary resources. There are considerable losses during the shipment, processing and storage of agricultural products.

The trade union and management authorities are called on to step up work on economies and thrift and, in conjunction with the soviets, people's control authorities and the Komsomol, they create monitoring posts at the enterprises, organize spot checks and introduce individual and collective savings accounts everywhere.

Speaking of the importance of the extensive dissemination of valuable initiatives and progressive experience, Comrade Abakirov observed that the soviets and trade union committees and management authorities frequently confine themselves in this important work to just one aspect of matters--approval of a valuable initiative. Another, principal aspect--practical introduction of the initiative--is frequently forgotten, unfortunately. The republic Committee of Construction and Construction Materials Industry Workers Trade Union, for example, suffers from these shortcomings. Thus, according to the report data, the brigade contract, the Leningrad trade union groups' initiative "Not a Single Disrupter of Labor Discipline" and others were introduced in 1979 in the republic Ministry of Contruction's Frunze Construction and Installation Trust No 1. In fact it turned out that all these innovations exist only on paper.

Nor do things stand all that well with the introduction of the Frunze people's "All Supplies to the Fraternal Republics on Schedule and of Excellent Quality" initiative. Last year, a large number of the republic's enterprises failed to cope with contractual obligations with respect to interrepublic supplies. The trade union councils and committees and the management authorities should remember that under the conditions of the current cooperative relations between enterprises, sectors and republics, the precise fulfillment of plans for the supply of products in accordance with contracts and orders by each labor collective is of exceptional significance.

More initiative and persistence needs to be displayed in the fulfillment of collective contracts. More than 1,800 of them are concluded in the republic annually. Unfortunately, because of incomplete work by the administration and the trade union committees not all of them are fulfilled. Disruptions occur in the ministries of agriculture, local industry, construction materials industry, rural construction and certain others. The trade union organizations are obliged in such instances to make fuller use of their rights and apply strict measures to the guilty parties.

Concern for an improvement in the working conditions of workers and employees has always been and remains a subject of the trade unions' particular attention. A great deal of work is being performed with the participation of trade union activists on the elaboration and implementation of measures aimed at improving working conditions, the mechanization and automation of heavy and laborious processes and at improving general sanitary conditions. Some R82 million were spent to this end in the 10th Five-Year Plan, 1.6 times more than in the 9th. There was an improvement in the working conditions of more than 120,000 persons in this period. On the results of all-union public surveys of the state of the conditions and protection of labor and the domestic life and recreation of women and minors, 69 of the republic's enterprises and organizations had the title "Enterprise With a High Standard of Production" conferred on them and were awarded AUCCTU diplomas.

But work in this crucial area of trade union activity still does not correspond to modern requirements. The unsatisfactory organization of labor protection and the flagrant violations of safety equipment that occur at the enterprises of a number of ministries and departments and on kolkhozes and sovkhozes are particularly intolerable. The appropriate preventive work is being performed inadequately in agricultural production, safety equipment services have yet to be created in rayon and oblast agricultural administrations and the operation of machinery and mechanisms in a state of disrepair is permitted.

It is the duty of the republic's trade unions and management authorities to exercise more effective supervision over the fulfillment of comprehensive plans to improve the conditions and protection of labor and to strive to ensure that production is as convenient and safe for the workers as possible. Where it is a question of the working person's health, the trade union organizations must be uncompromising and implacable toward any shortcomings and omissions.

In the period under review, the republic's trade unions were constantly engaged in improving the working people's housing conditions and social life. Almost 500,000 persons improved their housing conditions in the 5 years. Measures were implemented to bring strict order to bear on the registration and allocation of apartments, develop the house-building cooperatives and improve everyday conditions in workers' hostels. But the housing problem remains acute. It is made worse by the fact that the trade unions, together with the management and soviet authorities, failed to fulfill the plans for housing construction. In the 10th Five-Year Plan alone, construction workers fell 723,000 square meters short in the supply of accommodations. A particularly big lag was allowed to develop in Narynskaya and Issyk-Kul'skaya Oblasts and the ministries of agriculture, light industry and public education.

It is essential that the trade union councils and committees put this area of work under special supervision. It is also necessary to cut short even more emphatically and strictly the least breaches of housing legislation.

Speaking of the tasks of further developing state social insurance and pensions for the working people, the speaker observed that in the 5 years, R733 million, or R290 million more than in the previous 5-year period, had been spent on social insurance needs. It is necessary in this important work to ensure the unconditional fulfillment of the plans to improve the conditions and protection of labor and sanitary-improvement measures and strive persistently for a reduction in worker morbidity.

More concern needs to be displayed for an expansion of the network of sanatoria and health centers. The republic's light industry has only one primitive health center. And there are no such health establishments, nor are they being built, in the ministries of agriculture, local industry, housing and municipal services, consumer services and trade and in the Kirgizpotrebsoyuz.

Implementing the decisions of party congresses and the CPSU Central Committee decree "A Further Improvement in Ideological-Political Education," the republic's trade union organizations are striving to ensure the unity of the working people's ideological-political, labor and moral education.

As a whole, however, the trade unions' educational and cultural-mass work does not correspond fully to the increased tasks. It is not yet sufficiently geared to the struggle against instances of indiscipline, lax management, abuses and other manifestations alien to the Soviet way of life. The trade unions are making inadequate use of such effective forms and methods of education as workers' meetings, preventive councils, public personnel departments and people's courts.

Successful performance of the tasks posed to the trade unions by the 26th CPSU Congress depends to a decisive extent on a rise in the level of their organizational work. The republic's trade unions currently unite over 1,387,000 persons. The number of primary and shop organizations and trade union groups increased considerably in the period under review. Some 39 sectorial trade union committees in rayons and cities, 9 in oblasts and 2 in republics and the Talasskaya Oblast Council of Trade Unions were newly created. It is essential to strive to ensure that each trade union group and shop primary organization work with the maximum input, constantly perfect the practice of trade union meetings and factory-plant and local committee sessions and improve the qualitative composition of the elective aktiv.

Work was stepped up in the period under review on an examination of the working people's letters and verbal appeals. Nonetheless, there are still instances of an inattentive, superficial attitude toward requests and complaints, which frequently compels people to turn to other republic and central authorities. It is the task of the trade union authorities in this important work to be guided strictly by the CPSU Central Committee decree on improving work with the working people's letter and proposals in the light of the decisions of the 26th CPSU Congress and the Kirghiz Communist Party Central Committee Bureau decree on this question.

Proceeding toward the glorious jubilee of the country of the soviets, we are all thinking with particular warmth and pride about our great multinational motherland and the amicable united family of fraternal peoples. Our friendship, which strengthens from day to day, is a reliable guarantee of successful progress. The trade unions will continue to strengthen the great friendship of the Soviet peoples.

Permit me on behalf of our congress and all members of the republic's trade unions to give the assurance that the trade unions of Soviet Kirghizia will, under the leadership of the party organizations, make a fitting contribution to fulfillment of the historic decisions of the 26th CPSU Congress.

Party Second Secretary's Speech

Frunze SOVETSKAYA KIRGIZIYA in Russian 20 Feb 82 p 2

[KirTAG report on speech by V.A. Makarenko, second secretary of the Kirghiz Communist Party Central Committee, at 14th Congress of Kirghiz Trade Unions 19 February 1981]

[Excerpts] Comrades! The 14th Trade Union Congress has become a big and important event in the republic's public and political life. During it, the representatives of more than 1,387,000 trade union members have summed up work in the last 5-year period, determined the tasks for the future and spoken of the problems that have to be solved. All the speakers were unanimous that in the period since the 25th CPSU Congress and the 16th Trade Union Congress, the tasks that confronted the Kirghiz trade union organization were tackled successfully on the whole. These years were filled with strenuous struggle of the workers, kolkhoz members, intelligentsia and all working people of the republic to realize the plans for building communism outlined by the party.

In the accomplishment of the outlined plans, a particular role is assigned to the Soviet trade unions--the most populous organization of working people--which, under the party's leadership, have become an influential sociopolitical force of our society. There is essentially no single important question in the sphere of material production, social relations or people's domestic life and education that does not come withing the competence of the trade unions and is not a subject of their attention and concern.

The report of Comrade E.A. Abakirov, chairman of the Kirghiz Council of Trade Unions, and the delegates' speeches have shown graphically the role and significance of the trade unions in an upsurge of the republic's economy, in people's education and in the development of socialist democracy.

Warmly approving and supporting the domestic and foreign policy of the Communist Party and the fruitful activity of the CPSU Central Committee and its Politburo headed by the true standard bearer of Lenin's great cause and relentless fighter for peace and social progress, Comrade Leonid Il'ich Brezhnev, the working people of Soviet Kirghizia are demonstrating high political and labor activity and a patriotic endeavor to work even better and more productively.

Actively participating in all-union socialist competition for the successful fulfillment and overfulfillment of the 11th Five-Year Plan, the Kirghiz working people scored pronounced successes in the first year of the 5-year plan in developing the economy, science and culture and raising the people's well-being. The plan for industrial output sales was fulfilled. There was an increase in labor productivity, thanks to which 84 percent of the industrial output increase was obtained. New machinery and instruments were assimilated. Some 715 industrial products were manufactured with the official Symbol of Quality, and their share of total production amounted to 11.5 percent.

The pace of capital construction increased. Some R782 million of fixed capital were commissioned, 15 percent more than was introduced in 1980. The working people acquired 526,000 square meters of housing, 9 percent more than the previous year. Plans for the commissioning of general educational schools, hospitals and clinics were fulfilled successfully.

Kirghizia's agricultural workers cultivated a good harvest, conducted the harvesting in an organized fashion and successfully fulfilled plans and socialist pledges for the sale to the state of grain, potatoes, vegetables, fruit, grapes and melon and essential oil crops and silkworm cocoons. Grain production amounted to 1.55 million tons. It was the first time the republic had harvested such a quantity of grain. The state was sold over 400,000 tons of grain, one-third more than planned. The kolkhozes and sovkhozes provided themselves fully with high-quality grain crop seeds.

Specialization of the farms in the production of corn, sugar beet, alfalfa and aromatic tobacco seeds is under way in the republic.

The stockbreeders fulfilled the annual quotas for purchases of all types of animal husbandry products with an increase in the numbers of all types of productive livestock. The quotas for supplies to the public of meat and milk stocks were also successfully fulfilled.

At the same time, comrades, we must clearly realize that the level of our work on the development of the republic's economy does not correspond to the requirements of the 26th CPSU Congress. One of every five industrial enterprises permitted a reduction of labor productivity last year. This is characteristic particularly of enterprises of the textile, food and local industry, construction materials industry and others.

Dozens of the republic's kolkhozes and sovkhozes fail annually to cope with the plans for the production and sale to the state of farming and animal husbandry products. There continue to be serious shortcomings in trade and consumer services.

We have yet to reach a point where questions concerning an improvement in the management mechanism and its increased influence on the growth of efficiency and acceleration of the intensification of social production have become the primary concern of republic trade union organizations and trade union committees and councils. Instances of disruption of the plans for the production and sale of output by certain collectives, the manufacture of low-quality products and the far from complete use of production capacity and available resources testify to this above all. The equipment shift-work coefficient is low at many engineering plants and construction industry and light, food and local industry enterprises. For example, at the Kirgizelektrodvigatel Plant, the metal-cutting machine tool shift-work coefficient was 1.45, at the Tyazhelektromash 1.31 and at the Electronic Engineering Plant only 1.25.

There are also serious omissions in agricultural production. Many of the republic's kolkhozes and sovkhozes operate at a loss from year to year.

None of these shortcomings is coincidental. They are explained by many objective and subjective factors. But the main thing is still the inability to organize production and make the maximum use of its potential and the initiative of the masses. And the trade unions, which are still making insufficient use of the rights and opportunities they have been granted for actively influencing the accomplishment of economic tasks, are also responsible for this.

The targets for a reduction in raw material and intermediate product and heat and power expenditure norms are not being met and considerable losses in the handling and storage of physical assets are being permitted at a number of enterprises. Insufficient use is being made of secondary fuel-energy resources, and lax management is being tolerated.

This work is organized particularly inadequately at enterprises and in organizations of the ministries of construction, agriculture and local, meat and dairy industry, municipal services, rural construction and reclamation and water resources and the State Committee for Supply of Production Equipment for Agriculture. We have not yet succeeded in closing off all channels of losses, waste and embezzlement in agricultural production, at processing industry enterprises and in trade, consumer cooperatives and consumer services.

And the continuing instances of petty theft, which are inflicting considerable material and even greater moral damage on our society and each labor collective, cause particular concern.

There is truly inexhaustible potential in the introduction of cost accounting and the best forms of the organization and remuneration of labor in agriculture. The rural trade unions are making an extremely inadequate study of these questions.

Comrades! The struggle to increase production efficiency and the broad use of intensive factors of economic growth presuppose a strengthening of labor discipline and the increased responsibility of every worker for the precise fulfillment of the duties entrusted to him.

Many trade union committees and managers have failed to secure fulfillment of their own measures for strengthening labor discipline, perform this work inconsistently, asystemically and irresolutely and confine themselves to general instructions.

In the struggle against violaters of labor discipline and antisocial manifestations, inadequate use is being made of the educational role of the labor collective, socialist competition, workers' meetings, the people's courts and other forms and methods of social influence. As an inspection showed, when the work of the people's courts was questioned by the Kirghiz Communist Party Central Committee Bureau, only 50 percent of the cases concerning absenteeism are submitted for examination, and even less in such sectors as motor transport and food, textile and light industry.

The inactivity and passive attitude of many people's courts toward loafers, drunkards, idlers and other transgressors is not receiving a sharp and high-minded evaluation on the part of the trade union committees and councils.

And in connection with labor discipline, we have to dwell on a further important question--the strictest observance of labor laws. The Kirghiz Communist Party Central Committee Bureau recently examined the question of the state of work with the letters and the organization of the receiving of citizens in the republic trade union committees and councils. Mention was made here of the increasingly large number of letters of labor matters. In the 10th Five-Year Plan, the people's courts reinstated in work more than 63 percent of those who had brought suit seeking reinstatement for involuntary absence and paid out approximately R190,000, and only one-third of this amount was recovered from the managers. These figures speak for themselves, I believe, comrades.

Most of the breaches of labor legislation in the dismissal of workers and employees occur at enterprises and in establishments of the Kirgizpotrebsoyuz and the ministries of agriculture, construction, rural construction, internal affairs, education, meat and dairy industry and motor transport and highways. I believe that the trade union organizations will adopt the most emphatic measures to increase even further supervision of the observance of labor legislation and bring due order to bear here.

Together with the letters and complaints pertaining to labor disputes, I would also like to mention a relatively large category of letters received by the Kirghiz Communist Party Central Committee, and not just the Central Committee. I am talking about the letters dealing with questions of accommodation. There is an ever increasing number of them with every passing year, although the rate of construction increases from year to year. There are, of course, objective factors here: We cannot satisfy everyone right away. And this is understood.

But there are also factors that should disturb us the most. These are, first, instances of the disruption of plans for the introduction of housing and, second, the continuing instances of the incorrect allocation of apartments and various violations and abuses in these areas. In the majority of cases, it is these factors that give rise to the big stream of letters being received both by the party and the trade union authorities. I believe that the trade union authorities and trade union organizations need to give the most serious attention to these shortcomings.

Comrades! A special place in trade union activity should be occupied by concern to improve the conditions and protection of labor, safety equipment and industrial sanitation. Unfortunately, even today, despite the measures that are being adopted, the level of industrial accidents remains high. For example, in the Ministry of Motor Transport and Highways the level of industrial accidents is considerably above the republic-average indicator.

It is the primary duty of the trade unions to display high-mindedness and persistence in improving the conditions of labor protection, make fuller and skillful use of all the rights they have been granted, ensure uncompromising supervision of the fulfillment of composite plans, pledges and collective contracts and hold officials (from the foreman through the minister) strictly accountable for safe, healthy conditions in production.

In this connection, there should be an appreciable increase in the role of the republic's trade unions in realizing the food program, which Comrade L.I. Brezhnev has termed the central problem of the 5-year plan. The basis of the food program is, as is known, a further upsurge in agriculture. The trade unions must operate more efficiently in the solution of this problem.

Comrades! The Communist Party and its Central Committee attach exceptional importance to a further improvement in the work of the trade unions and a refinement in the forms and methods of their party leadership. This was discussed as clearly as could be at the 26th CPSU Congress. You know that in recent years a considerable amount of work has been done to refine the structure of the industrial trade unions so that it will coresond more fully to the structure of the management of industry and the rights of the executive authorities of the sectorial trade unions will be extended. In particular, two new sectorial trade unions have been created here in the republic: the Automobile, Tractor and Agricultural Machine Building Workers and Fruit and Vegetable Industry Workers Trade Unions.

I wish to dwell primarily on the work with personnel. It has to be said that we have not yet solved this problem completely. Thus, only 40 percent of the rayon chairmen of the Agricultural Workers Trade Union Committee are specialists of this sector. Can it be considered normal that only 36.2 percent of the sovkhoz worker committee and kolkhoz trade union committee chairmen of Oshskaya Oblast are agricultural specialists? To all appearances, this is why they do not investigate the economy of the farms and make an inadequate study of questions concerning an increase in the efficacy of socialist competition, the quest for reserves for an increase in crop yield and livestock productivity and the introduction of progressive experience.

The following question, on which I wish to dwell, comrades, is one of principle--it is that of an increase in the level of leadership of the primary trade union organizations.

In recent years the Kirghiz Council of Trade Unions and the oblast councils and republic committees of the trade unions have increased their attention to the primary and shop organizations and trade union groups. The comprehensive study of their activity and assistance in the removal of shortcomings that have been brought to light have come to be practiced more frequently. Questions concerning the leadership of the trade union organizations and the style and methods of work of the trade union committees are periodically examined in the presidiums and secretariats.

All this is correct. However, it has to be admitted that the level of leadership of the primary trade union organizations does not correspond to the requirements of the 26th CPSU Congress. I attended trade union report and election conferences. Examples were noted there of the inadequate work of certain trade union organizations, as were instances in which some of them displayed passivity, not involving the working people in production management and failing to display initiative and persistence in fulfilling collective contracts, improving the working people's working and everyday conditions and their recreation and defending their rights and interests.

There are many organizations where meetings of the factory-plant and local committee, permanent production conferences and trade union meetings are held rarely. And if they are held, they are held without due preparation and with undue haste and they do not discuss relevant issues of the life and activity of the labor collectives.

We consider the on-paper-only style of leadership a cause of such a situation. Daily attention to the primary organizations and practical assistance to them has yet to become the main content of the activity of many trade union committees and councils.

Frequently, the efforts of trade union machinery workers are expended on various meetings and on the preparation of reports, accounts, information and material for presiding sessions.

Shortcomings in the monitoring of performance have become a bottleneck in the work of Kirghiz Council of Trade Union departments and the oblast councils and republic committees of the trade unions.

They are reaching a point where many adopted decisions which are basically sound and correct, are not being implemented and for this reason are failing to duly influence an improvement in the state of affairs in different areas of economic and cultural building.

It is essential that the Kirghiz Council of Trade Unions and oblast councils and republic committees of the trade unions resolutely rid themselves of a paper-only style of work and pay as much attention as possible to the primary trade union organizations. The main thing here is to strive to ensure that the work of all trade union orgnizations corresponds more fully to their rights and degree of responsibility. Particular attention should be paid here to the kolkhoz trade union organizations. An increase in the membership of kolkhoz trade union organizations is a phenomenon of sociopolitical significance. And it is important for us that it occupy a fitting place in the accomplishment of all economic, social and educational tasks in the countryside.

And there can be no doubt that the trade unions of Soviet Kirghizia--a militant detachment of our country's trade unions--will henceforth with their entire activity justify their high calling as a school of management, a school of education and a school of communism and will make a fitting contribution to fulfillment of the historic decisions of the 26th CPSU Congress.

AUCCTU Secretary's Speech

Frunze SOVETSKAYA KIRGIZIYA in Russian 20 Feb 82 p 3

[KirTAG abridged report of speech by AUCCTU Secretary L.A. Zemlyannikova at 14th Congress of Kirghiz Trade Unions 19 February 1982]

[Excerpts] Dear comrades!

Permit me on behalf of the AUCCTU to warmly and cordially greet you, congress delegates, and, through you, the splendid working class, toiling peasantry, intelligentsia and all working people of the four times order-bearing KiSSR.

The report campaign in the trade unions is coming to an end. The 17th Congress of Soviet Trade Unions which will be an important event in the country's political life, will open 16 March.

The 14th Congress of Kirghiz Trade Unions is being held in a businesslike, working atmosphere. An in-depth analysis of trade union activity in the period under review, which shows their contribution to the accomplishment of economic and social tasks and the Soviet people's education, is contained in the report of Comrade E. Abakirov, chairman of the Kirghiz Council of Trade Unions, and the delegates' speeches.

The party regards the trade unions as its reliable support among the masses and a powerful means of developing democracy and enlisting the working people in the building of communism. A tremendous influence on a rise in the level of the trade unions' entire activity was exerted by the CPSU Central Committee decree "The Karagandinskiy Obkom's Work on Fulfillment of the Decisions of the 26th CPSU Congress Concerning Party Leadership of the Trade Union Organizations and Their Increased Role in Economic and Cultural Building." Recent party and government decrees on results, physical culture, trade and preparations for sowing directly concern the trade unions and their practical work.

The 26th CPSU Congress emphasized that the trade unions must make fuller and more persistent use of the broad rights they have been granted, display greater initiative in the accomplishment of production, social and cultural tasks and perform their supervisory functions more fully and purposefully. The party congress proposed that the unions display more persistence in the organization and solution of all questions concerning the Soviet people's labor, life and daily routine.

Republic party organizations and the Kirghiz Communist Party Central Committee are paying constant attention to the activity of the trade unions. The Kirghiz Communist Party Central Committee Bureau regularly receives reports of the Council of Trade Unions, the oblast councils and the republic committees on various issues. Obkoms, raykoms and gorkoms and the primary party organizations are directing the work of the trade unions and giving them practical assistance and support in the accomplishment of the manifold tasks of economic and cultural building.

The working people of Kirghizia marked the last 5-year plan with significant successes and have begun the new one in shock fashion. The trade unions are making an impressive contribution to fulfillment of the plans for economic and social development. They are paying great attention to an improvement in socialist competition and the development of valuable initiatives and progressive experiences.

At the same time, the trade unions can and must tackle many vitally important questions better.

Such valuable initiatives as competition under the motto "All Supplies to the Fraternal Republics on Schedule and With Excellent Quality" and competition for the speediest introduction of the achievements of science and technology in production and for rational use of labor, material and fuel-energy resources were born and have been supported in the republic.

Unfortunately, progressive experience is not being introduced quickly enough in the republic. The Frunze people's initiative "All Supplies to the Fraternal

Republics on Schedule and With Excellent Quality" has not been duly disseminated. And yet, in 1981 over 114 of the republic's enterprises failed to cope with their contractual obligations.

Valuable initiatives and progressive experience are being introduced inadequately at consumer and municipal service, procurement and engineering enterprises and organizations. Plant and interplant schools of progressive experience have not been organized in a number of ministries and departments, and progressive labor means and methods are not being demonstrated in the worker training and improvement system. Competition has not yet been organized between construction organizations, construction materials industry enterprises, prime contractors, subcontractors and planning institutes. The pledges of a number of collectives of this sector are not justified economically and are being compiled without regard for individual and brigade pledges, and competition results are being summed up formally.

Comrade L.I. Brezhnev said at the 16th Trade Union Congress: "The party regards the trade unions as a powerful force capable of really helping in the strengthening of labor discipline in all areas of production." These questions were raised very pointedly at the 26th party congress. A great deal of work in this area is being performed throughout the country and in your republic. Nonetheless, the trade union organizations are not making full use of the entire set of measures for influencing the disrupters of labor discipline. As you know, the Kirghiz Communist Party Central Committee Bureau has already pointed to the unsatisfactory work of the people's courts. Publicity is lacking in their work, the collectives are not notified of the decisions and the sessions are not prepared carefully enough.

It is essential in the struggle against the disrupters of labor discipline to make more considered and purposeful use of public opinion and the workers' meetings.

With the transition to the brigade form of labor there is an increase in the role of the trade union groups in the solution of all questions, particularly in educational work and the strengthening of labor discipline. The Regulations Governing the Trade Union Group Organizer recently ratified by the AUCCTU Presidium determine the range of his duties and extend his rights. The trade union group organizer must assist the development of brigade cost accounting and the introduction of progressive labor methods, work in conjunction with the brigade leader on the organization of socialist competition, strengthen labor discipline and display concern for an improvement in the working people's everyday conditions. The trade union group organizer is granted the right to participate in the solution of all questions submitted to the brigade council.

Comrades! Very big tasks confront agricultural workers. It is essential to make more rational use of the land, equipment and fertilizer and strive for high and stable harvests of all crops. A particularly great deal has to be done for the development of the republic's leading sector--animal husbandry--where the main tasks of the food program will be tackled.

The opportunities for the trade unions to influence the state of affairs in agriculture and the provision of the people with food products have increased considerably since the admittance of kolkhoz members as trade union members and the creation of the Fruit and Vegetable Industry Workers Trade Union. It is necessary to seriously rethink the content of the industrial enterprises' patronage work. Patronage of the countryside should provide for the mechanization and more accomplished organization of labor and a rise in the rural workers' skills and cultural-technical level. Particular concern in medical services and cultural-patronage work should be displayed for the shepherds.

The trade unions have a great role in the sphere of labor protection and safety equipment. Much has been done in the republic in this connection. However, it is essential that the trade union organizations turn their attention to the fact that gas pollution, dust content, noise and vibration are still above the norms at a number of enterprises of light and local industry, construction materials industry, engineering, coal industry and nonferrous metallurgy. The indicators of public and domestic sanitation premises in local industry, trade, consumer services and the Kirgizkolkhozstroy Association are lower than the republic average.

Resources allocated for labor protection are not as yet being assimilated adequately, and due attention is not being paid to the training and instruction of workers in safe labor methods.

At the center of all the tasks of our social development is the man of labor and concern for his needs and requirements. The republic's working people have adopted for unswerving guidance the CPSU Central Committee decree "The Kirghiz Party Organizations' Work on Expanding the Production and Improving the Quality of Consumer Goods and Developing the Services Sphere." Last month's Kirghiz Communist Party Central Committee plenum examined paths to the realization of the assigned tasks. The trade union organizations' participation in work on an expansion of the production and an improvement in the quality of goods in mass demand and the development of the services sphere must be most active and direct.

The trade union organizations need to display more persistence in fulfilling plans for the construction of housing and children's preschool establishments.

Kirghiz trade unions are performing a great deal of work on the working people's communist upbringing. It is necessary in this most important area of activity to assist the party more actively in shaping the Soviet people's ideological world outlook and inculcating feelings of patriotism and socialist internationalism. We must raise true patriots of our motherland in the very rich revolutionary, combat and labor traditions. An important economic and social task is the cultivation in the working people of an endeavor to master professional skill. The trade unions are also called on to increase attention to scientific-technical propaganda in the labor collectives. They must head a working people's mass campaign to master scientific-technical knowledge. There is every opportunity for this.

It is necessary in this 5-year plan to ensure a fundamental reorganization of the forms and methods of work of our clubs and enlist the broad public aktiv and, primarily, workers in this. Every club must be a center of political, labor and moral education and a place for meaningful recreation and mass public creativity.

Permit me, dear comrades, to wish you great success in work and to express the confidence that the Kirghiz trade unions will, under the leadership of the republic party organization, worthily greet the 17th Congress of USSR Trade Unions and honorably accomplish the tasks assigned by the Communist Party.

USUBALIYEV ADDRESSES PARTY, INDUSTRY OFFICIALS AT AWARD CEREMONY

[Editorial Report] Frunze SOVETSKAYA KIRGIZIYA in Russian on 14 March, page 1, features a 2,000-word report on the award of the Challenge Red Banner of the CPSU Central Committee, AUCCTU and Komsomol to Narynskaya Oblast for its successful completion of the 1981 state economic plan. At the ceremony T. U. Usubaliyev, CPSU Central Committee member and first secretary of the Kirghiz CP Central Committee, addressed party representatives, industry leaders, and representatives of trade-union, Komsomol and agriculture organizations. Usubaliyev noted that the oblast's achievements were the result of "great organizational and mass-political work," and he dwelt in detail on the achievements of the "better rayons, farms and leading workers of the oblast." While citing progress in sheep raising, field culture and feed procurement, Usubaliyev also noted that there were "shortcomings and oversights". Several rayons were criticized for allowing "unused reserves", particularly in livestock and feed production. Usubaliyev concluded by expressing the certainty that those inspired by the high award would apply their greatest efforts in fulfilling the "historic decisions" of the 26th CPSU Congress.

16TH CONGRESS OF AZERBAIJAN TRADE UNIONS HELD; ALIYEV SPEAKS

Opening Session

Baku BAKINSKIY RABOCHIY in Russian 6 Feb 82 p 1

[Text] The trade unions, our country's most populous public organization, are reliable conduits of the policy of the Communist Party and its very close and loyal assistants. Speaking of the important role of the Soviet trade unions in the life of our society, Comrade L. I. Brezhnev emphasized in his report at the 26th CPSU Congress that the party regards the trade unions as its reliable support among the masses and a powerful means of developing democracy and enlisting the working people in the building of communism.

The republic trade unions' contribution to Soviet Azerbaijan's splendid accomplishments at the stage of developed socialism is impressive. They are actively participating in increasing the creative activity of the masses and in mobilizing their labor efforts for implementation of the Leninist party's magnificent plans and the molding of the Soviet people's active involvement in life.

With a feeling of legitimate pride in the republic's successes and reports of labor victories achieved in the shock vigil of the 11th Five-Year Plan, the emissaries of Azerbaijan's trade unions, which unite 2.27 million in their ranks, have arrived at their 16th congress, which opened 5 February in Baku in the Palace imeni V.I. Lenin. Questions concerning the maximum use of the opportunities for trade union influence on all aspects of economic and cultural life and a further refinement of their activity in the light of the decisions of the 26th CPSU and 30th Azerbaijan Communist Party Congresses are at the center of their attention.

Illustrious heroes of labor, guardians of the 5-year plans, pacesetters of the socialist competition in industrial and agricultural production, figures of science and culture, and party, soviet, trade union and Komsomol workers were gathered in the hall.

The congress presidium consisted of G. A. Aliyev, candidate member of the CPSU Central Committee Politburo and first secretary of the Azerbaijan Communist Party Central Committee; K.M. Bagirov, O.A. Bagirov, G.A. Gasanov, V.A. Guseynov, A.V. Kovtunov, I.A. Mamedov, F.E. Musayev, Yu.N. Pugachev, S.B. Tatliyev and Z.M. Yusif-zade, members of the Azerbaijan Communist Party Central Committee Bureau; R.E. Mekhtiyev, D.M. Muslim-zade, L.Kh. Rasulova and G.Sh. Efendiyev, candidate members of the Azerbaijan Communist Party Central Committee Bureau; and AUCCTU Secretary V.F. Bogatikov.

The congress was opened by L.Kh. Rasulova, chairman of the Azerbaijan Council of Trade Unions.

The CPSU Central Committee Politburo headed by Comrade L.I. Brezhnev was elected honorary presidium with great enthusiasm.

The steering bodies of the congress--the presidium, secretariat and editorial and credentials committees--were elected.

The delegates unanimously passed the agenda of the congress:

1. Report on the work of the Azerbaijan Council of Trade Unions and the tasks of the republic's trade unions in light of the decisions of the 26th CPSU and 30th Azerbaijan Communist Party Congresses.

2. Report of the Azerbaijan Council of Trade Unions' auditing committee.

3. Election of the Azerbaijan Council of Trade Unions.

4. Election of the Azerbaijan Council of Trade Unions' auditing committee.

5. Election of delegates to the 17th Congress of USSR Trade Unions.

The report of the Azerbaijan Council of Trade Unions was delivered by its chairman, L.Kh. Rasulova.

A report was received from the auditing committee, which was delivered by its chairman, S.S. Sadykhov.

A debate followed the reports. The following participated: T.A. Kerimov, senior foreman of the rolling-mill shop of the Azerbaijan Pipe-Rolling Plant imeni V.I. Lenin; M.K. Sailov, leader of a viticulturists' brigade of Shemakhinskiy Rayon's Viticultural Sovkhoz imeni Nasimi; R.S. Kazikbekov, chairman of the Nakhichevanskaya Oblast Council of Trade Unions; L.V. Barusheva, sewing machine operator of the Garment Factory imeni Volodarskiy and deputy of the USSR Supreme Soviet; S.S. Davidyan, chairman of the Nagorno-Karabakhskaya Oblast Council of Trade Unions; Hero of Socialist Labor I.S. Guseynov, chairman of the republic committee of the Oil and Gas Industry Workers Trade Union and deputy of the USSR Supreme Soviet; M.Ya. Kaziyev, AzSSR minister of social security; Hero of Socialist Labor N.D. Zeynalova, brigade leader of Shamkhorskiy Rayon's Kolkhoz imeni R. Aliyev; A.Yu. Karakhanov, general director of the Azelektromash Production Association; M.A. Dunyamaliyev, shepherd of Kazakhskiy Rayon's Dzheyranchel'skiy Sheep-Breeding Sovkhoz; Nabi Khazri, poet and USSR State Prize winner; Hero of Socialist Labor Sh.R. Aliyev, chairman of the republic committee of the Heavy Engineering Workers Trade Union; Azerbkurortsovet Chairman M.M. Abbasov; N.A. Kusch, excavator of the

Promstroymekhanizatsiya Trust's Construction-Installation Administration-2; K.Yu. Abbasov, mechanic of the Korovabad Locomotive Depot and secretary for social work of the rayon line committee of the Railroad Workers Trade Union; D.M. Asanov, AzSSR minister of rural construction; L.A. Aleskerova, deputy chief of a section of Baku's Central Department Store; and D.M. Kerimov, chairman of the trade union committee of the Tauz Industrial-Agrarian Association.

The congress received and approved the report of the credentials committee, which was delivered by its chairman, N.S. Fataliyev, secretary of the Azerbaijan Council of Trade Unions.

The congress delegates were greeted by students of the republic's vocational-technical education system. The future working class replacement shift of Azerbaijan swore an oath of fidelity to the Soviet people's splendid revolutionary, labor and international traditions and expressed on behalf of all the young men and women of the republic warm gratitude to the party and government and Comrade L.I. Brezhnev personally for their paternal concern for Soviet youth.

Telegrams of greetings were addressed to the congress from the councils of trade unions of Moscow and the fraternal republics and collectives of Azerbaijan's industrial and agricultural enterprises.

The congress continues on 6 February.

In the evening the delegates attended a gala concert in the Palace imeni V.I. Lenin at which masters of the arts of the republic, creative collectives and participants in amateur artistic activity performed.

Closing Activities

Baku BAKINSKIY RABOCHIY in Russian 7 Feb 82 p 1

[Text] The 16th Congress of Azerbaijan Trade Unions continued on 6 February.

G.A. Aliyev, candidate member of the CPSU Central Committee Politburo and first secretary of the Azerbaijan Communist Party Central Committee; K.M. Bagirov, O.A. Bagirov, G.A. Gasanov, V.A. Guseynov, I.A. Mamedov, F.E. Musayev, Yu.N. Pugachev, S.B. Tatliyev and Z.M. Yusif-zade, members of the Azerbaijan Communist Party Central Committee Bureau; R.E. Mekhtiyev, D.M. Muslim-zade, L.Kh. Rasulova and G.Sh. Efendiyev, candidate members of the Azerbaijan Communist Party Central Committee Bureau; AUCCTU Secretary V.F. Bogatikov; and K.N. Brutents, deputy chief of a CPSU Central Committee department, constituted the presidium.

The following participated at the morning session in the debate on the reports of the Azerbaijan Council of Trade Unions and its auditing committee: D.M. Muslim-zade, first secretary of the Azerbaijan Komsomol Central Committee; A.S. Aliyeva, operator at the Novo-Bakinskiy Oil Refinery imeni Vladimir Il'ich and deputy of the USSR Supreme Soviet; T.A. Kasumov, AzSSR minister of health; T.Kh. Mustafayev, chairman of the joint committee of the AzSSR Academy of Sciences' Trade Union; Z.N. Bagirov, AzSSR minister of culture; A.M. Takhmasib, teacher at Baku School No 132 and deputy of the USSR Supreme Soviet; G.S. Rzayev, chairman of the republic Sports Committee; and K.N. Gasanova, workers on Lenkoranskiy Rayon's Sovkhoz imeni B. Abbasov and deputy of the USSR Supreme Soviet.

A major speech at the congress was delivered by G.A. Aliyev, candidate member of the CPSU Central Committee Politburo and first secretary of the Azerbaijan Communist Party Central Committee, who was warmly greeted by those present (Comrade Aliyev's speech will be carried in tomorrow's edition).

The delegates unanimously recognized the activity of the Azerbaijan Council of Trade Unions in the period under review as satisfactory. The report of the Azerbaijan Council of Trade Unions' auditing committee was approved.

The resolution outlined the concrete paths to a further improvement in the activity of the republic's trade unions.

The congress elected the Azerbaijan Council of Trade Unions, the council's auditing committee and the delegates to the 17th Congress of USSR Trade Union.

With tremendous enthusiasm, the congress adopted a letter of greetings to the CPSU Central Committee and Comrade L.I. Brezhnev, general secretary of the CPSU Central Committee and chairman of the USSR Supreme Soviet Presidium.

This concluded the 16th Congress of Azerbaijan Trade Unions. The delegates rose for the singing of the "Internationale."

The first plenum of the Azerbaijan Council of Trade Unions elected by the 16th Congress of Azerbaijan Trade Unions was held 6 February.

L.Kh. Rasulova was elected chairman of the Azerbaijan Council of Trade Unions.

G.A. Melkumyan, N.S. Fataliyev and Ye.S. Shelaginov were elected secretaries of the Azerbaijan Council of Trade Unions, and Hero of Socialist Labor T.A. Kerimov, senior foreman of the Azerbaijan Pipe-Rolling Plant imeni V.I. Lenin, was elected secretary for social work.

The plenum elected G.M. Abbasov, M.M. Abbasov, D.M. Asanov, N.A. Guliyev, I.S. Guseynov, S.S. Davidyan A.N. Zamanov, R.S. Kazibekov, A.Yu. Karakhanov, T.A. Kasumov, T.A. Kerimov, G.A. Melkumyan, F.G. Muradaliyev, V.V. Petrov, L.Kh. Rasulova, S.I. Tagi-zade, N.S. Fataliyev, Ye.S. Shelaginov and R.A. El'darova members of the Presidium of the Azerbaijan Council of Trade Unions.

G.A. Aliyev, candidate member of the CPSU Central Committee Politburo and first secretary of the Azerbaijan Communist Party Central Committee; K.M. Bagirov, O.A. Bagirov, V.A. Guseynov, Yu.N. Pugachev, S.B. Tatliyev, A.M. Yusif-zade, R.E. Mekhtiyev, D.M. Muslim-zade and G.Sh. Efendiyev, members and candidate members of the Azerbaijan Communist Party Central Committee Bureau; and AUCCTU Secretary V.F. Bogatikov participated in the plenum.

A session of the newly elected Azerbaijan Council of Trade Unions' auditing committee was held. S.S. Sadykhov was elected chairman.

Aliyev Speech

Baku BAKINSKIY RABOCHIY in Russian 9 Feb 82 pp 1-3

[Speech by G.A. Aliyev, candidate member of the CPSU Central Committee Politburo and first secretary of the Azerbaijan Communist Party Central Committee, at 16th Congress of Azerbaijan Trade Unions on 6 February 1982]

[Excerpts] Dear comrades!

The Azerbaijan Communist Party Central Committee warmly and cordially greets the delegates to the 16th congress of the republic's trade unions and, through you, all members of the trade unions of Soviet Azerbaijan (stormy applause). We are sure that your congress will be an important landmark in the working people's struggle to realize the party's historic plans and multiply the republic's achievements and its contribution to the strengthening of the might of our great motherland.

Representatives of the working class, kolkhoz peasantry, intelligentsia, women workers and youths, shock workers, production pacesetters and innovators and party, soviet, trade union and Komsomol workers have gathered in this hall today for the forum of the people of labor. The trade union congress is a further graphic manifestation of the monolithic cohesion of our society and a demonstration of the triumph of Soviet and truly people's democracy (stormy, prolonged applause).

Last year was not an easy one. The drought, the dimensions of which are well known, inflicted great losses on agriculture and the economy as a whole. But under the extremely unfavorable weather conditions the rural workers performed a great deal of work on providing the country with agricultural products. The state grain resources are fully providing the population with bread and bread products. The country's cotton growers obtain a big harvest. A good foundation for the next harvest was laid. For the entire set of operations, R37 billion, 27 percent of total capital investments in the national economy, were invested in development of the agrarian sector last year.

The Communist Party and the Soviet Government are persistently and consistently implementing the Peace Program for the 1980's approved by the 26th congress. The initiatives put forward by the Soviet Union for limiting and reducing both nuclear and conventional armaments are aimed at a recuperation of the international atmosphere and the preservation and extension of detente. Soviet foreign policy is encountering increasingly broad recognition and support in the world, for it expresses the fundamental interests, dreams and cherished aspirations of millions and millions of ordinary people of our planet (stormy applause).

The high evaluation of the achievements of Azerbaijan's working people by the party Central Committee and Leonid Il'ich Brezhnev personally, and his penetrating and moving words at the CPSU Central Committee November (1981) Plenum about the republic and cordial greetings and congratulations to the rural workers and participants in the construction and assimilation of production plants at the Baku oil refineries, have evoked in each of us an effort to work even better, achieve even greater successes and scale new heights (stormy applause).

In the intensive labor rhythm of the 5-year plans and the working people's annual victories in all-union socialist competition there is a great contribution from the glorious army of members of Azerbaijan's trade unions, which number 2.2 million persons. And today, from the platform of the 16th Congress of Azerbaijan Trade Unions, we express cordial gratitude to the trade union organizations, the trade union aktiv and all trade union members for their selfless work and inspired and fruitful labor that has lifted our republic to the pinnacles of modern socioeconomic and intellectual progress (stormy, prolonged applause).

I

Comrades! Soviet trade unions have an important place in the Soviet political system. The USSR Constitution records that the trade unions participate, in accordance with their statutory duties, in the running of state and social affairs and in the solution of political, economic and sociocultural questions. Together with other public organizations, they have been granted the right of legislative initiative. These provisions, which are incorporated in the constitution for the first time, reflect the trade unions' increased role in the development of socialist democracy throughout our political system. They proceed from the fundamental Leninist definition of the trade union as a school of control, of management, and of communism. Nor, as Comrade L.I. Brezhnev pointed out in his speech at the 16th Trade Union Congress, are these areas of trade union work exhausted under the conditions of developed socialism. On the contrary, they are now acquiring even greater significance and are being revealed with even greater amplitude.

The report of the Azerbaijan Council of Trade Unions delivered by Comrade L.Kh. Rasulova and the speeches of the congress delegates reviewed in detail the multifaceted work of the republic's trade unions in the past 5 years.

We note with profound satisfaction that, implementing the decisions of the 25th and 26th CPSU and 29th and 30th Azerbaijan Communist Party Congresses, the republic's trade union organizations have increased their activity considerably and, what is most important, their efficacy in the struggle to realize the party's economic stragegy and the dynamic development of all sectors of the economy, science and culture. They have begun to involve themselves in greater depth in questions concerning organization of the labor, social life and recreation of the working people and their ideological-moral education.

I would like in this connection to mention the great assistance given to the Azerbaijan trade unions by the AUCCTU. The participation in our congress of Comrade V.F. Bogatikov, secretary of the AUCCTU, is a manifestation of attention (applause). On behalf of the Azerbaijan Communist Party Central Committee, we express our warm gratitude to the AUCCTU Presidium and its chairman, Comrade A.I. Shibayev, for their attention to the needs of the republic's working people and support for the affairs and undertakings of the Azerbaijan Council of Trade Unions (stormy applause).

Proceeding from what has been said, I wish to dwell on certain problems ensuing from this dual responsibility, for growth in and qualitative improvement of the economy is the direct and correct path to an improvement in the standard of living of the man of labor, his family and all citizens.

As is known, the party has put forward for the 11th Five-Year Plan and the entire 1980's far-reaching tasks in the economic and social development of the country and each union republic. Their essence is that we must secure a further growth of the working people's well-being on the basis of the steady, progressive development of the national economy, the acceleration of scientific-technical progress, the more rational use of production potential, the utmost economies in all types of resources and an improvement in work quality.

To translate these words into the language of figures and with regard for the high socialist pledges adopted by Azerbaijan's working people, we must in the 11th Five-Year Plan secure a national income growth of 31 percent compared with the planned 29 percent, increase industrial production 32 percent instead of the planned 30 percent and increase labor productivity in industry 24 percent compared with the targeted 23 percent and obtain no less than 80 percent of the output increase thanks to this indicator. We must more than double the manufacture of products bearing the Symbol of Quality. In agriculture, it is planned that average annual gross production will increase 22 percent and labor productivity 18 percent. Crucial tasks have been put forward in the sphere of capital construction; in the 5-year period over R10 billion in capital investments must be assimilated and their volume must be increased by a factor of almost 1.4.

A wide-ranging program of social development is planned. Great tasks have to be tackled by the workers of science, culture, education, public health, trade and consumer services. In honor of the USSR's 60th anniversary, the republic's industrial workers have undertaken to fulfill the 1982 plan 3 days ahead of the specified time and the agricultural workers propose to achieve harvests of all crops (applause).

And a most important obligation of the trade union organizations--from the primary organizations through the Azerbaijan Council of Trade Unions--is to contribute in every possible way to the fulfillment of socialist pledges by each brigade, shop, section, farmstead, enterprise, kolkhoz and sovkhoz. The trade union workers are called on to concern themselves with the creation of favorable conditions for highly productive labor in each place of work. And this means the timely provision of raw material, intermediate products, transport and hot meals and the creation of good refreshment areas, comfortable reading rooms and well-appointed field camps. After all, pledges are born as a result of a quest for reserves. They are a collective's statement of more efficient labor and at the same time people's voluntarily assumed high moral duty. This is why our responsibility for ensuring that all pledges are embodied in practical deeds and that each worker keep his word is so great (stormy applause).

Competition should be geared today more than ever before to the solution of fundamental problems of the economy, the intensification of production, the acceleration of scientific-technical progress, an increase in product quality and the rational use of all types of resources. In other words, to the achievement of the best national economic results.

I would like to stress in this connection that the strength and efficiency of competition in our day do not lie in individual, even exceptional, achievements and records but in ensuring that each collective work without stragglers, precisely and smoothly. Only on such a basis is it possible to find and commission all resources and eliminate bottlenecks.

As is known, the republic party organization is struggling to fulfill the plans of every labor collective in all technical-economic indicators. Much has been done in this direction, and the number of enterprises that failed to cope with the targets declined almost fivefold in the last decade. But we have not yet reached the set goal--working without stragglers. Some 28 production enterprises and associations, or 4 percent of them, failed to fulfill the output sales plans last year. The number of enterprises failing to cope with the quotas with respect to the product list, supplies and contract obligations is great, while the number of those failing to fulfill the socialist pledges is even greater. There are particularly many of these in the light, local and petrochemical industry, construction materials industry and certain other sectors. And we have a right today to complain about the corresponding republic trade union committees and the Presidium of the Azerbaijan Council of Trade Unions, which are not displaying due persistence and initiative in the accomplishment of a most important economic and political task--working without stragglers. There is something for the trade union organizations to work on here, and very thoroughly at that.

As you know, the most concentrated indicator of the intensification of the economy is growth in labor productivity. It is gratifying that Azerbaijan was in first place among the union republics in this indicator last year (stormy applause). More than 81 percent of the industrial output increase was obtained thanks to increased labor productivity here. These results were achieved to a considerable extent thanks to the increased attention of managers and trade union committees to questions concerning the organization of labor and production.

But we also have, unfortunately, instances of a different sort. Last year, for example, there was a decline in output per worker in the Ministry of Cotton Cleaning Industry and Ministry of Petrochemical Industry systems, the Azneft' Association and elsewhere. There is no nor can there by any justification for this. The trade union organizations are obliged to display genuine concern and exactingness and to strive for unconditional fulfillment of the plans for the introduction of new equipment and all measures for an improvement in production provided for by collective contracts, which are a decisive factor for the further growth of labor productivity.

Last year the collectives of a number of enterprises came out with a valuable initiative that was supported by the Azerbaijan Communist Party Central Committee--assimilating the rated capacity of the newly installed works ahead of schedule. They honorably kept their word, and the country obtained almost R40 million of additional output (applause).

We also expect more from the trade unions in further increasing the production of products bearing the Symbol of Quality. In recent years, the proportion of products of the highest quality category has almost doubled here and for those subject to certification production, has surpassed the union average. But what has been achieved far from exhausts our industry's potential. The trade union organizations are called on to concern themselves with ensuring that the problem of product quality is made of paramount importance in the elaboration of socialist pledges and the summation of competition results. It is your duty to ponder and implement a set of measures morally and materially stimulating the maximum production of products bearing the Symbol of Quality.

Under the conditions of the constantly developing economy, increasingly great significance is attached to economies and thrift and the rational use of raw material and fuel-energy resources. This is a principal task put forward by the 26th party congress, which was expressed very precisely by Leonid Il'ich when he said: "The economy must be economical."

We have certain successes here in this sphere, but, frankly speaking, the struggle for economies and thrift has not yet become the daily concern of all the republic's management and trade union authorities and every worker and employee. Big losses and unproductive waste of raw material, intermediate products, fuel and energy are still permitted at many enterprises.

A most important task of the trade unions is to enlist all working people in an active struggle for economies in raw materials, intermediate products, fuel and energy and against lax management and extravagance. This is all the more important in that the indicators of economies and thrift have now become a principal condition in the determination of socialist competition winners.

Comrades! The report mentioned the impressive contribution to an increase in socialist production efficiency of the republic's production efficiency experts and inventors, and we are grateful to the innovators for their fruitful technical work. But there are still many shortcomings in the organization of inventing and production efficiency work, which is a vital concern of the trade unions. And they are connected primarily with an underestimation of the importance of this matter on the part of the Azerbaijan Council of Trade Unions and the republic trade union committees. The republic scientific-technical society and all-union Inventor and Production Efficiency Expert Society councils are involving themselves insufficiently in the coordination of the working people's technical work, and many of their local elements are essentially inactive. The red tape concerning the examination and introduction of proposals of inventors and production efficiency experts can be termed out-and-out mismanagement. This applies primarily to the ministries of agriculture, fruit and vegetable industry, housing and municipal services, procurement, health and consumer services. We also expect more efficient work in this field from the collectives of such scientific research institutes as the AzINMash, the AzNIPIneft', the Neftekhimavtomat Scientific Research and Planning Institute, the Azgiproneftekhim and others.

Practice has shown convincingly the advantages of the brigade form of the organization and stimulation of labor, whose significance was emphasized anew at the 26th CPSU Congress. In the republic's industry this form of the organization and remuneration of labor extends to over 40 percent of all workers. Positive experience in the introduction of the brigade contract has been accumulated in the Soyuzneftemash Association, where it extends to approximately 3,000 persons. But this progressive form of labor organization has not yet become widespread enough at enterprises of light, food, gas and chemical industry and ferrous and nonferrous metallurgy. The brigade contract is being introduced particularly slowly in construction, where, as is known, it was conceived. We expect the trade union committees to stimulate work in this field. The Azerbaijan Council of Trade Unions and many republic trade union committees have repeatedly passed decrees on the mass introduction of the brigade contract. You need, finally, comrades, to actively set about the implementation of your own decisions.

There has been an immeasurable increase in the role and responsibility of the trade unions in the struggle for a further upsurge of agriculture. Until recently their possibilities in this sphere of the economy were limited inasmuch as the trade union organizations at the kolkhozes were extremely small. There has now been a fundamental change in the situation. Now, 98.5 percent of all the republic's kolkhoz members are members of a trade union. Thus, the trade union organizations on the kolkhozes are a great social force called on to contribute to an unswerving increase in the production and procurement of grain, cotton, grapes, vegetables and other crops and the development of animal husbandry and to ensuring the high quality and preservation of the agricultural product. The kolkhoz trade union organizations will only be able to tackle the tasks confronting them successfully with the constant assistance of the republic committee of the Agricultural Workers Trade Union and the Azerbaijan Council of Trade Unions. I would like to hope that attention and support will be rendered and that the trade union organizations in the countryside will become an even more effective force in the struggle for new victories in the development of our republic's agriculture (stormy applause).

II

The measures implemented in industry have led to a fundamental improvement in the conditions and content of labor and strengthened the processes of the qualitative and quantitative growth of industrial workers. In the period 1970-1980 the strength of the republic's working class increased 42.5 percent and the rate of average annual increase constituted 3.6 percent. This is one of the highest indicators among the union republics (applause).

Thanks to introduction of the latest equipment in production, there has been an increase in the intellectual content of labor, particularly among highly skilled workers. In accordance with the demands of modern production, the training and improvement of workers and employees has been undertaken at an accelerated pace. More than 400,000 persons underwent improvement instruction in the final year of the 10th Five-Year Plan, four times higher than the 1970 indicator. Furthermore, almost 70 percent of those who upgraded their professional qualifications are workers.

All this has stimulated a further strengthening of the leading role of the working class and an increase in its relative significance in the employed population and opened broad new possibilities for the intensive development of progressive social processes.

Much has also been done to further enlist women in assertive labor and public-political activity. The following indicators are the eloquent results of the Azerbaijan Communist Party's efforts: The average annual strength of women workers and employees in the republic's economy increased by more than 250,000 in 1980 compared with 1970, and more than 47 percent of specialists with higher and secondary specialized education currently are women (applause). One of every three research workers is a woman. The number of women among those admitted as party candidate members in 1980 was over 40 percent. Women are extensively represented among party, soviet and trade union authorities. And I would like to emphasize in particular that in all sectors of the economy and culture, in rank and file work and in executive positions, women are setting an example with the conscientious, selfless performance of their duty (stormy, prolonger appluase).

We consider it essential to emphasize particularly that the trade unions have a very crucial role in accomplishing the tasks for the working people's further intensive social development set by the Azerbaijan Communist Party Central Committee. It is essential that the Azerbaijan Council of Trade Unions, in conjunction with the republic ministries and departments, develop and implement concrete programs for social development of the labor collectives for each association, enterprise and region, remove the disproportions that have come about between the structures of jobs and the labor force and strive consistently for an increase in labor and production discipline and the creation at the industrial enterprises of conditions for a plan-oriented rise in the level of professional skills of the workers, working women and youth and their increased public activity.

An important obligation of the trade unions is concern for the protection of labor and observance of safety technology. Every accident, regardless of its seriousness, damages the most valuable property of the state--the health of the working people. We conducted a serious discussion of this at the 15th Trade Union Congress. A certain amount of work has undoubtedly been done in the period under review. But the Azerbaijan Council of Trade Unions, the republic trade union sectorial committees and the leaders of a number of ministries and departments have not adopted the proper measures to strengthen labor protection. Despite a reduction in the overall number of instances of traumatic injury, their severity coefficient remains high. As the Azerbaijan

Council of Trade Unions' report said, tens of thousands of man-days are lost to production annually because of accidents. The level of traumatic injury is highest in the motor transport and industrial construction ministry systems, on the Azerbaijan Railroad and in the Kaspmorneftegazprom and Soyuzneftemash Associations.

We cannot be reconciled to such a situation, comrades. And here, too, the trade unions must be decisive in word and deed. Performing the duties entrusted to them by the state and availing themselves of the rights they have been granted, the trade union committees are called on to ensure the strictest supervision of the observance of all standards and rules of safety equipment, labor protection and sanitation and hygiene, not overlook a single violation and institute proceedings against everyone to blame for an accident to a worker or kolkhoz member. And, furthermore, officials, irrespective of the position they hold, must be held accountable, Be decisive and uncompromising; after all, it is a question of the protection of the labor of our Soviet man (stormy applause).

III

Concern for the man of labor is a manifold task. It demands of the trade unions practical activity in the most varied directions. Together with what has been said, this also means material support for the working people, an improvement in their housing, municipal and social conditions and an expansion of the services sphere. At the previous congress, we raised a number of specific questions in this sphere, and it has to be said that much has been done. There has been an improvement in the working people's material well-being and in the role of the payments and benefits from social consumption funds, whose volume last year amounted to almost R2 billion. Deductions for the economic incentive funds, thanks to the high growth rate of production and profit, increased by a factor of 1.7 in the 10th Five-Year Plan. But we cannot fail to be puzzled by the fact that far from full use is being made of these funds. Thus, by the end of the 10th Five-Year Plan unutilized resources from this fund constituted R342 million, including R177 million intended for material incentive. Nor were there appreciable changes last year. Particularly inadequate use is being made of the material incentive funds in the ministries of light, local and fruit and vegetable industry and trade, the State Committee for Viticulture and Wine Making, the State Committee for Supply of Production Equipment for Agriculture and the Azneft' Association.

One wonders what is preventing the leaders of the enterprises, ministries and associations, together with the trade unions, from spending the resources especially intended for the material encouragement of the people of labor. Do they not understand that a callous, bureaucratic attitude is doing material and moral harm to the working people's interests.

We believe that the Azerbaijan Council of Trade Unions and the republic trade union factory-plant and local committees must become closely involved in bringing order to bear in the use of material incentive funds. After all, it is no coincidence that they are growing here; it is the result of the large production successes and victories in socialist competiton. Consequently, every worker deserving of material encouragement must receive it in full and in good time. And I hope that the trade union workers will display proper concern to ensure this (stormy applause).

A most important place in our social program is occupied, as is known, by housing construction. This problem is at the center of attention of the republic party organization. The plan for introduction of housing was fulfilled last year, which enabled 173,000 persons to improve their housing conditions. At the same time, we know that many families are still living in communal, ill-equipped apartments. The solution of these questions has two aspects: on the one hand it is necessary to strive for an annual increase in the volume and an improvement in the quality of housing construction and build homes with an improved layout. On the other, it is necessary to reliably ensure fairness and strict observance of established procedures in the allocation of housing.

We have a right to make the most serious complaints to the trade unions for passivity in questions of the allocation of housing. You, comrades, not to mention other bodies, receive many complaints of violations in the allocation of apartments and abuses in this matter. But instances of trade union organizations emphatically opposing such ugly phenomena are a rare exception. Unfortunately, there are more instances of trade union workers, abusing their office and in circumvention of the law, acquiring apartments for themselves and their relatives. For this reason, they frequently not only do not oppose the illegal acts of leaders in the allocation of housing but with their signatures confirm their imaginary legitimacy to the detriment of the interests of the workers and employees.

The allocation of housing is an acute problem concerning the interests of thousands and thousands of people. And its solution must be approached with the highest degree of party and civic responsibility. The trade unions have sufficient rights and opportunities to ensure strict observance of the proper sequence, objectivity, legitimacy and honesty and to rule out abuses in the allocation of housing. I would like to hope that our trade unions will avail themselves of their rights to bring complete order to bear in this important matter.

An important task of the trade unions is to improve the organization of public catering in every possible way. The level of development of this sector in the republic does not correspond to present-day requirements. We lag behind the all-union indicators for commodity turnover per capita, the transition of public catering to industrial methods of food preparation and the manufacture and use of prepared foods. As an examination of this question in the Azerbaijan Communist Party Central Committee showed, there is a shortage of approximately 7,000 sit-down places in workers' canteens of enterprises of the ministries of light and timber and wood processing industry, motor transport and others, while the Baku Flour Milling Works, Cotton-Wool Factory and Artificial Leather and Film Material Plant and the Glavbakstroy Wood Processing Plant lack canteens altogether. And there are approximately 80 such enterprises in Baku alone. This situation, comrades, is intolerable.

I wish to emphasize that currently, when, owing to objective circumstances, temporary difficulties have developed in providing the population with meat and certain other products, the significance of public catering has increased considerably. The point being that the workers' canteens and refreshment rooms are supplied with products in their full requirement. Consequently, every worker may obtain a high-calorie meal every day. And it is the duty of the trade unions to make use of all their rights and supervisory prerogatives to ensure that everything intended for the man of labor reaches his table. The trade unions are obliged to involve themselves more assertively and concretely in questions concerning the organization of public catering in the labor collectives.

A principal social task tackled daily by the party and government is concern for the Soviet people's health and recreation. The trade unions are making an impressive contribution to it. Definite work has been done in recent years on strengthening the material-technical base, improving the quality of treatment and prophylactic assistance to the population, increasing official sanitary inspection and bringing order to bear in the selection, assignment and training of medical personnel.

At the same time, as mentioned at the 30th Azerbaijan Communist Party Congress, shortcomings in the organization of both hospital and outpatient-clinic assistance are still present in the activity of the medical establishments. The sanitary condition of many medical establishments does not correspond to modern requirements, and there is a shortage of apparatus and medicines. An atmosphere of irreconcilability to transgressions of the standards and principles of communist morality among medical personnel has not been created everywhere.

Together with the trade unions, serious complaints should be leveled at ministry and department leaders. We believe that our leading sectors and every large-scale production association and enterprise can and, I would say, are obliged to build their own recreation centers, sanatoria, health centers, holiday hotels and children's preschool establishments. Apsheron's Caspian coastline should be used primarily for this, of course. Where there is no chance of an independent solution to this question it is necessary to pool resources and unify efforts. A situation in which enterprises of the republic's leading industrial sectors--electrical engineering, electronics, instrument-making, radio engineering and certain others--lack their own sanatoria, recreation centers, holiday hotels and health centers, although having the possibilities for this, which need to be fully utilized, cannot be considered normal.

Comrade teacher Takhmasib, who spoke today, raised the question of the construction of a health center for the teachers. And this is correct. It is only to be regretted that it is belated. We have more than 120,000 teachers here in the republic. This is a very big army of people of intellectual work. But the Ministry of Education and the Education Workers Trade Union have not raised this question once yet. And I would think that for such a ministry as that of education it would be possible to build one and, possibly, more than one health center. The ministry builds many schools and other establishments annually. I am not saying, of course, that it is necessary to build health centers at the expense of schools, but the ministry has resources and contractors and it could, had it wished, have solved the problem long ago. I believe that the republic trade union committee, Azerbaijan Council of Trade Unions and the corresponding organizations will now set about this question. A health center for the teachers needs to be built. I repeat, even more than one, perhaps. It is also necessary, as Comrade Takhmasib suggested, to build a teachers' center in Baku (applause).

The CPSU Central Committee, USSR Council of Ministers and AUCCTU recently adopted the decree "Measures for Further Improving the Working People's Sanatorium-Health Resort Treatment and Recreation and for Developing the Network of Trade Union Resorts." And it is the duty of the Azerbaijan Council of Trade Unions and the republic trade union committees to provide for the implementation of all of the measures outlined by this decree.

Attaching great significance to the development in the republic of organized forms of the working people's recreation and sanatorium-health resort treatment, the Azerbaijan Communist Party Central Committee, in conjunction with the republic Council of Ministers and the AUCCTU, has examined questions concerning the prospects for resort building and the creation of tourist centers in the Yalama-Nabran' zone. Together with the planning of a resort-tourist complex with housing and sociocultural facilities and engineering-communications work, the construction of two structures--sanatorium and tourist--with 500 places each is envisaged in the 11th Five-Year Plan. The progress of resort construction was studied and measures for its acceleration were outlined in Kala-Alty and Naftalan and on Apsheron.

Incidentally, comrades, these questions were raised 5 years ago at the previous congress, but the proper measures for their solution have yet to be adopted. We in the Azerbaijan Communist Party Central Committee have made a very close study of this problem and will keep it under constant supervision. We expect increased activity on the part of the Azerbaijan Council of Trade Unions and all trade union organizations.

The creation in the republic of resort zones of all-union and republic significance is an important task of the party, soviet and trade union authorities, the Gosplan, Gosstroy and ministries and departments. Great assistance in the solution of these questions will be rendered to us by the AUCCTU.

It is the duty of all authorities concerned, primarily the Azerbaijan Council of Trade Unions, to ensure the precise implementation of the planned work, for which it is essential, incidentally, to set up a special construction organization. Development should be approached in scientifically substantiated manner and with regard for climatic and landscape conditions, so as to not be detrimental to nature. Particular attention should be paid here to questions of the quality of architectural decisions and construction so that the buildings are convenient for recreation and attractive in appearance.

IV

The educational functions of the trade unions, which are called on to shape an active positive position in life in every worker, are manifold, comrades. It is primarily a question of labor education. Mentorship has been an effective form for this recently. More than 27,500 skilled workers and production pacesetters participate in this noble movement in the republic. From good will and the calling of their hearts they teach the young people industriousness and skills and raise them on the heroic traditions of our illustrious working class. Many of them are here in this hall. It was pleasant to see yesterday with what a profound feeling of gratitude the instructors were greeted by the trainees of the vocational-technical schools.

We cannot say that the trade unions are taking full advantage of their possibilities and rights in the struggle against ugly phenomena, embezzlement of socialist property, bribe-taking and speculation. So-called "takers" feel they have the run of the place at certain enterprises, particularly of the light, food and meat and dairy industry.

Trade union workers must participate even more actively in the struggle against the enemies of communist morality and against all negative phenomena and adopt an irreconcilable attitude toward any manifestation of dishonesty and unscrupulousness. A principal place in the trade unions' educational work should be occupied by moral education, moral-legal preventive work and extensive and systematic propagandizing of the values and advantages of the Soviet way of life. In the socialist society, which embodies the powerful alliance of equal and free workers and true masters of their land and their own fate, the trade unions possess a vast amount of moral capital. Having this noble capital operate at full capacity is the honorary and responsible mission of our trade union organizations (stormy applause).

The organization of festivals, competitions and reviews of the amateur arts, which are conducted unjustifiably often and, moreover, frequently in work and study time, and are not preceded by careful preparations, is in need of considerable improvement. The current shortcomings in the development of amateur arts activity are connected with gaps in work on the selection, assignment and training of club establishment personnel and amateur arts leaders. The Azerbaijan Interunion Trade Union Folk Creativity Center is not actively enough involved in these matters, in raising the ideological level of the amateur arts and enriching their repertoire with highly artistic works of Soviet drama, music and choreography and samples of national and foreign classics.

The cultural-educational establishments possess great potential for solving key problems of the working people's communist upbringing and for satisfying their intellectual needs and aesthetic requirements. A responsible task of the trade unions is the skillful, efficient use of this potential in the interests of the all-around development of the personality and the enrichment of the spiritual world of every worker .

An important place in trade union activity is occupied by questions of the physical culture of the masses.

The Azerbaijan Council of Trade Unions, the sectorial trade union committees and the local committees are obliged to become actively and purposefully involved in improving the material-technical base, display constant concern for the preservation and timely and high-quality maintenance of sports installations and adopt a proprietary attitude toward public property. And, what is most important, it is essential to skillfully mobilize all resources and possibilities to ensure the true mass nature of physical culture and sport (stormy applause).

V

A principal task of the trade unions is defense of the rights and interests of the man of labor and the development of democratic principles in production. You, comrades, have the broadest opportunities for exercising your rights--workers' meetings, permanent production conferences, collective contracts, participation in allocation of the material incentive funds and housing, the issuing of passes to sanatoria, recreation centers and Pioneer camps, labor protection inspections, worker supervision in trade and public catering and much else. Even a short list gives us an idea of how great the trade unions' rights in our country are and how diverse the forms and methods of their realization. And it is very good that the trade unions are availing themselves of them ever more effectively in the name of the interests of the people of labor. Much was said about this in the report and the delegates' speeches.

At the same time, the speeches sounded notes of alarm. Mention was made, inter alia, of the fact that far from all of the 2,500-plus plant and shop permanent production conferences are operating efficiently and that their recommendations are not always supported and implemented. There are considerable gaps in the conclusion of collective contracts. At enterprises of metallurgy, local industry, housing and municipal services, consumer services and construction and in a number of other sectors the administration fails to observe a number of the commitments assumed in accordance with the collective contracts, and the trade unions are, unfortunately, inactive.

Such instances testify that the trade union organizations and their leaders are insufficiently linked with the masses and do not know enough about their needs and concerns and interests and aspirations. It is for this reason that the worker, kolkhoz member or employee, bypassing the trade union, frequently turns to party or soviet authorities with the questions that are troubling him.

Trade union workers need to display greater sharpness and scrupulousness when it comes to breaches of labor legislation. The trade union organizations are still frequently under the thumb of the administration, going along with wrongful dismissals. As a result the people's courts granted 60 percent of the suits brought for job reinstatement. We also spoke of a similar situation at the previous Azerbaijan Trade Union Congress. However, as you can see, there have been no significant changes. The trouble is that neither the Azerbaijan Trade Union Council Presidium, nor the Ministry of Justice nor other interested establishments have gotten around to analyzing the causes of the breaches of labor legislation. And one of them is ignorance of the laws on the part of both the managers and trade union workers and the unsatisfactory organization of legal propaganda. It also has to be said that, as an analysis shows, the courts do not always make legitimate rulings and at times force the reinstatement of a malicious loafer and shirker.

I would like to hope that the trade unions and judicial authorities will, finally, deal with this problem properly. Both managers and the judicial authorities are obliged to observe Soviet legislation unswervingly. It is the trade unions' duty to occupy a high-minded position in all conflicts and strictly protect the interests of both the man of labor and the state (applause).

A most important area of the trade unions' work is active, effective struggle to strengthen labor discipline. At the previous congress we criticized the Azerbaijan Council of Trade Unions and the sectorial trade union committees for a lack of due attention to this problem. The situation has been rectified somewhat. But there is still much absenteeism, whole-day and intrashift idle time and absence with administration permission. Suffice it to say that these factors are responsible for the loss of approximately R100 million of industrial output annually. Losses are particularly great at enterprises of the light and meat and dairy industry and construction materials industry. And how much time is wasted in the ministries, departments, associations and scientific research institutes?

We have reason to say again today that the trade union organizations are still struggling inadequately to strengthen labor discipline, and they discuss these questions and institute proceedings against the transgressors only rarely. In addition, the local committees frequently come to the defense of loafers and people who do not consider themselves bound to work productively for a full work day.

VI

Comrades! We spoke in comparative detail at the previous congress on the tasks of the factory-plant and local trade union committees and the shortcomings and measures for an improvement in their activity. It is gratifying that the work of many factory-plant and local committees was stepped up considerably in the period under review and that they are exerting a pronounced influence on the achievement of production successes. But, as the discussion at the congress testifies, there are still many gaps and unsolved problems in their work. And the main cause of these is the low level of leadership on the part of many republic trade union committees.

While paying lipservice to observance of the law, certain trade union leaders in practice take the path of transgressing it and of abusing their position for mercenary ends.

It has to be said frankly that the policy of the Azerbaijan Communist Party Central Committee aimed at the increased exactingness and responsibility of the personnel, a strengthening of discipline and merciless struggle against all phenomena that are alien to us has until recently not been established in the activity of the Presidium of the Azerbaijan Council of Trade Unions and certain republic trade union committees. They have been struggling very inadequately against those who like to profit at the expense of the state, obtain accommodations and a car illegally and so forth.

All that has been said above was a consequence of the fact that the Presidium of the Azerbaijan Council of Trade Unions; despite repeated warnings and the serious criticism at the previous congress, did not draw the due conclusions and was unable to reorganize the work of the Council of Trade Unions in the light of the requirements of the party and the 16th Congress of USSR Trade Unions. The Azerbaijan Council of Trade Unions had weak connections not only with the local but also with republic trade union committees, coordinated their activity inadequately and displayed passiveness in the presentation and solution of urgent problems of economic and cultural building. The Council of Trade Unions and many republic committees neglected work on the selection and assignment of persons, who failed to justify the trust shown in them. Paperwork, formalism, lack of principle in an evaluation of the situation locally, liberalism and a conciliatory attitude toward shortcomings predominated in the style and methods of the work of the Azerbaijan Council of Trade Unions' Presidium and departments.

We note with satisfaction that the Presidium of the Azerbaijan Council of Trade Unions and its chairman, Comrade L.Kh. Rasulova, performed a considerable amount of work last year on removing the shortcomings and stimulating the activity of the trade unions. The measures adopted to improve personnel work and the moral-psychological atmosphere in the Council of Trade Unions and republic committees merit approval. Supervision of performance was stepped up, discipline strengthened and exactingness increased. There is more professionalism and sharpness in the activity of the Council of Trade Unions and its Presidium. Recently, the Azerbaijan Council of Trade Unions has come to the Azerbaijan Communist Party Central Committee, the republic government and the AUCCTU with a number of important proposals aimed at satisfying the working people's growing requirements in various walks of life. And we hope that the good start will be suitably developed (stormy applause). Much, very much remains to be done for a fundamental improvement in the activity of the Presidium of the Azerbaijan Council of Trade Unions and the sectorial trade unions and in the removal of existing shortcomings. Incidentally, it should be said that certain questions that we raised at the previous congress are just as pertinent today. The Presidium of the Azerbaijan Council of Trade Unons should take this into consideration in its practical work.

The new Azerbaijan Council of Trade Unions and all trade union organizations have to perform active work on tackling the tasks put forward by the 26th CPSU and 30th Azerbaijan Communist Party Congresses and this congress of the republic's trade unions. You, dear comrades, must work in earnest in order, as Leonid Il'ich Brezhnev said, "...to continue to increase the control of the trade unions and labor collectives over the solution of all questions of people's labor, life and social routine extend their participation in the planning and management of production, the selection and assignment of personnel and the efficient use of enterprise and organization resources" (stormy applause).

Our trade unions will work the more successfully, the better and more specific the party leadership of them. The party committees are obliged to support the trade union organizations in every possible way, strive for their increased influence in the labor collectives, extensively enlist the trade union aktiv in participation in the work of the party authorities and share experience in organizational and political work. Party leadership of the trade unions is a creative business. It is political leadership that permits no petty tutelage or, in any event, substitution for and infringement of the rights of the trade union organizations (applause).

Comrades! We have every reason to state that the 16th Congress of Azerbaijan Trade Unions is being held on a high organizational and ideological level and in an atmosphere of healthy, businesslike criticism and self-criticism (stormy applause). And this permits us to express the first conviction that the republic's trade unions, under the leadership of the party, will henceforward participate even more actively in economic and cultural building and the working people's communist education and will make a fitting contribution to fulfillment of the 11th Five-Year Plan and realization of the historic decisions of the 26th CPSU Congress (stormy, prolonged applause. All rise).

PARTY LECTURERS HOLD SEMINAR IN BAKU

Lecturer's Seminar

Baku BAKINSKIY RABOCHIY in Russian 23 Feb 82 pp 1, 2

[Azerinform report: "Carry the Party's Words To the Masses: Zonal Seminar-Conference of Party Committee Lecturers"]

[Text] It is an honorable and responsible mission to carry to the masses the party's thoughts, to explain its policy, and to contribute to consolidating lofty communist ideas. Further improvements in the quality and effectiveness of lecture propaganda are the principal topic of the zonal seminar-conference of party committee lecturers convened by the CPSU Central Committee and inaugurated on 22 February in Baku at the Club imeni F. E. Dzerzhinskiy. These lecturers represent the central committees of the CP of Georgia, Armenia, and Azerbaijan, as well as the oblast party committees of Dagestan, Kabardino-Balkariya, North Osetiya, and Checheno-Ingushetiya; the Krasnodarskiy and Stavropol'skiy Kray party committees, the Moskovskaya, Volgogradskaya, and Rostovskaya Oblast party committees; and the ideological workers of the Armed Forces of the USSR. The seminar is also being attended by lecturers from city and rayon party committees within the zone and ideological workers and activists of our republic.

The presidium members are: G. A. Aliyev, candidate member of the CPSU Central Committee politburo and First Secretary of the Azerbaijan CP; the Azerbaijan CP Central Committee Bureau members G. A. Gasanov, V. A. Guseynov, A. V. Kovtunov, I. A. Mamedov, Yu. N. Paguchev, G. N. Seidov, and K. A. Khalilov; Candidate Member of the Azerbaijan CP Central Committee Bureau R. E. Mekhtiyev; Deputy Chief of the Propaganda Department at the CPSU Central Committee P. K. Luchinskiy; department chiefs at the Azerbaijan CP Central Committee R. A. Abutalybov and A. F. Dashdamirov; and heads of lecture groups within the zone's party committees.

The opening address at the seminar-conference was delivered by P. K. Luchinskiy, deputy chief of the Propaganda Department at the CPSU Central Committee. In behalf of the seminar participants he cordially greeted the Azerbaijan CP Central Committee and all workers of the republic, whom he congratulated on winning the All-Union Socialist Labor Competition for the Successful Fulfillment of the 1981 State Plan for Economic and Social

Development and on the award, for the 12th year in a row, of the Challenge Red Banner of the CPSU Central Committee, the USSR Council of Ministers, the VTsSPS [All-Union Central Council of Trade Unions], and the Komsomol Central Committee to the Azerbaijan SSR. He wished them further successes in fulfilling the decisions of the 26th CPSU Congress and the competition in honor of the 60th anniversary of establishment of the Union of Soviet Socialist Republics.

Comrade Luchinskiy also transmitted greetings to representatives of the Georgian and Armenian SSRs, Dagestanskaya ASSR, Stavropol'skiy Kray, and Moskovskaya and Rostovskaya Oblasts in connection with their award of the Challenge Red Banners of the CPSU Central Committee, the USSR Council of Ministers, the VTsSPS, and the Komsomol Central Committee for excelling in last year's competition.

He expressed his gratitude to the Azerbaijan CP Central Committee and personally to Candidate Member of the CPSU Central Committee, First Secretary of the Azerbaijan CP Central Committee, comrade G. A. Aliyev, for their solicitude and concern for the successful conduct of the zonal seminar conference of party committee lecturers in Baku.

The speaker further declared that regularly convening such seminars is specified in the resolution of the CPSU Central Committee "On the Status and Measures to Improve Lectural Propaganda." This is a proof of the attention paid by the party Central Committee to an important sector of ideological indoctrination--lectural propaganda. "Our seminar ranks in importance with the other major ideological measures carried out by the CPSU Central Committee following the 26th party congress, such as the All-Union Conference on Ideology for Secretaries of the Party Central Committees of the Union Republics, and Kray and Oblast Party Committees, as well as the republic and zonal seminars for secretaries of city and rayon party committees, and the courses for heads of propaganda and agitation departments within the party central committees of the Union republics as well within the party kray and oblast committees. These measures represented the implementation of the directive of the CPSU Central Committee concerning the profound analysis and propaganda of materials of the 26th congress. At these seminars the conclusions and assessments by the party congress, which we follow in our everyday activities, were transmitted to the broad aktiv. And as known, in these activities an important role is assigned to lectural propaganda.

"As comrade L. I. Brezhnev points out in his 'Reminiscences,' 'The passionate words of the party were and remain the party's sharp-edged weapon, and therefore they must be treated very seriously.' This brief sentence sums up and interprets a tremendous amount of experience which is of great significance to the present and to the future.

"In recent years the possibilities of the Soviet people for receiving information via radio, television, and newspapers and periodicals have markedly broadened. Nevertheless, nothing can replace the personal contact between workers and the lecturer, propagandist, or public speaker, the possibility of questioning him, listening to his answer, exchanging opinions about recent events. That is why the congress expressed gratitude to these categories of party workers and activists for spreading the party's thoughts and explaining its policies among the masses. They are, as L. I. Brezhnev said, doing work that is useful and necessary for the people.

"However, despite all its indisputable accomplishments, lecture activity needs constant refinement and further improvements in effectiveness and quality.

"A year already has passed since the 26th congress of our party; tomorrow will be the first anniversary of the opening day of that congress. The Soviet people is preparing to solemnly celebrate the 60th anniversary of establishment of the USSR through feats of labor and socio-political activity. Yesterday the resolution of the CPSU Central Committee 'On the 60th Anniversary of Establishment of the Union of Soviet Socialist Republics' was published. This is an important theoretical document of the party, which has been received by the Soviet people with tremendous enthusiasm.

"This opens a fertile field of activity to lecturers, in this connection: the propagandization of the historic meaning of the achievements of socialism, the clear and convincing revelation of the heroism of our days, of the beauty and grandeur of the labor of the Soviet man, of the meaning and accomplishments of socialist democracy, of the broad range of the rights and freedom of the Soviet citizen, and of the practical incarnation of the ideas of V. I. Lenin and Lenin's nationality policy in our state. At a time when communists and all Soviet people are starting to implement the resolutions of the CPSU Central Committee, you, party lecturers, are able to take part in propagandizing the ideas of socialist internationalism among the workers of fraternal Azerbaijan, this republic of glorious revolutionary traditions. The resolution adopted by the Azerbaijan CP Central Committee 'On Measures to Further Develop the International Ties of the Workers of Azerbaijan With the Workers of the Fraternal Soviet Republics' plays an important role in promoting the ideas of friendship and brotherhood of all the nations of our multinational homeland.'"

Comrade Luchinskiy continued: "By contrast with the previous years, the CPSU Central Committee Secretariat decided to conduct the seminars in eight zones: Tashkent, Alma-Ata, Baku, Tallinn, Odessa, Voronezh, Sverdlovsk, and Novosibirsk. This was done to reach a greater number of party-committee lecturers. For the first time, lecturers from city and rayon party committees and the ideological aktiv have been invited to such seminars. The convening of zonal seminars serves not only to broaden the range of categories of seminar participants but also to bring theory closer to the practice of indoctrination, to the experience of local party committees and organizations with allowance for the particular features of regions and republics. The program of our seminar provides for visits and speeches to party rayon committees and labor collectives, the analysis of experience in lectural propaganda, the exchange of such experience, and section activities."

The floor was offered to Candidate Member of the CPSU Central Committee Politburo, First Secretary of the Azerbaijan CP Central Committee, G. A. Aliyev, who was warmly welcomed by those present.

Aliyev Speech at Seminar

Baku BAKINSKIY RABOCHIY in Russian 23 Feb 82 pp 1-2

[Text: "Speech of Comrade G. A. Aliyev"]

[Excerpts] Esteemed comrades, dear guests!

The Central Committee of the Azerbaijan CP warmly and cordially welcomes the participants in the zonal seminar-conference of party committee lecturers from the republics of the Transcaucasus, autonomous republics, krays, and oblasts of North Caucasus, and Moskovskaya, Rostovskaya, and Volgogradskaya Oblasts, as well as of political workers of the army and navy on ancient Azerbaijan soil!

Precisely such a great event in the life of the ideological and scientific community of this country and our republic has been the All-Union Scientific and Practical Conference on Moral Education held in Baku in April 1979. It revealed extensive new possibilities for perfecting moral education in the struggle to consolidate an active and committed attitude of the builder of communism, and it left behind a profound trace in the republic's ideological life. Further, it contributed to intensifying the educational work of our party organizations. The communists of Azerbaijan responded to the convening of that conference by considering it both a great honor and of great assistance to the CPSU Central Committee and to its Propaganda Department in further improving indoctrination activities in the republic.

This seminar-conference and the fact that it is attended by more than 160 experienced, competent party committee lecturers from various republics, krays and oblasts of the country represent at the same time an important means of strengthening the bonds of common purpose linking the bearers of ideology, the bonds of friendship and international brotherhood.

The Central Committee has outlined a program for further perfecting of socialist international relations and for the international and patriotic education of workers at the present stage. The propaganda and elucidation of the statements in that resolution and the consistent implementation of the resolution itself are currently becoming the chief purpose of the ideological-front workers, including lecturers, propagandists, and all verbal propaganda fighters. Our seminar-conference should and will make its own contribution to the practical implementation of the related tasks.

On this glorious anniversary of the Soviet multinational state, the workers of Azerbaijan demonstrate with renewed strength their unshakable loyalty to the Communist party and its Leninist Central Committee, their indestructible fidelity to the ideals of internationalism and brotherhood of the peoples of the USSR.

Comrades! Lecturing is a most important orientation of the agitation and propaganda work of the party organizations.

A party-committee lecturer is an ideological fighter for the party. He is entrusted with the exalted mission of propagandizing and elucidating the policies and ideological-theoretical wealth of the party, our great goals and tasks. The activity of the lecturer and propagandist is an important channel for communication between party organizations and the masses. It has the special advantage of direct and immediate intercourse with the people, of emotional contact with them, which places it above any other form of propaganda and agitation. This is so because, given the specific nature of the lecturer's work, he does not merely speak to the audience but also listens to it, answers questions in addition to asking them, and sometimes engages in a debate or polemics. All this immeasurably enhances the possibilities for convincing people and taking their opinions more fully into consideration; it enriches the lecturer himself and, in the final analysis, assures the effectiveness of his work. That is why the party attaches such great importance to lectural propaganda and pays such demanding attention to the work and performance of lecturers.

Of course, such lecturing work presupposes the lecturer's extensive prior theoretical and political training and demands of him constant study and self-improvement and an unflagging effort to broaden his own horizon and perfect his skills as a public speaker.

It must be bluntly stated, however, that the quality of the lecturers is not always and everywhere even barely adequate to the demands of the party and the 26th CPSU Congress. The shortcomings existing in this work--pedantry, oratorical crackling and superficial knowledge of life--are pointed out in the resolution of the CPSU Central Committee "On Further Improving Ideological and Political-Educational Work." Practice shows that some lecturers display insufficient knowledge and a limited outlook which they conceal by citing copy-book maxims and resorting to shopworn phraseology in their attempts to avoid topical questions. Lenin emphasized: "Spurious phraseology and spurious bombast represent moral decay and the first sign of political bankruptcy." Vladimir Il'ich taught that the revelation of truth is our strength. But truth does not tolerate any falsehood. Hence, any propaganda, including lecture work, can be effective only when it is inseparably linked to the party's policy and utterances, when it tells the truth. Comrade L. I. Brezhnev pointed out: "Participation in real life, helping the people to understand more clearly the meaning of that life and guiding its course, helping to make this life better, more decent, brighter and richer not only materially but spiritually--what can be more important and more noble? This is the yardstick with which the party approaches ideological work in all its forms." This is how the party poses the question at present, and such is the yardstick with which the work of lecturers and propagandists should be measured.

These lessons, this example, obligate every party worker, every lecturer, to exert his entire energy, strength and knowledge, all of his skills and craft, in the cause of mobilizing the masses to carry out the historic plans of the party and to struggle for the triumph of communist ideals.

[In Azerbaijan] national income during the five-year plan period has increased by 47 percent compared with the planned 32 percent. Industrial output also increased by 47 percent compared with the planned 39 percent, while the mean annual volume of agricultural gross output increased by 47 percent compared with the planned 21 percent. For its pre-term fulfillment of the 10th Five-Year Plan, Soviet Azerbaijan has been awarded the Order of Lenin.

We greatly rejoice to note that the republics of the Transcaucasus, many autonomous republics, krays, and oblasts of the entire Caucasus, as well as Moskovskaya Oblast, which is also represented at this seminar, have emerged as victors in the all-Union competition. We greet and welcome you in your capacity as envoys of Georgia, Armenia, Moskovskay Oblast, Dagestanskaya ASSR, Stavropol'skiy Kray, and Rostovskaya Oblast, on the occasion of your notable accomplishment in being awarded the Red Banner of the CPSU Central Committee, the USSR Council of Ministers, the VTsSPS, and the Komsomol Center Committee.

We are confident that your seminar will contribute to raising the level and effectiveness of lectural propaganda and enhancing its contribution to the accomplishment of the tasks posed to the ideological-front workers by the 26th congress of the great Leninist party.

Allow me, comrades, to wish the seminar participants fruitful work, creative successes, and new achievements.

(The speech of comrade G. A. Aliyev was heard with great attention and repeatedly interrupted by prolonged applause].

The seminar-conference participants listened to the following lectures: "The Leninist Nationality Policy of the CPSU at the Present Stage (Toward the 60th Anniversary of Establishment of the USSR)," by I. F. Anoshkin, doctor of philosophical sciences, senior scientific co-worker at the Institute of Marxism-Leninism under the CPSU Central Committee; "Basic Socio-Economic Tasks of the 11th Five-Year Plan and for 1982," by D. G. Khodzhayev, deputy department chief at the USSR Gosplan; "Strengthening the Country's Defense Capacity as a Most Important Task for the Party and Soviet State," by Vice Admiral P. N. Medvetsev, member of the Military Council of the Soviet Navy.

On 23 February the seminar-conference will continue its deliberations.

The seminar participants placed flowers at the monument to V. I. Lenin erected on the central square of Baku, which is named after the founder of the Communist party and the multinational Soviet state.

A wreath was placed at the memorial to 26 Baku commissars.

The seminar participants familiarized themselves with notable sights of Baku, toured the museums, and viewed films by Azerbaijani filmmakers.

TURKMEN AGRICULTURAL CONFERENCE HELD

Ashkhabad TURKMENSKAYA ISKRA in Russian 5 Mar 82 p 1

[Turkmeninform report: "Conference of the Pace-Setters of Turkmenistan's Agriculture"]

[Text] The agricultural year 1981 was spent working and in concern for the crop harvests and the development of animal husbandry. Translating into reality the historic decisions of the 26th CPSU Congress and the resolution of the 22nd Turkmen CP congress, and actively joining the all-Union socialist labor competition for fulfillment of the tasks of the first year of the 11th Five-Year Plan period and the period as a whole, the field and farm workers coped with the plans and socialist pledges for procurement of thin-fiber cotton, mulberry silkworm cocoons, grain, vegetable and melon crops and animal-husbandry products. For the year as a whole Maryyskaya Oblast and a number of rayons and farms were awarded the Challenge Red Banners of the CPSU Central Committee, the USSR Council of Ministers, the VTsSPS [All-Union Central Council of Trade Unions), and the Komsomol Central Committee. The best rayons, kolkhozes, and sovkhozes were awarded the Challenge Red Banners of the Turkmen CP Central Committee, the Turkmen SSR Council of Ministers, the Turkmen Trade-Union Council, and the Turkmen Komsomol Central Committee.

The republic's workers are grateful to the CPSU Central Committee and the Soviet government for assistance in developing the economy and culture of Turkmenistan. They respond with devoted labor to the party's fatherly concern.

The capital of the republic welcomed hospitably the envoys of Turkmen villages. They came to Ashkabad from across sunny Turkmenistan--from the Tashauzskiy oasis, the subtropic zone, the Murgab valleys, the Tedzhen and Amudar'ya rivers, and the Karakum and Kopetdag virgin lands--in order to discuss broadly and from all sides the results of last year's work, analyze accomplishments and shortcomings, exchange advanced knowhow and achievements in developing agriculture on the basis of concentration, specialization, and intensification of branches, uncover the potential for a further increase in agricultural production and procurements, identify the new frontiers to be stormed in honor of the 60th anniversary of establishment of the USSR and outline the ways of implementing the decisions of the November (1981) Plenum of the CPSU Central

Committee and the advice and directives of comrade L. I. Brezhnev contained in his speech at that Plenum, so as to carry out the party's food program.

On 4 March the conference of Turkmenistan's agriculture pace-setters was convened in the Political Education House of the Ashkhabadskaya Oblast Turkmen CP Committee. Its participants included the leading grain growers, mechanizers, vegetable growers, silk growers, animal husbandrymen, and workers of other branches; the heads of and experts from kolkhozes, sovkhozes, and inter-farm associations; secretaries of oblast, city, and rayon party committees and rural party organizations; chairmen of oblast, city, and rayon soviets of people's deputies; trade-union and Komsomol workers; scientists, administrators, and experts from republic ministries of agriculture, land reclamation and water management, fruit and vegetable farming, procurements, and cotton-processing industry, as well as from the Turkmen SSR Goskomsel'khoztekhnika [State Committee for Agricultural Equipment] and their local offices, and also from certain other ministries and departments; responsible workers of the apparatus of the Turkmen CP Central Committee, the Presidum of the Turkmen SSR Supreme Soviet, and the Turkmen SSR Council of Ministers; and representatives of the press, television, and radio.

The conference also was attended by delegations from the fraternal republics of Uzbekistan, Azerbaijan, and Tajikistan.

The members of the conference presidium consist of the eminent figures in the republic, heroes of socialist labor, famed masters of farming and animal husbandry, talented organizers of kolkhoz and sovkhoz production, and members and candidate members of the Turkmen CP Central Committee Bureau P. Annaobrazov, A. S. Boyko, M. G. Gapurov, V. F. Zhulenev, Ch. S. Karryyev, N. V. Makarkin, G. S. Mishchenko, M. Mollayeva, M. A. Charyyev, M. G. Shmidt, O. I. Ishankuliyeva, and S. A. Niyazov; the deputy chairmen of the Turkmen SSR Council of Ministers V. Ye. Abramov, R. A. Bazarova, N. Orazmukhamedov, and N. T. Suyunov; and the chief of cotton production technology at the USSR Ministry of Agriculture N. I. Krutskikh. The presidium also includes the heads of delegations from fraternal republics of: Uzbekistan--B. R. Rakhimov, Deputy Chairman of the Uzbek SSR Council of Ministers; Azerbaijan--G. R. Gasanov, Azerbaijan SSR Minister of Forestry; Tajikistan--Kh. N. Nasretdinov, Tajik SSR Minister of Land Reclamation and Water Management.

The conference began its deliberations.

The state hymns of the Soviet Union and Turkmen SSR were sung.

Vigorous applause accompanied the election of an honorary presidium consisting of members of the CPSU Central Committee Politburo headed by the General Secretary of the CPSU Central Committee and Chairman of the Presidium of the USSR Supreme Soviet, Comrade L. I. Brezhnev.

A report on "Results of the Fulfillment of the 1981 Agricultural Production and Procurement Plans and the Tasks of the Republic's Agricultural Workers for 1982 Ensuing from the Decisions of the 26th CPSU Congress and the Recommendations and Directives of the General Secretary of the CPSU Central

Committee, Chairman of the Presidium of the USSR Supreme Soviet, Comrade L. I. Brezhnev, With Respect to the Development of Agriculture, and from the Decisions of the 22nd Congress of the Communist Party of Turmenistan," was presented by the First Secretary of the Turkmen CP Central Committee, M. G. Gapurov.

The report was discussed by, among others, P. Annaobrazov, first secretary of the Ashkhabadskaya Oblast party committee; A. Akgayev, first secretary of the Maryyskaya Oblast party committee; S. Dzhumakuliyev, chairman of the "Kommunizm" Kolkhoz in Khalachskiy Rayon; B. Atayev, first secretary of the Tashauzskaya Oblast party committee; B. R. Rakhimov, head of the Uzbekistan delegation, deputy chairman of the Uzbek SSR Council of Ministers; R. Khudayberdiyev, first secretary of the Chardzhouskaya Oblast party committee; G. R. Gasanov, head of the Azerbaijan delegation, Azerbaijan SSR Minister of Forestry; T. Durdynazarov, chairman of the Krasnovodskaya Oblast executive committee of the soviet of people's deputies; Kh. N. Nasretdinov, head of the Tajikstan delegation, Tajik SSR Minister of Land Reclamation and Water Management; K. Atayeva, mechanic-driver of a cotton-harvesting machine at the "Kommunizm" Kolkhoz in Turkmen-Kalinskiy Rayon; G. Gurbanov, Turkmen SSR Minister of Agriculture; G. Koyunliyev, shepherd at the "Kazandzhik" Sovkhoz in Kazandzhikskiy Rayon, Hero of Socialist Labor; A. Khatamov. Turkmen SSR Minister of Fruit and Vegetable Growing; K. Akhmedyarov, chairman of the "40 Years of Turkmen SSR" Kolkhoz in Ashkhabadskiy Rayon; and L. A. Kruglyakov, chairman of the Turkmen SSR Goskomel'khoztekhnika.

The conference participants accepted the socialist pledges of Turkmenistan's agricultural workers for 1982.

Agreements on socialist labor competition with Uzbekistan, Azerbaijan, and Tajikistan were concluded.

The conference adopted with great enthusiasm a letter of greetings to the CPSU Central Committee, the Presidium of the USSR Supreme Soviet, the USSR Council of Ministers, and the General Secretary of the CPSU Central Committee, Chairman of the Presidium of the USSR Supreme Soviet, Comrade L. I. Brezhnev.

UKRAINIAN TRADE UNION CONGRESS HELD

Kiev PRAVDA UKRAINY in Russian 26 Feb 82 pp 1-2

[RATAU report on proceedings at 13th Ukrainian Trade Unions' Congress]

[Excerpts] Soviet people are persistently implementing the plans of the 26th CPSU Congress, tackling tasks of tremendous scale and significance. Proceeding toward the 60th anniversary of the formation of the USSR, the workers of city and countryside are doing everything to successfully fulfill the plans of 1982 and the 5-year plan as a whole. An important organizing role here belongs to the trade unions, which, as Comrade L. I. Brezhnev, general secretary of the CPSU Central Committee and chairman of the USSR Supreme Soviet Presidium, emphasized, are the party's dependable support in the masses and a powerful means of the development of democracy and the enlistment of the working people in the building of communism. The trade unions of the Ukraine—a 25 million-strong detachment of the country's trade unions—are participating extensively in the accomplishment of economic, social and cultural tasks.

The best representatives of the working class, kolkhoz peasantry and intelligentsia have come to the republic capital for the 13th Ukrainian SSR Trade Union Congress. On the eve of the congress its delegates, representatives of all oblasts, laid flowers on the monument to V. I. Lenin, founder of the Communist Party and the Soviet state, and the monument in honor of the Great October Socialist Revolution. Wreaths were placed at the Tomb of the Unknown Soldier in the Park of Eternal Glory.

Twenty five February, 10 o'clock AM: The congress delegates and guests, who have assembled in the "Ukraina" Palace of Culture, warmly welcome Comrades V. V. Shcherbitskiy, A. F. Vatchenko, G. I. Vashchenko, I. A. Gerasimov, B. V. Kachura, A. P. Lyashko, I. A. Mozgovoy, I. Z. Sokolov, V. A. Sologub, A. A. Titarenko, V. V. Fedorchuk, V. F. Dobrik, Yu. N. Yel'chenko, A. S. Kapto, Ye. V. Kachalovskiy, Yu. A. Kolomiyets and Ya. P. Pogrebnyak, leaders of the Ukrainian Communist Party and the republic government, and AUCCTU Secretary A. V. Viktorov.

The 13th UkSSR Trade Unions' Congress was declared open.

With tremendous enthusiasm the CPSU Central Committee Politburo headed by Comrade L. I. Brezhnev was elected honorary presidium.

Following the election of the congress' steering bodies, the following agenda was passed unanimously:

1. Report of the Ukrainian Council of Trade Unions.

2. Report of the Auditing Commission.

3. Election: of the Ukrainian Council of Trade Unions and the UkSSR Trade Unions' Auditing Commission.

The report was delivered by V. A. Sologub, chairman of the Ukrainian Council of Trade Unions. The 13th Ukrainian Trade Unions' Congress, he said, is being held at a time when our party and the entire Soviet people are commemorating the anniversary of the 26th CPSU Congress. The time that has elapsed since the congress has emphasized with all certainty the tremendous vitality and realism of its decisions. The program of the country's further economic and social development put forward by our party has become the concrete concern of millions and is being implemented consistently.

Like all Soviet people, the working people of the Ukraine unanimously approve and support our party's wise domestic and foreign policy and the purposeful activity of its Leninist Central Committee and Central Committee Politburo headed by the outstanding continuer of the great Leninist cause and relentless fighter for peace and social progress, Comrade L. I. Brezhnev.

The Ukrainian Communist Party Central Committee's greetings to our congress, the speaker continued, note the active role of the republic's trade unions in the accomplishment of the tasks of economic and cultural building and determine the main directions of their work at the current stage and the concrete paths of their participation in the practical fulfillment of the historic decisions of the 26th CPSU and Ukrainian Communist Party congresses. The warm words of greeting, which are imbued with party concern, and the always concerned support for our proposals and initiatives on the part of the Ukrainian Communist Party Central Committee and Comrade V. V. Shcherbitskiy, member of the CPSU Central Committee Politburo and first secretary of the Ukrainian Communist Party Central Committee, personally engender a feeling of profound gratitude and give rise to an ardent aspiration to work even better and with greater results.

The purposeful leadership and constant assistance of the Ukrainian Communist Party Central Committee, obkoms, gorkoms and raykoms and primary party organizations have exerted a decisive influence on a rise in the overall level of the republic trade unions' organizing work in the period under review and have contributed to the unions' stronger organization, numerical growth and increased influence on all aspects of the life of the labor collectives.

Guided by Lenin's instructions, the party has set the unions a dual task: displaying the utmost concern for the development of the economy, and upsurge of production and, on this basis, a further rise in the people's well-being and displaying better concern for the working people's rights and interests and their work and social conditions. In tackling this task, the report observed, the Ukrainian Council of Trade Unions and the trade union councils and committees are paying paramount attention to the development of the working people's creative assertiveness and their increasinglyextensive enlistment in production management. The trade union organizations regularly discuss drafts of the annual and 5-year plans and forward plans of the labor collectives' socioeconomic development and uncover resources for an increase in production efficiency and work quality. Extensive use is made for this purpose of permanent production conferences, meetings and conferences to conclude collective contracts, working people's amateur scientific-technical associations, worker control, brigade leader councils and other proven forms of democracy in the sphere of socialist production.

The report analyzed the activity of the republic's trade union organizations in the study, collation and introduction of progressive experience. Much was done in the period under review for, in particular, the extensive dissemination of the initiatives of the collectives of Zaporozhskaya Oblast for reducing manual labor, L'vovskaya and Dnepropetrovskaya Oblasts for the introduction of a comprehensive product quality and production efficiency control system and Kiev and Cherkasskaya Oblasts for increasing the production and sale to the state of animal husbandry products, of the Yampol' beet growers and others, which were approved by the CPSU and Ukrainian Communist Party Central Committees.

The work that was done on perfecting socialist competition contributed to a considerable extent to the fulfillment of the main socioeconomic targets of the 10th Five-Year Plan and the first year of the 11th.

At the same time the speaker criticized for shortcomings in the organization of competition the republic committees of the workers of coal, metallurgical and food insutry and construction and construction materials industry, which are mobilizing the collectives inadequately for the fuller use of resources and production potential, introduction of the achievements of science and technology and a reduction in unproductive losses. It is essential to target the participants in competition more purposefully toward the utmost intensification of social production, an increase in labor productivity and the more efficient use of all resources.

A big place in the report was devoted to questions of a careful attitude toward metal, fuel-energy resources and work time. It is necessary to continue to stimulate the public review of economy and thrift which is conducted in the republic, in which approximately 10 million persons participate annually. Over R3 billion were saved in the last 5 years alone thanks to the introduction of proposals received.

Particular attention was paid to the importance of the rational use of labor resources. A practicable way of tackling this task is, as Comrade L. I. Brezhnev emphasized, a sharp increase in labor productivity, the saving of every hour and every minute of work time, a reduction in manual labor and the adoption of additional measures to accelerate the production of comprehensive production automation and mechanization facilities. Great economic and social significance in this respect is attached to the introduction of the brigade form of the organization and remuneration of labor and the utmost strengthening of labor discipline.

Nonetheless, far from full use is yet being made of the possibilities of mass technical creativity in a number of sectors of the economy. A considerable number of scientific-technical innovations which had been accepted, but not introduced was brought to light in the course of a public stock-taking conducted on the eve of the congress. Greater persistence in the use of everything that is provided by the creative thought and initiative of pacesetters and innovators must be displayed by the All-Union Society of Inventors and Production Efficiency Experts and scientific-technical society republic councils.

The unions, the report said, have an important role in the accomplishment of the tasks connected with the development of agricultural production and the solution of socioeconomic problems of the countryside. The activity of the Ukrainian Council of Trade Unions, republic, oblast and rayon union committees and the primary organizations has been aimed at the further development of competition for a rise in the standard of farming, an increase in grain production and animal husbandry products, a strengthening of the fodder base and rational use of the machinery-tractor pool. Measures have been implemented for an improvement in the workers' work and social conditions and services for them in the field and at the farmsteads and for an extension of training personnel of the mass occupations.

A most important taks of the trade unions is practical implementation of the food program drawn up in accordance with the directives of the 26th party congress and the CPSU Central Committee November (1981) Plenum. The trade union councils and committees are called on to continue to perfect competition on the kolkhozes and sovkhozes, strengthening work relations with the workers of the processing sectors, develop the industrial collectives' and trade union organizations' patronage of the farm collectives and trade union committees in every possible way and strive for the ahead-of-schedule fulfillment of all orders of the countryside.

The speaker went on to describe in detail the republic trade unions' participation in reelization of the social program of the 5-year plan and the solution of such questions as an increase in workmanship and safety equipment, organization of the working people's sanatorium-resort treatment and an improvement in the housing and everyday conditions of workers, kolkhoz members, employees and the intelligentsia.

Mention was made in this connection of the important role of collective contracts and agreements on labor protection (on the kolkhozes). Over 36,000 of them are now concluded annually in the republic.

In the period under review the Ukrainian Council of Trade Unions and the trade union councils and committees also participated actively in the examinstion and implementation of measures connected with an increase in the wage of workers and employees and the pay of kolkhoz members and an increase in the wage rates and salary scales of workers of the nonproduction sectors. Resources from the social consumption funds were spent and material incentive and housing and sociocultural construction funds were formed and used with the direct participation and control of the trade unions.

Some R11 billion or R2.6 billion more than in the Ninth Five-Year Plan were spent in the 10th on measures for the health care of the working people and their children and an improvement in material support for working women, dietetic food and sanatorium-resort treatment. Some R5 billion were spent in this period on an improvement in production and social conditions and labor protection, and twice as much will be spent in the 11th Five-Year Plan. The task of the trade union organizations is to ensure that these huge resources be used fully, as intended, carefully and economically everywhere.

The Ukrainian Council of Trade Unions has adopted measures for an improvement in sanatorium-resort management in recent years. In accordance with the recent CPSU Central Committee, USSR Council of Ministers and AUCCTU decree, it is planned to perform a great deal of work on the introduction of new large-scale sanatoria and tourist complexes in the Crimea, Odessa and the Carpathians and begin the development of new resort zones. The speaker drew the attention of the construction ministries and departments to the need for the fulfillment of plans for the installation of resort and tourist facilities.

In the current 5-year period the plans of the ministries and departments provide for the building of an additional 200 sanatoria and health centers. Much has to be done for the further development of family recreation, and in the next 2-3 years it is necessary to prepare all trade union recreation centers and holiday hotels for the recuperation of parents and children and to more than double the number of places for this in the tourist centers.

V. A. Sologub observed that much had been done in the 5 years to secure healthy and safe work conditions. The trade union and management bodies must continue to tackle the tasks connected with this with even geaater persistence. It is intended in the 11th Five-Year Plan to basically complete the introduction of a system of labor safety standards which covers all sectors of production and which is unparalleled in the world.

Much space in the report was given to questions of an improvement in working people's housing conditions and trade-consumer services at their place of work. The republic trade union organizations adopted measures in the period under review to enhance the effectiveness of socialist competition for the on-schedule introduction and an improvement in the quality of the construction of housing and increased control over its allocation and fulfillment of the requirements of the new housing legislation. Much was done in this time to extend the network of worker and student canteens, and the network of stores and order desks at the production enterprises was doubled. The practice of the joint work of the republic's trade union and management authorities on the creation of comprehensive acceptance centers and consumer service workshops was approved by the AUCCTU. It is the task of the trade union organizations to display initiative and persistence more actively and, together with the soviet and management authorities, do everything to ensure that concrete concern for each specific individual be seen everywhere.

Under current conditions, the speaker emphasized, tremendous significance is attached to questions of the communist education of the working people and shaping in them of a Marxist-Leninist world outlook, high consciousness and morality and an active position in life. For the trade unions, which unite all working people--party members and nonparty persons--these tasks are of special urgency. All trade union components are obliged to be in practice, as V. I. Lenin emphasized, organs of the "labor and socialist education of the entire working people's masses to a man." The efforts of the trade union organizations in the period under review were aimed at ensuring the close unity of ideological-political, labor and moral education with regard for the singularities of different categories of working people and the youth. For a stimulation of the unions' educational activity importance is attached to the CPSU Central Committee decree "A Further Improvement in Ideological, Political Education" and Comrade L. I. Brezhnev's books "The Small Land," "Revival," "Virgin Land" and "Reminiscences".

It is the trade union organizations' duty to support and disseminate more energetically the best experience of educational work in the labor collecrives and introduce new forms of cultural-educational work making possible the more efficient use of the working people's and youth's free time in the interests of their ideological and spiritual enrichment. It is necessary to increase the labor collectives' influence on the shaping of people's sensible requirements and wage an aggressive struggle against manifestations of a consumerist attitude toward life.

The trade union organizations must constantly improve the ideological-political, labor, moral and legal education of the younger generation and display more concern for the young men and women's professional tuition and their retention on the job and an improvement in work, social and recreational conditions and enlist the young people more actively in the collectives' social life. Constant attention should also continue to be paid to the youth's military-patriotic education and its preparation for the defense of our socialist fatherland.

The speaker paid much attention to an improvement in the trade unions' organizational work. In the period under review the republic's trade unions grew numerically and their ranks were reinforced by 4.5 million persons, including 2.8 million kolkhoz members. This sectorial trade union, which unites more than 5 million persons, is currently the most populous. In accordance with the directives of the 25th CPSU Congress, a great deal of work was done to improve the structure of the sectorial trade unions in accordance with the structure of management of the economy. Two new republic trade union committees were formed—of oil and gas industry workers and fruit and vegetable industry and procurement workers.

The Ukrainian Council of Trade Unions and the trade union councils and committees have made a constant study of the work of the primary trade union organizations and trade union groups. The initiative of the best trade union group organizers—production pacesetters of the republic—who have appealed for work to be performed under the motto "Not a Single Straggler in the Trade Union Group," has been broadly supported.

Many trade union councils and committees are characterized by specificity and an ability to rely on the trade union activists and concentrate their efforts on the priority tasks. Unfortunately, not all of them are working thus, to which Comrade V. V. Shcherbitskiy correctly drew attention at the 26th Ukrainian Communist Party Congress and in the speech at the time of the meeting of Ukrainian Communist Party Central Committee Politburo members and candidates with trade union leaders last June. The speaker emphasized the importance of a constant improvement in the style and methods of the work of the trade union authorities, of the selection and training of personnel and of control and the verification of performance.

On behalf of the 13th Ukrainian Trade Unions' Congress the speaker assured the CPSU Central Committee, Ukrainian Communist Party Central Committee and AUCCTU that the republic's trade unions would continue to be a dependable support and combat assistant of the Lenin Party in all areas of the nationwide struggle for communism.

The report of the UkSSR Trade Unions' Auditing Commission was delivered by its chairman, G. K. Leonchuk.

The reports of the Ukranian Council of Trade unions and the Auditing Commission were discussed.

The delegates spoke of the republic working people's warm approval of the CPSU's domestic and foreign policy and the fruitful activity of the Leninist Central Committee and its Politburo headed by Comrade L. I. Brezhnev and described the great enthusiasm with which the republic's workers, kolkhoz members and intelligentsia are working on implementation of the program of the country's social and economic development outlined by the 26th CPSU Congress.

The report of the Credentials Commission was delivered by its chairman, F. Ye. Nishchiy.

Discussion of the reports of the Ukrainian Council of Trade Unions and the Auditing Commission continued at the evening session.

The congress was addressed by AUCCTU Secretary A. V. Viktorov.

The 13th Ukrainian Trade Unions' Congress continues today.

SHCHERBITSKIY ADDRESSES UKRAINIAN TRADE UNION CONGRESS

Kiev PRAVDA UKRAINY in Russian 27 Feb 82 pp 1-2

[Speech by V. V. Shcherbitskiy, member of the CPSU Central Committee Politburo and first secretary of the Ukrainian Communist Party Central Committee, at 13th Ukrainian Trade Unions' Congress on 26 February 1982]

[Text] Dear Comrades!

In the recently adopted decree "60th Anniversary of the formation of the USSR" the CPSU Central Committee calls on communists, Komsomol members and working people of all the country's nations and nationalities to greet this splendid event with new achievements in realization of the historic decisions of the 26th CPSU Congress, the development of the economy and the strengthening of the defense capability of the country and a rise in the Soviet people's well-being and culture. The trade unions of the Soviet Ukraine, which unite 25 million persons, that is, practically all the republic's working people, are called on to make a fitting contribution to the accomplishment of these honorable and responsible tasks.

In the socialist society the trade unions are endowed with enormous rights and powers in production management and the solution of educational, economic and social questions and participate actively in the refinement and development of socialist democracy. This is a truly great army of labor capable of successfully tackling the most complex tasks.

Having shown the viability of Lenin's principles of the trade unions' organizational development, historical experience testifies convincingly that "communication with the mass, that is, with the vast majority of workers (and, subsequently, all working people) is the most important and most basic condition of the success of any trade union activity." Thus said V. I. Lenin. This experience and the entire logic of the proletariat's class struggle also testify that the strength of the trade unions and the guarantee of their successful activity lie in the proven leadership of the Marxist-Leninist party. The Communist Party and the Soviet state support the trade unions and their multifaceted activity aimed at the development of production and an improvement in work conditions, a constant rise in the people's well-being, a refinement of the socialist way of life and the formation of the new man in every possible way.

You know, Comrade V. V. Shcherbitskiy continued, what great attention the 26th CPSU Congress paid to the trade unions and their increased role in the life of each labor collective and the accomplishment of the tasks of communist building. It is currently its first anniversary. We may say with complete justification that the congress' decisions, which received the unanimous support of the party and the entire Soviet people, are being implemented consistently and are having an ever increasing impact on the course of events in the world. A new step forward was taken in the past year in the development of the economy, science and culture of the country and all the fraternal union republics. The moral-political unity of our people and their cohesion around the Communist Party, the Central Committee and its Politburo headed by Comrade L. I. Brezhnev, loyal continuer of the great Leninist cause, have become even stronger.

Comrades! The historical truth and great creative force of the ideas of Marx, Engels and Lenin have been convincingly corroborated by the conversion of actual socialism into a decisive factor of world development and by new victories of the world revolutionary process. The future, as V. I. Lenin foresaw, belongs to communism. But the path of the revolutionary renewal of the world, the path of pioneers, is difficult. We are now witnessing a serious exacerbation of the international situation brought about by the increased aggressiveness of American imperialism and its allies together with the Beijing hegemonists. The enemies of peace made, in particular, a dangerous attempt to take advantage of and exacerbate the events in Poland for their own insidious ends. Impudently and unceremoniously interfering in this country's internal affairs and flagrantly flouting the elementary standards of international law, the imperialists of the United States and certain other countries are inciting internal counterrevolution in every way possible, endeavoring to tear Poland away from the socialist community and destabilize the situation on the European continent. A particular gamble has been made here, as you know, on splitting the trade union movement and turning the so-called "free" trade unions, whose leaders were political adventurists, into an opposition, antisocialist force.

The decisive measures of the Military Council of National Salvation adopted in accordance with the Polish Constitution struck a serious blow at these ominous plans.

Under the conditions of the imperialists' inflammation of international tension our party's Central Committee and the Soviet government are firmly defending the cause of detente and fittingly rebuffing the irresponsible attempts to bring the world to the verge of thermonuclear catastrophe.

Profound realism and an all-around consideration of the alignment of class forces and consistent defense of the interests of peace and socialism--this is the guarantee of the success of the foreign policy course formulated by the 26th CPSU Congress, which is being pursued persistently and purposefully by our party's Central Committee, its Politburo and Comrade L. I. Brezhnev personally.

I believe, Comrade V. V. Shcherbitskiy observed, we are all agreed that this congress is being held in a businesslike, exacting atmosphere. The results of the work done in the period under review were shown thoroughly and self-critically in the report of the republic Council of Trade Unions delivered by Comrade V. A. Sologub. Many interesting thoughts concerning a rise in the level of the trade unions' organizing and educational work, specific proposals and also critical observations were expressed in the delegates' speeches. Their implementation will undoubtedly contribute to an improvement in the entire work of the trade union organizations. As far as the proposals within the competence of the state authorities are concerned, they will be examined attentively in the Ukrainian SSR Council of Ministers and the appropriate ministries and departments. I believe that the AUCCTU also will turn its attention to some of them.

I am sure that none of those here present has any doubt that Comrade L. I. Brezhnev's requirement put forward in his speech at the CPSU Central Committee November (1981) Plenum: "It is necessary to work better. To compile plans better and fulfill them better. Organize production better and produce better. In a word, to work more efficiently" fully applies to the activity of the trade unions. This is made incumbent upon us by, primarily, the crucial tasks which confront us in the 11th Five-Year Plan. Their accomplishment was, as you know, made more difficult by the fact that last year we were unable, for reasons discussed in detail at the CPSU Central Committee November (1981) Plenum and the Ukrainian Communist Party Central Committee plenum, to reach the charted boundaries in a number of important indicators. And this means that this year it is necessary not only to fulfill the set plans and quotas but to surpass them and to do the maximum possible to make good the lag that was allowed to develop in a number of sectors.

Particular attention should be paid to the work of the base sectors--coal and chemical industry, ferrous metallurgy and power engineering--and also the sectors producing consumer goods. We are obliged to secure the on-schedule introduction of the most important national economic facilities, primarily capacity at the AES and agricultural machine-building enterprises, and implement fully the program of housing and cultural-social construction.

It is very important that each farm, rayon and oblast fulfill the plans and socialist pledges for the production and procurement of grain, sugar beets, potatoes, milk, meat and other farming and animal husbandry products.

An increase in the rate of labor productivity growth based on an acceleration of scientific-technical progress and the rational use of all resources is a task of paramount importance for all sectors without exception.

The trade unions are called on to actively influence the accomplishment of these tasks by their activity and make skillful use of their extensive possibilities to mobilize the working people for the achievement of the main goals of the party's economic policy. It is primarily a question of an increase in the efficiency of socialist competition. Our republic has splendid traditions here. And it is a matter of honor for the trade union workers to develop these traditions and multiply the wealth of experience.

But it has been correctly said here in this connection that there are still many shortcomings, primarily formalism, pointless bustle and, sometimes, mismanagement in the work of a number of trade union councils and committees in the organization of competition. The authority of the socialist pledges has diminished in certain collectives, and the factors impeding the achievement of the planned results are not being removed in good time. And it is not simply a case of their fulfillment being inadequately organized in a number of instances; they are frequently adopted without due substantiation and calculations.

Persistence is not always displayed in the fulfillment of pledges with respect to labor productivity growth, economies in resources and contractual supplies. The delegates spoke about this. And what does nonfulfillment of their plans and pledges by such collectives as, say, the "Krivorozhstal'" or Zhdanov Plant imeni Il'ich signify? It leads to the point where many allied collectives (engineers, construction workers)--and not only of our republic--experience a metal shortfall, fail to provide the economy with the necessary machines and do not introduce important facilities on time. Consequently, the labor rhythm of entire sectors is disrupted.

Nor can it be considered correct that the trade union committees and the press, television and radio, which propagandize socialist pledges extensively at the initial stage, when they are adopted, pay considerably less attention to how they are being fulfilled and how the charted boundaries are being reached. After all, this is the main aspect of the matter. And, of course, it is bad enough when the pledges are not fulfilled. But it is even worse when a high-minded appraisal is not made of this, the reasons are not analyzed and conclusions for the future are not drawn.

The trade unions can and must do considerably more for propaganda of the achievements of the socialist competition winners and the progressive labor methods of the innovators.

The miners Nikolay Nikolayevich Skrypnik and Aleksandr Nikolayevich Nosov, the metallurgists Nikolay Petrovich Bondarenko and Yuriy Grigor'yevich Yefimenko, the construction workers Sergey Ivanovich Chekalin and Vladimir Sergeyevich Plakhotin, the weavers Vera Vasil'yevna Kolomiyets and Galina Andreyevna Kuchina, the machine operator Nikolay Andreyevich Lavrik, the stockbreeder-operator Leonid Vladimirovich Mendak, the beet grower Feodosiy Dmitriyevich Mel'nichuk, pacesetters all, and many, many others, matured in the 10th Five-Year Plan and were on a par with those known to the whole country. Honor and glory to our splendid workers and all right-flank men of socialist competition!

Comrade V. V. Shcherbitskiy paid great attention to the tasks of the trade unions, party and Komsomol organizations and management authorities for dissemination of the experience of the innovators and the growth of their ranks. We expect, he emphasized, more purposeful work in this area for the Exhibition of Achievements of the UkSSR Economy also. After all, it is frequently the case, unfortunately, that neighboring enterprises even, not to mention other rayons, cities and oblasts, are unaware of innovations which produce good results.

Many decisions have been adopted, including those adopted by the trade union authorities, on, for example, dissemination of the Zaporozh'ye people's experience of reducing manual labor. This is being tackled purposefully in Donetskaya, Dnepropetrovskaya, L'vovskaya and Khar'kovskaya Oblasts and the city of Kiev. At the same time the proportion of manual labor is still being reduced very slowly in Cherkasskaya, Vinnitskaya, Chernigovskaya and Voroshilovgradskaya Oblasts and in light industry, construction materials industry, engineering and metal working. It is considerable, as before, in the industry of Krymskaya, Nikolayevskaya and Zakarpatskaya Oblasts.

A reduction in unproductive, heavy manual labor is a task of tremendous economic and social importance. It is also a concrete manifestation of concern for man, his work conditions and his health. Who if not the trade unions should take up this extremely necessary and noble job? And the party organizations will support them.

The trade union organizations possess many effective levers of influencing an increase in production efficiency in the accomplishment of production tasks. They are participating directly in perfecting technical norm-setting, moral and material stimulation and the organization of production and labor, mass economic primary education and the production efficiency expert and inventor's movement. And more is asked of him to whom much has been given, as they say.

The trade unions have much good work to their credit in this respect. Substantial results are produced by spot inspections and reviews of economies and thrift, the introduction in production of the achievements of science and progressive experience and the use of reserves in each job, the creative cooperation of the workers, engineering-technical personnel and the scientists and competitive reviews of professional skill. But it has to be said plainly that here also inadequate use is being made of available potential. Thus a revision of production norms is not always accompanied by extensive explanatory work and is at times not backed up by concrete organizational-technical measures. Impermissible slowness is tolerated in the introduction of inventions and production efficiency expert proposals. The role of material and moral incentives is still underestimated at a number of enterprises and construction projects, and equalization is sometimes permitted in the payment of bonuses, which does not stimulate people to work with the maximum input or to increase product quality.

The work of the permanent production conferences, these being a big force, given good organization, is in need of a considerable improvement in certain labor collectives. It is sufficient to say that more than 1.1 million persons participate in them in our republic alone. Their efforts should be concentrated more actively, primarily on a quest for and the implementation of intrinsic production potential and the removal and, even better, prevention of shortcomings and the causes thereof.

The development of the brigade forms of the organization and remuneration of labor also merits the trade union committees' closest attention. As experience shows, this is a very promising matter, but at the same time not simple. It is no secret that undue haste is permitted in places in staffing the brigades and switching them to the new work conditions, and, in particular, all details of the dependence of wages on labor participation are not thought through, which merely discredits a good idea. The Ukrainian Council of Trade Unions, republic trade union committees and the ministries and departments should organize specific training with the leaders of consolidated brigades working on a single order.

And, of course, questions connected with the inculcation in the working people and, primarily, the youth of a conscious, responsible attitude toward work, public property and public duty and high moral qualities should constantly be within the trade unions' field of vision. It must always be remembered that the slightest deviations from the standards and principles of the Soviet way of life--whether they be manifestations of cupidity or a vulgar disregard for public interests--considerably harm (economically and morally) the cause of communist building.

Losses of work time in industry and construction are still considerable owing to absenteeism and other breaches of labor discipline. This applies particularly to a number of enterprises and construction sites of Odesskaya, Nikolayevskaya, Kirovogradskaya, Zakarpatskaya and Chernigovskaya Oblasts, the coal industry, engineering and metal working and construction materials industry. Lax management, embezzlement, including so-called "petty" theft, downing tools and elementary carelessness are also the cause of losses. These shameful phenomena and relapses into a petit bourgeois mentality and morality arise where a conciliatory, lenient attitude toward them is permitted.

The interests of the cause demand a resolute intensification of the struggle against this evil and a tightening of control over the amount of labor and the amount of consumption. This corresponds fully to the principles of socialism, this is just, and we must struggle for this in earnest. And the trade unions must play an important part here. Your possibilities here are enormous. Worker meetings and comrades' courts, worker honor councils, mentorship, and the press--the entire arsenal of means of moral and material influence should be geared to the creation everywhere of an atmosphere of intolerance toward and universal condemnation of all who endeavor to take from society as much as possible while giving it as little as possible.

It is necessary to inculcate an active position in life in every worker. After all, it is frequently the case that honest, conscientious workers adopt an impartial attitude toward the fact that labor discipline is being violated, instances of drunkenness are tolerated and inflated reports are being written right alongside them, in the same shop, brigade or link. If everyone not only worked well but also adopted a truly irreconcilable attitude toward shortcomings, things would go considerably better here and we would achieve more.

Everyone should understand that the source of material benefits and the growth of the people's well-being is labor and only labor and that it is only possible to consume what has been produced. There is no need to show how important it is to convey this truth to our young people, who have frequently not yet acquired the proper conditioning of labor and life. Neither time nor efforts shouldbe spared here—after all, the young people are our country's future, and it is they who have to take over the baton of the older generations.

You know, Comrade V. V. Shcherbitsky emphasized, how much has been done in recent years for a rise in the working people's living standard. The real income of the republic's population increased 41 percent (per capita) in the Ninth and 10th Five-Year Plans. Payments and allowances from the social funds increased 74 percent and last year constituted almost R22 billion--an average of R437 per inhabitant. Some 16.4 million persons obtained new apartments or improved their housing conditions in the last two 5-year plans. The wide-ranging program of social measures outlined for the 11th Five-Year Plan by the 26th CPSU Congress is being implemented consistently.

Much in the accomplishment of the tasks directly connected with an improvement in our people's work, living and social conditions depends on the persistence and initiative of the trade unions. It is this that is indicated by the example of the republic's foremost collectives--the "Zavod 'Arsenal'" imeni V. I. Lenin, imeni S. P. Korolev, "Dneproshina" imeni XXV s''yezda KPSS and Sumy imeni Frunze production associations, the Kiev Polytechnical Institute imeni 50-letiya Velikoy Oktyabr'skoy sotsialisticheskoy revolyutsii, the Kiev "Polskovskiy" Sovkhoz and many others—where questions concerning the creation of the essential conditions for people's highly productive labor, training and meaningful recreation are being tackled well.

Where man and his needs are the center of attention, there results are produced.

The trade union organizations are called on to do everything to ensure that proprietorial use be made of the tremendous resources allocated for the construction of housing, children's preschool establishments, hospitals and clinics, the development of resorts, the installation of everyday-service premises, expansion of the public catering and consumer service network and the protection of labor and an improvement in its conditions.

Effective worker control of the operation of the stores, restaurants, municipal transport and the entire services sphere and the correctness of the allocation of housing, observance of labor legislation, environmental protection, sport and tourism, and the amateur arts, children's playtime--in a word, everything concerning the work, life and social existence of the working man and the members of his family—should be at the center of the trade union organizations' attention and a subject of their daily concern.

At the same time it is necessary in outlining at the congress a work program for the coming period to determine several major, priority tasks on whose accomplishment the trade unions must work persistently in the next few years. Supporting what was said on this score in the report and the delegates' speeches, I would like to dwell, in particular, on the following concrete questions.

First, every enterprise and every sector must have and implement on a planned basis a precise program of the mechanization and automation of production processes, an improvement in the organization of production and an appreciable reduction on this basis in manual labor.

Second, we have realistic opportunities for doing everything necessary in the next 3-4 years at every enterprise for a further improvement in work conditions in accordance with modern requirements, including production aesthetics, and installing good consumer-service premises everywhere.

Further, both in the past and, unfortunately, at this congress also the question of special clothing has been raised. Republic ministry and department leaders, Gosplan and, of course, the trade union authorities need to display greater initiative and enterprise in this matter. As the example of the collectives of the "Zaporozhtransformator" Production Association, the Mine imeni gazety "Sotsialisticheskiy Donbass," the Kiev "Stroyindustriya" Works and other enterprises testifies, much in this respect may be done on the spot, directly at the enterprises--given the desire and persistence. In particular, it is possible and necessary for there to be everywhere areas for laundering and dry cleaning the special clothing and to organize workshops for its alteration and repair. This does not require large outlays. And there is no doubt that if we all set about this properly, with both hands, so to speak, we will solve this problem, and many others also.

A considerable step forward was taken in the period under review in an improvement in the organization of public catering and consumer services for the working people at work. We need to continue this work persistently in order by the end of the 5-year plan to have increased to the norm the number of seats in all worker canteens and to have made full provision for hot meals for those employed in work underground, on night and evening shifts, in open-cut mines and at construction sites, field camps and farmsteads and also for students.

An important task is providing young families with housing. For this reason it is essential to be more active in building small family houses and hostels.

Formulation of the question of recreation centers, holiday hotels and tourist centers of the trade unions and enterprises also being prepared for family recreation also merits the utmost support. It is essential that the Ukrainian Council of Trade Unions and the republic trade union committees in conjunction with the appropriate ministries and departments outline a concrete plan of action for the accomplishment of these and other tasks and apply all forces for their realization. These questions should also be reflected in collective contracts. It is important here to raise responsibility for fulfillment of the reciprocal, bilateral--I stress, bilateral--commitments which they stipulate. Only in this case will success be guaranteed.

Comrade V. V. Shcherbitskiy went on to observe that in matters large and small success is always determined by people, their conscientious, honest attitude toward any job and their ability to organize this job, bring it to a conclusion and achieve the set goal.

Many splendid skilled workers and activists—communists and nonparty people, competent people profoundly devoted to the cause—work in the republic's trade unions. Their selfless labor is valued highly by our party and our people.

Now, when we have to tackle increased, qualitatively new—in scale and nature—tasks, the significance of the enterprising, purposeful activity of the personnel increases immeasurably.

Particular urgency is attached to an improvement in the style and methods of trade union work and the personnel's increased responsibility for the entrusted assignment. Specifically, it is a question, inter alia, of a rise in the level of organization and supervision of the fulfillment of adopted decisions.

It is well known that many trade union committees and councils are still carried away by memoranda writing and a large number of frequently crowded meetings and sessions, whose benefits are few and sometimes entirely invisible. At the same time a considerable proportion of good, practicable decisions and measures is being implemented only partially or in breach of the specified times.

A no less important task is improving the work of the local level and increasing the fighting efficiency of every primary and shop organization and trade union group.

After all, it is here that the fulfillment of all our plans is primarily ensured. And our organizing and mass-political work should be concentrated directly in the labor collectives.

All this requires a further improvement in work with the personnel and with the large trade union aktiv. It is necessary to more boldly promote to trade union work capable organizers primarily from the ranks of the foremost workers, particularly women, and also specialists and to raise exactingness toward the communists elected to the trade union bodies.

Trade union activist is not only a high title but also a responsible assignment.

The ability to always be in the thick of people, know their everyday needs and requirements, come to a person's assistance in good time and support him at a time of difficulty, react sharply to shortcomings and always occupy a high-minded, party position—these are the qualities which are required of those whom the members of the collective have entrusted to be trade union leaders. In inculcating such qualities in all trade union personnel it is necessary to rid ourselves resolutely of people who have become bureaucratized and who are sluggish and unenterprising. I am sure you will agree that it is only on this condition that all the trade union organizations will be up to the modern requirements and tasks set by the 26th CPSU Congress.

Comrade V. V. Shcherbitskiy said in conclusion:

This congress has shown that the republic's trade unions have everything necessary for successful work. All the trade unions' useful work and initiatives will, as always, be most actively supported by the party and state authorities.

Permit me to wish you, comrade delegates, and, through you, all members of the trade unions and all working people of the republic fruitful work and creative new successes in fulfillment of the decisions of the 26th CPSU Congress and a fitting greeting of a splendid date--the 60th anniversary of the formation of the USSR.

There is no doubt that the trade unions of the Soviet Ukraine--a combat detachment of the USSR's trade unions--will continue to be the active organizers of the masses and the dependable support of the party organizations in implementation of the plans of communist building.

(Comrade V. V. Shcherbitskiy's speech was received with great attention and repeatedly interrupted by applause)

UKRAINIAN TRADE UNION CONGRESS ELECTS PRESIDIUM

Kiev PRAVDA UKRAINY in Russian 27 Feb 82 p 1

[Text] The first plenum of the Ukrainian Council of Trade Unions elected by the 13th Ukrainian Trade Unions' Congress, which examined organizational matters, was held on 26 February.

The plenum elected a Ukrainian Council of Trade Unions' Presidium of 21 persons.

V. A. Sologub was elected chairman of the Ukrainian Council of Trade Unions, and A. V. Yefimenko, M. A. Zapol'skiy, Yu. S. Zubenko, I. F. Poyda, V. I. Sivolob and N. M. Slavinskiy were elected secretaries. Hero of Socialist Labor T. V. Bychenok, seamstress at the Kiev Factory imeni Smirnov-Lastochkin, was elected Ukrainian Council of Trade Unions secretary on an unpaid basis.

An Auditing Commission session elected as its chariman V. P. Kitsun.

GRISHKYAVICHUS ADDRESSES LITHUANIAN MVD MEETING

Vilnius SOVETSKAYA LITVA in Russian 16 Feb 82 pp 1, 3

[EL'TA report on proceedings, speech by P. Grishkyavichus, first secretary of the Lithuanian Communist Party Central Committee, at 15 February meeting of MVD workers in Vilnius]

[Text] Vilnius, 15 February--A republic meeting was held today in the new Palace of Culture and Sport of the Lithuanian SSR MVD of internal affairs authority executives which discussed the state of the maintenance of public order and the tasks to strengthen socialist legality and law and order in the light of the decisions of the 26th CPSU Congress.

A report was delivered by Yu. Mikalauskas, minister of internal affairs of the LiSSR.

The rapporteur and the other speakers observed that the republic's internal affairs' law enforcement authorities had performed a considerable amount of work on combating crime and breaches of public order. The public order-maintenance posts, preventive services of the labor collectives and the volunteer public-order squads have an increasingly big role in the strengthening of socialist legality. Several thousand squad members are on duty daily to maintain public order in the cities and neighborhoods alone. New forms and methods of education are being introduced and more effective measures aimed at eradicating the breaches of law and order which are encountered are being found in the collectives.

The meeting was addressed by I. Bogatyrev, deputy minister of internal affairs of the USSR.

A speech was delivered by P. Grishkyavichus, first secretary of the Lithuanian Communist Party Central Committee.

V. Goncharov, executive of the CPSU Central Committee, Yu. Petkyavichyus, chairman of the LiSSR KGB, A. Buylis, chief of the Lithuanian Communist Party Central Committee Administrative Organs Department, and leaders of the republic's law enforcement authorities participated in the meeting.

A year--the first year of the 11th Five-Year Plan--has elapsed since the 26th party congress, Comrade P. Grishkyavichus said. Its results are being summed up everywhere. And it is primarily Soviet people's increased activeness and political and labor enthusiasm which is being stressed. The shock labor on implementation of the congress' historic decisions is convincing testimony to the unanimous approval of and ardent support for the domestic and foreign policy of the Communist Party and the Soviet state and the multifaceted activity of the CPSU Central Committee and its Politburo headed by Comrade Leonid Il'ich Brezhnev. This is a striking manifestation of the resolve to accomplish all the tasks set by the party.

As you know, a big program of economic and social development in accordance with the congress' decisions is being implemented by the party organization and all working people of our republic.

The first year of the new five-year plan was marked by persistent and intensive labor. And although it was very difficult, it was crowned with certain successes. Industry fulfilled the annual plan for sold commodity output 101.1 percent and production thereof increased 5 percent compared with 1980. Labor productivity increased 3.8 percent, and this accounted for 83 percent of the entire industrial production increase.

The production of consumer goods increased 3.8 percent compared with the previous year. The most pronounced increase was secured in the manufacture of carpeting, furniture, confectionary products and certain other commodities.

The construction workers also worked pretty well, in the main. Installed fixed capital was in excess of R1 billion. Five percent more capital investments were assimilated than in 1980, and there was a 2-percent increase in construction and installation. The quota for the construction of schools and medical and children's preschool establishments was fulfilled, and the plan for the introduction of housing was overfulfilled by 5 percent.

The agricultural workers considerably overfulfilled the plans for the sale of plant-growing products to the state.

But the difficult recent years had a particularly negative effect on our principal agricultural sector--animal husbandry. Of course, the trouble was primarily the fact that fodder production lagged behind the growing requirements. Whence a considerable drop in the productiveness of the animals, particularly the cows. The productive qualities of the milch herd replenishment declined owing to inadequate feeding. For this reason last year also, although the conditions of the summer feeding were better, cow productiveness did not increase on many farms. The annual milk yield per cow of the public herd declined by 454 kilos in 1981 compared with 1977 and constituted 2,913 kilos.

Similar difficulties arose in meat production also.

Despite this, the Lithuanian Communist Party Central Committee and Council of Ministers are doing everything to maintain the population's provision with animal husbandry products at the level of past years.

If we take per capita consumption of these products, relative stability is observed here. Some 80 kilos of meat products were consumed per capita in the republic in 1975, and 81 kilos in 1980. Consumption of dairy products also remains roughly at the level of the 10th Five-Year Plan.

Unfortunately, on the one hand people's objectively growing requirements and, on the other, these negative trends in agricultural production sometimes lead to difficulties in providing the market with certain types of meat and dairy products.

And, furthermore, it needs to be borne in mind that any, even the most short-term, disruption or breakdown in the rhythmic supply of the market with certain food products immediately gives rise to sharp fluctuations in the demand for these products. This is what happened, for example, at the end of last year with butter, when, following late delivery to the stores, the demand for butter suddenly spurted almost twofold-people began to stockpile.

A considerable part in the replenishment of food resources in our republic has traditionally been played by the rural inhabitants' private subsidiary farms. Unfortunately, in the last decade, primarily in connection with the reduced numbers of the rural population, the production and sale to the state of animal husbandry products by this sector began to decline. The CPSU Central Committee and the government of the country have determined important measures stimulating the development of the citizens' subsidiary farms and their sale of product surpluses to the state. The development of the subsidiary farms assumes a plan-oriented, more stable nature to a certain extent with the introduction of a system of contracts for the purchase of products from the population which also provides for fodder supplies. In turn, the Lithuanian Communist Party Central Committee and republic Council of Ministers have adopted a number of additional measures for securing more favorable conditions for the development of the subsidiary farms. The size of the plots of land directly on the central grounds has been increased and a firm policy of the mandatory construction in the countryside of one-bedroom apartments with farm construction has been adopted. As a rule, all cities of rayon jurisdiction (formerly rayon centers) and urban-type communities have been converted into the central estates of adjacent farms in order that their residents also have the right to the development of subsidiary farming.

The measures are already beginning to produce positive results. The subsidiary farms' sale of livestock and poultry increased 11 percent and of milk 4 percent last year compared with 1980.

As a whole, despite the difficulties, there is every reason to look to the future with optimism. There are opportunities this year even to take a marked step forward in the sphere of agriculture. More winter wheat was sown than ever before. All the cereals' seeds have been prepared, and equipment repair is being completed. It is gratifying that people in the countryside are working strenuously and with a sense of duty, endeavoring to do everything to fulfill the adopted pledges.

There are certain shortcomings and difficulties and unsolved problems in industry also. The plan for the production of artificial soft leather, leather footwear, teenagers' bicycles, domestic refrigerators, meat, whole milk products and a number of other products--mainly consumer goods--was not fulfilled last year.

Despite the fact that the plans for the production of certain commodities are being fulfilled, there remains a shortage of them nonetheless. These are primarily cotton cloth and linen and articles made thereof.

Permit me to cite certain figures. The delivery for sale of cotton cloth to the republic's trading network increased from 15.6 million meters in 1976 to almost 22 million meters in 1981 (a 40-percent increase); of linen from 3.6 to 4.7 million meters respectively (an increase of more than 30 percent); and of bedding from 220,000 to 352,000 sets (a 59-percent increase). As you can see, the sale of all these commodities now in short supply has increased by a factor of 1.5 in the last 5 years. Why, then, is there still a shortage of them?

The answer lies in increased demand. Consequently, the main path to a solution of this problem is to build up production and find additional commodity resources, which is being done by our industry and trading organizations. For example, the resources of cotton cloth increased by a factor of almost 1.5 in 1981 compared with 1980 thanks to its above-plan manufacture and additional allocations by the union authorities.

The situation concerning leather footwear remains more complex. Our people's requirements here also are, naturally, growing, yet actually average per capita leather footwear consumption has remained at the 1975 level and constituted 3.2 pairs in 1980. If, in addition, we add the low quality of the footwear (rejects in 1980 constituted 12.9 percent and 13.5 percent in 1981), the dissatisfaction justifiably being displayed by the working people is understandable. In the recent period the republic Ministry of Light Industry has achieved considerable successes in a quantitative and qualitative improvement in the production of the majority of products, but this has not been the case with footwear. Criticism of the ministry on this issue is, in principle, justified, and we have to adopt urgent and decisive measures for a radical improvement in the situation.

Despite the difficulties, the working people's well-being continues to grow. The average monthly wage of workers and employees in 1981 increased 2 percent compared with 1980 and amounted to R169. Kolkhoz members' pay increased 5 percent and amounted to $140 a month. Retail commodity turnover increased 5 percent. On a per capita average it constituted R1,253 and was 30 percent more than in 1975. It has to be said that this year also market allocations of the main food and nonfood commodities not only are not declining but increasing in many products.

The volume of consumer services increased 6 percent, including 6.5 percent in the countryside. They constituted an average R38 per capita--41 percent more than in 1975. Consumer services extend to more than 990 kolkhozes and sovkhozes or 93 percent of them.

Unswervingly fulfilling the directives of the 26th CPSU Congress, the republic party organization will struggle persistently and insistently for the unconditional realization of the quotas of the 11th Five-Year Plan in all sectors of the economy and a rise in the population's material and cultural living standard.

At the same time it must always be remembered that the accomplishment of the tasks of economic and social development put forward by the party demands a constant strengthening of discipline in each area of work, increased responsibility, the strictest observance of socialist legality, a strengthening of law and order and increased struggle against all infringements of the law.

An important part here has been and is being played by the law enforcement authorities, including the internal affairs authorities. It may be noted with satisfaction today that they have devotedly performed and continue to perform their duty at all stages of socialist and communist building.

As throughout the country, in our republic also much has been done to improve the activity of the militia, prosecutor's office, the court and the judicial authorities. The level of legality has risen and public order has been strengthened as the result of common efforts. A reduction in crime is to be observed in a number of rayons, many centers of population and labor collectives. A big positive contribution to the strengthening of socialist legality and law and order is being made by the party, soviet and law enforcement authorities of the cities of Vilnius, Kaunas and Alitus and Kayshyadorskiy, Prenayskiy, Shakyayskiy and Yurbarkskiy rayons.

The Lithuanian Communist Party Central Committee and the LiSSR Supreme Soviet Presidium and Council of Ministers value this contribution highly. I want once again to express to you and the entire personnel gratitude for the successful accomplishment of the set tasks and the organization and discipline displayed here.

It is gratifying that crime decreased somewhat last year, but this must not be grounds for complacency. Using accumulated experience, it is necessary to adopt all measures for a further strengthening of socialist legality and law and order. This is all the more essential in that infringements of the law in the republic are still widespread.

The most important present-day tasks are ensuring model public order and combating serious crimes, infringements of the law among the youth, embezzlement of socialist property, negligent management, speculation, bribe-taking, parasitism and drunkenness. The internal affairs authorities, primarily the departments for combating embezzlement of socialist property and speculation, have stepped up their work in fulfillment of these tasks. But the situation demands the continued concentration in this field of the efforts of all our law enforcement authorities and a keener and more uncompromising struggle against these transgressions.

While paying tribute to the skill and selfless labor of the majority of workers of the internal affairs authorities we need today to draw attention to the most characteristic shortcomings in their work. In order to create the appearance of a felicitous situation with respect to the crime-detection rate certain militia workers continue to leave crimes off the list or reach unwarranted decisions on waving the institution of criminal proceedings. The largest number of such instances occurs in Vilnius, Shyaulyay and Panevezhis, Kaunas' Panemunskiy Rayon and Vil'nyusskiy, Ionavskiy, Kedaynskiy, Panevezhskiy and Shilutskiy rayons. This does not contribute to a strengthening of law and order. It is necessary to declare a resolute struggle against red tape and slowness and increase the promptitude of the detection and investigation of crimes.

Educational work with the personnel of the MVD authorities remains a bottleneck. It is here that the reasons for instances of a careless attitude toward performance of their duty, low culture in work, rudeness in dealing with the citizens, exceeding their authority, drunkenness, breaches of discipline and even crimes on the part of certain workers are to be found.

Instances of unseemly behavior and breaches of discipline on the part of internal affairs workers, for which disciplinary and, sometimes, criminal proceedings even are brought against them, are still frequent.

Many crimes, the bulk of which are recurrent or serious, moreover, are committed under the influence of alcohol. We are forced to admit that we are fulfilling the party decisions on combating this social evil unsatisfactorily. Certain meetings, conferences and festive and other social measures culminate, as before, in sessions involving liquor. Instances of drunkenness in connection with birthdays and on other pretexts directly on official premises have become more frequent. We must put an end to this intolerable phenomenon. The Lithuanian Communist Party Central Committee will once again harshly condemn this immoral practice and determine strict measures to combat it in the very near future.

I would like to draw attention to one further question related to the problems being discussed today. This is the situation in collective horticulture. It should be said that this useful business has been interpreted correctly by the majority of our working people--workers and ordinary employees--and is being conducted well and is of obvious benefits. But some leading workers and employees have taken the wrong path: they have neither planted nor sown, but homes grow up right away, like mushrooms after the rain, and in many cases, moreover, are being built illegally, by way of a variety of abuses. The Lithuanian Communist Party Central Committee has already examined questions connected with this, and a number of workers have been punished along party and administrative lines. Unfortunately, the proper conclusions are not being drawn from this, and we are encountering abuses again and again. Unfortunately, it has to be said that the MVD authorities also are turning a blind eye to this. We are not aware of an instance of even one action being brought on their initiative or of a warning being received by the party authorities concerning abuses in the acquisition of building materials and the illegal use of transport and mechanisms.

In a word, there is an urgent need for the most decisive measures in this matter also. The proposal recommending that leading workers not engaged in construction on the cultivated areas will obviously be adopted, in addition to other measures. And those who have acquired materials for the building of small homes or villas will have to hand them over to the worker collectives.

The CPSU Central Committee has instructed the party committees to hold more strictly to account those who display carelessness and passiveness in the struggle against infringements of the law, embezzlement, bribe-taking and abuses. The law enforcement authorities are obliged to react more keenly and without delay to the warnings received concerning these crimes. It is necessary to perform persistent and better work on restoring embezzled property to the state and also on removing the causes and conditions contributing to crime.

All shortcomings and mistakes in work must be keenly and scrupulously assessed. There must be more of an impact here on the part of the internal affairs' authorities' party and Komsomol organizations. It is their duty to strive to ensure that each employee be a model of discipline and devotion to the cause of communism and an example of a creative and responsible approach to the accomplishment of the set tasks.

The ministry party committee, political workers and the primary party organizations of the city and rayon internal affairs departments should strive constantly for an increase in the fighting efficiency of the party organizations and the vanguard role of every communist and adopt measures for a further refinement of political education and an increase in the employees' ideological conditioning.

It is fitting to recall here the words of the CPSU Central Committee accountability report to the 26th congress to the effect that the Soviet people have a right to demand that the work of the law enforcement authorities be as efficient as possible and that each crime be duly investigated and the guilty parties deservedly punished.

It is necessary to enlist the working people more extensively in the fight against crime and to stimulate the efforts of all state, inspection and administrative authorities and public formations.

As already mentioned, a considerable amount of work has been done recently on an improvement in the qualitative composition of the internal affairs authority personnel and an increase in its professional qualifications. The gorkoms and raykoms have begun to pay more attention to these matters. But more still needs to be done.

All services of the internal affairs authorities are confronted with the big tasks determined by the 26th party congress. The congress' instructions make incumbent upon them a fundamental rise in the level of all activity and a display of even greater initiative, scrupulousness and implacability in the struggle against all breaches of law and order. As far as assistance on the part of the party and soviet authorities is concerned, as Comrade Leonid Il'ich Brezhnev said at the 26th CPSU Congress, "in this matter the authorities maintaining law and order will be ensured full party support..."

In conclusion Comrade P. Grishkyavichus expressed the conviction that the communists and the entire personnel of the republic's internal affairs authorities would, fulfilling the decisions of the 26th CPSU and 18th Lithuanian Communist Party congresses, apply all their powers and knowledge for a further strengthening of socialist legality and law and order and greet the 60th anniversary of the formation of the USSR with new successes.

INFORMATION REPORT ON LATVIAN PARTY PLENUM

Riga SOVETSKAYA LATVIYA in Russian 3 Mar 82 p 1

[LATinform report: "Information Report on a Latvian Communist Party Central Committee Plenum"]

[Text] A Latvian Communist Party Central Committee Plenum took place on 2 March 1982 in Riga.

The plenum discussed the question of the tasks of the republic party organization to further strengthen the fodder base in order to increase the output of livestock farming produce in light of the decisions of the 26th CPSU Congress .

LaSSR Communist Party Central Committee first secretary A.E. Voss opened the plenum.

LaSSR Communist Party Central Committee secretary V.A. Chemm delivered the report.

The following participated in the discussion of the report: Daugavpils party raykom first secretary P.B. Tsunskiy; Yelgava party raykom first secretary Ya. A. Kaleys; LaSSR Council of Ministers deputy chairman and LaSSR Gosplan chairman M.L. Raman; mechanized milking foreman at the "Barkava" sovkhoz in Madona rayon, A.A. Strode; first secretary of the Leningradskiy party raykom, Riga city, A.P. Rubiks; Tukums party raykom first secretary A.A. Voyka; LaSSR minister of agriculture K.A. Shpogis; and chairman of the "Uzvara" kolkhoz in Bauska rayon, I.A. Yansons.

Sector chief of the CPSU Central Committee Agricultural Department M.S. Khozyainov spoke at the meeting.

In conclusion, A.E. Voss addressed the plenum participants.

The LaSSR Central Committee plenum adopted an extended resolution on the question under discussion.

SPEECH BY V.A. CHEMM AT LATVIAN PLENUM ON LIVESTOCK FARMING

Riga SOVETSKAYA LATVIYA in Russian 3 Mar 82 pp 1-2

[LATinform stenographic-record report: "'On the Tasks of the Republic Party Organization To Further Strengthen the Fodder Base in Order To Increase the Output of Livestock Farming Produce in Light of the Decisions of the 26th CPSU Congress.' The Report by Latvian Communist Party Central Committee Secretary V.A. Chemm"]

[Text] Comrades. The businesslike conditions and the labor and political enthusiasm among the republic's workers testify to the fact that under the leadership of the party stepped-up work is in progress to fulfill the tasks set by the 26th CPSU Congress. The congress decisions and the speech by comrade L.I. Brezhnev at the CPSU Central Committee November (1981) Plenum are mobilizing things for a successful fulfillment of the program outlined for the economic and social development of our country. The main task set by the CPSU for the current five-year plan is a steady improvement in the well-being of all Soviet people.

In implementing the decisions of the 26th CPSU Congress during 1981 the workers of the republic fulfilled ahead of schedule the tasks for the sale of industrial output, achieved further development in agricultural production and in science and culture, and created favorable prospects for improving work efficiency during the 11th Five-Year Plan. Socialist pledges have been adopted for 1982 and for the five-year plan as a whole. They provide for fulfillment of the five-year plan for the sale of industrial output by 20 December 1985, insuring all growth in the volumes of industrial output through labor productivity improvements, and completion in the main of the transfer to the team method for labor organization by the end of the five-year plan. The volume of agricultural production should increase 13 percent during the five-year plan.

This year the collectives of the industrial enterprises intend to complete the sales of their output ahead of schedule, by 29 December, in honor of the 60th anniversary of the formation of the USSR. By the end of the year it is intended to produce above-plan industrial output worth R40 million, including R17 million of consumer goods. Rural workers, making extensive use of of the achievement of science and leading experience, have resolved to achieve significant growth in the output of all kinds of agricultural produce and to sell to the state at least 300,000 tons of grain, 290,000 tons of potatoes, 1.5 million tons of milk, 367,000 tons of meat in live weight measure, and more than 1.5 billion eggs.

In the successful fulfillment of tasks set for the republic's national economy for 1982, a special place should be given to questions of introducing the achievements of science and leading experience, improving labor organization and raising labor discipline, and constant concern for improvements in workers' qualifications. On this basis we should strive to achieve every possible saving of material and labor resources. "Economics should be economical"--this is the slogan of the 26th CPSU Congress, and it should become a guide in the work of all collectives, industrial enterprises, construction organizations, and kolkhozes and sovkhozes.

In the ways to further improve the living standard of the workers as defined by the 26th CPSU Congress, the task of improving food supplies was moved to the forefront. For the purpose of finding a radical solution to this problem, the CPSU Central Committee recognized the need to draw up a special food program, whose basis is the further development of agricultural production.

Under the conditions of our republic, one key point in implementing the food program is a substantial increase in the output of livestock farming produce.

In accordance with the plans confirmed for the 11th Five-Year Plan we must reach an average annual meat production of 300,000 to 310,000 tons slaughtered weight and milk production of 1,8 to 1.9 million tons. This is why it is now extremely important to make an in-depth analysis of all aspects of livestock farming, reveal existing shortcomings, and define the still unutilized production reserves.

Tasks of increasing the output of livestock farming produce and improving livestock farming efficiency have always been at the center of attention in the party organization and the soviet and agricultural organs in the republic. The creation of more favorable economic conditions for farming, reinforcement of the material-technical base, and increases in fodder production, especially during the period following the CPSU Central Committee March (1965) Plenum, promoted a significant growth in the producition of livestock farming produce at kolkhozes and sovkhozes. During that period the production of live-weight meat increased by a factor of 2.6, milk by 19 percent, and eggs by a factor of 3.6. Over the following 12 years, through 1978, indicators for livestock farming development improved constantly and insured fulfillment and overfulfillment of state plans. However, starting in 1978, primarily as the result of nonfulfillment of plans for fodder procurement, growth rates in the output of produce from livestock farming have slowed. As a result, during the last five-year plan the republic did not manage to cope with deliveries of milk and meat for the state. Unfortunately, most of the republic's farms have not succeeded in achieving the necessary growth in the output of livestock farming during the first year of this five-year plan, either.

Within the republic, pig breeding and poultry farming are quite well developed. Further increases in the numbers of pigs and poultry will be at slower rates. Moreover, these forms of livestock farming require mainly concentrated fodders, whose reserves here are still limited. At the same time, much work is needed to further intensify these sectors. Weight increases for fattened hogs must be increased to reach at least 450 grams daily, and in poultry farming at least 230-240 eggs must be obtained each year from each bird.

Under the conditions in the republic it is cattle that provide the basic amount of livestock farming produce. Development rates during the 11th Five-Year Plan should be more rapid compared with the last five-year plan. We must increase the numbers of cattle, especially cows, and achieve a significant increase in the production of milk and meat. There are great reserves. Let us talk about some of them.

We must significantly improve matters in dairy farming. In order to fulfill the plan for the production of milk in the republic, by 1985 it will be necessary to insure a 14.1 percent growth compared with 1980.

In order to increase the dairy herd, during the in-stall period special concern must be shown for fundamental improvements in feeding for dairy cows, differentiating according to productiveness. Everywhere, increases in milk yield should be organized from cows that have calved, especially first calvers.

During the last 3 years there has been virtually no increase in the herds of cows at kolkhozes and sovkhozes, while at the same time the private sector continues to contract year after year. Possibilites do exist for increasing milk production and the herds of cows at all the farms in the republic. For example, in the public sector, each year 30 to 33 first calvers are added to each 100 cows in the herd, which makes it possible not only to renew but significantly increase the herd. However, Chemm noted, herd increases have been held back in recent times by the deteriorating work of the livestock breeding service which has permitted a worsening quality in the rearing of calves and care for the main herd. As a result, a large number of calves are rejected and average age of cows in the main herd has been unjustifiably lowered.

The administrations of the rayon agricultural-production association must achieve a sharp improvement in the work of the livestock breeding service. At the same time the raising of replacement calves must be organized at farms with high productiveness for cows, for subsequent transfer to thsoe kolkhozes and sovkhozes where the milk yield is low.

The Ministry of Agriculture, party raykoms and ispolkoms, local agricultural organs and farm bosses and specialists must radically improve work in dairy farming.

The most important thing in improving meat production is to wage a constant struggle for each kilogram of weight increase and for maximum return from each kilogram of fodder. All the organizational work of the party raykoms and all rural party and Komsomol organizations, and the practical activities of agricultural organs and farm bosses and specialists and of all workers at livestock farms and complexes must be concentrated on this.

One of the chief reserves for increasing beef production is raising the delivery weight of cattle. It must be brought up to an average of 420 kilograms this year. And by 1985 it must be 450 kilograms.

A major reserve for increasing meat production is improving survival rates for calves and young pigs, consderable losses of which are permitted each year in Bauskiy, Dobel'skiy, Yelgavskiy, Madonskiy, Kuldigskiy, Ludzenskiy and other rayons and in some other parts of the republics.

Growing sterility in cows is also lowering milk and meat production. Last year there was a shortfall of 21 calves for each 100 cows. If these losses are computed for all the farms in the republic, it turns out that sales of milk and meat to the state can be increased 10-12 percent.

Selection and pedigree breeding work should be of major significance in the development of livestock farming in the republic. Definite successes have already been achieved here. In the future it is essential to carry out pedigree breeding work more deeply and more extensively with all kinds of cattle and to develop new breeds and improve the existing ones. The republic has bought black-and-white Frisian and Anglerskaya cattle, which have shown high productiveness under the conditions prevailing here. Thus, at the "Tsesvayne" sovkhoz, 4,268 kilograms of milk have been obtained from each of the 983 Anglerskaya cows, and at the "Tervete" kolkhoz, 5,094 kilograms from black-and-white Frisians. Productiveness is just as high at many other farms.

However, work on breeding and rearing these cattle is still proceeding slowly. The Ministry of Agriculture must take more energetic steps to create a core of pedigree amimals at farms that could in the future insure a highly productive herd of animals. Only serious and daily work to improve the qualitative indicators for the pedigree herd can be our guarantee of success in increasing milk and meat production in the future.

Certain work has been done to fulfill the CPSU Central Committee and USSR Council of Ministers "On Additional Measures To Increase the Output of Agricultural Produce in Citizens' Subsidiary Private Plots." Thus, last year, 23 percent of all milk and 5 percent of meat sold the state was bought from these facilities. However, despite the fact that more than a year has elapsed since the decree was promulgated, organizational work done by the ministries and administrations, and also many party raykoms and rayispolkoms, still requires considerable improvement. In order to bring all available reserves into play it is essential to takes steps to increase the number of cattle in the private sector and to help in procurement of essential fodder and facilitate the construction of farm buildings.

The main reason for the hold-up in the further intensification of livestock farming, V.A. Chemm went on to say, is above all the lagging growth rates for the fodder base being permitted by a whole series of kolkhozes and sovkhozes.

During the 10th Five-Year Plan constant work was done at the republic's farms to strengthen the material-technical base for fodder production. During those years a large number of grain storage facilities and silage and hay installations with capacities for 270,000 tons and succulent fodder facilities with capacities for 125,000 tons were commisioned. Some 46 shops for the production of the simplest concentrated feeds and fodder mixes were built, together with the interfarm "Straume" concentrated feed plant with a daily production of 150 tons. The installation at virtually all the farms in the republic of units for the production of dried fodder, at which 300,000 to 350,000 tons of this fodder can be produced each season, was completed. Within the system of the republic Ministry of Procurement the Dobelskiy concentrated feed plant with a daily production capacity of 525 tons of fodder was commisioned and reconstruction work was done on a number of enterprises, making it possible to increase the production capacities for concentrated feed.

Last year party, soviet and agricultural organs jointly with industrial enterprises exercising patronage did much work, and this made it possible to substantially increase the production and procurement of coarse and succulent fodders on the republic's farms. Nevertheless, many farms and entire individual rayons are permitting a drop in cattle productiveness during the overwintering because of a general shortage of fodders, especially concentrated feeds that they make themselves.

As you can see, the steps taken to strengthen the fodder base still lag behind the development rates for public livestock farming, and this is inadmissible.

The LaSSR Communist Party Central Committee considers that party, soviet and agricultural organs must make fundamental changes in the the approach to solving the problem of fodder production.

Taking into account the intended growth in the numbers of cattle and poultry and the need to increase the production of meat, milk and other livestock farming produce as envisaged in the draft for the food program, it is necessary that by the end of the five-year plan at least 6 million tons of fodder units should be produced, or an increase of 51 percent over 1980. This level of fodder production will make it possible to apportion 35-40 quintals of fodder units to each head of cattle each year. For this it would be expedient at each kolkhoz and sovkhoz to draw up concrete measures for the entire 11th Five-Year Plan whose implementation will insure an increase in fodder production along with a substantial improvement in quality.

For us, grain has been and will remain the most important fodder crop.

Calculations made by specialists indicate that in order to provide for the needs of livestock farming for concentrated feeds we must achieve a stable gross grain production of at least 2.1 million tons annually. During the 11th Five-Year Plan the republic's farms will not have at their disposal adequate opportunities for expanding the area sown to grain crops. The main increase in grain production must be insured through steady growth in yield and sharp curtailment of losses during the harvesting. The efforts of party, soviet and agricultural organs, scientific establishments and leaders and specialists and all grain growers in the republic must be directed toward solving these problems.

We consider shameful the practice now current in individual kolkhozes and sovkhozes whereby grain sowings are used for purposes other than their designated purpose. Last year farms in Tsesisskiy rayon used 23 percent of grains for other purposes; in Stuchinskiy rayon the figure was 22 percent, in Ludzenskiy rayon 19 percent and in Yelgavskiy rayon 18 percent.

Party raykoms and ispolkoms must reinforce the responsibility of farm chiefs and secretaries of primary party organizations for fulfillment of plans for gross grain harvests, and hold strictly accountable those who permit unjustified use of areas sown to grain crops used for purposes other than those designated.

Agriculture in the republic has at its disposal a whole range of fine grain varieties. Nevertheless, as practice shows, some regionalized varieties of grains and legumes are not suitable for intensive grain farming.

In this connection a need has arisen for a more active search for high-yield, and disease-resistant, especially lodging-resistant, grain varieties that meet the requirements of intensive farming.

The main task for the research and variety-testing networks is to activate their work to find, grow and utilize new early-ripening and high-yield varieties of grains and legumes that insure a substantial increase in yield, and to accelerate their introduction into agricultural production.

In recent years concentrated feeds and fodder grain has been taking a high share of the concentrated fodders used. Party, soviet and agricultural organs and farm leaders must be guided by the general state task set by the party for the economic use of grain, especially grain used for fodder.

The potato is one agricultural crop that makes it possible to reduce grain consumption for fodder. Of late the potato has been little used for this purpose even though the effectiveness of this crop for fodder is very high. Even worse, individual farms engaged in raising hogs grow potatoes in inadequate quantities, counting on using only concentrated feeds for the hogs. Such leaders should be set straight.

In order to have potatoes in adequate quantities for fodder we must insure an average annual output at kolkhozes and sovkhozes of at least 900,000 tons, or increase production 37 percent against the average annual output for 1976-1980. Yield must be increased from 110 to 160 quintals per hectare.

There are farms in each rayon of the republic whose experience shows that whatever the weather conditions it is possible to obtain sufficiently good harvests of this crop. For this it is necessary to have permanent sections engaged in potato growing. Practice has shown that by carrying out the entire complex of agronomic, technological and organizational measures, these specialized sections have for many years been obtaining potato harvests of 250 quintals and more per hectare. Farms with such sections include the "Lachplesis" kolkhoz in Ogrskiy rayon, the "Yanays" kolkhoz in Saldusskiy rayon, and the "Padom'yu Latviya" kolkhoz in Rizhskiy rayon, the Priyekule selection station and many others.

The Ministry of Agriculture, party raykoms and rayispolkoms, and rayon agricultural-industrial associations must decisively demand from farm chiefs and the party organizations in kolkhozes and sovkhozes the introduction at each farm, this very year, of the tried and tested leading experience gained over many years by the specialized sections and teams in growing potatoes. and increased yield and a larger gross harvest in the republic.

Here, attention should be directed toward radical improvements in seed growing and healthier seed material, and also toward questions of cropping methods and techniques, and to taking effective steps to deal with potato diseases and pests. The republic Gosplan and the republic State Committee for Supply of Production Equipment for Agriculture [Goskomsel'khoztekhnika] must resolve questions of providing kolkhozes and sovkhozes with machines for dressing the tubers, cultivators and other equipment of which shortages are still being felt in the potato-growing farms.

Perennial and annual grasses and cultivated pasture and mown hay, which occupy 46 percent of agricultural land, play an important role in the provision of fodder for cattle. Unfortunately, many farms are obtaining poor harvests of grasses and hay from these extensive areas.

The organizational level in fodder production that we are talking about is exemplified in the kolkhozes "Pirmays mays" in Aluksenskiy rayon and imeni L. Paegle in Gulbenskiy rayon, and the sovkhozes "Irlava" in Tukumskiy rayon and "Dzerbene" in Tsesisskiy rayon where in 1981 only 10.3 to 13.3 quintals of hay was obtained from perennial grasses.

Meanwhile, where field fodder production is properly organized, last year 60 to 90 quintals of hay per hectare were obtained. This was the yield obtained at the kolkhozes "Trikata" in Valkskiy rayon, "Straume" and "Yanays komunars" in Saldusskiy rayon, "Iyetsava" in Bauksiy rayon, and "Tervete" in Dobel'skiy rayon, and at the sovkohzes imeni Lenin and imeni 50-letiye SSSR, and many other farms.

One important reserve for supplementing fodders is increased intensiveness in the use of meadowland and pastures. At present only 55 percent of these areas of land are used intensively. During this five-year plan it is essential to carry out work more extensively on improving meadowland and pasture and on bringing them into intensive fodder production.

Cultivated pasture occupies a special place in the republic's farms, providing valuable and inexpensive green mass and playing an important part in the production of milk and meat. The kolkhozes and sovkhozes have 0.46 of a hectare of cultivated pasture for each cow and heifer. During the past 3 years, however, their productiveness has been declining steadily.

We can and must achieve an average yield per hectare of at least 35-40 quintals from the first mowing of perennial grasses, at least 27-30 quintals from improved meadowlands, and 3,500-4,000 units of green fodder per hectare from cultivated pasture. The Ministry of Agriculture, the Ministry of the Fruit and Vegetable Industry, the Ministry of Land Reclamation and Water Resources, party raykoms and rayispolkoms, and kolkhozes and sovkhozes must this very year take urgent steps to increase the yield from each hectare of perennial grasses on meadowlands and pastures.

Straw, which makes up almost one-fifth of the food ration for cattle, is an important reserve for supplementing coarse fodders. It is essential at each farm to organize the preparation of straw and its use as feed, and to make better use of available fodder-preparation shops and to construct new ones.

Decisive steps must also be taken to improve efficiency in the utilization of arable land allocated for the sowing of annual grasses and silage crops. As a rule, in recent years these crops have been sown on inadequately prepared and inadequately fertilized areas with all kinds of mixed seeds, which has been leading to low harvests and nonfulfillment of coarse fodder procurement plans. Party raykoms and rayispolkoms, the Ministry of Agriculture and the Ministry of the Fruit and Vegetable Industry, and kolkhozes and sovkhozes must radically alter their attitudes toward the use of land set aside for these crops and must improve the structure and quality of the sowings and the techniques used in cultivating the crops, and obtain at least 250 quintals per hectare of green mass from annual grasses and silage crops.

More attention must be given to our basic silage crop--corn. In recent years we have had at our disposal fine varieties and hybrids that under our conditons insure a green mass harvest of more than 500 quintals per hectare. At the same time many farms are not making use of the opportunities offered by this crop and are violating the agrotechnical rules and obtaining extremely poor harvests. The Ministry of Agricultural must be seriously rebuked for its improper attitude toward conducting seed hybridization--one of the ways of increasing the yield from corn under the conditions of our zone and long recommended by science.

Livestock farming in the republic experiences constant shortages of fodders containing sugar. It is necessary to increase the production of root crops for fodder, making more extensive use of semisweet beet, for which sugar beet equipment has been modified, making it possible to reduce manual labor to a minimum. The experience of the kolkhozes "Brivida" in Kraslavskiy rayon, imeni Michurin in Daugavpilsskiy rayon, "Kopdarbs" in Ogrskiy rayon, "Sarkana ausma" in Preyl'skiy rayon and "Komunars" in Kuldigskiy rayon indicates that each year they obtain high and stable harvests of semisweet beet with minimum use of manual labor. The Ministry of Agriculture and its scientific research establishments must resolve the question of seed growing for high-yield self-pollinating varities of sugar beet for fodder and of supplying them to the republic's kolkhozes and sovkhozes. Resolution of this problem, and also the extensive use of chemical means for plant protection and the introduction of leading technology, will make it possible by 1985 to have increased the gross production of root crops by a factor of 1.5 compared with 1981.

The cultivation of a well-recommended late crop, namely cabbage for fodder, should also be expanded; this crop makes it possible to maintain high productiveness in cows during the period of transition to in-stall conditions. In order to make more rational use of land and to supplement fodder resources it is essential to practice interrow sowing more extensively, using crops such as rape, perko, legume mixes and others. The experience of leading farms in this matter should be disseminated as widely as possible.

Food waste from cities and industrial centers, which is now used insufficiently, constitutes an additional fodder reserve. The LaSSR Ministry of Municipal Services and the city and rayon executive committees of soviets of working people's deputies must radically improve the organization of its collection and dispatch, and the republic Gosplan should allocate the necessary amount of vehicles and containers for this purpose.

One special task confronting the republic is to solve the protein problem for livestock farming. Protein shortages in feed rations are reducing effectiveness in the use of fodder by 30-35 percent and increasing fodder consumption and production prime costs. One realistic way to increase the production of plant protein is through a substantial increase in sowings of and harvests obtained from protein-rich crops. We must reinstate and considerably expand sowings of clover, alfalfa, peas, beans, vetch and other legumes. The Ministry of Agriculture, the Ministry of the the Fruit and Vegetable Industry and the scientific research establishments must in short periods set up seed growing for these and other protein-rich crops and supply them to kolkhozes and sovkhozes.

The report then went on to analyze problems of the further development of seed growing for grains, fodder crops and perennial grasses.

Land reclamation is of great significance in increasing fodder production. The most intensive crops and high-yield varities are planted on drained land. However, there are serious shortcomings in the planning, construction and utilization of land reclamation systems. Errors and omissions are still being permitted in reclamation projects. Cases of poor quality meliorative work are still common. The recent years with heavy precipitation have shown that the throughput of many water collectors is inadequate and that some drained land is being used inefficiently. The Ministry of Land Reclamation and Water Resources must take the most urgent steps to eliminate defects, improve work quality and carry out the necessary reconstruction work on water-collection installations that do not insure the removal of excess moisture from the fields.

Improving efficiency in the use of reclaimed land is a major reserve in increasing fodder production. For this it is necessary first and foremost to implement agricultural-meliorative and organizational-technical measures aimed at systematic and planned improvements in fertility.

Organic ferilizers play an invaluable role in improving soil fertility. The storage, carting out and application of organic fertilizers to the soil require considerable improvement. For some years now the target has been to apply at least 11-12 tons of organic fertilizers per hectare, but it has still not been met. The inititative of the farms in Valmiyerskiy rayon, approved by the LaSSR Communist Party Central Committee, shows that it is possible to increase the build-up of organic fertilizers on every farm, but for this, collection and storage and a solicitous attitude to this valuable fertilizer are essential.

Peat is an important source for organic fertilizers. And here serious rebukes must be directed at the peat industry and the Ministry of Land Reclamation and Water Resources, which in recent years have not been insuring the delivery of peat to consumers in accordance with confirmed plans. The situation in this important matter must be radically corrected.

The role of the "Latsel'khozkhimiya" scientific-production association in improving soil fertility and increasing fodder production has recently been growing increasingly. Increasing supplies of mineral fertilizers and plant protection means, and improving the build-up and application of organic fertilizers require a scientifically sound approach to their use. There are still significant shortcomings in this matter. First and foremost, the regional agricultural-industrial associations must strengthen the material-technical basis of "Latsel'-khozkhimiya in order to achieve a sharp improvement in the effectiveness of these fertility resources.

Concentrated feeds play a most important part in the development and strengthening of the fodder base for livestock farming. With each passing year the republic's industry increases processing of these feeds, but unfortunately their quality could be better. In recent years there has been a drop in the protein proportion, which has led to overconsumption of grain for the production of concentrated feeds and increased grain consumption per unit of livestock farming produce. The enterprises of the republic Ministry of Procurements must take steps to reduce the proportion of grain in concentrated feeds through the more extensive use of other high-nutrient components, and also through improving the assimilability of concentrated feeds on the basis of appropriate processing techniques. Gosplan, the Ministry of Agriculture, the Ministry of the Food Industry, the Ministry of the Meat and Dairy Industry, and enterprises in the cellulose-and-paper, fish and other industrial sectors must seek out ways of increasing the production of protein components for the concentrated feed industry and present proposals for government consideration.

Retention of quality in fodder during storage is an important reserve in improving the fodder balance. Now, as the result of violations of techniques used to preserve fodder and inadequate storage facilities, a considerable proportion of fodder deteriorates. Gosplan and Gossnab must this year allocate at least 20,000 tons of cement and other essential construction materials above the plan to kolkhozes and sovkhozes in the republic for the repair of existing storage facilities and additional construction of new facilities.

The CPSU Central Committee and USSR Council of Ministers recommend that a sector character be imparted to fodder production. On this plane the experience of several of the republic's farms where specialized management subdivisions have been set up for fodder procurements, is of interest. They are backed with the land used for fodder and permanent crews to work it, and are given definite production plans. Here, too, questions of moral and material incentive for workers have been correctly resolved as a function of their specific contribution to and the final results of work. Fodder production has been organized on this principle at the kolkhozes "Nauksheny" in Valmiyerskiy rayon, "Tervete" in Dobel'skiy rayon, and "Adazhi" in Rizhskiy rayon, at the "Olayne" sovkhoz and at a number of other farms.

The Ministry of Agriculture, Ministry of the Fruit and Vegetable Industry, party raykoms and ispolkoms, regional agricultural-industrial associations, and farm chiefs and specialists must make a deep study of this experience and organize, this year, specialized teams at all kolkhozes and sovkhozes for the production and procurement of coarse and succulent fodders.

During the summer period specilized teams should handle all matters concerned with the care, sowing and harvesting of all kinds of grasses and their storage; during the winter period they must deliver fodder to the farms and prepare for suckling of the young.

Capable specialists should head these teams; and they should be given the necessary rights, that is, fodder production should be given the rank of an independent sector.

In recent years there has been an improvement in the supplies of agricultural equipment available. However, despite this, as before there are bottlenecks in the mechanization of cultivation and harvesting for some kinds of fodder crops, particularly cured hay. Farms are feeling an acute shortage of equipment for hay turning and its collection, transportation and storage in local facilities. The industrial enterprises of the republic and the State Committee for Supply of Production Equipment for Agriculture must provide much assistance in solving these problems.

Successful implementation of the tasks of intensifying agricultural production is inseparably linked with improvements in rural construction. The LaSSR Communist Party Central Committee plenum that took place in June last year defined the tasks of the construction organizations for the 11th Five-Year Plan. Now, summing up the results for 1981, it can be said that the construction organizations of the Ministry of Construction and the "Latvkolkhozstroy" associations have not fulfilled plans for capital construction in the countryside, especially at farms that are lagging economically. It is quite clear that the frustration of a number of planned projects is in no way facilitating reinforcement of the production base for kolkhozes and sovkhozes and even less the resolution of the complex tasks to develop livestock farming and strengthen its fodder base. In 1982 republic ministry and administration chiefs and party gorkoms and raykoms must liquidate the lagging behind that has been permitted and fulfill the rural construction program.

Questions of improving efficiency in agricultural production, creating a stable fodder base, and further increasing the production and sale of milk and meat should be resolved comprehensively along with the key problem of party leadership in agriculture, namely improving cadre work.

In 1981 the average number of tractor drivers available in the republic per 100 tractors was 91. This does not satisfy the requirements of agriculture and is leading to prolongation of the busiest work periods. This is noted particularly in fodder preparation and harvesting.

Party, soviet and agricultural organs at rayon level and the primary party organizations must show concern first of all for the training and strengthening of their own permanent mass profession personnel and must create for them the necessary conditions for work and leisure.

During the periods of the busiest agricultural work party gorkoms and raykoms must send vehicle operators from all enterprises and organizations to help the kolkhozes and sovkhozes. Now, already, comprehensive technologic teams should be brought up to strength with manpower for the successful completion of the spring field work, and each vehicle operator involved should know his task and the equipment he is to use. V.A. Chemm also dealt in detail with questions of improving patronage aid from the city to the countryside and the more active participation of the republic's Komsomol organizations in this work.

Realization of the program outlined for the further strengthening of the fodder base, increasing the output of livestock farming produce, and, in the final analysis, resolving the food program, requires unprecedented, effective ideological backup and improvements in political work in the countryside. Today, not only more active actions in general are required from the rural party organizations but also more initiative-filled, purposeful political-educational work among rural workers.

First and foremost, in this work the mobilizing functions of propagandists and lecturers and political information workers and agitators msut be precisely defined. Rural party organizations are obligated to make more complete use of the system of economic education as an important lever in the development of initiative and competence in work with agricultural cadres, especially those in the mass professions.

In a word, ideological-educational work among rural workers requires decisive execution and a strengthening of its links with the life of rural workers collectives.

The most crucial time in agricultural production is now starting. The main task now is the successful completion of the stock-keeping period. Special attention should be given to the rational utilization of available fodder resources in order to come through the winter without losses of cattle and with a rapid increase in the productiveness of cattle and poultry.

Another task, no less important, is concern for the harvest and the fodder base in 1982. The CPSU Central Committee and USSR Council of Ministers has adopted an extensive decree "On Additional Measures To Prepare for and Carry out Spring Field Work in 1982," in which provision is made for a set of measures for the successful completion of field work. Here, all the recommendations made earlier must be taken into account and fulfilled, with no procrastination.

The rapporteur then dealt in detail with the features of preparing for and carrying out the spring field work in our republic, stressing that the primary task for communists and all farm workers is to take all necessary steps to improve farming techniques and soil fertility and aimed at obtaining stable harvests of agricultural crops regardless of the weather conditions.

Party raykoms and primary party organizations msut intensify work to mobilize the workers to meet the targets set for the second year of the five-year plan, develop socialist competition in honor of the 60th anniversary of the formation of the USSR, and greet this noteworthy date in a worthy manner.

In conclusion V.A. Chemm expressed the firm conviction that communists of the republic party organization will do everything in order to fulfill with honor the decisions of the 26th CPSU Congress.

MARCHUK ADDRESSES GEORGIAN PARTY AKTIV

Tbilisi ZARYA VOSTOKA in Russian 2 Mar 82 p 2

[Speech by G.I. Marchuk, deputy chairman of the USSR Council of Ministers and chairman of the USSR State Committee for Science and Technology, at Georgian party-economic aktiv meeting on 1 March 1982]

[Text] Dear Comrades!

The CPSU Central Committee, USSR Council of Ministers, AUCCTU and Komsomol Central Committee have examined the results of all-union socialist competition for the successful fulfillment of the plan of the USSR's economic and social development in 1981--the first year of the 11th Five-Year Plan.

For the achievement of high results in all-union socialist competition and the successful fulfillment of the plan of economic and social development the Georgian SSR has been awarded the CPSU Central Committee, USSR Council of Ministers, AUCCTU and Komsomol Central Committee Challenge Red Banner.

The victory in all-union socialist competition is the splendid result of the selfless creative labor of the workers, kolkhoz members, engineers, scientists and all working people of Georgia and a result of the tremendous mass-political and organizing work of the republic's party, soviet, trade union and Komsomol organizations.

Permit me at the behest of the CPSU Central Committee, USSR Council of Ministers, AUCCTU and Komsomol Central Committee and at the behest of Comrade Leonid Il'ich Brezhnev, general secretary of the CPSU Central Committee and chairman of the USSR Supreme Soviet Presidium, to warmly and cordially congratulate you and, through you, all working people of the GSSR on the deserved award and wish you further success in work, big new labor accomplishments, good health and personal happiness.

The GSSR's great successes in the struggle for fulfillment of the plan, which have been appraised highly in all-union socialist competition, are gratifying to all working people of the country and the entire Soviet people.

This appraisal is an expression of party and government recognition of the achievements of Georgia's working people and your big contribution, dear comrades, to the fulfillment of the 1981 plan.

Your victory in all-union socialist competition is particularly remarkable in that it was won in the year of the 26th CPSU Congress, whose historic decisions evoked tremendous political and labor enthusiasm in the country. Inspired by the decisions of the 26th CPSU Congress and the CPSU Central Committee November Plenum, Soviet people are struggling selflessly for realization of the plans outlined by the party and striving for increasingly new successes in communist building.

And it is particularly pleasing to note today that in the front ranks of active builders of communism in our country are the working people of Soviet Georgia. This is striking testimony to the historic achievements of socialism, the triumph of the CPSU's Leninist nationality policy and the tremendous vitality of our multinational state, the 60th anniversary of whose formation the entire Soviet people will greet as their big holiday.

The Soviet Union has trodden a glorious path of struggle and victories in the time of its existence.

The main result of the path that has been trodden is the creation in the USSR of the society of developed socialism, in which the creative forces of the new system and its truly humane essence are being revealed increasingly fully. Currently the entire activity of the party and the people is geared to a further strengthening of our society, the creation of the material-technical base of communism, an improvement in social relations and the education of Soviet citizens in a spirit of communist high-mindedness.

The Soviet economy today is a comprehensively developed economy of huge dimensions and one furnished with modern equipment which serves as the sure foundation of the strengthening of the country's defense capability and the accomplishment of the tasks of communist building.

The year of 1981 was an important new stage in the country's economic and social development. A further growth of the country's economic potential was achieved, the scale of social production grew and the Soviet people's well-being rose as a result of widespread socialist competition and the selfless labor of the working class, kolkhoz peasantry and Soviet intelligentsia.

National income in 1981 increased by R14 billion or 3.2 percent and amounted to R474 billion. With regard for expenditure on housing and sociocultural construction four-fifths of national income were channeled directly into the people's well-being.

A great deal of work was performed on enhancing the technical standard of and streamlining production and improving the quality of manufactured output: approximately 4,000 new machinery, equipment and instrument models were created and approximately 11,000 mechanized flow lines and transfer machines were installed at industrial enterprises.

A vast program of capital construction was accomplished in 1981. Approximately 200 new large-scale state industrial enterprises were commissioned in the course of the year. The modernization and retooling of operating enterprises were undertaken extensively.

Under extremely unfavorable weather conditions the agricultural workers performed a great deal of work to provide the country with agricultural products.

Our party regards the development of industry and agriculture as the basis for an improvement in Soviet people's lives.

Science, education, culture and health care were further developed, work and recreational conditions improved and large-scale environmental protection measures were implemented.

Comrades! It is particularly pleasing today to note the big contribution to the successful fulfillment of the 1981 plan of economic and social development of the GSSR working people.

Implementing the decisions of the 26th CPSU and Georgian Communist Party congresses and the instructions and recommendations of Leonid Il'ich Brezhnev on questions of economic and cultural building expressed during his visit to Tbilisi for the jubilee festivities on the 60th anniversary of the establishment of Soviet power and the formation of the Georgian Communist Party, in 1981 the GSSR working people secured a dynamic growth of the sectors of material production and the services sphere and fulfilled and overfulfilled all the most important plan quotas of economic and social development and the adopted socialist pledges.

The plan for the volume of industrial production was fulfilled 101.5 percent. Industrial production increased 5.1 percent compared with 1980, which was above the growth rate envisaged by the socialist pledges.

Labor productivity in industry increased 3.7 percent compared with 1980 instead of the 3.5 percent envisaged by the pledges. The increase in industrial output thanks to labor productivity growth constituted 76 percent against an annual plan, with regard for the pledges, of 72 percent.

Considerable successes were scored in an increase in the technical-economic level and quality of the manufactured product. More than 2,000 products were commended by the official Symbol of Quality in 1981.

Despite the difficult weather conditions, the republic's agricultural workers achieved big successes in fulfillment of the plan quotas and socialist pledges.

The gross agricultural product in 1981 comparable prices constituted over R2 billion, which was 9.5 percent higher than the average annual level in 1976-1980.

The achievements of the tea growers, viticulturists and citrus growers were particularly significant.

The annual plan quotas for the purchase of vegetables, livestock, poultry, eggs and wool were considerably overfulfilled.

The achievements of the republic's agricultural workers were evaluated highly at the CPSU Central Committee Plenum and in a letter of congratulations from Comrade L.I. Brezhnev.

Some R1.3 billion of fixed capital were commissioned thanks to state capital investments in 1981, which was almost 10 percent above the 1980 level. The plan for the commissioning of housing thanks to state capital investments and also sociocultural facilities was overfulfilled.

Pronounced successes were also achieved in other sectors of the republic's economy. As a result the aggregate social product increased 5.2 percent in the year.

And the level of social labor productivity increased 6 percent compared with 1980 against the planned 5.2 percent, and 85 percent of the total national income increases was obtained thanks to increased labor productivity.

A wide-ranging program of a rise in the population's living standard was implemented in the republic.

It affords me particular satisfaction today to mention those who distinguished themselves in all-union socialist competition in 1981. These were working people of the Abkhazskaya ASSR, the cities of Tbilisi and Kutaisi and Bogdanovskiy, Gurdzhaanskiy and Makharadzevskiy rayons and the collectives of 25 industrial, construction, transport and other organizations, which were also awarded challenge red banners.

Many splendid production pacesetters who are displaying high models of a communist attitude toward work are working in all sectors of the GSSR economy. Great respect is enjoyed by such masters of production as comrade metallurgists Ivanashvili and Ordzhonikidze, miners Kirkitadze and Tsitsishvili, the coremaker Kurtanidze, lathe hand Rostiashvili, construction worker Modebadze, tea growers Kupuniya, Sakaniya and Talakvadze, the citrus grower Avidzba and many, many others.

Permit me to wish the pacesetters of industry, agriculture, construction, transport and other sectors of the economy and all working people of the republic new successes in their noble labor for the good of our great socialist motherland!

Comrades!

Guided by the decisions of the CPSU Central Committee November Plenum and the propositions and conclusions set forth in Comrade Brezhnev's speech at the plenum, the party, soviet, trade union and Komsomol organizations and ministries and departments are concentrating attention on the successful fulfillment of the 1982 plan and the five-year plan as a whole and directing all efforts toward realization of a most important party goal--an increase in the efficiency of the economy and its intensification.

The GSSR working people have adopted new upgraded socialist pledges for fulfillment and overfulfillment of the 1982 plan and the five-year plan as a whole. Competition for a fitting greeting of the 60th anniversary of the formation of the USSR is widespread. Upgraded socialist pledges in honor of the country's jubilee have been adopted by more than 1 million workers and employees, 40,000 brigades, sections and shops and 3,100 enterprises, kolkhozes and sovkhozes.

Permit me to express the firm confidence that under the leadership of the republic party organization headed by Comrade Eduard Amvrosiyevich Shevardnadze, candidate of the CPSU Central Committee Politburo and first secretary of the Georgian Communist Party Central Committee, the GSSR working people will successfully fulfill the plan quotas and socialist pledges of the second year of the 11th Five-Year Plan and make a fitting contribution to realization of the program of the new stage of communist building which was determined by the 26th congress of our Lenin Party.

Comrades!

Our achievements and prospects in economic building and many other walks of life are connected to a determining extent with the acceleration of scientific-technical progress.

Our Communist Party's 26th congress again confirmed the significant role which scientific-technical progress is called on to perform in the coming decade. The main singularity of the USSR's economic development in the 11th and 12th five-year plans is completion of the transition to an intensive path of development. The policy of intensification has been fully reflected in the five-year plan of the country's development for 1981-1985.

In previous years the main attention has been paid to an increase in and expansion of production and economic potential. We doubled fixed production capital in the last two five-year plans. This is an outstanding achievement of our country. The center of gravity is now shifting to an increase in the returns from the production potential and the further intensification of labor. It is primarily a question of securing a growth of labor productivity mainly thanks to a rise in the technical level of production and economies in and the rational use of raw material, intermediate products, energy and labor resources. It is planned to tackle this complex task by way of the introduction of the achievements of science and progressive technology and the retooling and modernization of operating enterprises.

Here are a few figures characterizing the scale of scientific-technical progress in the 11th Five-Year Plan. It is planned to obtain 90 percent of the increase in national income thanks to labor productivity growth. The increased technical level of production and mechanization and automation will enable us to economize on the labor of 12 million persons.

The Plan of the USSR's Economic and Social Development for 1981-1985, which has been drawn up in accordance with the decisions of the 26th CPSU Congress, stipulates an extensive list of scientific research and planning-design developments and an increase in the scale of the introduction of modern scientific and technical achievements in production.

Realization of the plan's scientific-technical programs is a most important task. It requires a further increase in the efficiency of the work of the country's scientific research, planning-design and production engineering organizations and enterprises and daily attention to questions of the acceleration of scientific-technical progress on the part of ministries and departments of the USSR and the union republics and party, soviet, trade and Komsomol organizations.

The scientists, specialists and workers of Georgia are called on to make an appreciable contribution to the realization of these programs. It is particularly pleasing to note today the great creative scientific traditions and rich scientific-technical potential of the GSSR, which makes it possible to tackle the most complex tasks in many areas of modern science and technology. A big role here is being performed by the Academy of Sciences and State Committee for Science and Technology of your republic.

There is no doubt that the scientists, specialists, workers and kolkhoz members of the GSSR will do everything necessary to accomplish the big tasks confronting them in the sphere of an acceleration of scientific-technical progress and the development of our country's economy!

Comrades!

A most important factor of the successful accomplishment of the tasks of communist building is the foreign policy of the CPSU and the Soviet state.

An unswerving aspiration to a just democratic world is the invariable line of our foreign policy.

The CPSU Central Committee, its Politburo and the Soviet Government are consistently performing active work on the implementation of the program of struggle for peace and international cooperation and the freedom and independence of the peoples.

The high-minded Leninist policy being creatively implemented under current international conditions corresponds to the fundamental interests of the peoples of the Soviet Union and the other socialist countries and all progressive mankind. It is for this reason that it enjoys the invariable support of hundreds of millions of people of our planet.

The Soviet Union actively opposes the aggressive aspirations of the imperialists.

The firm foundation of the successful implementation of Soviet foreign policy was and remains the permanancy of our social system, the dynamic development of the economy, the monolithic unity of the people and their cohesion around the party and the defense might of our state.

Comrades!

The Soviet people inseparably connect all their victories and achievements with the leading role of the Communist Party. Soviet people have been convinced on the basis of many years of experience that the party is leading them along the true, Leninist road. The strength and viability of the domestic and foreign policy formulated by the party consist in the fact that it corresponds to the requirements of social development and Soviet people's interests.

Soviet people warmly support and unanimously approve the party's domestic and foreign policy and express feelings of profound gratitude to the Leninist CPSU Central Committee and Central Committee Politburo and Comrade L.I. Brezhnev, general secretary of the CPSU Central Committee and chairman of the USSR Supreme Soviet Presidium, for their tremendous work on the development of the country's economy, a rise in the working people's well-being and implementation of the Peace Program.

Dear Comrades!

It is my great honor to present to the GSSR--winner in all-union socialist competition for the successful fulfillment of the plan of the USSR's economic and social development in 1981--the CPSU Central Committee, USSR Council of Ministers, AUCCTU and Komsomol Central Committee Challenge Red Banner.

Allow me to present the red banner that has been conferred on the republic.

Permit me to once again cordially congratulate the comrades here present and all working people of the GSSR on the high award and wish you further success in labor, prosperity and happiness.

GEORGIAN CENTRAL COMMITTEE CONVENES PLENARY SESSION

Tbilisi ZARYA VOSTOKA in Russian 3 Mar 82 p 1

[Text] The Georgian Communist Party Central Committee Fifth Plenum was held on 2 March.

The plenum discussed the following questions:

The work of the Georgian Communist Party Central Committee Bureau and Secretariat in 1981 and the tasks for 1982.

The progress of realization of the critical observations and proposals expressed at the Georgian Communist Party Central Committee Fourth Plenum.

Insofar as the report of the Georgian Communist Party Central Committee Bureau on the first item on the agenda was sent ahead of time to Georgian Communist Party Central Committee members and candidates and Auditing Commission members and the gorkoms and raykoms it was not read out.

Information on the second item was presented by G.V. Kolbin, second secretary of the Georgian Communist Party Central Committee.

The plenum heard the report of A.M. Barabadze, member of the Georgian Communist Party Central Committee and Georgian SSR prosecutor, or the practice of the investigation and judicial examination of criminal cases involving instances of the embezzlement of socialist property.

T.N. Menteshashvili, first secretary of the Tbilisskiy Gorkom; V.R. Papunidze, first secretary of the Adzharskiy Obkom; U.A. Ivaniashvili, steel worker at the Rustavi Foundry; R.G. Ketsbaya, first secretary of the Sukhumskiy Gorkom; O.V. Melkadze, chairman of the GSSR People's Control Committee; F.V. Dzhnoyev, first secretary of the Tskhinval'skiy Raykom; N.V. Valishvili, rector of the Kutaisi Polytechnical Institute imeni Muskhelishvili; D.N. Mosesov, lathe hand at the Tbilisi "Stankostroitel'" Production Association; B.Z. Makashvili, first secretary of the Goriyskiy Gorkom; G.I. Gvetadze, minister of internal affairs of the GSSR; N.G. Cherkezishvili, editor of the newspaper ZARYA VOSTOKA; G.G. Lezhava, minister of health of the GSSR; D.I. Guguchiya, chairman of the board of the Kolkhoz imeni Marks of Zugdidskiy Rayon's village of Kakhati; G.I. Gunava, first secretary of the Lentekhskiy Raykom; M.L. Mdivani, director of Gardabanskiy Rayon's Norioyskaya Poultry Factory; V.G. Bakradze, first secretary of the Lagodekhskiy Raykom; Z.A. Kvachadze, secretary of the Georgian Council of Trade Unions; and G.Z. Mirianashvili, chairman of the GSSR State Committee for Construction Affairs, participated in the debate on the agenda.

The plenum approved a letter of the Georgian Communist Party Central Committee to the communists and all working people of Soviet Georgia in connection with the 10th anniversary of the CPSU Central Committee decree on the Tbilisskiy Gorkom.

A big speech at the plenum was delivered by E.A. Shevardnadze, candidate of the CPSU Central Committee Politburo and first secretary of the Georgian Communist Party Central Committee.

The plenum adopted corresponding decrees.

The plenum examined an organizational question.

A.P. Sakvarelidze was confirmed as chief of the Georgian Communist Party Central Committee Science and Educational Institutions Department, E.A. Sekhniashvili was relieved of this position in connection with his transfer to other work.

V.A. Kondrat'yev, chief of a department of the CPSU Central Committee, participated in the plenum.

The Georgian Communist Party Central Committee Fifth Plenum concluded.

RED BANNER AWARDED KAZAKHSTAN FOR GRAIN SALES TO STATE

Kunayev Speech

Alma-Ata KAZAKHSTANSKAYA PRAVDA in Russian 11 Mar 82 pp 1,2

[Speech by First Secretary of the CC of the Communist Party of Kazakhstan D. A. Kunayev: "The Homeland's Honorary Award Inspires Us"]

[Text] For the achievement of high results in the All-Union Socialist Competition for the production and sale to the state of grain and other very important types of agricultural output in 1981 the Kazakh Soviet Socialist Republic has been acknowledged as victor of the competition and awarded the Red Challenge Banner of the Central Committee of the CPSU, the USSR Council of Ministers, the AUCCTU, and the CC of the Komsomol.

The presentation of the honorary award was marked by a meeting held on 10 March in Alma-Ata in the Kazakh State Order of Lenin Academic Theater of Opera and Ballet imeni Abay of the republic aktiv of party, government, trade union, and Komsomol organizations jointly with representatives of workers' collectives.

In the Presidium were the member of the Politburo of the CC CPSU and first secretary of the CC of the Communist Party of Kazakhstan comrade D. A. Kunayev, the Deputy Chairman of the USSR Council of Ministers comrade Z. N. Nuriyev, the members of the Bureau of the CC of the Communist Party of Kazakhstan comrades K. M. Aukhadiyev, B. A. Ashimov, Ye. F. Bashmakov, V. A. Grebenyuk, Z. K. Kamalidenov, O. S. Miroshkhin, N. A. Nazarbayev, Yu. N. Trofimov, and D. T. Yazov, and the candidate members of the Bureau of the CC of the Communist Party of Kazakhstan S. S. Dzhiyenbayev and V. T. Shevchenko.

The Presidium also consisted of the Deputy Chairman of the Presidium of the Supreme Soviet KaSSR A. P. Plotnikov, the Deputy Chairmen of the Council of Ministers KaSSR E. Kh. Gukasov, Sh. Zh. Zhanybekov, K. D. Kobzhasarov, and T. G. Mukhamed-Rakhimov, the member of the Military Council and Chief of the Political Administration of the Red Banner Central Asian Military District Lieutenant General V. F. Arapov, advanced production workers, party and government officials, cultural figures, scientists, and the leaders of ministries and departments.

The introductory words opening the meeting of the republic aktiv were delivered by the member of the Politburo of the CC CPSU and First Secretary of the CC of the Communist Party of Kazakhstan comrade D. A. Kunayev who was warmly met by his audience.

With great enthusiasm the participants of the meeting elected an honorary presidium consisting of the Politburo of the Central Committee of the CPSU led by comrade Leonid Il'ich Brezhnev.

Comrade D. A. Kunayev said in his introductory speech:

Dear comrades!

Today you and I are the participants in a pleasant and joyous event in the life of the workers of Soviet Kazakhstan.

Our republic is being presented with the Red Challenge Banner of the CC CPSU, USSR Council of Ministers, AUCCTU, and the CC of the Komsomol for its achievement of high results in the All-Union Socialist Competition for the production and sale to the state of grain and other very important types of agricultural output in 1981.

Struggling to carry out the decisions of the 26th CPSU Congress, the workers of Soviet Kazakhstan achieved good results last year also in other branches of the economy. The plan was fulfilled by the republic's industry.

Capital construction was carried out on an unprecedented scope, which added even more to the economic might of Kazakhstan.

There was a marked increase in the role of science and technology.

New heights were taken by our multi-genre art and culture.

Among the considerable achievements of our toilers, their successes in the production and sale to the state of grain and other very important types of agricultural output are especially appreciable.

As is known to you, at the November (1981) Plenum of the CC CPSU comrade Leonid Il'ich Brezhnev gave high praise to the achievements of the grain growers of Kazakhstan and called their experience an example of good and stable work, and the result of last year's harvest a great labor victory.

The workers of our republic are sincerely grateful and deeply thankful to the party and government and personally to Leonid Il'ich Brezhnev for their high evaluation of the labor of the people of Kazakhstan, for their tireless concern for the good of the people and the flourishing of our homeland, and for their consistent struggle to strengthen peace in the entire world.

It gives me great satisfaction to express heartfelt gratitude in the name of the CC of the Communist Party of Kazakhstan and the Presidium of the republic's Supreme Soviet and of its Council of Ministers to all those who have earned the high praise of our party, who with their indefatigable and fruitful labor have won the Red Banner which is being presented today.

A large group of Kazakhstan's agricultural workers has been singled out for high government awards for their high indicators and labor valor shown by the results of 1981, and 14 of the best of the best have been awarded the high title of Hero of Socialist Labor.

Permit me, dear comrades, to congratulate those who have been awarded from the bottom of my heart and to wish them all kinds of new successes.

Comrades! The high evaluation of the labor of our Kazakhstan workers obliges us to continue to achieve more substantial indicators in all of the spheres of our economy, science, and culture. This is especially important on the eve of such significant events as the 60th anniversary of the formation of the USSR and the 250th anniversary of Kazakhstan's voluntary association with Russia.

Now, as never before, it is necessary to increase our general contribution to the noble cause of communist construction and to ensure the absolute fulfillment of the socialist commitments which have been adopted in all of the fields of the economy, knowing that only by harmonious, energetic, and fruitful work is the strength and might of our beloved homeland forged and increased.

We are confident that, in keeping with our developed tradition, the workers of our republic will do everything for the successful accomplishment of the magnificent tasks which are being placed before us by the Central Committee of the party and its Politburo led by the outstanding political leader and statesman of our day comrade Leonid Il'ich Brezhnev.

On the rostrum is the Deputy Chairman of the USSR Council of Ministers comrade Z. N. Nuriyev.

(Comrade Z. N. Nuriyev's speech is being published in today's issue of the newspaper).

On a commission from the Central Committee of the CPSU and the Soviet government, and personally from the General Secretary of the CC CPSU and Chairman of the Presidium of the USSR Supreme Soviet comrade L. I. Brezhnev, Z. N. Nuriyev ardently and sincerely congratulated the workers of four-times order-bearing Kazakhstan on their great labor victory and presented the homeland's honored award.

In a festive atmosphere the Red Banner of the CC CPSU, USSR Council of Ministers, AUCCTU, and the CC of the Komsomol was accepted by: the member of the Politburo of the CC CPSU and First Secretary of the CC of the Communist Party of Kazakhstan comrade D. A. Kunayev, the Chairman of the Council of Ministers KaSSR B. A. Ashimov, the combine operator from the "Bulakskiy" sovkhoz in Kokchetavskaya Oblast S. Zhumagaliyev, the chairman of the kolkhoz imeni V. I. Lenin in Enbekshikazakhskiy Rayon, Alma-Atinskaya Oblast, S. K. Burdin, the mechanization specialist on the "Pervomayskiy" sovkhoz in Karagandinskaya Oblast N. Kabdykarimova, the milkmaid from the "Zarechnyy" sovkhoz in Severo-Kazakhstanskaya Oblast N. K. Luk'yanchenko, and the link leader from the "Forty Years of October" kolkhoz in Panfilovskiy Rayon, Taldy-Kurganskaya Oblast, A. Baktayev.

The meeting was addressed by the secretary of the Chimkentskaya Obkom of the Communist Party of Kazakhstan, the Hero of Socialist Labor A. A. Askarov; the first secretary of the Komsomol'skiy Raykom of the party of Aktuybinskaya Oblast, the hero of socialist labor P. T. Oleshko; the winding machine operator at the Alma-Ata Cotton Combine and deputy to the Supreme Soviet of the KaSSR Zh. Sarsenbayeva; the team leader of a tractor-field team at the sovkhoz imeni the 60th anniversary of the Soviet Army in Turgayskaya Oblast, the Hero of Socialist Labor V. A. Belyayev; and the director of the sovkhoz imeni Kozlov in Kustanayskaya Oblast V. I. Doroshko. On behalf of the republic's workers they expressed their heartfelt gratitude to the communist party and the Soviet government for the honored award and gave their assurance that the workers, kolkhoz workers, specialists, and all of the toilers of Kazakhstan, inspired by the constant concern of their native Leninist party for strengthening the economic might of the Country of Soviets, the welfare of the people, and the triumph of the cause of peace, will achieve great new successes in realizing the designs of the 26th CPSU Congress and the tasks posed in the decisions of the November (1981) Plenum of the CC CPSU and in the speech of comrade L. I. Brezhnev at that Plenum, will participate even more actively in the All-Union Socialist Competition for a worthy reception of the 60th anniversary of the formation of the USSR, and will make a weighty contribution to communist construction.

The Chairman of the Council of Ministers KaSSR B. A. Ashimov delivered a speech at the meeting of the aktiv. He said:

Respected comrades! Our republic has only just been presented with an honored award--the Red Challenge Banner of the CC CPSU, USSR Council of Ministers, AUCCTU, and CC of the Komsomol which it has been awarded for the achievement of high results in the All-Union Socialist Competition for the production and sale to the state of grain and other very important types of agricultural output in 1981.

We have received with a feeling of deep emotion the warm words of greetings and the good wishes of the General Secretary of the CC CPSU and Chairman of the Presidium of the USSR Supreme Soviet comrade Leonid Il'ich Brezhnev.

Permit me, dear comrades, on your behalf and on behalf of the communists and all of the workers of the Kazakh SSR to express our most heartfelt gratitude to the Central Committee of the CC CPSU and the Soviet government, and personally to Leonid Il'ich Brezhnev for their high evaluation of the labor successes of the workers of Kazakhstan and for their constant solicitude and concern for the comprehensive development of our republic's economy, science, and culture.

With all of our hearts we wish dear Leonid Il'ich good health and great success in his enormous work for the good of the Soviet people and in the name of peace and of the triumph of the ideals of communism.

Comrades! Having given an extensive development to the socialist competition for the practical realization of the decisions of the 26th CPSU Congress and the 15th Congress of the Communist Party of Kazakhstan, the November (1981) Plenum of the CC CPSU, and the program instructions of comrade L. I. Brezhnev on the party's economic policy, during the first year of the 11th Five-Year Plan the republic's labor collectives worked with the necessary intensity and marked it with good achievements in economic and cultural construction.

Kazakhstan's multi-branch industry received a further development. Compared to the previous year, industrial production increased by 3.9 percent. The plans for the total volume of output sales, for the production of the most important types of products, and for an increase in labor productivity were fulfilled. Consumer goods alone were produced in the amount of 5.8 billion rubles. The use of production capacities improved, and the technical and economic indicators of enterprises increased. Important measures were carried out to improve the quality of output.

More than 8 billion rubles were invested for the development of the economy. As a result of the concentration of labor and material resources on the most important start-up construction projects, more than 100 large production objects were put into operation in power engineering, ferrous and nonferrous metallurgy, machine building, and the chemical, light, food, and other branches of the economy. Six million square meters of housing were commissioned, which made it possible for 615,000 people to improve their housing conditions, and many schools, children's preschool institutions, and other cultural and domestic facilities were built.

Our glorious grain farmers worked especially fruitfully last year. They demonstrated an increased mastery and level of organization, and in exceptionally difficult weather conditions grew and harvested the crop and fulfilled their socialist commitment for the delivery of grain to the state with honor. The republic's farms provided themselves with good quality seeds and have prepared the land for this year's sowing. The plan for the sale of vegetables, sugar beet, cotton, melon crops, and grapes was also overfulfilled.

Positive results were also achieved in animal husbandry. Livestock and poultry herds grew, and procurements of meat, milk, eggs, wool, and other animal husbandry output increased. The sovkhozes and kolkhozes performed a truly enormous amount of work to strengthen the feed base--for the first time around 21 million tons of hay and haylage and a substantial quantity of other coarse and succulent feeds were put in storage.

The workers of science, transportation and communications, and of the entire service sphere labored persistently over the fulfillment of their socialist commitments. The volume of retail commodity turnover in state and cooperative trade reached 13,357,000,000 rubles. More than 150 million rubles worth of above-plan goods were sold. The assignment for providing domestic services to the public, including in rural areas, was overfulfilled.

The forward lines which have been taken by the KaSSR in the first and starting year of the new five-year plan in economic development are the result of a large amount of well-directed organizational and political work by the Central Committee of the Communist Party of Kazakhstan, the republic's party, government, trade union, and Komsomol organizations, its economic cadres, and of the coordinated work of all of the production collectives of the republic.

The communists and all of the workers of the republic welcomed with great joy and pride the awarding to the member of the Politburo of the CC CPSU and First Secretary of the CC of the Communist Party of Kazakhstan comrade D. A. Kunayev of the Order of Lenin and his third "Sickle and Hammer" Gold Medal and the warm words said to him by L. I. Brezhnev when he presented him with this high award of our Homeland:

"Kazakhstan has," Leonid Il'ich emphasized, "outstanding achievements in the development of its economy, science, and culture. And I would give especial emphasis to the stable growth of its grain production. For four years in a row now the republic has been overfulfilling its plan and has been producing on the order of a billion poods of grain, and sometimes even more. Dimash Akhmedovich has put a great deal of his labor into these achievements."

Our working class, kolkhoz peasantry, people's intelligentsia, and all of the people of Kazakhstan have perceived the high evaluation of the work of the republic party organization as a battle order from our native party to work even better and more efficiently, and to increase the contribution of Soviet Kazakhstan to our general national work of strengthening the material and technical base of communism in our country.

As has already been noted here Red Challenge Banners of the CC CPSU, the USSR Council of Ministers, the AUCCTU, and the CC of the Komsomol have been awarded to Aktyubinskaya, Kokchetavskaya, Severo-Kazakhstanskaya, Taldy-Kurganskaya, and Chimkentskaya Oblasts, to the cities of Alma-Ata, Balkhash Kustanay, and Tselinograd and to Sovetskiy Rayon in the city of Karaganda, to 19 rural rayons, and to the collectives of 78 associations, enterprises, organizations, and institutions in industry, construction, and transportation, and of sovkhozes and kolkhozes, including 42 which have been inscribed on the All-Union Board of Honor of the Exhibition of the Achievements of the Economy of the USSR.

In the republic socialist competition recognition as victors has gone to 6 oblasts, 5 cities and city rayons, 19 rural rayons, and 154 industrial enterprises, construction, scientific research, and planning and designing organizations, sovkhozes, kolkhozes, and other agricultural enterprises.

The party and the government have given a high evaluation to the labor valor shown by Kazakhstan workers in the fulfillment of their plans and socialist commitments to increase the production and sale to the state of grain and other field and livestock section products last year. Orders and medals of the Soviet Union have been awarded to 10,000 advanced agricultural workers, and 14 workers have been awarded the title of Hero of Socialist Labor, a high award which was presented to them yesterday under ceremonial circumstances by comrade D. A. Kunayev.

Permit me on behalf of the Central Committee of the Communist Party of Kazakhstan, the Presidium of the Supreme Soviet, and the Council of Ministers of the Kazakh SSR to ardently congratulate the workers of the oblasts, cities, and the rayons, the collective-victors in the All-Union and republic socialist competitions, and the comrades who have been given awards, and to thank them for their inspired labor and wish them further successes.

Comrades! In the second year of the 11th Five-Year Plan our republic is faced by new and larger tasks. In industry production has to exceed 24 billion rubles, and, moreover, around 90 percent of the increase has to be obtained on the basis of a better utilization of existing capacities. The socialist commitments provide for the advance fulfillment of the annual plan for the production and sale of output and for the above-assignment production of a substantial quantity of coal, petroleum, iron ore, iron, steel, rolled goods, machine building and metal working output, mineral fertilizers, and consumer goods.

Large capital investments will have to be utilized for the further development of our economy, science, and culture.

During the first two months of this year Kazakhstan's multi-branch industry operated on the whole stably and fulfilled its assignments for the production and sale of industrial output. Substantial work is being performed to improve capital construction and the work of the branches which had the task of providing normal services for the needs of the economy and the republic's population.

The leaders of enterprises and construction sites and of ministries and departments and the Soviets of People's Deputies have to take additional measures to speed up the rate of industrial production and of capital construction, and have to achieve the efficient use of operating capacities and the fulfillment and overfulfillment by every labor collective of its socialist commitments for the production of high quality output in the assigned products list and for the punctual commissioning of planned facilities. It is especially important to ensure rhythmic operations by the branches upon which the work of all of the elements of the economy depend to a decisive degree. This concerns above all reliable energy supplies for the economy, the punctual supply of allocated material and technical resources, and an improvement of the work of transportation.

Rural workers are faced with exceptionally responsible tasks. In order to accomplish the assignments of the five-year plan it will be necessary not only to consolidate the results which have been achieved, but to substantially surpass them. As early as this year the production of grain has to be brought to 28 million tons, and its delivery to the state to 16 million tons. A large amount of work has to be carried out in the procurements of meat, milk, and other types of animal husbandry output. We have everything necessary for the accomplishment of these important tasks: vast lands, equipment, rich material resources, and, most important, highly qualified cadres. It is important to prepare for the spring field work on time and to perform it on a high agrotechnical level. Time remaining before sowing has to be used with maximum return for the completion of repairs on the machinery and tractor pool, the manning of teams and links with mechanization cadres, the bringing of seeds to high sowing conditions, and the delivery to farms of fertilizers and fuel and lubricants.

Active work has to be begun on every sovkhoz and kolkhoz to obtain big grain and bean harvests this year. The country, as in the past, is expecting a lot of bread from us. It is a matter of honor for the republic's farmers not only to fulfill, but to overfulfill their socialist commitments for the production and sale to the state of grain.

Special attention has to be directed toward a more efficient use of each hectare of irrigated land and toward the introduction of progressive technologies for the cultivation of corn, rice, sugar beet, and crude cotton, and their yields have to be increased. The production of potatoes and vegetables has to fully meet the needs of the republic's population.

The thorough development of animal husbandry and an increase in the production of meat, milk, and other output by livestock sections is a subject of constant concern. It is the duty of sovkhoz and kolkhoz leaders and specialists, of all animal husbandry workers, and of government and agricultural agencies to complete the wintering of the livestock in an organized manner, to achieve high herd reproduction indicators, not to lose any young livestock, and to increase the productivity of the livestock. A responsible period has now come in sheep raising. Young will have to be obtained from more than 18 million ewes. A further growth of the herds and of the production of beef, wool, and karakul depends to a large extent upon the successful performance of this important campaign.

On every farm a complex of measures has to be realized to further strengthen the feed base for the growing animals: proper care of perennial grasses, an expansion of the sowings of annual feed crops, high yields, and the timely preparation and organized performance of feed procurements.

Important measures are being carried out in the republic to develop the subsidiary farms of enterprises and organizations. There are now more than 1,000 of them. With good organization they are capable of substantially adding to our food resources. Economic leaders and the ministries and departments have to show concern for the punctual and high quality planting of potatoes and vegetables and of feed crops on the subsidiary farms and for obtaining a maximum amount of cropping and animal husbandry output.

Substantial work is being performed in the localities to further develop the private farms of the population. There has been an increase in the land areas for collective orchards and in the private plot fund. The population has been sold more young livestock and poultry than in past years, and more than 2 million tons of hay and straw have been allocated to it. Government and economic agencies have to continue to work on improving the conditions for running private citizen farms, expand the network of procurement points for purchasing surplus output, and organize cooperative trade in food goods everywhere.

A constant improvement of the organization of trade and of domestic services and health care and an improvement of the work of the entire public service sphere will undoubtedly foster fruitful work by production collectives and their successful fulfillment of their plans and high socialist commitments.

Comrades! A year has passed since the historic 26th CPSU Congress which has become an important landmark in the life of our party and people finished its work. During this period there has been a graphic demonstration of the ever increasing influence of the decisions of the congress on the social and economic development of the country and of every union republic, on the spiritual life of Soviet society, and on the international situation.

The decree of the CC CPSU "On the 60th Anniversary of the Formation of the Union of Soviet Socialist Republics" has given rise to a new tide of political and labor activeness by Soviet people. Each passing day sees an expansion of the scope of the competition of the republic's labor collectives for a worthy reception of the country's glorious anniversary and the 250th anniversary of Kazakhstan's voluntary association with Russia. The motto calling for better and more efficient work and for the use of all reserves for the achievement of the highest results with the least expenditures has become the chief content of the competition.

Permit me on your behalf and on behalf of all of the workers of Kazakhstan, B. A. Ashimov said in conclusion, to assure the CC CPSU and the Soviet government and comrade Leonid Il'ich Brezhnev personally that the workers of Kazakhstan, under the leadership of the republic's party organization, will, in response to their high award, ensure the successful fulfillment of the assignments of the 1982 plan and of the 11th Five-Year Plan as a whole and will make a worthy contribution to the further strengthening of the economic and defense might of our beloved homeland.

With great enthusiasm the participants of the meeting of the republic aktiv adopted a letter of greetings to the Central Committee of the CPSU and to the General Secretary of the CC CPSU and Chairman of the Presidium of the USSR Supreme Soviet comrade Leonid Il'ich Brezhnev.

Nuriyev Speech

Alma-Ata KAZAKHSTANSKAYA PRAVDA in Russian 11 Mar 82 p 3

[Speech by Z. N. Nuriyev: "The Homeland's Honored Award Inspires Us"]

[Text] Dear comrades!

On the basis of the results for 1981 the CC CPSU, USSR Council of Ministers, AUCCTU, and CC of the Komsomol have found the Kazakh Soviet Socialist Republic to be the victor in the All-Union Socialist Competition for the production and sale to the state of grain and other very important types of agricultural output and have awarded it the Red Challenge Banner.

It is with great joy that I am carrying out a commission of the Central Committee of the party and of the USSR Council of Ministers and presenting your republic, the quadruple order-bearing Kazakhstan, with the Red Challenge Banner.

Comrades! It is with especial satisfaction that I convey to the workers of Soviet Kazakhstan the heartfelt greetings, the warmest congratulations on their high award, and the wishes for new successes of the General Secretary of the CC CPSU and Chairman of the Presidium of the USSR Supreme Soviet comrade Leonid Il'ich Brezhnev.

A year has passed since the 26th CPSU Congress. In carrying out its decisions, the Soviet people, under the leadership of the communist party, have achieved new successes in economic and social development. The country's national income has increased by 14 billion rubles. The production of industrial output has increased by 21 billion rubles. Around 200 large new enterprises have been put into operation. Two million well-appointed apartments have been built. The population's real income has increased. The country's agrarian and industrial potential has continued to grow. Overcoming the difficulties of an unprecedentedly dry year, the workers of agriculture have produced 120 billion rubles worth of cropping and animal husbandry output.

The workers of Soviet Kazakhstan have been making their own worthy contribution to strengthening the country's economic and defense might. The republic has overfulfilled its plan for the production of industrial output. Its annual growth came to 3.9 percent.

It is gratifying to note that despite the adversities of bad weather, in 1981 rural workers produced 8,610,000,000 rubles worth of output, which is 151 million rubles more than the annual average of the 10th Five-Year Plan.

Remarkable successes have been achieved in grain farming. The republic again sold the state around 1 billion poods of good quality grain. This is a large contribution to the country's food resources. It is doubly precious, since, as a result of the drought in the Povolzh'ye and certain other large agricultural areas, the state failed to receive a substantial quantity of grain from them.

The grain farmers of Kazakhstan have been demonstrating an example of stable work. Not only last year, but during the 10th Five-Year Plan as a whole, the republic fulfilled its plan for the production and procurement of grain and practically reached the mark of selling the state 1 billion poods of grain a year.

During the 10th Five-Year Plan the average annual gross grain harvest came to 27,497,000 tons, or an increase compared to the 9th Five-Year Plan of 5,835,000 tons. This is a major success for the republic's grain farmers who are worthy continuers of the great virgin land epoch.

Of paramount importance in the struggle to increase grain production is the extensive introduction of a soil protection system of cropping which, under the conditions of the dry year of 1981, graphically demonstrated its advantages. Today more than 20 million hectares of arable land are being cultivated by anti-erosion implements without turning a furrow and sown by special sowers which ensure good seed embedment in the stubble background.

Last year 94 percent of the spring grain crops were cultivated with this technology.

The increase in the gross grain harvest also became possible thanks to an improvement of labor organization and production management and to the increased skills of the mechanization experts and specialists. Last fall 106,000 combine operators were employed in the harvest and many of them achieved high indicators. Of them, 489 thrashed 10,000 and more quintals of grain.

The link of the Hero of Socialist Labor Petr Mikhaylovich Breusov from the "Karasuskiy" sovkhoz in Kustanayskaya Oblast thrashed 48,300 quintals of grain with 3 combines. The remarkable woman worker Raushan Dauletova from the "Pobeda" sovkhoz in Oktyabr'skiy Rayon, Aktyubinskaya Oblast, thrashed 14,600 quintals of grain during the season.

More than 150,000 trucks were employed in transporting grain. Progressive transportation methods were used by 1,800 motor vehicle teams. The grain was delivered to 125 elevators on an hourly schedule. Many of the drivers demonstrated models of highly productive labor, each carrying 7,000-10,000 and more tons of grain from the farms to the elevators. Among them is the driver Akkay Pshembayev from the Zhanadalinskiy Motor Vehicle Transportation Enterprise in Turgayskaya Oblast who carried more than 1 million poods of grain on his 100-ton trailer truck.

Last year especially high indicators were achieved by the workers of Aktyubinskaya Oblast who overfulfilled their plan for the sale of grain to the state by 2.4 times, and of Chimkentskaya Oblast who sold 2 plans. Procurement plans were overfulfilled by the farms of Kokchetavskaya Oblast which delivered 135 million poods of grain to the procurement point, by Turgayskaya--101 million, Severo-Kazakhstanskaya--85 million, Karagandinskaya--38 million, and Taldy-Kurganskaya--31 million poods. The grain farmers of Kustanayskaya Oblast sold the state 180 million poods of high quality grain.

Outstanding successes were achieved by the farmers of Komsomol'skiy Rayon, Aktyubinskaya Oblast, Nurinskiy Rayon, Karagandinskaya Oblast, Shchuchinskiy Rayon, Kokchetavskaya Oblast, Vozvyshenskiy Rayon, Severo-Kazakhstanskaya Oblast, and certain others which overfulfilled their procurement plans by 1.5-2.5 times.

A million or more poods of grain were sold to the state by 257 of the republic's kolkhozes and sovkhozes.

It is important that of 10,700,000 tons of procured wheat, more than 80 percent consisted of strong, hard, and valuable varieties. The plans for the procurements of barley, rye, oats, rice, and corn grain were overfulfilled.

The General Secretary of the Central Committee of the CPSU comrade Leonid Il'ich Brezhnev has warmly and sincerely congratulated the grain farmers of Kazakhstan with their labor victory. He expressed his profound gratitude to sovkhoz workers, kolkhoz workers, farm leaders and specialists, scientists, the workers of cities and industrial centers and procurement and transportation organizations, the student youth, the soldiers of the Soviet Army, the party, government, trade union, and Komsomol workers, and to all who with their selfless labor ensured the fulfillment of the socialist commitments for the sale of grain.

Along with an increase in gross grain harvests, in recent years the kolkhozes and sovkhozes of Kazakhstan have achieved an increase in the production and procurements of crude cotton, sugar beet, potatoes, and fruits and vegetables.

The republic has increased production and sale to the state of meat, milk, eggs, and wool. Compared to the average annual level of the 10th Five-Year Plan, last year meat procurements increased by 194,000 tons, or by 15 percent, milk by 186,000 tons, or by 9 percent, eggs by 221 million units, or by 12 percent, and wool by 8,000 tons, or by 7 percent.

All of this is the natural result of the beneficial influence of the communist party's agrarian policy.

Comrades! Kazakhstan's achievements are important. They have been given their due by the Central Committee of the CPSU and by the Soviet government. In addition to the awarding of the Red Banner to the republic, Red Challenge Banners have also been awarded to Aktyubinskaya, Kokchetavskaya, Severo-Kazakhstanskaya, Taldy-Kurganskaya, and Chimkentskaya Oblasts, to the capital of the republic--Alma-Ata,--and also to the cities of Balkhash, Kustanay, and Tselinograd, and to 19 rural rayons, including Komsomol'skiy Rayon in Aktyubinskaya Oblast, Kamyshninskiy Rayon in Kustanayskaya Oblast, Arkalykskiy Rayon in Turgayskaya Oblast, and Atbusarskiy Rayon in Tselinogradskaya Oblast.

Among the award winners are dozens of kolkhozes, sovkhozes, and industrial enterprises, including those which are known to the whole country for their outstanding achievements like the collectives of the "Alma-Atinskiy" Order of Lenin sovkhoz in Talgarskiy Rayon, Alma-Atinskaya Oblast, the "Forty Years of October" Order of the Red Banner of Labor kolkhoz in Panfilovskiy Rayon, Taldy-Kurganskaya Oblast, the

"Avangard" sovkhoz in Pavlodarskiy Rayon, Pavlodarskaya Oblast, and others, and also the All-Union of the Red Banner of Labor Scientific Research Institute of Grain Farming.

For labor valor demonstrated during the fulfillment of their plans and socialist commitments, the Presidium of the USSR Supreme Soviet has awarded orders and medals to 10,000 of Kazakhstan's advanced agricultural workers.

The best of the best have been awarded the high title of Hero of Socialist Labor. The company of Heroes of Kazakhstan has been added to with the names of 14 new Heroes. Among them are: Semen Semenovich Alaturov--a mechanization specialist on the "Svobodnyy" sovkhoz in Kamyshninskiy Rayon, Kustanayskaya Oblast; Sartyy Zhumagaliyev--a combine operator at the "Bulakskiy" sovkhoz in Kokchetavskiy Rayon, Kokchetavskaya Oblast; Umirtay Umirbekov--a senior shepherd at the "Kurtinskiy" sovkhoz in Kurtinskiy Rayon, Alma-Atinskaya Oblast; and Asanbay Askarov--the First Secretary of the Chimkent Obkom of the Communist Party of Kazakhstan, and other comrades.

Permit me to sincerely congratulate all of the award winners and to wish them new successes in carrying out the decisions of the 26th Congress of the Communist Party of the Soviet Union.

In Kazakhstan this is not the first time--it happens every time--that I have been the witness of great transformations. By virtue of my work I often have occasion to analyze the indicators of the development of the republic's economy. I want to observe that in recent years all of the branches of the republic's economy have been developing dynamically, and that its productive forces have been growing from year to year.

The plowing up of the virgin land was a powerful impulse which has, as it were, given the republic a second breath. Kazakhstan of our day is a very large industrial republic with a developed agriculture. In a word, it is rich not only in grain, but also in ore, and energy carriers. Its storehouses are enormous. Almost all of the chemical elements of the Mendeleyev Table exist here and are mined here for the good of our fatherland. Accelerated rates of development characterize the mining industry, ferrous and nonferrous metallurgy, the petroleum, petrochemical, and chemical industries, and machine building, and the fuel and energy potential is growing. Light industry and the food branches are gaining strength. Construction is being carried on on a large scale. The republic's cities and villages are becoming more beautiful. Today Kazakhstan supplies its output to all of the union republics and to many foreign countries.

However, its main wealth is the ambitious and talented people of Kazakhstan. With its labor and with the help of other brother-peoples it has turned its limitless expanses and hills and dales into a flowering and rich region of our homeland.

The progressive development of Kazakhstan's economy and culture is convincing testimony to the correctness of the Leninist nationalities policy of the communist party.

The achievements of the republic are the results of the large amount of political and organizational work of the CC of the Communist Party of Kazakhstan led by the member of the Politburo of the CC CPSU and First Secretary of the Central Committee of the Communist Party of Kazakhstan comrade Dinmukhamed Akhmedovich Kunayev. It is the result of the fruitful work of the republic's Council of Ministers and of all of its party, government, and economic agencies, and of the selfless labor of the numerous collectives of the republic's enterprises, sovkhozes, kolkhozes, and construction projects.

In recent years the Central Committee of the CPSU and the Soviet government have been doing a great deal to ensure a further improvement of the well-being of Soviet people. In this respect, the problem of food provisions is now being moved to the forefront. For the purpose of finding a radical solution to it, on the initiative of comrade Leonid Il'ich Brezhnev, a special food program is being worked out. Its goal is to rapidly accomplish the task of uninterrupted supplies to the population of meat and dairy products, and also other types of foods.

In addition to producing 28 million tons of grain in 1982 and 29.5 million tons in 1985, Kazakhstan is also facing the task of sharply increasing the production and sale to the state of other types of food. This year livestock and poultry procurements are supposed to come to 1,500,000 tons, and by the end of the five-year plan to 1,600,000 tons, and milk to 2,482,000 tons in 1982 and 2,750,000 tons in 1985.

The production of potatoes, vegetables, fruits and berries, sugar beet, sunflowers, crude cotton, eggs, and wool will also have to be increased.

There is no denying it: your plans, like those of the other republics, are strenuous. But the farms of Kazakhstan possess sufficient reserves and experienced organizers and with new material and technical and financial resources they can and without fail will come out onto the mapped out frontiers.

Especial attention has to be given to the creation of a solid feed base for animal husbandry. Along with an expansion of work to increase the productivity of hay fields and pasture lands, measures have to be taken to ensure high and stable harvests of feed crops. Losses of feed during procurement and storage are still great on the farms.

It must be noted that despite substantial investments, individual rayons and farms are still producing a small return and that irrigated lands, equipment, and other productive funds are not being used efficiently everywhere.

There is a great diversity in the republic in the yields of agricultural crops and in livestock productivity.

The results of the fulfillment of the 11th Five-Year Plan will be effected above all by how we work this year. It is now important to ensure the efficient use of every kilogram of feed, to make good preparations for the calving of cows and the lambing of sheep, and to complete the livestock wintering in an organized manner.

It is necessary to punctually develop measures to transfer the livestock to summer maintenance. The organization of the green conveyor has to be carefully thought out for every livestock section so as to fully supply animal husbandry with cheap feeds and, on this basis, compensate for the decrease in productivity which has been permitted and produce a maximum amount of meat and milk during the summer and autumn period.

A little time remains before the beginning of the spring field work. Equipment repairs and seed preparations have to be sped up. Party, government, and agricultural agencies and the sovkhozes and kolkhozes have to think out the sowing tactics and to conduct sowing, as you know how to do this, rapidly and thereby lay a good foundation for obtaining a weighty harvest in 1982.

Comrades! Our homeland is approaching an important event--the 60th anniversary of the formation of the Union of Soviet Socialist Republics. The scope of socialist competition for a worthy reception for the state is everywhere being expanded and new patriotic initiatives are being born.

In the historic struggle for the construction of communism the multinational people of the Country of Soviets is uniting even more closely around its leader--the party of Lenin and its Central Committee led by the faithful continuer of the great Lenin's cause, the General Secretary of the CC CPSU comrade Leonid Il'ich Brezhnev.

In conclusion, permit me once again to ardently and sincerely congratulate you and all of the workers of Kazakhstan on your high award and to express my confidence in the fact that your agricultural workers will do everything for the successful realization of the food program and of the tasks which have been set by the 26th CPSU Congress.

CENTRAL OFFICIALS VISIT UZBEK CONFERENCE

Tashkent PRAVDA VOSTOKA in Russian 28 Feb 82 p 2

[Text] An all-union zonal seminar of staff lecturers of the Kirghiz, Tajik, Turkmen and Uzbek Communist Party central committee, obkoms, gorkoms and raykoms convened by the CPSU Central Committee Propaganda Department has concluded in Tashkent.

For a week its participants discussed the paths of a further improvement in lecture propaganda and an increase in the effectiveness of the lectures and the use of various forms and methods of ideological work in the light of the decisions of the 26th party congress, CPSU Central Committee decrees on questions of ideological and political education and the instructions of Comrade L. I. Brezhnev.

On 23 and 26 February papers and lectures were delivered at the seminar by V. D. Yezhov, B. M. Istomin, V. I. Kobysh and V. V. Sitnin, executives of the CPSU Central Committee, A. D. Deminov, first deputy chairman of the USSR Gosstroy, B. V. Zabotin, deputy minister of internal affairs of the USSR, S. A. Bobylev, member of the Military Council and chief of the Political Directorate of the USSR's Air Defense Forces, E. Yu. Yusupov, vice president of the Uzbek SSR Academy of Sciences, scientists and figures of literature and art.

The papers, lectures and speeches in the sectional classes emphasized that the CPSU Central Committee decree "60th Anniversary of the Formation of the USSR" is of tremendous significance for the stimulation and extension of lecture propaganda. It determines the main characteristics and prospects of the development of the Soviet multinational state at the current stage and reveals the international significance of the solution of the nationality question in our country. The extensive propaganda and in-depth study of this most important party document should secure a further upsurge in the political and labor assertiveness of the masses.

Lecturers and propagandists, the participants in the seminar observed, are called on to reveal in their speeches to Soviet people the historic import of the gains of socialism and show strikingly and convincingly the heroic spirit of our days, the essence of socialist democracy and the breadth of the rights and freedoms of the Soviet citizen. A particular role belongs to a convincing portrayal of the great vitality of Lenin's nationality policy and the ideas of proletarian internationalism.

A most important task of lecture propaganda, the speakers said, is illustration of the international nature of Marxist-Leninist teaching and the ideological aspects of the CPSU's international activity.

The participants in the seminar acquainted themselves with the practice of lecture work in areas of Tashkent and delivered lectures in the labor collectives of the Uzbek capital. Classes were conducted on the procedure of spoken action and experience of lecture work was exchanged.

On the final day of the seminar--27 February--the paper "Tasks of Ideological and Political Education" was presented to those assembled by M. V. Gramov, deputy chief of the CPSU Central Committee Propaganda Department.

A. U. Salimov, secretary of the Uzbek Communist Party Central Committee, R. Kh. Abdullayeva, deputy chairman of the UzSSR Council of Ministers, V. S. Kudinov and M. Kh. Khalmukhamedov, executives of the CPSU Central Committee Propaganda Department, and leading workers of UzSSR party, soviet, trade union and Komsomol bodies and ministries and departments participated in the seminar.

AZERBAIJAN COMMITTEE ELEVATED TO STATE COMMITTEE

[Editorial Report] Baku BAKINSKIY RABOCHIY in Russian on 18 March publishes on page 1 a 200-word report of two Azerbaijan SSR Supreme Soviet Presidium decrees. The first decree announces the elevation of the Committee for Supervision of Safe Working Practices and for Mine Supervision attached to the Azerbaijan SSR Council of Ministers to union republic State Committee of the Azerbaijan SSR for Supervision of Safe Working Practices and for Mine Supervision. The second, dated the same day, announces the appointment of N.M. Aliyev as chairman of the new state committee.

UZBEK MINISTRY RESTRUCTURED

[Editorial Report] Tashkent PRAVDA VOSTOKA in Russian on 18 March publishes on page 1 a 100-word report of an Uzbek SSR Supreme Soviet Presidium decree announcing that the Uzbek SSR Ministry of Municipal Services would be restructured as the Ministry of Housing and Municipal Services.

CENTRAL OFFICIALS VISIT BELORUSSIA

[Editorial Report] Minsk SOVETSKAYA BELORUSSIYA in Russian on 14 March carries on page 1 a 400-word BELTA report on the visit of N.F. Vasilyev, USSR Minister of Land Reclamation and Water Resources and V.I. Chudin, USSR Minister of Construction, Road and Municipal Machine Building, to Belorussia on 12 March. They were received by T.Ya. Kiselev, first secretary of the Belorussian CP Central Committee. They discussed "problems of land reclamation in the republic as well as further improvement in construction, road building, machine building and equipment." Taking part in the talks were A.N. Aksenov, chairman of the Belorussian Committee and D.A. Danilov and G.G. Kovalenko, deputy chairmen of the Belorussian Council of Ministers.

Vasilyev and Chudin visiter several industrial sites in Gomelskaya Oblast, where they discussed progress in the work of new land reclamation technology.

LESSONS OF 11TH PARTY CONGRESS CONSIDERED VALID TODAY

PM080915 Moscow PRAVDA in Russian 26 Mar 82 p 2

[Article by S. Kolesnikov, candidate of historical sciences: "A Course of Socialism: On the 60th Anniversary of the 11th RCP(B) Congress"]

[Text] Each of our party's congresses is a kind of step up on the steep and difficult path to the heights of social progress. Literally forging a way through the virgin lands of history, the congresses of the Communist Party have, as Lenin put it, summed up "the results of periods of social development, applying their Marxist methods of study to them." Every party forum has opened up and still does open up the broadest horizons for creative questing in a cause without precedent--the planned creation of a new world. This was true of the 11th Russian Communist Party (Bolsheviks) [RCP(B)] Congress, held in Moscow 27 March-2 April 1922.

By concretizing and developing the most important provisions of the new economic policy [NEP] as the policy of the transitional period from capitalism to socialism, the congress set a true course toward the future. That was not easy to do. The guidelines for forward movement were defined against the background of a highly complex mesh of socioeconomic structures, contradictory political trends and acute ideological struggle. But such guidelines--the only correct ones--were found. And this was thanks above all to the force of Lenin's genius.

Lenin's plan for building socialism, which truly covered all the stories of the social edifice, including the development of production forces, the radical reworking of social relations and the education of the new person, was and still is a model of the scientific, comprehensive, realistic approach to resolving the tasks of the revolutionary transformation of society. The 11th party congress is rightly regarded as an important stage in the formation of this plan.

The whole difficulty and the whole art of politics, V. I. Lenin believed, lie in the stability to take into account the uniqueness of each specific historical period. The 11th RCP(B) Congress met when the first year of peaceful socialist building was drawing to a close. The country was gradually beginning to emerge from the ruins. The social foundations of Soviet power--the alliance of the working class and the labor peasantry--was gaining strength.

The international position of the young Republic of Soviets was also strengthening.

At the same time a struggle was still going on between socialist and capitalist structures in the economy and in public life. In the course of this struggle the question "who will win" was being decided once and for all. The gravity of the situation was exacerbated by the famine which struck Russia.

But no trials falling to the working people's lot could shake the correctness of Lenin's main conclusion, that "economically and politically the NEP fully ensures the opportunity to build the foundations of a socialist economy." ("Complete Collected Works," Vol 45, pp 60-61) It was a question of using these opportunities skillfully and sensibly. So at the congress the party put forward the task of regrouping forces for a resolute offensive against capitalist elements.

The historical outcome of any affair is decided by the masses and their involvement in conscious creativity. Lenin saw this as the basis and most important task of the party's policy. A distinctive feature of the 11th Congress was the fact that its decisions reflected the problem of mutual relations between the leading detachment of the working class and all the main classes and population groups in the country--first and foremost the peasantry.

How to ensure that the masses arise to consciously create a new life and follow the working class and its vanguard? That problem was at the center of the party's attention.

It is well known that the role of leading detachment is not automatically granted. It has to be won and earned in an intensive, acute struggle, in the practice of building the new society. The masses are not particularly polite toward people who claim the right to leadership but cannot prove that right with deeds nor find the correct approach to them, Vladimir Ilich noted at the congress. It is necessary to ensure, he noted, that "the masses see the connection between their life now and the work being done for the sake of remote socialist ideals." (Vol 45, pp 76-77) So what communists needed above all was thoughtfulness, consideration and realism both in determining the priority practical steps in building a socialist economy and in making predictions for the more distant future.

It was necessary, to use Lenin's words, to know how to correctly express "what the people are aware of." (ibid., p 112) With its indefatigable defense of the vital interests of the working class and the broadest masses and its devotion to the ideals of communism, the party won the lofty right to be the leader of working people of all nations and ethnic groups.

Likening the mesh of political events to a chain, Lenin defined the essence of party leadership as the ability to discover and to grasp the main, decisive link in that chain. The party congress named as this decisive link the ability to manage the economy, find the point of contact between industry and the peasant economy and involve the many million strong masses of working people in building the foundations of socialism.

The 11th RCP(B) Congress was one of the first in our party's history at which as Lenin said, the real, chief, main tasks of the working class and its leading detachment--the practical tasks of creating a new society--emerged in all their significance. And in this work, with its tremendous scope, the main thing was to learn to administer, manage and deploy people. "The crux of all work," Vladimir Ilich noted, "...lies in selecting people and in checking execution. If we learn practical lessons in this respect and derive some practical benefit, then we will once again overcome all difficulties." (ibid., p 113)

The entire practice of socialist and communist building has convincingly confirmed that question of leadership of the economy are not simply economic questions, but essentially political and party questions. The inspired definition of Lenin's that "politics is concentrated economics" has taken on flesh and blood in communists' deeds.

The 11th RCP(B) Congress defined a number of positions of principle in the party's relations with the trade unions, outlining concrete measures to strengthen the trade union organizations with communist cadres, who as Lenin put it, were to live the workers life and know it through and through. The party, as the masses' leader, attached priority significance to this, since, as Lenin noted, to be the masses' leader means knowing how to unerringly determine, on any question at any time and without trace of false idealization, the masses' mood, real desires, requirements and thoughts and level of consciousness; to win trust through a comradely attitude toward people and the solicitous satisfaction of their needs.

The congress dwelt in detail on the question of the trade unions' function after the victory of the socialist revolution. The resolution that was adopted noted that the trade unions must give all-round support to the worker-peasant state, involve working people in the management of socialist industry and defend their interests. But the congress also indicated frankly that interference by the trade unions in the purely administrative management of enterprises is impermissible. History has demonstrated extremely clearly the unviability of anarchosyndicalist concepts of "trade union independence" (as well as of the wretched Trotskiyist ideas of "statization" of the trade unions) and attempts to substitute trade union associations for the socialist state and for the political party of the working class.

Comrade L. I. Brezhnev, developing Lenin's tenets, said at the 17th USSR Trade Unions Congress that their activity "must create an atmosphere such as to exclude the very possibility of violations of the working person's rights and render inconceivable any manifestations of conceit or indifference which certain leaders are still guilty of."

The implementation of the Communist Party's leading role depends largely on the activeness and organization of the proletarian vanguard itself. The 11th Congress was distinguished from previous RCP(B) forums as V. I. Lenin put it, by "greater cohesion, greater unanimity and greater organizational unity." (ibid., p 136) The congress reaffirmed the party's determination to strengthen the unity and cohesion of its ranks and combat all manifestations of opposition and factionalism.

Initiative and activeness on the part of all components of the party organism and every communist are particularly necessary when society is resolving creative tasks which require a creative approach, flexible theoretical thought and persistence in the implementation of decisions adopted.

Since the victory of October, it was noted in the 11th Congress decisions, every party organization has had to participate actively in one form or another in the country's highly complex economic, administrative, cultural and political life. But party organizations, the congress warned, must not interfere in the day-to-day current work of economic organs.

The party's new working conditions also put forward the important task of improving its qualitative makeup in every way. Following a proposal from Lenin, new conditions for admission as a member of the RCP(B) were adopted and attention was stepped up toward young recruits to the party's ranks.

Showing concern for strengthening the party's organizational unity and cohesion, the congress adopted a decision to create the post of general secretary of the RCP(B) Central Committee. I. V. Stalin was elected to this post.

The party's elaboration of a well-founded, realistic program of actions in new historical conditions was the most convincing evidence that socialism's enemies (and, let us add, some people who called themselves its friends) were wrong in asserting, as they did even then, that our party is losing flexibility of mind and of its entire organism. "No. We have not lost that flexibility," Vladimir Ilich replied to such accusations. The 11th Congress was the best illustration of his words.

It was the last party congress in which V. I. Lenin actually took part. But the party's entire history provides convincing confirmation that the CPSU is leading our people along Lenin's course.

....The further the years illuminated by the eternal glory of October recede into the past, the more vividly and clearly more and more aspects of the Leninist party's historical experience stand out. The more significant the quest for the path to socialism carried out by Leninist communists appears to us. By no means everything went smoothly or ideally along that path. But it is this difficult, at times agonizing experience in forging a path through history's unpaved spaces that convinces us of the correctness of Lenin's words to the effect that "no force in the world, however much evil, trouble and torment it may bring to millions and hundreds of millions of people, can take back the basic gains of our revolution, since these are no longer 'our' gains, but worldwide historical gains." (ibid., pp 136-137)

No force can "take away" the achievements of real socialism or discredit what has already been won and, so to speak, recorded in the "genetic code" of generation upon generation of working people struggling for the revolutionary restructuring of the world.

That is why the Leninist party's congresses will always stand out as bright beacons in the endless succession of years and events, lighting the path to the future.

CSO: 1800/426

ALIYEV SPEECH AT AzSSR CENTRAL COMMITTEE PLENUM

Baku BAKINSKIY RABOCHIY in Russian 7 Mar 82 pp 1-7

[Speech by Geydar Ali Rza ogly Aliyev, first secretary of the CPAz Central Committee and candidate for membership in the CPSU Central Committee Politburo, at CPAz Central Committee plenum on 5 March 1982 in Baku: "Animal Husbandry and Fodder Production Must Be Brought Up to the Level of Present Requirements"]

[Excerpts] Comrades!

The Communist Party has attached primary significance to agriculture during all stages of socialist construction in our country. Without a developed agricultural sector, V. I. Lenin stressed, "any type of economic construction is impossible.... Our food supply is the real foundation of the economy."

Intensive factors have become a definite prerequisite for accelerated agricultural development: the augmentation of the productivity of agricultural crops and of animal husbandry. In 1981 the grain yield was 2.6 times as great as in 1969, reaching 24.4 quintals per hectare. The respective figures for other crops were 2.4 times and 36 quintals for cotton and 2.3 times and 102 quintals for grapes. The vegetable yield was 1.7 times as great in 1981 as in 1969, the yield of tea leaves was 3.4 times as great, the yield of cucurbits was 1.3 times as great and the tobacco yield was 1.8 times as great. The average milk yield of cows and buffalos was 2.6 times as great and amounted to 1,739 kilograms. The average sale weight of cattle was 1.4 times as great, reaching 296 kilograms.

The stepped-up, consistently high rates of agricultural growth have had a positive effect on the development of the entire republic economy and have contributed to a significant rise in the level of public prosperity. They have brought about fundamental changes in the socioeconomic conditions and even the very appearance of the Azerbaijan rural community and in the standard of living of the rural population. We can quite confidently say that agriculture in Azerbaijan is rapidly approaching the status of a highly developed sector of the socialist economy. (thunderous applause)

Comrade L. I. Brezhnev's pointed criticism of the Azerbaijan party organization in 1966 and the numerous high commendations republic achievements have received from the party and from Leonid Il'ich in recent years, particularly at the 26th congress and the November CPSU Central Committee Plenum, clearly testify to the tremendous changes that have taken place in the life of Azerbaijan and in its economy, including its agriculture. (thunderous applause)

None of this has made us self-satisfied or smug, however. The Azerbaijan party organization fully realizes that republic potential is not being used in its entirety as yet, and our agriculture still suffers from many defects and shortcomings. Our main objective is a considerable increase in our average annual gross product in comparison to the product of the 10th Five-Year Plan, highly effective agricultural production and products of high quality. There is no doubt that the party organization and rural workers of Azerbaijan will keep their promise to fulfill plans and socialist commitments for the 11th Five-Year Plan ahead of schedule and in excess of set assignments. (thunderous applause)

This is a matter involving our honor, our loyalty to the glorious traditions of the 1970's, our duty to the country and to Lenin's party. (thunderous and prolonged applause)

Comrades! Animal husbandry is one of the most important branches of agricultural production. Suffice it to say that it accounts for 28 percent of the republic's gross agricultural product. For many years, however, animal husbandry was the most neglected branch of agriculture in Azerbaijan. Statistics of the 1950's and 1960's tell us in the language of irrefutable figures that it was in a state which could only be described as pitiful. At that time, many managers and specialists tried to justify their own laziness and irresponsibility with references to the firmly established belief that animal husbandry in Azerbaijan was a hopeless endeavor.

The primitive techniques of livestock breeding and fodder production and the complete lack of interest in this field naturally resulted in unproductive livestock and poultry and the regular non-fulfillment of plans for the sale of animal husbandry products to the state. Here are just a few figures which speak for themselves. In 1969 the average milk yield of cows and buffalos was only 677 kilograms, each laying hen produced 92 eggs and each sheep produced 1.6 kilograms of wool. The average weight of cattle sold to the state was slightly over 200 kilograms. The productivity of the mother herd per 100 head was 49 calves and buffalos and 43 lambs and kids.

Between 1969 and 1981 the output of meat on kolkhozes and sovkhozes increased 1.7-fold, the milk output increased 2.6-fold, the egg output tripled and the wool output increased 1.6-fold. These indicators are much higher than the indicators of most union republics.

Between 1969 and 1981 the gross animal husbandry product of republic farms increased 2.1-fold. Azerbaijan now ranks second among the union republics in terms of rates of development in the public sector.

Although the herd of cows and buffalos was only 11 percent greater in 1981 than in 1969, the milk yield is now, as I have already mentioned, 2.6 times as great. The average weight of cattle sold to the state rose from 209 kilograms to 296 and the weight of sheep rose from 27 kilograms to 34.

All of this has allowed us to considerably reduce the gap between the productivity of our livestock and the union average. Whereas in 1969 the union indicator of milk yield per cow and buffalo was 3.3 times as high as our republic indicator, in 1981 it was already only 1.2 times as high. We were 82 kilograms below the average consignment weight of cattle, but now we are only 51 kilograms below this average. The weight of sheep sold to the state has almost reached the union indicator, but in 1969 the union indicator was 1.4 times as high. Our kolkhozes and sovkhozes now sell hogs weighing 107 kilograms, or 5 kilograms above the union average.

The quality of animal husbandry products has improved considerably. Now 81 percent of the milk sold to the state is of the best quality, while in 1969 only 10 percent or less of the milk was in this category. Up to 94 percent of the livestock falls into the well-nourished or average categories, which is 20 times as much as in 1969. Last year republic kolkhozes and sovkhozes earned more than 6 million rubles in additional net profits just as a result of the improvement of product quality.

The republic's achievements in the development of animal husbandry have been commended numerous times by the party and government. In the 1970's and in 1980-1981 there were three all-union socialist animal husbandry competitions, and our republic was awarded challenge red banners and honorary certificates of the CPSU Central Committee, USSR Council of Ministers, AUCCTU and Komsomol Central Committee all three times.

Of course, Comrades, the quantitative and qualitative changes in republic animal husbandry in recent years have been massive and impressive. When we assess the situation objectively, however, we can see quite clearly that the productivity of republic animal husbandry does not meet the high demands of the party or the needs and requirements of the population and its absolute indicators are not up to union standards. I must frankly admit that we were not able to comply with the demand of the July (1978) CPSU Central Committee Plenum that the entire party organization, all of our ministries and departments, kolkhoz and sovkhoz managers and all our rural workers take a radically different approach to animal husbandry and that the indifference and irresponsibility with regard to major problems in branch development and to the concerns of workers in many areas be overcome. Some administrators of farms, rayons, ministries and departments are still paying little attention to pressing problems in animal husbandry and fodder production, in the mistaken belief that these are matters of secondary importance, and some have even reconciled themselves to the shortcomings.

The management of animal husbandry, just as economic management in general, is not simply an administrative matter, but also a political, party matter.

Proceeding from party policy goals, the 26th CPSU Congress stipulated the main objectives in the area of increasing the output of animal husbandry products to supply the population with food. The congress announced: "Animal husbandry is today's rural frontline."

Guided by these instructions, the CPAz Central Committee decided to hold this plenum to analyze the state of this branch more thoroughly and to determine the republic party organization's responsibilities in the further development of animal husbandry and the reinforcement of its fodder base in line with the decisions of the 26th CPSU Congress and with the statements and conclusions set forth in speeches by Comrade L. I. Brezhnev.

We believe that something must be done to reduce the discrepancy between the level of production and the actual needs of the republic population for meat and dairy products. In the last 10 years we have been able, for example, to increase the output of meat in the republic by 48 percent. This increased per capita meat consumption by 6 kilograms. The degree to which the republic satisfied its own demand for milk rose 31 percent in the 1970's. However, in view of the fact that the population of Azerbaijan increased by almost 1 million during that time, our per capita level of meat and milk consumption is still below the union average. Consequently, the output of these products must be increased even more quickly so that the growing demand for meat, milk and other products can be satisfied without resorting to the use of more of the unionwide food supply.

As Comrade L. I. Brezhnev stressed, "it has long been known that party slogans and programs come to life in the work of the masses. If we want to institute profound changes, V. I. Lenin told us, 'we must strive for heightened interest in them and awareness of them and convince more and more millions and tens of millions of people of the need for them.'"

Proceeding from this belief, we decided to make thorough preparations for this plenum, we published the Central Committee decision to convene the plenum in the press on 4 August 1981 and we organized public discussions of problems in animal husbandry and all of the items on the plenum agenda. Today we can say with complete justification that this approach has produced excellent results.

The decision of the CPAz Central Committee to hold the plenum was fully approved and supported by kolkhoz members, sovkhoz workers and laborers in industry, transport and all branches of the economy. The problems of animal husbandry and fodder production were discussed by around 500,000 kolkhoz members, sovkhoz workers, specialists, scientists, cultural figures and party, soviet, trade-union and Komsomol personnel.

The CPAz Central Committee, ministries, departments, newspaper editors and radio and television stations received more than 3,000 letters containing proposals and recommendations, reflecting the truly proprietary interest taken by the republic working public in the accelerated development of animal husbandry and fodder production. On behalf of the CPAz Central Committee, I want to sincerely thank all those who responded to our appeal and took part in the discussion of current issues. (thunderous applause)

The agriculture department of the party Central Committee has given us constant assistance in the preparations for the plenum and in all our work to develop agricultural production in the republic. We sincerely thank this department for its attention, support, valuable advice and recommendations.

Several letters have pointed out specific ways of organizing intensive field fodder production and pasture management and have proposed the widespread planting of winter and post-harvest crops in the republic, which would result in the attainment of two or more fodder harvests a year from the same area of land. Workers, kolkhoz members and employees have shared their views on the need to develop the private plots of citizens, improve veterinary services for livestock and organize more effective assistance by local party, soviet and administrative organs in supplying the livestock on private farmsteads with fodder.

Special commissions set up within the CPAz Central Committee, party obkoms, gorkoms and raykoms, ministries and departments examined all of the proposals and recommendations sent in by workers. Many of them are reflected in the materials of this plenum.

At a republic conference on agricultural affairs in the beginning of December 1981, we specified the duties of party, soviet and administrative organs in connection with the preparations for the plenum. With a view to the results of discussions of the proposals and recommendations of workers in labor collectives, specific measures for the intensification of animal husbandry and fodder production in 1982-1985 and during the period up to 1990 were planned for each kolkhoz, sovkhoz, interfarm association, ministry and department and for each rayon and the republic as a whole. These measures include a detailed program for the further development of specialization and concentration in animal husbandry and fodder production, the determination of the necessary levels of livestock and poultry productivity and the gross product, and specific assignments to reinforce the material and technical base of the branch. Special attention will be given to the fundamental improvement of breeding, the enhancement of production efficiency and the improvement of the quality of work. These measures will allow us to overcome the existing discrepancy between republic indicators of livestock productivity and the union average within the current 5-year period, and in the future we will make even greater advances and bring the branch up to a much higher level.

Of course, although we have attached primary significance to intensive factors, we cannot disregard the great potential for quantitative growth. We have many rayons and farms with an extremely small herd of livestock, particularly with regard to the dairy herd. By using irrigated lands more intensively and by instituting a scientifically sound system of crop rotation, most cotton and grape plantations can and must considerably augment the capacities of dairy and meat farming and considerably increase the output of milk and meat.

Large plots of land in a number of rayons are hardly used at all for agriculture and are unproductive. Given the proper level of operational efficiency, agricultural and water-management agencies could quickly organize the irrigation of these lands, including irrigation with the use of local run-off, and thereby put these sizeable reserve areas for the cultivation of animal husbandry products to use. Interfarm fodder associations are being formed in a number of republic regions for this purpose.

Here is another pertinent matter. We are requesting industrial enterprises to set up auxiliary farms to provide labor collectives with more meat and milk. What can we say about the work of some agricultural enterprise managers who have land, including irrigated plots, but, for various reasons, do not want to engage in animal husbandry and have become nothing more than consumers? Party gorkoms and raykoms must look into the specific details of these cases. In accordance with CPSU Central Committee instructions, all kolkhozes and sovkhozes, regardless of their field of specialization, must have animal husbandry facilities, produce food for their own needs and participate in the creation of the national food supply.

With the aid of all these measures, by 1985 the republic should be producing 300,000 tons of meat, 1 million tons of milk and 1.1 billion eggs. The average milk yield of cows and buffalos on kolkhozes and sovkhozes should be brought up to 2,050-2,100 kilograms, and the average sale weight of cattle should reach 360-380 kilograms. This will require a much stronger fodder base. Plans call for the procurement of a minimum of 30-32 quintals of feed units per head of livestock in 1985. All of these indicators exceed our present levels by an average of 40-55 percent, and by almost 100 percent in the case of fodder.

As you can see, we have set ourselves a massive and crucial task: to raise animal husbandry to a much higher level, to considerably augment the rates and volumes of meat, milk, egg and wool production and to completely transfer the branch to the channels of intensification.

Quite frankly, this will not be easy to do. The commitments we have assumed are considerable, but they are realistic. They are based on our reserves and potential and on the rich experience we accumulated during the years of the Ninth and Tenth Five-Year Plans. And we are certain that we will not only reach these levels but will even go beyond them. (thunderous prolonged applause)

These, comrades, are our overall results and problems. Now I would like to discuss the state of individual branches of animal husbandry and fodder production, our objectives in these branches and our plans for further development in greater detail.

I. Basic Directions for the Intensification of Animal Husbandry

Comrades! Animal husbandry in Azerbaijan is a multisectorial branch. We raise most types of livestock and poultry, and they are raised in all rayons and on all farms, and even in the private sector. This is why the party organization believes that intrasectorial and regional specialization and concentration are the most important factors in the intensification of animal husbandry. The main results of past work have already been discussed. Now we must look at the present state of individual branches and our plans for their further intensification.

Cattle

Cattle breeding is the leading branch of animal husbandry. It accounts for more than 50 percent of the gross animal husbandry product and 44 percent of the meat output. Sizeable sums have been allocated for the reinforcement of the material and technical base and the augmentation of fixed assets in this branch.

The further development of livestock breeding exclusively for meat production on specific farms and in specific rayons should play an important part in increasing the beef output. Attaching great significance to this matter, the CPAz Central Committee and the republic Council of Ministers adopted a special decree in the beginning of 1981 to define the specific responsibilities of party, soviet and agricultural agencies in the further intensification of this branch.

Experience tells us that specialization is one of the most effective ways of developing animal husbandry. The recommendations of the Ministry of Agriculture envisage the specialization and concentration of the breeding of dairy and dairy-meat cattle in suburban zones, lowlands and, in part, in the foothills. Meat and meat-dairy cattle should be concentrated in alpine areas and partly in the foothills.

These recommendations should be used as a guide in breeding, in the construction of dairy farms and interfarm calf-raising complexes, and in the creation of a fodder base and labor force. The operational technology of these complexes should envisage, in addition to milk production, the raising of pure and improved breeds of young cattle for other commercial dairy farms.

Therefore, Comrades, we must perform a great deal of purposeful work to considerably increase the productivity and the size of our cattle herd, which represents the main source of increased meat and milk resources. Our accomplishment of this work will be a fitting contribution to the fulfillment of the food program and the improvement of the republic population's food supply. (thunderous applause)

Sheep-Breeding

Comrades! Sheep-breeding is an important branch of animal husbandry and a traditional branch of the rural economy in Azerbaijan. The potential of this branch to increase meat resources stems from the quicker maturing of the herd, the high level of profitability and the relatively lower expenditures of labor and material resources than in other branches of livestock breeding for meat production. Suffice it to say that the cost of producing a ton of beef is almost twice as high as that of mutton, and the cost of producing pork is almost 1.5 times as high. It is also significant that sheep-breeding is essentially the only source of wool, a valuable industrial raw material.

When we made plans for this branch, we encountered the reluctance to increase the number of sheep in some rayons, and even the tendency of some managers to reduce the size of the herd. The requisitions and proposals received from rayons envisage the growth of the republic herd by only 5 percent between 1981 and 1985, and by only 1 percent in the public sector.

We think that this is unacceptable. Within a short period of time, we were able to increase the size of the sheep herd 1.5-fold, even though some of our comrades were saying in 1970 that our pastures would not accommodate this many sheep. We can and must plan for the continued dynamic growth of the herd in rayons specializing in sheep-breeding and we must carry out these plans unconditionally. (applause)

Hog-Breeding

Comrades! Some work was done during the Ninth and Tenth Five-Year Plans to develop hog farming. The herd of hogs on republic kolkhozes and sovkhozes grew, their productivity increased, qualitative indicators rose and the economic effectiveness of the branch increased. Now hogs are raised in 24 rayons. The material and technical base of this branch has been considerably reinforced, and large complexes have been built and put to use in Apsheronskiy, Mardakertskiy and Askeranskiy

Rayons. The construction of complexes is being completed in Khanlarskiy, Zakatal'skiy, Shaumyanovskiy and other rayons. Now just the Bininsk Hog-Fattening Complex in Apsheronskiy Rayon, which is one of the best in the country, produces pork equivalent to half of the amount produced by the entire republic in 1970.

Plans envisage a herd of 193,000 hogs by 1985. In addition, the productivity of the mother herd will be augmented dramatically, to the level of 1,440 piglets per 100 dams. This could result in the procurement of 17,000 tons of meat by 1985, which will be almost double the 1981 output.

Poultry Farming

Our objective in this branch is a poultry meat output of 48,000-50,000 tons and an egg output of 430 million eggs by 1985.

The appropriate ministries, departments and local party, soviet and administrative organs must take measures to reinforce the material and technical base, radically improve the activities of kolkhoz, sovkhoz and interfarm poultry breeding enterprises, heighten the productivity of breeding facilities and organize the continued intensive development of poultry farming. In the near future, all liquidated breeding facilities should be put back in operation and each kolkhoz and sovkhoz should have its own poultry breeding facility. We feel that statistical agencies should keep separate records of all production indicators for each individual factory and farm.

Pond Fish Farming

Comrades! Pond fish farming is a relatively new branch of our economy. Until 1970 we obtained almost nothing from our internal bodies of water and did not use them to raise fish.

Our plans in this branch envisage the growth of the area of fish farms to 2,300-2,500 hectares within the near future, the attainment of a commercial fish catch of at least 2,500-3,000 tons by 1985 and the augmentation of this catch to at least 5,500-6,000 tons of fish by 1990.

Private and Auxiliary Farming

Comrades! In recent years some work has been done in our republic to increase the herd of livestock privately owned by kolkhoz members, sovkhoz workers, employees and other citizens. Between 1969 and 1981 the number of cattle on private farmsteads increased by 11 percent, the number of sheep and goats increased by 23 percent and the number of hogs increased by 31 percent. Now cattle owned by the population represent more than 52 percent of the total herd, with cows and buffalos representing 68 percent of the republic total, sheep and goats representing 38 percent, hogs representing 11 percent and poultry representing 68 percent. In 1981 alone, the private farmsteads of the population produced 88,000 tons of meat, 448,000 tons of milk and 481 million eggs, or 1.6-1.8 times as much as in 1969. These farmsteads account for more than 31 percent of total state livestock purchases, 6 percent of state egg purchases and around 25 percent of the wool sold to the state.

The productivity of privately kept livestock, however, is still low. According to budget studies, the average milk yield of cows and buffalos is 46 percent lower in this sector than on kolkhozes and sovkhozes, and the average sale weight of cattle is 6 percent lower.

The measures planned by the Central Committee envisage the further development of the private farming sector. By 1985 the herd of cattle on private farmsteads should reach 1.03 million head, which will be an increase of 8 percent over the 1981 figure, and the herd of sheep should increase by 11 percent. The population will be allocated 2.4 times as much fodder of all types as in 1981.

A decree adopted by the republic Council of Ministers last November specifies the general plan for the distribution and development of auxiliary farms during the 11th Five-Year Plan, but many have not even begun to carry out this plan. The auxiliary farming commission of the CPAz Central Committee should institute strict control to ensure the unconditional fulfillment of this program.

By 1985 the minimum number of cattle on auxiliary farms should be 10,000-12,000 and the number of sheep and hogs should double.

The republic Ministry of Agriculture and Gosplan must take it upon themselves to coordinate all of the work involved in the creation and efficient operation of the auxiliary farms of industrial and trade enterprises, concentrating on mobilizing unutilized animal husbandry production reserves.

Zooveterinary Services

Comrades! Livestock cannot be raised in accordance with present-day requirements without a well-organized zootechnical and veterinary service. The role and responsibility of the zootechnician and veterinarian have grown immeasurably in the reproduction of the herd, the enhancement of breeding qualities and productivity, the widespread use of artificial insemination, the correct organization of feeding and planning of a balanced diet for livestock, the struggle against various diseases, the establishment of the necessary sanitary conditions in animal husbandry facilities, and so forth.

A group of measures should be planned and carried out on each kolkhoz and sovkhoz, at each interfarm enterprise and in each rayon to improve zooveterinary services, to protect agricultural livestock more effectively against diseases, murrain and compulsory slaughter and to improve the sanitary conditions of animal husbandry farms and complexes. These measures must reflect such important matters as the need to improve the organization of methods of combating livestock diseases, enhance the quality and effectiveness of preventive treatment, develop the material and technical base of the zooveterinary service and incorporate scientific and technical achievements, advanced experience and the scientific organization of labor on a broad scale.

II. The Intensification of Fodder Production--The Most Important Condition for the Further Development of Animal Husbandry

In recent years more than 1,000 specialized brigades and links have been formed on kolkhozes and sovkhozes and large interfarm enterprises have been opened in nine rayons for the production, procurement and preparation of fodder. There are 314 fodder shops and fodder kitchens in animal husbandry facilities and complexes, and 17 interfarm fodder plants, with capacities for the storage of 1.9 million tons of haylage and silage, are now operating. I will remind you that 10 years ago most of our fodder was kept in primitive earth trenches.

This is why the CPAz Central Committee believes that a strategic part of our work in the 11th and 12th Five-Year Plans will be efforts to considerably increase the fodder output, bring its structure in line with zootechnical standards and improve its quality. The plans mapped out prior to the plenum envisage the augmentation of the volume of feed resources stored in 1985 to 1.84 million tons of hay, 1.79 million tons of haylage, 1.98 million tons of silage, 350,000 tons of feed tubers, 33,000 tons of grass meal and 410,000 tons of farm-produced forage grain. In comparison to 1981 quantities, the 1985 fodder supply will consist of twice as much hay, 1.3 times as much haylage, 1.5 times as much silage, 2.6 times as much feed tubers, 1.8 times as much grass meal, 1.7 times as much locally produced forage grain and 2.5 times as much green fodder.

This means that in 1985 each head of livestock in the republic could be guaranteed an average of 30-32 quintals of feed units, as compared to 19 quintals last year. With the exception of feed concentrates, the fodder structure will meet zootechnical requirements.

Plans call for the growth of the area used to cultivate mixed winter fodder crops to 91,000 hectares in 1982, and to 107,000 hectares in 1985, as compared to 24,500 in 1981. The area of land used for the cultivation of post-harvest corn will be increased to 103,000 hectares in 1982 and 115,000 in 1985, as compared to last year's 64,000 hectares. Here, just as in field fodder production as a whole, agrotechnical measures must be carried out on a high level so that each hectare will produce the maximum yield.

In the next few years corn should account for a high percentage of the grain supply. Last year's experience showed that industrial technology can be used to greater advantage in corn cultivation than in the raising of other grain crops. Farms in Belokanskiy and Zakatal'skiy Rayons obtained 100-110 quintals of corn from each hectare, which was double or triple the yield of spike crops.

Gosplan, the Ministry of Agriculture, the Ministry of the Fruit and Vegetable Industry and the State Committee for Viticulture and Wine Making must work with republic research and project planning establishments throughout 1982 on the elaboration of a comprehensive program, envisaging a considerable increase in the work involved in the surface and fundamental improvement of pastures, the enhancement of their productivity and the establishment of the necessary production, cultural and consumer conditions for animal husbandry, and must then ensure the fulfillment of the program.

The efficient use of natural feeding areas must be accomplished in two ways:

The augmentation of the productivity of pastures by means of surface and fundamental improvements; the establishment of intensive field fodder production in pastures.

It is our duty to ensure the unconditional observance of the optimal harvest schedule and the technology for the production of haylage, silage and other types of fodder. All necessary measures must be taken for the construction of additional large-scale haylage and silage storage facilities so that not one ton of fodder has to be stored in earth trenches in 1982. The preservation of green mass with formic acid and other chemical preservatives must be organized on a broad scale this year.

Prior to the end of 1983 fodder shops should be opened on all animal husbandry farms, and the plans for new fodder shops should include the suitable technology for the thermochemical and microbiological processing of fodder and the preparation and issuance of balanced feed mixtures. Large industrial enterprises in the republic should take an active part in this work.

III. Maximum Reinforcement of the Material and Technical Base of Animal Husbandry and Fodder Production

Comrades! The stepped-up development of animal husbandry and fodder production will depend directly on the reinforcement and development of their material and technical base.

The unsatisfactory work of the Ministry of Agriculture, Ministry of Industrial Construction, Main Administration of Kolkhoz and Sovkhoz Construction and State Committee for the Supply of Production Equipment for Agriculture just in the construction of animal husbandry complexes and poultry factories led to the underutilization of state and kolkhoz funds by more than 63 million rubles and to the failure to complete around 40 million rubles' worth of construction and installation work. The plan for contracted operations was fulfilled by an annual average of 60-75 percent. Shortcomings disrupted plans for the completion of milk production complexes for 9,200 cows, calf-raising facilities for 36,000 head, complexes for the fattening of 6,000 head of cattle, sheep complexes for 50,000 dams and several poultry factories.

The state lost 12,000 tons of meat, 51,000 tons of milk and more than 117 million eggs last year just as a result of the underutilization of the capacities of animal husbandry complexes and poultry factories.

Agricultural ministries and the rayons concerned must effective measures to ensure the complete use of all existing capacities, draft a schedule for the completion of this work and submit it to the CPAz Central Committee. I am referring to a schedule and a report on the results of the work to ensure the full-capacity operation of all complexes.

Comrades! It will be important to retool existing animal husbandry and fodder production facilities, to modernize their equipment and to raise the level of the mechanization and automation of technological processes. However, the State Committee for the Supply of Production Equipment for Agriculture, which performs the work, and the Ministry of Agriculture, Ministry of the Fruit and Vegetable Industry and the State Committee for Viticulture and Wine Making, which, as clients, are expected to dictate technical policy, have displayed unsatisfactory performance in this extremely important area of work, and this is attested to by the low level of mechanization. For example, the national average level of mechanization in the watering of cattle is 90 percent, but on republic farms it is only 33 percent. The respective figures for other operations are 90 and 12 percent in milking, 45 and 21 percent in fodder distribution and 75 and 37 percent in the cleaning of facilities. The national indicator of comprehensive mechanization is 3.5 times as high as our republic indicator. Considering the fact that the machines and equipment we do have do not all operate regularly and continuously, the situation is even worse.

By 1985 we should bring the level of comprehensive mechanization in animal husbandry up to 51 percent, and the mechanization levels of milking up to 60 percent, of automatic watering up to 75 percent, of fodder distribution to 78 percent and of cleaning operations to 77 percent. Gosplan, Gossnab and the State Committee for the Supply of Production Equipment for Agriculture should take all of the necessary measures to provide all of the material and technical resources needed to raise the level of mechanization in animal husbandry. The republic Council of Ministers must do something to speed up the manufacture of the required technological equipment and spare parts at the Mingechaur Experimental Specialized Plant of the USSR Ministry of Machine Building for Animal Husbandry and Fodder Production.

IV. Efficiency and Quality Must Be Given More Attention

Comrades! For all the years of the Ninth and Tenth Five-Year Plans, the CPAz Central Committee paid special attention to problems in heightening the efficiency of agricultural production and improving the use of land, water, labor, material and financial resources. We have accomplished a great deal in this area.

Gosplan, the Ministry of the Meat and Dairy Industry, the Ministry of Agriculture and the Ministry of the Fruit and Vegetable Industry, the State Committee for Viticulture and Wine Making and the State Committee for the Supply of Production Equipment for Agriculture should work out a precise schedule for the sale of livestock and milk on each farm, set up areas on kolkhozes and sovkhozes for the unloading of livestock and equip all animal husbandry farms with capacities and equipment for the storage and refrigeration of milk. Procurement organizations must be equipped with vehicles designed for the transport of livestock and milk. Before 1985 all livestock and milk should be turned over to the state directly on the farms. This will considerably improve the quality of animal husbandry products and prevent product losses.

Party, soviet and agricultural agencies must ensure the efficient use of all material, technical and financial resources, the strict observance of conservation rules, the careful treatment of public property, the widespread incorporation of scientific and technical achievements and progressive technology and, on this basis, the heightened efficiency of all animal husbandry branches. In 1985 milk of the highest category should represent 99 percent of the total procured quantity, and all livestock turned over to the state should be of the well-nourished and average quality categories.

V. Important Responsibilities of Scientists

Comrades! The intensive development of animal husbandry and fodder production, just as the development of the entire agricultural complex, cannot be accomplished without the most active and comprehensive participation by science. This is why the CPAz Central Committee has always been concerned about the development of agricultural research, the enlargement of the network of research establishments, the reinforcement of the research base and the establishment of all necessary conditions for creative investigation. Suffice it to say that total expenditures on the three main institutes engaged in livestock-related research of the republic Ministry of Agriculture just during the 10th Five-Year Plan exceeded 17 million rubles and were 4.8 times as high as the expenditures of the Eighth Five-Year Plan.

Today the republic has a multi-field network of research institutes, experimental stations, problem laboratories, auxiliary experimental facilities and academic farms, which are mainly concerned with the study of matters pertaining to animal husbandry and fodder production. They employ hundreds of researchers, including 68 doctors and 265 candidates of sciences. We are happy to say that our scientists made a significant contribution to the development of animal husbandry in the republic during the years of the Ninth and Tenth Five-Year Plans.

The work of academy institutes has been unsatisfactory in the area of fodder production. For several decades the Botany Institute has been engaged in unsuccessful studies of ways of improving summer and winter pastures. Each year the institute limits its studies to experiments on the grounds of the Botanical Gardens, or in one or two other spots at best, while proposed recommendations regarding the use of fodder vegetation are not being implemented.

The reasons for this ineffective work apparently consist less in the incompetence of scientific personnel than in the inability or reluctance of the managers of research establishments to focus the efforts of their collectives on the resolution of major problems. Republic agricultural ministries and Gosplan have not displayed the necessary persistence in this matter. In short, the level of scientific management is not high.

Agricultural science has an exceptionally important role to play in the accomplishment of large-scale tasks in animal husbandry. All of the work of scientific establishments and all systems connected in one way or another with animal husbandry, as well as the Azerbaijan SSR Agricultural Institute and other VUZ's with this type of department, must be coordinated and conducted as a single entity.

The Ministry of Agriculture must fundamentally reorganize the management of research establishments in general and the work connected with animal husbandry and fodder production in particular. The scientific level of research must be raised dramatically and research must be coordinated more closely with practice, with today's requirements and with the future objectives of republic agriculture.

The Academy of Sciences must pay more attention to the activities of its biological and agricultural subdivisions and institutes, evaluate their activities more strictly, develop projects with practical value and make higher demands on the quality and scientific level of research so that it will correspond to the present needs of animal husbandry.

VI. The Level of Party Management of the Development of Animal Husbandry Must Be Raised

Comrades! This new stage in the struggle for the development of animal husbandry requires a higher level of party management and better methods of work with the masses. This means that the activities of each party organization must be highly organized, efficient, ingenious and purposeful. Each communist and each rural worker must be fully aware of the significance of party objectives. It is now our job to make skillful use of accumulated experience and tried and tested forms and methods of work by the party organizations of Azerbaijan, the fraternal republics, krays and oblasts in concentrating all efforts and potential for the intensification of animal husbandry and fodder production. It is important that all party organizations and communists in rural areas first be made fully aware of party objectives in the area of animal husbandry and fodder production and of the instructions which will be issued by this plenum of the CPAz Central Committee. They must use the methods of party persuasion and communist indoctrination to arm each livestock tender and all rural laborers with an awareness of these objectives and inspire them to carry out all of our plans.

Party and party-Komsomol groups should be set up in each area to improve the party management of the development of animal husbandry and fodder production. Party obkoms, gorkoms and raykoms must rely more on trade-union and Komsomol organizations. Trade unions and Komsomol organizations must be given more to do in rural areas so that they can encourage rural workers, especially young laborers, to take an active part in the attainment of objectives. Every opportunity must be taken to teach young people to respect and love animal husbandry professions and to direct them into decisive areas of the shock front of this five-year plan. The Azerbaijan Komsomol must be the most active participant in the struggle for the dramatic development of animal husbandry and fodder production in the republic.

One of the most important duties of party, trade-union and Komsomol organizations is the thorough development of socialist competition among animal husbandry workers for the attainment of the best possible results. They must study, summarize and publicize the experience of the best animal husbandry workers and advanced farms and promote valuable initiatives and the efforts to accelerate technological progress. For us, as Comrade L. I. Brezhnev said, the specific economic results of labor competition and the great educative potential of competition are equally important.

We have some problems with workers in the mass professions. Between 1976 and 1981, when the assignment for the vocational and technical educational system called for the training of 17,200 skilled workers for animal husbandry and fodder production, the system actually turned out only 6,100, or 35 percent of the assigned figure. The farms need 2,000 milking machine operators, 1,200 more mechanizers for animal husbandry facilities, 700 more machinists for fodder shops and fodder plants, 800 more equipment monitors for poultry factories and poultry farms, over 2,000 more artificial insemination technicians and workers in other mass professions.

The CPAz Central Committee believes that strict order in animal husbandry, the precise keeping of records on each farm and an uncompromising struggle against any deviations from standards and rules governing the use of animal husbandry products and fodder should be the daily concerns of party committees and primary party organizations. (applause)

The mass news and propaganda media--the press, television, radio and films--have important responsibilities. They must provide vivid, accessible and daily coverage of the struggle to develop animal husbandry and fodder production, summarize the experience of production leaders and describe the proceedings of socialist competition for the augmentation of field and farm productivity. The republic State Committee for Publishing Houses, Printing Plants and the Book Trade must publish more procedural and reference works, brochures, posters and booklets on animal husbandry. There is no question that our scientists, writers, journalists and artists must also be active in this field.

Comrades! The intensification of animal husbandry and fodder production is the major responsibility of agricultural ministries and departments and their local agencies. But they are precisely the ones that are guilty of serious shortcomings and omissions in the development of animal husbandry and fodder production in the republic.

The Ministry of Agriculture (Comrade Askeron), which should be the main organizer of the work to develop animal husbandry and fodder production, coordinate all breeding, zooveterinary, selection and seed-raising operations, incorporate scientific achievements and advanced experience and draft current and future plans for the development of agriculture throughout the republic, is not performing these functions well enough. It pays virtually no attention to general problems, limiting its activity to day-to-day concerns and concentrating on individual cases, and has not had any great influence in improving the state of affairs in animal husbandry and fodder production.

Poor management and shortcomings in the work methods and style of the Ministry of Agriculture are largely the result of the excessive size of its staff, its numerous structural subdivisions and their parallel functions. It now has 74 administrations and sections, 10 deputy ministers and a total of 824 staff members. Seven independent associations, main administrations, with a staff of 320, have been set up to manage 270 farms. Almost each one of these has structural subdivisions which perform the same functions. In Khanlarskiy Rayon alone, for example, eight specialized animal husbandry farms are under the jurisdiction of four departments--the republic Sovkhoz Association, the Administration for Livestock Production on an Industrial Basis, the Azerbaijan SSR Breeding Association and the Azerbaijan SSR Interkolkhoz Industrial Livestock Production Administration. The situation is similar in several other rayons.

The ministry holds numerous board meetings, sometimes lasting up to 2 days, at which largely meaningless decisions are made. Last year alone, the board considered 447 matters and discussed from 20 to 25 matters at each meeting.

All republic agricultural ministries and departments must fundamentally improve their style and methods of management and the organizational forms of agricultural administration, particularly in the branches of animal husbandry and fodder production, and concern themselves daily with the incorporation of progressive methods of economic management. They must resolutely eliminate all bureaucratism and red tape from their work, give all proposals and requests timely consideration and bring the administrative system as close as possible to the production sphere.

Comrades! In summation, I would like to stress once again that we must resolutely direct our attention to animal husbandry and fodder production. Only through the combined energetic efforts, wills, knowledge, awareness and responsibility of each and every one of us can we raise this branch to meet the level of present party requirements, the population's need for food products and industry's need for raw materials. This will require an intelligent approach, purposeful organizational and political work, insistence and persistence. The attainment of our present goals will depend on how we organize our daily work and mobilize reserves on each farm, on each kolkhoz and sovkhoz and in each rayon.

I, Comrades, am very happy to inform you that today, while our plenum was in session, Leonid Il'ich Brezhnev telephoned me.

This, Comrades, is vivid proof of all that has been said about the tremendous concern Leonid Il'ich Brezhnev has displayed for our republic. The attention of the party and the caring attitude displayed by Leonid Il'ich Brezhnev, the leader of our party and our state, toward all problems in Soviet Azerbaijan give us even greater strength and obligate us to work even better and strive even more vigorously to carry out all of our great party's plans successfully.

We can assure the CPSU Central Committee, the Central Committee Politburo and Comrade L. I. Brezhnev personally that the party organization and working public of rural Azerbaijan will uphold their glorious traditions of the Ninth and Tenth Five-Year Plans by ensuring the successful performance of all tasks in the area of animal husbandry and fodder production and will make a fitting contribution to the fulfillment of the historic plans of the 26th congress of our great Leninist party. (thunderous prolonged applause)

GRISHIN ADDRESSES PARTY GROUP ORGANIZERS

PM071401 Moscow MOSKOVSKAYA PRAVDA in Russian 26 Mar 82 pp 1, 3-4

[Unattributed report: "Implementing the Party's Plans"]

[Excerpts] A conference of Moscow's party group organizers, convened by the Moscow CPSU Gorkom, has been held.

The conference participants discussed the question "on the party groups' tasks for raising the standard of organizational and political work and enhancing the activeness and initiative of communists in the light of the decisions of the 26th Party Congress and the CPSU Central Committee November (1981) plenum and of the instructions and recommendations of Comrade L. I. Brezhnev, general secretary of the CPSU Central Committee.

V. V. Grishin, first secretary of the Moscow CPSU Gorkom, delivered a report at the conference.

On behalf of the Moscow CPSU Gorkom, V. V. Grishin cordially welcomed the leaders of Moscow's party groups who had gathered for the citywide conference and wished them great success in their responsible party work.

Party group organizers, the speaker said, are a large detachment of party activists heading the party's grassroots. In its organizational structure the party group is closest to production and to people and it structures its work in close contact with people's life, work and everyday concerns. Here in lies the strength and significance of the party groups and the specific character of the forms and methods of their activity.

The present conference's aim is to analyze and generalize accumulated work experience, exchange opinions on tasks for the period ahead and formulate recommendations for further improving party groups' work.

The all-Moscow conference of party group organizers is being held 1 year after the 26th CPSU Congress finished its work. The congress' ideas and decisions are exerting an increasingly profound influence on the life of our country, the activity of the party and people and the course of events in the world. The past year has been a period of creative work on fulfilling the economic and social tasks outlined by the congress and a period of intensive struggle to preserve and consolidate peace. The successes achieved by our people fully confirm the correctness of the party's course and convincingly demonstrate the great vital force of its policy.

The party Central Committee November (1981) plenum, at which Comrade L. I. Brezhnev delivered a policy speech, was a direct and immediate continuation of the 26th CPSU Congress' work. The sixth session of the USSR supreme Soviet, held after the CPSU Central Committee plenum, approved the plan for the country's economic and social development for 1982 and for the 11th 5-year plan. In his vivid and profound speech at the 17th Trade Union Congress, Comrade L. I. Brezhnev pointed out the ways of solving the main questions of the country's economic and social development. He then posed the task of transferring the economy to an intensive development footing and of making it genuinely economical. The party and the people are armed with a clear and precise program of communist building at the contemporary stage and are persistently implementing it.

In Moscow, as throughout the country, the preparations for the 60th anniversary of the USSR's formation are being launched on an increasingly wide scale. This remarkable event, the CPSU Central Committee resolution "on the 60th anniversary of the USSR's formation" stresses, is evidence of the triumph of the Leninist nationalities policy and socialism's historic achievements. The Central Committee has called upon communists, Komsomol members and all working people to mark the USSR's jubilee with new labor achievements. In this connection, approval has been given to the initiative of the advanced collectives of Moscow, Leningrade and the union republics which have launched socialist competition for a worthy greeting to the USSR's 60th anniversary and for a successful fulfillment and overfulfillment of the economic and social development plan for 1982 and the 11th 5-year plan targets.

The CPSU Central Committee resolution makes it incumbent upon party organizations to launch organizational, ideological and educational work on a broad scale so as to prepare for the 60th anniversary of the USSR's formation and to direct this work toward the further development of the masses' political and labor activity and the successful implementation of the historic decisions of the 26th Party Congress and the tasks put forward by Comrade L. I. Brezhnev at the CPSU Central Committee November (1981) plenum and the 17th Trade Union Congress.

Muscovites are heading toward the USSR's jubilee with considerable successes in all spheres of life and by dogged creative labor are implementing the program of communist creation put forward by the party. The targets for the 10th 5-year plan and for 1981 were fulfilled ahead of schedule in all national economic sectors. Positive economic work results have been achieved.

The speaker dwelt in detail on the tasks for 1982 and the 11th 5-year plan as defined by the plans for Moscow's economic and social development as well as by the socialist pledges of the city's working people.

Muscovites perceive the targets for 1982 and the 11th 5-year plan, the speaker stressed, as new evidence of the constant concern of the CPSU Central Committee, the Soviet Government and Leonid Ilich Brezhnev for the capital and for transforming it into a model communist city.

Answering this concern and the CPSU Central Committee November (1981) plenum's decisions with concrete deeds, Moscow's working people have actively set about fulfilling the outlined plans and pledges. The beginning of the 11th 5-year plan was marked by working people's high patriotic enthusiasm. Some 320,000 Muscovites completed their personal targets for 1981 by the 64th anniversary of the October Revolution. Competition was launched on a broad scale under the slogan "60 weeks of shock labor for the 60th anniversary of the USSR's formation." The ranks of those who pledged to complete their annual targets by 7 November 1982 are multiplying.

As a result of working people's efforts, all sectors of the city's economy successfully fulfilled the targets for the first year of the 5-year plan while industrial and transport workers finished the year ahead of schedule according to all main indicators. Industrial output worth hundreds of millions of roubles was manufactured above the plan. The entire increase in the volume of production was obtained by increasing labor productivity. New production capacities and a large quantity of apartment blocks, schools and cultural-consumer projects were commissioned.

The results of the capital's economic development in 1981 and the growing initiative of working people are creating the preconditions for achieving the targets that the Muscovites have set themselves. To achieve this, it is necessary to ensure the further raising of the standard of organizational and political work among the masses.

A paramount role in resolving the great and diverse tasks of communist building outlined by the 26th CPSU Congress belongs to primary party organizations and their many party groups which are doing much organizational and political work and are at the forefront of the struggle to implement the party's tasks and the plans for the country's economic and social development.

The 26th CPSU Congress stressed that energetic and competent party leadership is a main condition for new successes in communist building. "If every party organization in its particular area of work makes use of all reserves and establishes due order in everything," Comrade L. I. Brezhnev has pointed out, "the whole country's work will progress." Questions of improving party groups' work are of paramount significance in this connection.

In the last 5 years the number of party groups in the Moscow CPSU city organization has increased by 3,500 and now totals over 41,000. The expansion of their network attests to the further intensification of party influence on the major salients of economic and cultural building. The largest number of party groups is operating in the physical production sphere: At industrial, transport, communications and construction enterprises. A considerable number of party groups are working in scientific establishments and academic institutions and in the managerial sphere. The increase in the number of party groups and the changes in their structure reflect the processes of strengthening the party's grassroots and improving the economic mechanism. Temporary party groups in major areas of production and construction and in the fulfillment of particularly important targets are becoming widespread.

After citing by name the party organizers widely known for their production achievements, heroes of socialist labor and winners of Lenin and state prizes, the speaker noted that the majority of grassroots party leaders are skillfully combining their party duties with personal shock labor for the good of the motherland and through this have won people's confidence, gratitude and recognition for their great work.

Afterwards, V. V. Grishin dwelt in detail on party groups' ability to utilize their potential to establish an atmosphere of genuine creative questing, labor competition and comradely mutual assistance within every labor collective and to ensure the active participation of all members of the collective in competition. He noted the positive experience of such work accumulated party groups operating at the enterprises of various sectors of the city's economy.

Communists, the speaker said afterwards, the placing great trust in the very best of their comrades by electing them as party leaders of various levels including as party group organizers. Every one of them, whatever post he holds, must organically combine within himself party-mindedness and profound competence, discipline and an enterprising and creative approach to work and must be familiar with working people's lives, needs and interests, be sensitive to them and set an example in work and everyday life.

A party group organizers' prestige is formed primarily from these main qualities. The modern party group organizer's makeup is a fusion of an awareness of party and civic duty and a sense of being the true master of his production unit and his country, a love of work, a striving toward what is new, hostility toward stagnation and great businesslike efficiency.

Speaking of the qualities which must be inherent in a party group organizer, the speaker stressed that as a rule, a party group organizer is a person of irreproachable reputation who knows the collective's members well and knows how to work with them, an enterprising, principled and persistent person.

The conditions under which party groups work are extraordinarily varied. They might include a section in a plant shop, a construction workers' team, or a branch in a scientific research institute or establishment. But there is general law-governed pattern which determines the efficacy of communists' efforts whatever their working conditions. This is the ability to highlight the main problems among those facing a collective, to focus special attention on these and to find efficient ways of resolving set tasks.

For all communists, the main matter now is to resolve the most important economic and political task--the successful fulfillment of the targets for 1982 and the 11th 5-year plan and ensuring the intensification of the economy and greater production results with smaller expenditure and resources.

The successful fulfillemnt of this task and of the plans and socialist pledges depends on the work of collectives of sectors or shifts, teams, shops laboratories or sections--all the cells of the national economy where it is party groups above all that set the tone.

It should be the general concern of party groups in the 11th 5-year plan to highlight and use existing opportunities in all production links better. As the 1981 results attests, there are considerable reserves for raising the efficiency of production and services but they are not being fully utilized.

V. V. Grishin analyzed in detail shortcomings in the work of various sectors of the city's economy--the efforts of party groups should be directed toward eliminating them. Party groups should focus the maximum efforts, the speaker continued, on seeking potential for further raising labor productivity as a main factor of economic growth. It is first necessary to ensure that available machine tools, machinery and mechanisms are used more efficiently, operated at full capacity and used correctly. Only thus is it possible to achieve a considerable economic saving and obtain a large amount of supplementary output. Party groups should display more active initiative in resolving questions of the mechanization and automation of specific production processes and of replacing outmoded equipment by new, highly productive equipment and must comprehensively improve the organization of production and labor.

The rational use of work time and the reduction of its non-productive expenditure or loss are a major reserve for increasing production efficiency and labor productivity. Experience shows that party groups can do a lot here. Citing the example of the experience gained by the party groups of a number of the city's labor collectives in influencing production, the speaker stressed: every party group must make its specific contribution to the common struggle to raise production efficiency.

Great potential for increasing labor productivity is created by the broad introduction of the team method of work. Practice shows that its use ensures an average increase of labor productivity of 20-30 percent and a reduction in workers' numbers and lost working time. The team of the Moscow pipe plant's No 6 pipe welding mill is now in its second successful year of operation. It is working according to a unified schedule with payment according to end results, is fulfilling the plans systematically and is a leader in socialist competition. The team's collective has pledged to complete the target for the first 2 years of the 5-year plan by 18 December this year and produce 65,000 meters of high-quality steel pipes above the plan. Communists of the party group initiated the introduction and improvement of the team method. Party groups must comprehensively promote the acceleration of the introduction of the progressive form of labor organization and provision of incentives and use its advantages on a broader scale for the successful fulfillment of production targets and socialist pledges.

After stressing that the solution of the problem of raising the quality of all work requires party groups' direct participation, V. V. Grishin noted that the practice of concluding contracts concerning guaranteed quality has given a good account of itself in the struggle to achieve higher quality. The movement for high quality, the speaker said, must be further developed and improved.

In the speeches at the CPSU Central Committee November (1981) plenum and the 17th Trade Union Congress, Comrade L. I. Brezhnev stressed that ensuring the strictest policy of thrift in the use of all types of resources and the resolute elimination of mismanagement and wastefulness are a major condition for the successful fulfillment and over fulfillment of the outlined plans. Party groups should play a great role in this since it is at the work station and in the office that savings originate.

Many of the capital's enterprises have supported the initiative--approved by the CPSU Central Committee--launched by a number of labor collectives on saving manpower, material and energy resources on the basis of the broad use of the achievements of science and technology. Party groups were an active motive force in developing this initiative. Thus, on the initiative of the party group of section No 19 of the Scientific Research Institute of the rubber industry, a creative team of experts from the institute from the "Kauchuk" plant and the M. V. Lomonosov Moscow Institute of fine chemical technology's department of rubber was set up to accelerate the introduction of scientific developments into production. The team's plan which made provision for all stages of work--from developing the rubber formula to introducing finished articles at the "Kauchuk" plant--was under constant party group control. The adoption of this plan promoted a considerable time saving in carrying out operations. The rubber goods produced as a result of introducing more sophisticated production techniques were awarded the state seal of quality. The actual economic saving here amounted to R246,000 a year. The party group's initiative and the team's work experience were approved at a joint session of the institutes, vus's and plant's party committees and recommended for more widespread use. Several similar creative teams have already been created in 1982.

Of great national economic importance is the party group's dissemination of the initiative--approved by the Moscow Party Gorkom--of the collectives of the "Stankostroitelnyy Zavod Imeni Sergo Ordzhonikidze" and "Krasnyy Bogatyr" production associations and of a floodlight plant and an abrasives plant which resolved in the 11th 5-year plan to achieve an above-plan increase in profits by reducing the prime cost of manufactured output. It is important that the policy of thrift as one of the main principles of the socialist economy, should be implemented and consistently in every labor collective and at every work station.

The speaker went on to analyze how the city's party groups, working under diverse conditions, find specific forms and methods for implementing economic tasks.

Successfully solving outlined plans requires constant initiative, as Comrade L. I. Brezhnev stressed at the 26th CPSU Congress, initiative everywhere and in everything. This demand is a very important criterion in assessing the efficiency of party group's work. Many valuable undertakings and patriotic initiatives have emerged from the party's grassroots, were noted and given support at that level and with the help of party groups, transcended the framework of the team or section and became the property of enterprises' collectives and national economic sectors.

Socialist competition which, by its very essence, is based on people's high consciousness and initiative, is an effective means of developing the initiative of communists and all working people.

Being well aware of each person's individual reserves and the conditions under which he works, party groups together with foremen and the trade union and Komsomol Aktiv help working people to develop individual and collective pledges geared toward achieving high end results and to struggle successfully to implement them. Party groups are actively promoting the further development of competition in honor of the 60th anniversary of the USSR's formation, the dissemination of advanced workers' initiative--to fulfill the 1982 target by the 65th anniversary of the great October Revolution--and the adoption of counter plans and pledges for the ahead-of-schedule conclusion of the 11th 5-year plan.

It is now party group's paramount task to broaden labor emulation for the successful fulfillment of the 1982 and 11th 5-year plan targets and pledges within teams, sections, shifts, shops and branches. The role of primary-level production collectives in the struggle to raise efficiency and quality of work and strengthen labor discipline must be intensified. It is necessary to support and disseminate the initiative of those working on formulating counterplans and introducing technically validated norms, team autonomous financing and personal thrift and quality records. Every collective must strive to work without laggards and efficiently and harmoniously.

At the 17th Trade Union Congress Comrade L. I. Brezhnev posed the task of the broad development of the team form of labor organization and of provision of incentives. Moscow has done a certain amount of work on developing the team method. In industry over 40 percent of workers are amalgamated into teams and the team method is widespread in the construction sphere. Many teams work according to the contract and autonomous financing method. In the last 5-year period labor productivity in teams rose by 20 percent. However, we have still not done everything to introduce the team form of labor comprehensively. Much remains to be done on transferring them to the team contract principle. Party group organizers must promote the development of the team method of labor organization and remuneration in all sectors of the city's economy: In industry, construction, transport and the services sphere. Guided by L. I. Brezhnev's instructions, Moscow must set the country an example in this regard, as in all others and be the vanguard in implementing party policy.

In developing working people's socialist competition for the ahead-of schedule fulfillment of the 1982 and 11th 5-year plan targets, party groups must make wider use of the experience of the struggle to transform work stations, projects, sections, shops and branches into model examples of their kind. It is every party group's matter of honor to enlist new subunits and new participants to this struggle and thereby help to transform all enterprises and establishments into model ones.

In addition to topical national economic problems, the 26th CPSU Congress defined tasks of ideological and organizational party work at the present stage and made it an important aim of the whole party to ensure the unity of its ideological-theoretical, political-educational organizational and economic activity.

Experience shows that the surest path to success is by working with people, with each person individually. "Even the best plans will not be fulfilled," Comrade L. I. Brezhnev stressed, "if those who work at a machine or in the field, on a livestock unit, in a scientific research institute or in the services sphere do not put heart and soul into the work." Thus the party is doing much to arm Soviet people with a clear understanding of CPSU policy and of the urgent tasks of laws of communist building.

Principled guidelines on this score are defined in the 26th CPSU Congress documents and the resolution of our party's Central Committee "on further improving ideological and political-educational work." The party's instructions gave a powerful boost to the improvement of communist education, enriched it considerably and armed party organizations and ideological cadres with a specific and clear program of action which is being successfully implemented.

The core of ideological and political-educational work was and still is to mold among Soviet people a scientific world outlook, a selfless devotion to the party's cause and to communist ideals, love for the socialist motherland and proletarian internationalism. The work is based on an in-depth study and mastery by working people of the fundamental principles of Marxism-Leninism, the CPSU's historical experience and of the creative contribution to theory contained in the materials of the 26th Party Congress, the CPSU Central Committee resolution "on the 60th anniversary of the USSR's formation."

L. I. Brezhnev's works, his books "Malaya Zemlya," "Rebirth," "The Virgin Lands" and "Reminiscences," are an invaluable storehouse of experience of working with people under contemporary conditions for every communist and party group organizer. They reflect vividly and in depth the long historical period of the CPSU's struggle for socialism and peace and for our people's radiant future. Thus Leonid Ilich's works are reference books for party activists.

The further improvement of political-education work is being promoted by the approach of a portentous date--the 60th anniversary of the USSR's formation. The propaganda measures and mass political events devoted to it must be directed toward stepping up working people's patriotic and internationalist education, revealing more fully socialism's historic advantages and achievements, displaying the successes of the Soviet people and working Moscow in communist building and developing socialist competition for the ahead-of-schedule fulfillment of the 1982 national economic plan and the targets of the 11th 5-year plan as a whole. Here, one should proceed from the fact that Moscow is the capital of a multinational state and a city of internationalists where representatives of over 100 of our country's nationalities and ethnic groups live.

Party groups can do much to ensure that all activity relating to Muscovites' communist education meets the high demands made by the party at the present stage. Party groups are closest of all to people and work in those places where their ideological stances, their attitude to labor and their moral qualities are primarily fostered. No one is lost sight of there: each day communists associate with each other and with nonparty comrades. In short, there is potential for finding an approach to each individual.

Thus, as emphasized in the CPSU Central Committee resolution "on further improving ideological and political-educational work," party groups must be centers of daily ideological and educational work, must unite the collective, skillfully perform individual work with people, motivate their social and labor activity, raise the standard of work and everyday life and develop a sense of the new.

After dwelling in detail on party groups' experience and tasks of educational work, the speaker noted that party group's educational potential is still not being used skillfully everywhere.

The main method of party group's influence on further improving the education of collective members is by improving individual work with people. Party groups must shape the education of communists and all working people by taking into account each person's features, his production and social activity, education, skills, political training, life experience, family situation, interests and so forth. Vocational and general educational training and Marxist-Leninist study must be directed in line with this, and talks, political briefings and reports on questions of interest to working people, burning problems of local life and moral education must be similarly oriented. It is important to respond promptly to working people's moods.

For party groups, an important method of raising the efficiency of educational work, resolving specific economic and political tasks, strengthening discipline and organization and developing working people's creative activity is by creating a healthy moral and political climate within the collective. This must be worked at systematically, persistently and consistently, inculcating comprehensively the ethics of an inhabitant of a model communist city. On this basis, it is necessary to ensure that an atmosphere of implacability toward violations of social order, squandering of national wealth, absenteeism, drunkenness, manifestations of political indifference, indiscipline, slackness and egoism is asserted within labor collectives. It is necessary to create an atmosphere of principledness, comradely exactingness and attention toward each person and find a way through to his mind and heart. It is important that he should feel responsible to society and the collective for his actions and should treasure its honor. At the same time, the atmosphere in every collective must be imbued with a tactful attitude toward people and concern for improving the working and everyday living conditions of workers and employees.

Afterwards, the speaker spoke of party groups' role in educating young people and the need to recruit leaders of primary-level production links and, above all, foremen and team leaders to educational work on a broader scale.

It is the important concern of party group organizers to comprehensively strengthen collective members' revolutionary vigilance and political consciousness. This is demanded by the present-day situation which is characterized by the increased aggressiveness of imperialism, primarily U.S. imperialism, the fanning of anti-Soviet and anticommunist hysteria, the deliberate distortion real socialism. Our party is waging an active struggle for peace and to avert the threat of nuclear war. This resounded with new force in Comrade L. I. Brezhnev's speech at the trade unions' congress. On the Soviet Union's behalf, Comrade Brezhnev put forward important new initiatives on preventing an arms race and consolidating detente. All Soviet people fervently support our party's policy and tireless activity in defense of peace. At the same time, we must intensify our vigilance against the imperialists' intrigues and unmask their perfidious schemes.

Party groups are called on to react sharply to instances of hostile ideological influence and to actively combat sentiments of consumerism, parasitism and petty bourgeois psychology, various rumors and falsehoods put about by foreign radio stations and other attempts to erode the class consciousness of the working people.

In a word, there is literally no important trend in the educational process in which the role of party groups does not have a beneficial effect. They have the necessary means at their disposal for the state of political-educational work in collectives to meet the contemporary requirements of the party. It is the crucial task of all party groups to be equal to these requirements.

The further enhancement of the role of party groups in the life of the city's party organization is closely connected with the improvement of their organizational work.

Recently party committees have paid more attention to party groups. The question of their leadership has been examined at plenums and bureau sessions of several party raykoms and party committees and the experience of the best party groups is being generalized and circulated.

Party organizations are paying much attention to stepping up the influence of communists in teams, which are becoming the main form of labor organization and of provision of incentives. At the present time over 3,000 party groups are operating in teams. In the last 2 years alone over 500 party groups have been newly created in industrial teams in industry and about 150 in construction teams. The party stratum in the teams is growing. At the S. Ordzhonikidze Machine Tool Plant, for instance, there are party members among the workers in the vast majority of teams. Every second team leader here is a communist.

The experience of the creation and functioning of party groups in teams demonstrates the effectiveness of drawing the party structure closer to production conditions. Here, as a rule, there is a single technological process and the workers' trades are of a uniform nature. This makes for more skillful and effective leadership of the collective and education of the working people.

The party group is a militant link of the primary party organization and in its activity it makes energetic use of the forms and methods of resolving the tasks confronting it which are peculiar to party work.

The basis for successful work in party groups is the development of the activeness of the communists and the enhancement of their responsibility for matters in the particular sector in which they work. Often the party group unites communists of various teams and departments. In these collectives a lot depends on the personal example of the communists. People look on the them with special attention and do not lose sight either of their merits or their shortcomings. For this reason the practice of the delivery of reports in party groups by party members and candidates members on the implementation of statutory requirements, party decisions and assignments deserves every possible support.

The attention of the party group must be focused on analyzing the contribution of every communist to the fulfillment of party decisions the more profound the analysis is, the more principled the appraisal is and the firmer the guarantee that the role of communists will continue to grow.

Speaking of ways to develop the activeness and spontaneity of action of communists, V. V. Grishin noted that party meetings must be used more widely for this purpose. Party groups can do a lot to further improve monitoring and verification of execution and to increase executive discipline. Party groups and their organizers monitor the communists fulfillment of their assignments and the implementation of decisions taken by the primary party organization and higher party organs. The duty of the party group is to discover shortcomings, seek to eliminate them and forestall workers' errors and blunders. The party group can and indeed must intervene if the affairs and interests of the state are damaged through anyone's fault.

Analyzing the facts on which the success of the party group's work depends, the keynote speaker dwelt on questions of its interaction with foremen, team leaders and other leaders of primary-level production and management.

V. V. Grishin stressed that the party group is called on [to] conduct all its work in the collective in conjunction with trade union and komsomol groups, the people's control post and other public organizations, directing their attention toward solving the tasks facing the collective of the sector, shift or section and toward strengthening ties with the working people.

The growth in the role of party groups, as an important structural subdivision of the primary party organization and the diversity and complexity of their work in modern conditions makes qualitatively new demands of party organs and regarding the fulfillment of their obligations. To a crucial degree the influence of party groups on the life and affairs of their collectives and on the mobilization of working people for fulfilling plans and socialist pledges depends on the activeness and initiative of the party group organizer and his skill in organizing the work of communists. However, not everywhere have the party group organizers yet fully comprehended the need for such an approach to the work of party groups. In several instances the party groups lack fighting spirit, they rarely have meetings, and monotonous questions mainly concerning current production activity are often submitted for the communists' discussion. Party groups still do not do enough to help increase the vanguard role of communists in production and in social life and in the struggle against violations of state and labor discipline, and they rarely hear communists reports. Sometimes party groups remain aloof from the matter of improving monitoring and verification of execution and as a result many shortcomings in economic and political work are overcome only slowly.

There are many cases, where primary party organizations do not devote due attention to strengthening party groups and underestimate their role in resolving production and educational tasks. It is necessary for party organizations to improve the leadership of party groups in every possible way, help them in their work more and generalize their experience.

One of the effective ways of improving the work of party groups is to improve the organization and conduct of training of party group organizers. Now almost everywhere, party committees hold seminars for them and special areas are set aside in offices which deal with party organizational work. In a number of CPSU Raykoms meetings of the Rayon's party groups are held regularly for the purpose of providing them with information on topical tasks of party work and exchanging experience. Interesting and useful materials have been published regularly over the last 3 years now on the pages of Moskovskaya Pravda. But leaders of party groups nevertheless often voice justified dissatisfaction with training which at time lacks concreteness, profound analysis of accumulated experience and consideration of the specific features of the sector. The party Raykoms and party committees still have much to do in order to improve training and the entire activity of party groups.

It can be said without exaggeration that further raising the standard of party leadership of economic and cultural construction and improving the party-organizational and political work depend to a considerable extent on the increase in militancy and work capacity of party groups. Each of them must be a full and equal representative of our great party among the masses, and give expression to its strength and policy.

There is no doubt that Moscow's party organizations will fight with all their energy to carryout the tasks facing them in the 11th 5-year plan. In every sector they will continue by their practical deeds to confirm that the Moscow city party organization is, and will be, a reliable buttress of the CPSU Central Committee and the Politburo headed by Comrade L. I. Brezhnev.

In conclusion V. V. Grishin voiced confidence that the party groups will raise the standard of their work still higher, will intensify all aspects of their activity in the labor collectives, will persistently fulfill the decisions of the 26th CPSU Congress and Comrade L. I. Brezhnev's recommendations and will greet the 60th anniversary of the formation of the USSR with new achievements in implementing the majestic tasks of building communism.

GRISHKYAVICHUS STRESSES ECONOMIC, PATRIOTIC TASKS OF LITHUANIAN KOMSOMOL

Vilnius SOVETSKAYA LITVA in Russian 27 Mar 82 pp 1-2

/Speech by P. Grishkyavichus, first secretary of the Lithuanian CP Central Committee at the 20th Lithuanian Komsomol Congress held 25-26 March 1982 in Vilnius: "The Komsomol's Broad Field of Activity"/

/Excerpts/ The 20th Lithuanian Komsomol Congress is taking place at a noteworthy time--the 60th Anniversary of the formation of the Union of Soviet Socialist Republics. Responding to the party's call, Soviet people are getting ready to mark this historic date in the life of our multi-national state in a worthy manner; they are laboring persistently and self-sacrificingly in order to more successfully carry out the decisions of the 26th CPSU Congress, tasks set forth by the general secretary of the CPSU CC, chairman of the Presidium of the USSR Supreme Soviet, Comrade L. I. Brezhnev in speeches at the November 1981 Plenum of the CPSU CC and at the 17th Congress of USSR Trade Unions. Socialist competition is being expanded to fulfill and over-fulfill the assigned tasks for 1982 in the 11th Five-Year Plan.

This republic's Komsomol members play an active patronage role on the republic's most important construction projects and the All-Union Komsomol shockwork construction projects. Most of the Komsomol youth groups are operating effectively. By the time this congress opened, 8,000 young production workers and 22 Komsomol youth groups had fulfilled the tasks of two years of the five-year plan.

It is gratifying that even among the delegates to this congress there is a considerable detachment of persons in the forefront of labor. Permit me to cordially congratulate all the young shockworkers of labor and to wish them, as well as all young production workers, new labor victories.

Serving the cause of production labor even more is the patriotic movement called "Shockwork, Skills, Initiative, and Creativity of Young Persons for the 11th Five-Year Plan." There is no doubt that this movement will become a very effective means in the cause of inculcating among the youth a communist attitude toward labor along with consolidating its efforts to successfully carry out our five-year plan of economic and social development.

The republic's working people have taken on lofty socialist obligations. During this five-year plan a 23-percent increase in gross output is planned. The average annual production of agricultural output is scheduled to be increased by 10 percent. These are not easy obligations, but we are capable of fulfilling them. It is important to intensify social production, to make more effective use of existing economic potential and material resources. To assist in carrying out these tasks is the top-priority duty of the Komsomol organizations.

It is particularly important to reduce the proportion of manual labor. Komsomol members and other young persons at enterprises could engage in creating and introducing the means of small-scale mechanization. We must attract young scientists, specialists, and efficiency experts to this important work. The Komsomol organizations are developing a movement for economizing and conservation. This movement, however, must be more mass-based and effective. A more active struggle against the uneconomical use of fuel, energy, raw materials, and other resources, against their being squandered, must be waged by KOMSOMOLSKIY PROZHEKTOR /Komsomol Searchlight/. Its activities have improved in recent years. But it still does not shine its light everywhere as brightly as one would like.

Modern-day production means the precise organization of labor, strict discipline, requirements for personnel to fulfill the tasks assigned to them, and responsibility for the work entrusted to them. It is necessary to make efficient use of all working time, consolidate personnel, and reduce their turnover. And in this matter too we have some good examples. It is a rare case that experienced and young workers leave the Vilnius Plastic Products Plant or the Litovskaya GRES in Elektrenay. Located here are the administration, and party, trade-union, and Komsomol organizations concerned with improving conditions of work and everyday life, about increasing occupational prestige, and about educating the younger generation. This is also inherent in many other enterprises and organizations.

Unfortunately, this is not the situation everywhere. Thus, last year the Vilnius Grinding Machine Plant was short in their output by almost three million rubles. As compared to 1980, the number of unauthorized absences from work increased by a factor of 2.6; they were committed by one worker out of five. Personnel turnover is also great here. And at the Kaunas Clamp Component Plant such unauthorized absences were committed by one worker out of three, and the personnel turnover has reached 23 percent. This plant fulfilled last year's plan by only 90 percent. One would like to inquire whether indoctrination work is effective under such conditions, and will the young workers be good managers upon seeing such disorder? It is impossible to shut one's eyes to slackers, persons who take unauthorized leave, and inept workmen. And the Komsomol organization should speak out more decisively in the struggle against such negative phenomena.

Especially great is the role of the Komsomol and youth in solving the central problem of the present five-year plan--fulfilling the foodstuff program. It is founded on a high rate of development for agriculture. The rural areas have a very great need for industrious young hands, youthful energy, and initiative; they need various types of skilled specialists. And, in connection with this, questions arise concerning the retention of young persons in rural areas. In order to solve these problems, we need to precisely and thoughtfully carry out an entire complex of measures.

We have already accomplished a great deal with regard to creating a new, up-to-date villages. Kolkhoz and sovkhoz settlements are growing and becoming more beautiful, more varied facilities for cultural and everyday purposes are being erected, and efforts are being applied to see to it that every farm has a store, a kindergarten-nursery, public dining-room, a daily service facility, a school, and a House of Culture. Quite a bit is being done to improve the rest and recreation of the farmers. All this exerts a positive influence both on production and on the retention of personnel.

The republic has many farms where the problems of retaining young persons in the rural areas are being solved in a consistent manner. I happened to attend the accounts-and-election meeting held by the Komsomol organization of the Galyunas Kolkhoz of Alitusskiy Rayon--whose chairman is a delegate to this congress, Marite Milyauskayte. It was pleasant to see how much is being done here to make it conducive for young persons to remain on their native farm, how much concern there is to increase their skills, and to meet their just demands.

We have in our republic quite a few farms whose directors, party, trade-union, and Komsomol organizations are skillfully increasing their staffs of specialists, mechanics, and other mass occupations, and there there are essentially no shortages in personnel.

However, although quite a few agricultural specialists are being trained, there is still a shortage of them on some kolkhozes and sovkhozes. Such a situation has developed because in certain places normal working and everyday living conditions, are not provided, and a portion of the young fellows and girls who have obtained training in a specialized agricultural field go into a different line of work. There are even Komsomol members among them. And this is a considerable minus in the work of the Komsomol organizations as well.

The Moletskiy, Shvenchenskiy, Plungeskiy, Trakayskiy, Kedayskiy, and Zarasayskiy Rayons ought to do better work with agricultural specialists. Here less than a third of the farms' principal specialists have a higher agricultural education, and there are too few specialists working as average-unit supervisors.

And so, the questions of retaining young persons in rural areas and of training specialists are very important; they require the combined efforts of farm directors, party and soviet organs, trade-union and Komsomol organizations. Unfortunately, there are sometimes still not enough of these efforts.

A good form of training personnel is to send young persons to study at VUZ's and tekhnikums with stipends from the farms. Serving as a good example in this regard is the Shilutskiy Rayon, from which 42 students with stipends from farms have been sent to study at the veterinary academy alone. There are 50 and more students with farm stipends sent to the agricultural academy from each of the Radvilishskiy, Panevezhskiy, Lazsiyskiy, Kapsukskiy, and Vilkavishskiy Rayons. But there are only 11 students studying here each from the Shirvintskiy and Ionavskiy Rayons with farm stipends. There is not a single student with a farm stipend studying at the veterinary faculty of the veterinary academy from the Ignalinskiy or Pasval'skiy Rayons. Fewer students are sent from these rayons for study than individual farms send in other places. What kind of system is this? Conclusions must be drawn from all this. And the Komsomol should utter some forceful words in this regard.

The turnover of mechanics is still too great in the rural areas; a shortage of them is being felt. The rural vocational-technical schools are still not training enough workers in the field of animal husbandry, and, in particular, there are too few girls among them. The Komsomol organizations must also be of help in solving this problem.

The 26th CPSU Congress pointed to the need for strengthening labor, moral, and ideological-patriotic education, for creating a vital and creative atmosphere in every Komsomol organization. Quite a bit has been accomplished in solving these problems. The Komsomol organizations are solving the problems of indoctrinating young persons more creatively and comprehensively, and they are devoting more attention to Komsomol political education. All these are good moves in improving Komsomol political training, in forming the youth's scientific, class world view, in educating its political awareness and social activism.

Unfortunately, the quality of the political training is still not satisfactory everywhere. The words uttered by Komsomol lecturers, rapporteurs, and political information specialists ought to be more convincing. Within them must be felt the pulse of today and the prospects for tomorrow.

We must strengthen international and patriotic education still more. We must bring it about that every young person correctly understands and evaluates the development of the socialist nations, the principled and historically objective processes of their drawing closer together and flourishing, and the party's Leninist nationality policy. We must indoctrinate a feeling of general national pride in the Soviet people.

We must further strengthen the military-patriotic indoctrination of youth. An important role in this regard also belongs to the research expedition entitled "A Chronicle of the Great Patriotic War," as begun on the Komsomol's initiative. We value this initiative very highly. The heroic exploits of the people, the material gathered about them, comprise an inspiring example for our youth.

The Komsomol organizations have the duty to wage a decisive struggle against any manifestations of nationalism and chauvinism, alien to the nature of socialism, as well as nationalistic self-centeredness and conceit or civic irresponsibility, and to always rebuff them in a determined manner. We must not forget our political vigilance for a single moment, nor forget that imperialism is attempting by any means to step up ideological diversions against our country and spread discord among the peoples. The Komsomol has always waged a struggle against bourgeois propaganda. There is no doubt that this struggle will become even more effective, that every Komsomol organization will pay particular attention to it.

We are anticipating greater initiative from the Komsomol organizations in the matter of atheist education. This work is still being conducted on a low level in many groups.

We must further improve the labor and moral indoctrination of the younger generation. In youth groups, along with an educated, truly communistic attitude toward labor, one also encounters cases of indifference to one's duty, violations of discipline, at times even a conscious rejection of socially useful labor. In our society there are still people, among them young persons, who attempt to give a bit less and snatch a bit more from the state. It is precisely on the soil of such psychology that egoism, philistinism, and acquisitiveness make their appearance.

A portion of the youth are still suffering from the virus of consumerist psychology. They are striving by any price, at the expense of the society--often by criminal means--to acquire undeserved conveniences and privileges. All this inflicts great damage to the ideological and moral education of young persons. Moreover, certain Komsomol organizations and labor groups do not seem to notice this evil, and they react only when the violator of the moral and legal norms has already been caught red-handed.

We must also condemn the philistine interpretations of "personal" life, which, they say, is nobody's business. This is often used by people as a way of covering up violations of the rules of our socialist community, or by those who are attempting to justify their own unworthy acts. This is a harmful point of view, alien to our socialist way of life.

We should always remember the demand of the 26th party congress that it is necessary "by all organizational, financial, and legal means to close up any and all cracks tightly against parasitism, bribe-taking, black-marketeering, incomes gained without labor, or any encroachments on socialist property." This demand pertains to all organizations, departments, and all groups. It also pertains to the Komsomol organizations, which have at their disposal a considerable arsenal of means for combatting these negative phenomena. In this area the Komsomol has a great responsibility, since among the persons committing crimes there are still minors, youths, and even Komsomol members. Instances of drunkenness and hooliganism are still not infrequent. Let us draw the most decisive conclusions from this.

In his book "Vospominaniya" /Memoirs/ Comrade L. I. Brezhnev stressed the particular role played by the family in a person's upbringing, "because it is precisely here that the sources lie of a person's character, of his attitude toward life." This is an unusually profound and exact characterization of the family. It is very important to increase the role and responsibility of the family in all possible ways, as well as that of the parents for the upbringing of the younger generation, for rearing young persons on the basis of a positive example.

Cultural-educational work, literature, and art constitute a component part of a communist education. They have a particularly great importance in the formation of the communist world view. Talented, ideologically and artistically mature works aid in bringing out feelings of Soviet patriotism and socialist internationalism, in strengthening the principles of communist morality and the socialist way of life. New and significant literary works, art and photo exhibits, concerts, motion pictures, and shows offer broad possibilities for a more purposeful indoctrination of a young person and the formation of his ideological convictions.

Within the republic quite a bit has been done in order to reveal to the maximum the talents and creative capabilities of young persons. However, in this matter also there are some unsolved problems. One gets the impression that the Komsomol's influence on the process of artistic creativity has been lessened.

And today it is very important that young persons correctly understand the principles and directions of development of socialist culture, the problems confronting it, and the essence of socialist art. Unfortunately, in the sphere of art we still encounter a certain amount of thrashing about among a portion of the creative youth, the so-called quests for form, along with a narrow-mindedness of social thought.

Literary and art criticism should also come out of the framework of merely specific research studies; it ought to more boldly examine works on the ideological-political level.

At the present time there are almost 15,000 young Communists engaged in Komsomol work. Among persons entering the party more than 70 percent are Komsomol members. This testifies to the enormous trust which the party has in the Komsomol. Likewise in the future the republic's party organization will do everything so that the Komsomol's activity may be even more active, purposeful, and effective, so that it may yield the best possible results in all spheres of our life in the matter of implementing the decisions of the 26th CPSU Congress and in carrying out the magnificent tasks of building communism.

LATVIAN BODIES ASSESS ECONOMIC CRIME

LaSSR Supreme Soviet Presidium

Riga SOVETSKAYA LATVIYA in Russian 4 Mar 82 p 1

[Information Bulletin: "To Ensure Strict Observance of the Law"]

[Text] A meeting of the Presidium of the Supreme Soviet LaSSR has been held under the chairmanship of the Chairman of the Presidium of the Supreme Soviet LaSSR P. Ya. Strautmanis.

Reports were heard at the meeting from the Procurator of the LaSSR Ya. E. Dzenitis, the chairman of the ispolkom of the Proletarskiy Rayon Soviet of People's Deputies U. E. Mey, and the chairman of the ispolkom of the Yekabpilsskiy Rayon Soviet of People's Deputies Ya. Ya. Shiballo on the execution of the law stipulating measures to struggle against cases of the receipt by citizens of illegal compensation for services in the sphere of services and of gross violations of the rules of trade.

The Presidium of the Supreme Soviet noted that the measures being carried out to execute the new law in this field have been received by the population with approval. This is witnessed by the letters of citizens, their speeches in labor collectives, and materials in the republic and local press. The most well-directed work to prevent crimes of this type and punish violators has been organized in the cities of Riga, Yelgava, and Yurmala and in Bauskiy, Yekabpilsskiy, Rizhskiy and certain other of the republic's rayons where under the leadership of party agencies the local Soviets of People's Deputies and their executive committees have organized the punctual execution of the new law.

At the same time, the Presidium of the Supreme Soviet LaSSR pointed out that certain ministries and departments have not brought the necessary order to public services in a number of their subordinate stores, ateliers, workshops, and motor vehicle transportation enterprises. The Ministry of Domestic Services for the Public LaSSR, the Ministry of Motor Vehicle Transportation and Highways LaSSR, and the Latvian Republic Union of Consumers' Societies have been devoting insufficient attention to carrying out the new law and have not been taking decisive measures with regard to discovered cases of violations. The same shortcomings exist in the work of the State Inspectorate for Trade and Output Quality of the Ministry of Trade of the republic.

It has been pointed out to the republic's law protection agencies that they have not achieved an efficient examination of materials and investigation of criminal cases with respect to law violators. Insufficient work is being done to uncover persons who are receiving illegal compensation from citizens for performance of work connected with public services, especially in workshops, ateliers, medical institutions, and hotels. The procurators of a number of the republic's rayons and cities rarely make use of the right granted them by law to invite guilty workers from the service sphere and warn them about the impermissibility of their violations.

The decree adopted by the Presidium of the Supreme Soviet LaSSR binds the Soviets of People's Deputies and their executive committees and permanent commissions to ensure the observance of the law in the work of public service enterprises, institutions, and organizations and to achieve the elimination of instances of illegal compensation from citizens and also of violations of the rules of trade. They have been ordered to bring about a wider enlistment in this work of deputies, people's control groups, voluntary people's druzhiny, comradely courts and the appropriate commissions attached to the ispolkoms.

The appropriate ministries and departments have been made aware of the necessity for ensuring a maximum improvement of the work of their subordinate enterprises, institutions, and organizations and for calling especial attention to an examination of citizens' letters and complaints. It is emphasized that it is necessary in all cases to turn over materials regarding discovered law infractions to law protection agencies, and for the Ministry of Internal Affairs LaSSR, the Procurator LaSSR, and the Ministry of Justice and Supreme Court LaSSR to ensure the correct application of the law and a punctual and high quality investigation and examination of criminal cases of this category.

Other matters were also considered at the meeting of the Presidium of the Supreme Soviet LaSSR.

LaSSR Supreme Court Plenum

Riga SOVETSKAYA LATVIYA in Russian 10 Mar 82 p 3

[Information Bulletin: "A Plenum of the Supreme Soviet of the Latvian SSR"]

[Text] A plenum of the Supreme Court of the LaSSR has been held which, on the basis of a report by the Chairman of the republic's Supreme Court B. A. Azan, discussed the 1981 work results and defined the tasks for improving them.

The plenum noted that in carrying out the functions of the republic's supreme judicial agency, the Supreme Court LaSSR had done definite work to raise the level of the dispensing of justice in the LaSSR, to strengthen socialist legality and law and order, and to assist in the correct application of the law in civil and criminal cases and the defense of the rights and interests of citizens, enterprises, institutions, and organizations. Measures were taken to improve the quality and the schedules of the examination by judicial boards of civil and criminal cases, the prevention of crime, a strengthening of the struggle against thefts of socialist property, speculation, bribe-taking, and parasitism, and an improvement of work with citizens' complaints and applications. Constant attention has been given to improving work on the legal education of citizens.

The decree which was adopted by the plenum emphasizes that the most important task of the Supreme Court LaSSR is a further rise in the level of justice in the republic. Especial attention has to be given to strengthening the struggle against thefts of socialist property, speculation, bribe-taking, and parasitism.

The plenum also considered other matters.

The Procurator of the LaSSR Ya. E. Dzenitis, the Minister of Justice of the LaSSR V. I. Layvin, and the member of the USSR Supreme Court R. K. Brize took part in the work of the plenum.

AZERBAIJAN RECEIVES RED BANNER AWARD

Baku BAKINSKIY RABOCHIY in Russian 12 Mar 82 p 1

[Information Bulletin: "The Relay Race of Labor Accomplishments"]

[Text] Continuing the relay race of the labor accomplishments of the Ninth and Tenth Five-Year Plans which were Red Banner plans for Soviet Azerbaijan, during the starting year of the present five-year plan the workers of our republic have achieved outstanding new successes. Implementing the historic decisions of the 26th CPSU Congress and the instructions and recommendations of the General Secretary of the CC CPSU and Chairman of the Presidium of the USSR Supreme Soviet Comrade L. I. Brezhnev, with their inspired labor they have written a vivid new page into the heroic chronicle of communist construction in our country which is being created collectively by all of the peoples of the great Soviet Fatherland.

For the achievement of high results in the All-Union Socialist Competition and for the successful fulfillment of the State Plan for the economic and social development of the USSR for 1981, for the 12th year in a row the Azerbaijan SSR has been awarded the Red Challenge Banner of the CC CPSU, USSR Council of Ministers, AUCCTU, and CC of the Komsomol. The presentation of our Homeland's high award was marked by a meeting of the republic's party, government, trade union, Komsomol, and economic aktiv, jointly with representatives of workers' collectives which took place on 11 March in the festively decorated Palace V. I. Lenin.

In the presidium of the meeting were: the candidate member of the Politburo of the CC CPSU and First Secretary of the CC of the Communist Party of Azerbaijan G. A. Aliyev; the member of the CC CPSU and Deputy Chairman of the USSR Council of Ministers and Chairman of Gossnab USSR N. V. Martynov; the members of the Bureau of the CC of the Communist Party of Azerbaijan K. M. Bagirov, O. A. Bagirov, G. A. Gasanov, V. A. Guseynov, F. E. Musayev, Yu. N. Pugachev, G. N. Seidov, S. B. Tatliyev, K. A. Khalilov, and Z. M. Yusif-zade; the candidate members of the Bureau of the CC of the Communist Party of Azerbaijan B. S. Kevorkov, R. E. Mekhtiyev, D. M. Muslim-zade, and L. Kh. Rasulova; the fraternal republic delegation leaders--the Secretary ofthe CC of the Communist Party of Georgia Z. A. Chkheidze, the Secretary of the CC of the Communist Party of Armenia K. L. Dallakyan, the Secretary of the CC of the Communist Party of Turkmenia M. A. Charyyev; the Deputy Chairmen of the Council of Ministers Azerbaijan SSR S. K. Abussuliyev, F. G. Akhmedov, A. D. Lemberanskiy, Sh. A. Rasizade,

G. V. Shcheglov; the Deputy Minister of the USSR Food Industry N. V. Oreshkin; the Deputy Minister of the USSR Electrical Engineering Industry O. L. Zinchenko; and Azerbaijani advanced production workers, scientific and cultural figures, and party, government, trade union and Komsomol workers.

The meeting was opened by the Chairman of the Council of Ministers of the Azerbaijan SSR G. N. Seidov.

The state hymns of the USSR and Azerbaijan SSR were heard.

An honorary presidium consisting of the Politburo of the CC CPSU headed by Comrade L. I. Brezhnev was elected with great enthusiasm.

The floor was given to the Deputy Chairman of the USSR Council of Ministers and Chairman of Gossnab USSR N. V. Martynov who was given a warm reception by the assemblage. After making his speech, to the stormy and undying applause of those assembled he presented the Red Challenge Banner of the CC CPSU, USSR Council of Ministers, AUCCTU, and CC of the Komsomol to the representatives of the republic's workers.

The high award was accepted by the candidate member of the Politburo of the CC CPSU and First Secretary of the CC of the Communist Party of Azerbaijan G. A. Aliyev, the Chairman of the Presidium of the Supreme Soviet of the Azerbaijan SSR K. A. Khalilov, the Chairman of the Council of Ministers of the Azerbaijan SSR G. N. Seidov, the Chairman of the Azerbaijan Council of Trade Unions L. Kh. Rasulova, the First Secretary of the CC of the Komsomol of Azerbaijan D. M. Muslimzade, the President of the Academy of Sciences of Azerbaijan and the corresponding member of the USSR Academy of Sciences G. B. Abdullayev, the drilling chief of the Gobustan Administration for Drilling Operations and Hero of Socialist Labor S. A. Nagiyev, the operator at the Sumgait Super Phosphate Plant and Hero of Socialist Labor A. G. Agayev, the chairman of the kolkhoz imeni Kalinin in Ismaillinskiy Rayon and Hero of Socialist Labor N. V. Nikitin, the milkmaid on the "Leninavan" sovkhoz in Mardakertskiy Rayon L. B. Gulyan, the team leader on the "Kommunizm" sovkhoz in Babekskiy Rayon and Hero of Socialist Labor A. N. Aliyev, the cotton farmer on the kolkhoz "Kommunist" in Yevlakhskiy Rayon and Hero of Socialist Labor Sh. T. Aliyeva, the overall team leader of the Construction Administration - 30 of the Trust No. 3 in the city of Kirovobad and Laureate of the State Prize of the Azerbaijan SSR D. Kh. Abbasov and the link leader on the sovkhoz imeni B. O. Abbasov in Lenkoranskiy Rayon K. N. Gasanova.

The hall resounds with wishes for the good health of the communist party of the Soviet Union, its Leninist Central Committee, and the Politburo of the CC led by Leonid Il'ich Brezhnev and for the well-being of our soviet Homeland, and with words of heartfelt gratitude to the party and government for the high award.

Warmly received by the participants of the meeting, the candidate member of the Politburo of the CC CPSU and First Secretary of the CC of the Communist Party of Azerbaijan G. A. Aliyev delivered a speech.

The meeting also heard from the installation mechanic team leader from the "Azneftekhimmontazh" Trust T. B. Bagirov, the Chairman of the kolkhoz imeni Tel'man in Pushkinskiy Rayon and the Hero of Socialist Labor G. S. Gasanova, the lathe operator at the Petroleum Mine Machine Building Plant imeni P. Montin, the Laureate of the State Prize of the Azerbaijan SSR G. A. Smirnov, the female student from the Institute of Petroleum and Chemistry imeni M. Azizbekov S. A. Dzhafarova, and the poet and Secretary of the Board of the Union of Writers of Azerbaijan Dzabir Novrus.

The Secretary of the CC of the Communist Party of Georgia Z. A. Chkheidze, the Secretary of the CC of the Communist Party of Armenia K. L. Dallakyan and the Secretary of the CC of the Communist Party of Turkmenia M. A. Charyyev who spoke at the meeting sincerely congratulated the workers of Azerbaijan on their great labor victory in the All-Union Socialist Competition and on their high award from the Homeland, and wished them new accomplishments for the good of our multi-national Country of Soviets.

The participants in the meeting welcomed with stormy applause a report that agreements had been signed to continue the socialist competition for 1982 between Georgia, Armenia, Turkmenia and Azerbaijan.

With enormous enthusiasm and to the accompaniment of undying applause the meeting's participants adopted a letter of salutations to the Central Committee of the Communist Party of the Soviet Union, General Secretary of the CC CPSU and Chairman of the Presidium of the USSR Supreme Soviet Comrade L. I. Brezhnev.

In conclusion, there was a concert. (Azerbaijan Information Agency). (A report on the meeting will be published in tomorrow's issue of the newspaper.)

AZERBAIJAN PRESENTED CHALLENGE RED BANNER AWARD

Martynov Speech

Baku BAKINSKIY RABOCHIY in Russian 13 Mar 82 pp 1-2

[Unattributed report on speeches delivered by USSR Council of Ministers deputy chairman N.V. Martynov and CPSU Central Committee Politburo candidate member, Azerbaijan SSR Communist Party Central Committee first secretary G.A. Aliyev at a meeting of the Azerbaijan SSR party aktiv devoted to the presentation of a CPSU Central Committee, USSR Council of Ministers, AUCCTU and Komsomol Central Committee Challenge Red Banner to the Azerbaijan SSR: "The Award of the Motherland Inspires New Accomplishments"]

[Excerpts] Dear comrades. Dear Friends. Permit me on behalf of the CPSU Central Committee, USSR Council of Ministers, AUCCTU and Komsomol Central Committee warmly and sincerely to congratulate you, and through you all the workers of Soviet Azerbaijan, on your victory in all-union socialist competition for the successful completion of the state plan for the economic and social development of the USSR in 1981 and the award to the republic of a CPSU Central Committee, USSR Council of Ministers, AUCCTU and Komsomol Central Committee Challenge Red Banner (stormy, prolonged applause).

It is to me that the great honor has fallen of presenting to the workers of order-bearing Azerbaijan the warm words of greeting and congratulations on the successes that have been achieved and on the high award of the Motherland, from CPSU Central Committee general secretary, chairman of the USSR Supreme Soviet Presidium, comrade Leonid Ilich Brezhnev. (Prolonged, sustained stormy applause. All stand)

Dear friends. This is now the 12th straight year that your republic has been awarded a Challenge Red Banner. This speaks of the scale and consistency of the achievements of Soviet Azerbaijan, of the high labor activity of all workers in the republic, of the enormous organizational and political work done by the AzSSR Communist Party and its Central Committee. (stormy applause)

The first year of the 11th Five-Year Plan--1981--has been an important stage in realizing the program for the economic and social development of the country adopted by the 26th CPSU Congress.

National income, the basis of consolidation of the state's economic might and of further improvement in the living standard of the Soviet people, increased R14 billion. And four-fifths of the national income, or almost R380 billion, was used directly for the national well-being.

Capital construction has been implemented on broad scales. In 1981 about 200 major new industrial enterprises were commissioned. Much work was done on the reconstruction, expansion and retooling of existing enterprises. A large amount of housing, and schools, hospitals, preschool establishments and other sociocultural projects were commissioned.

As a result of the measures implemented in the pensions sphere, the material positions of about 14 million pensioners were improved. State aid for families with children was increased.

The enormous personal contribution made by L.I. Brezhnev in the creative development and implementation of our party's domestic and foreign policy and his tireless activity to strengthen world peace have earned for him the warm gratitude and love of the Soviet people and all people of good will on our planet. (stormy applause)

Many of the major accomplishments in our country are associated directly with the name of Leonid Ilich. This also applies in full measure to the achievements of order-bearing Azerbaijan. (stormy applause)

The rural workers of Azerbaijan achieved exceptionally great successes in 1981; as L.I. Brezhnev noted at the CPSU Central Committee November (1981) Plenum, despite the difficulties with the weather, they gathered record harvests of grain, cotton, grapes and vegetables. (stormy applause)

Last year capital construction went ahead on broad scales within the republic. Fixed capital worth more than R2 billion rubles was commissioned.

Dear comrades. Party concern for improving the well-being of the workers can be clearly seen in the example of Soviet Azerbaijan. In 1981, as in earlier years, the income of the population continued to grow. Using all sources of financing, 27,000 new well-appointed apartments were built with a total floor area of more than 1.5 million square meters. This made it possible to improve living conditions for more than 170,000 of the republic's inhabitants. The volume of retail trade turnover grew significantly. Domestic and everyday services were further developed. Their volume increased 15 percent over the year, including a 23-percent increase in rural localities.

Public health care facilities were expanded. Major new successes were achieved in the republic in the fields of science, culture, education and other spheres of public life.

The award of challenge red banners for results in all-union socialist competition in 1981 to the Nagorno-Karabakhskaya Autonomous Oblast, the cities of Baku and Kirovabad, and Bardinskiy, Dzhalilabadskiy and Lenkoranskiy Rayons is recognition of the great services of the workers of Azerbaijan to the Motherland, (stormy applause), and also to the labor collectives of 40 enterprises, associations, kolkhozes and sovkhozes and organizations in the republic. (applause)

Permit me to wish the leaders in industry, construction, transportation and agriculture, and all the workers of sunny Azerbaijan great successes in their noble labor (applause)

Dear comrades. The workers of Azerbaijan have responded actively to the party call to make 1982 a year of shock labor. This can be seen from the socialist pledges adopted by the republic's workers and the high labor and political enthusiasm with which they are laboring here, on the eve of the 60th anniversary of the formation of the USSR.

It is intended to insure the dynamic development of the national economy and all its sectors, of all the union republics. Suffice it to say that absolute growth in industrial and agricultural output for the country as a whole has been set at 30 percent and 50 percent respectively for the 11th Five-Year Plan, compared with growth achieved during the last five-year plan. High targets have been set for labor productivity growth and savings on material resources, the commissioning of production facilities, and growth in national income and other indicators.

In solving the tasks set by the 26th CPSU Congress and the CPSU Central Committee November (1981) Plenum an important role is assigned to the communists and all the workers of Soviet Azerbaijan. Your republic has at its disposal a mighty economic and scientific and technical potential. Important industrial sectors are concentrated here. Azerbaijan holds one of the leading places in the country for the production of petroleum products, petroleum equipment, steel pipes, nonferrous metals, synthetic rubber, electric motors, construction materials, domestic air conditioning systems, automobile tires, and many other kinds of industrial production. It would be difficult, too, to overestimate Azerbaijan's significance as a major producer of agricultural produce.

Dear friends. To me a great honor has fallen--to present a CPSU Central Committee, USSR Council of Ministers, AUCCTU and Komsomol Central Committee Challenge Red Banner to the Azerbaijan Soviet Socialist Republic. It is with great satisfaction that I do so.

(To the accompaniment of prolonged, sustained applause comrade Martynov presents the banner to representatives of the republic).

Dear comrades. Permit me yet again to congratulate warmly and sincerely on this high and well-deserved award of the Motherland and to wish you new labor accomplishments, creative energy and great personal happiness. (stormy applause)

Long live the Azerbaijan Soviet Socialist Republic! (stormy applause)

May the Soviet Union--our mighty, beautiful and great Motherland--grow strong and flourish! (stormy applause)

Long live the CPSU--inspirer and organizer of all our victories! (stormy, prolonged applause. All stand. Cries are heard in honor of the CPSU and Soviet government and Soviet Azerbaijan and its people).

Aliyev Speech

Baku BAKINSKIY RABOCHIY in Russian 13 Mar 92 pp 2-3

[Excerpts] Dear Comrades. The selfless labor of the working class, kolkhoz peasantry and intelligentsia of the republic in fulfilling plans and socialist pledges for 1981 has been crowned with a remarkable victory in all-union socialist competition. (Stormy, prolonged applause) The Azerbaijan SSR has been awarded the CPSU Central Committee, USSR Council of Ministers, AUCCTU and Komsomol Central Committee Challenge Red Banner which has just been ceremonially presented to the republic. (stormy, prolonged applause) From the bottom of our hearts we thank the CPSU, the Soviet government, the AUCCTU and the Komsomol Central Committee for this honored award. (stormy applause)

Our happiness has been multiplied many times over by the warm words of greeting and congratulations to the workers of Azerbaijan from CPSU Central Committee general secretary, chairman of the USSR Supreme Soviet comrade Leonid Ilich Brezhnev. (stormy, prolonged applause)

We thank CPSU Central Committee member, deputy chairman of the USSR Council of Ministers, our dear comrade Nikolay Vasil'yevich Martynov, who presented the banner to the republic, for his kind words to the party organization and workers of Azerbaijan and for his specific recommendations and businesslike advice. (stormy applause) We express our gratitude to the USSR Gossnab and to you, Nikolay Vasil'yevich, for your attention to the needs of the republic and for the help given in reinforcing its material and technical resources. (applause)

Comrades. A victory in all-union socialist competition is always honorable and happy. But the victory sustained in 1981, the year of the 26th CPSU Congress, acquires special meaning and significance.

For 12 years in a row the Azerbaijan SSR has been awarded a Challenge Red Banner of the CPSU Central Committee, USSR Council of Ministers, AUCCTU and Komsomol Central Committee. (stormy applause). And herein is embodied the indisputable fact that the economy of the republic is developing dynamically, at consistently high rates, and that the workers of Azerbaijan, not satisfied with what has been achieved, have always striven onward, to new heights. (stormy applause)

Last year, 1981, was not an easy one. The rural workers struggled for record harvests despite the elements and the adverse weather conditions. Not inconsiderable difficulties were encountered in industry, construction and transportation. But organization and selfless labor overcame all the complexities. And we accept the banner of victory on the labor front for the 1981 results as recognition of the courage, heroism and fiery Soviet patriotism of all the workers of Azerbaijan. (stormy, prolonged applause)

"...The intensive economic and social development of each of our republics." comrade L.I. Brezhnev has said, "accelerates the process of their comprehensive rapprochement." We have seen with our own eyes the wisdom and truth of these words in the example of our comprehensive cooperation and socialist competition with the workers of fraternal Georgia, Armenia and Turkmeniya and the cotton growers of Uzbekistan and Tajikistan. Year after year our cooperation is strengthened and filled with new content, and our ties become closer and our brotherhood more solid.

And we are happy beyond all bounds that the great successes engendered by our labor rivalry flow together in a mighty stream into the river of the entire country's accomplishments. We are proud that all the republics of the Transcaucasus stand--and not for the first time--in the glorious ranks of the winners in all-union socialist competition and have been awarded challenge red banners of the CPSU Central Committee, USSR Council of Ministers, AUCCTU and Komsomol Central Committee. (stormy applause). With all our hearts we congratulate the workers and party organizations of Georgia and Armenia on their remarkable new successes in the first year of the 11th Five-Year Plan and on the awards of the red banners, and we express the wish that all the years of the five-year plan will be marked with the high awards of the Motherland. (stormy, prolonged applause)

We warmly congratulate our Turkmen brothers on their new achievements in the economic and social development of their republic and wish them new successes in implementing the decisions of the 26th CPSU Congress. (stormy applause) We are pleased to greet the delegation here present from fraternal Turkmeniya, led by Turkmen SSR Communist Party Central Committee secretary Mergen Atayevich Charyyev. (stormy applause)

During the first year of the 11th Five-Year Plan socialist competition was raised to a qualitatively new level in the republic. And we were again convinced of the great creative force represented by the inexhaustible spring of the people's initiative. Hundreds of labor collectives involved in the movement for the ahead-of-schedule fulfillment of the 1981 plans honorably met their pledges.

Competition participants are concentrating their efforts on solving key economic problems, seeking out internal reserves to be used in improving production efficiency and work quality, improving organization and discipline on all sectors and achieving high final results. Thus, in practice the creative impetus imparted by the 26th CPSU Congress is enriching the content of socialist competition, giving it even greater depth and purposefulness and even greater strength and urgency, and embodying it in new accomplishments. (stormy applause)

Thanks to the highly productive labor and the enormous enthusiasm, will and skill of the kolkhoz farmers, sovkhoz workers, vehicle operators and specialists, and the great organizational work by party, soviet and agricultural organs, the volume of gross agricultural output in Azerbaijan reached a value of R2.59 billion for the first time, and topped the target set for 1981 by 16 percent.

During 1981 the construction workers, who fulfilled the capital construction program for 1981 for all main indicators, moved with a confident step to realize the stepped-up program for the 11th Five-Year Plan.

During 1981 much was also done to implement the program put forward by the 26th CPSU Congress for a further upsurge in the well-being of the people. National income used for consumption and accumulation rose 6 percent. Per capita real incomes increased 2.7 percent. Average monthly wages for workers and employees and wages for kolkhoz farmers increased. Payments and bonuses from public consumption funds rose 7 percent. The volume of trade turnover increased almost 7 percent, and of domestic and everyday services for the public, 15 percent.

In a word, comrades, the workers of Azerbaijan have successfully passed the first examination of the 11th Five-Year Plan and have fulfilled with honor the plans and their own socialist pledges and shown themselves capable of handling the increased and responsible tasks, and the republic has rightly been awarded the Red Banner of the Motherland. (stormy applause) The baton of the Red Banner has been passed on through the 9th and 10th five-year plans to the 11th Five-Year Plan and we are confident that the working class, the kolkhoz peasantry and the intelligentsia of Azerbaijan will in the future continue this remarkable tradition and multiply their contribution in solving the tasks set by the party. (stormy applause)

The high award of the Motherland has been awarded to the capital of Soviet Azerbaijan, Baku, and to the Nagorno-Karabakhskaya Autonomous Oblast, Kirovabad city, Bardinskiy, Dzhalilabad and Lenkoranskiy rayons, and to 40 enterprises, associations, organizations, kolkhozes and sovkhozes. (applause)

Today, on this ceremonial day, we warmly congratulate the collectives awarded red banner on their great labor victory and wish them new successes, new accomplishments. (stormy applause) Let the number of red banner collectives increase with every passing year, and let their contribution to the achievements of red banner Azerbaijan grow! (stormy applause)

The valorous working class of Azerbaijan has marked 1981 with selfless shock labor. It not only insured substantial growth in industrial output but also further progressive changes in the structure of industrial production and improved output quality.

We have special feelings of gratitude toward the republic's rural workers, the heroes of 1981's difficult harvest. Their labor feat will be entered as a bright page in the annals of Soviet Azerbaijan! The best of the best have been presented with state awards. Today a USSR Supreme Soviet Presidium ukase has been published awarding the title of Hero of Socialist Labor to tobacco grower Ziyarfat Aliyeva (applause), cotton grower Shamama Aliyeva, who is also a mother-heroine (applause), grape-grower's team leader Ali Aliyev (applause), milkmaid Makhmuzar Kurbanova (applause), first secretary of the Dzhalilabad party raykom Ibragim Kurbanov (applause), kolkhoz chairman Gyul'abbe Khalilov (applause) for achieving high results and for labor heroism shown in fulfilling plans and socialist pledges to increase the production and sale to the state of cotton, grapes, vegetables and other agricultural produce. Some 4,000 competition leaders have been awarded orders and medals of the USSR.(stormy applause)

With all our hearts we congratulate the award winners and we warmly thank all the cotton growers and grape growers, grain growers and vegetable growers, tea growers and tobacco growers, livestock farmers and silk growers of the republic. (stormy applause) We wish you health and prosperity and even larger harvests in the second year of the five-year plan. (prolonged stormy applause)

The many-thousand-strong army of construction workers in the republic demonstrated models of highly productive labor last year. We are grateful to our construction workers for their inspired work and for their fulfillment of crucial pledges, and we wish them new successes and even smoother operations on the construction conveyer line. (stormy applause)

It is with special gratitude that we note today the worthy contribution made to the republic's achievements by our remarkable intelligentsia--the scientists and writers, the journalists and artists, the teachers and physicians, the composers and actors. Each on his own sector promotes the further upsurge and burgeoning of Azerbaijan science, literature, art, the press, radio and television, people's education and public health. With all our heart we wish the figures of science and culture new creative achievements, good health and personal happiness (stormy applause)

Although the republic's industry has coped with the plans for the first 2 months of the year for the sale and production of output, we think that a production growth rate of 5.4 percent does not correspond to the possibilities of our inudstry. Many untapped reserves remain in industry, the number of lagging enterprises has increased and there has been a drop in the proportion of output awarded the Sign of Quality and a number of other technical-economic indicators have fallen off. Enterprises of the ministries light and local industries and of the petroleum refining and petrochemical industry did not insure completion of the 2-month plan during January-February and were operating below capacity.

The chiefs of ministries and administrations must carefully analyze the results of the 2-month period and take effective steps to liquidate lagging and insure fulfillment of the quarterly plan by every enterprise, without exception. Party committees must strengthen control over the course of the fulfillment of plans and socialist pledges and be more exacting toward economic leaders and enhance their responsibility.

Winter field work is now a most important sector of operations. On the whole. conditions during the fall-winter period have favored the development of winter crops and full harvests per hectare. However, these possibilities are not being fully utilized, and at many kolkhozes and sovkhozes the proper agricultural-technical approach to the sowing is not being insured. Harrowing and crop irrigation during the vegetative period, and crop protection against rodents are being carried out at extremely inadequate rates.

At the Azerbaijan Communist Party Central Committee plenum that took place in December of last year a conrete task was put forward--to bring into readiness all soil-working and sowing equipment by no later than the end of February, and grain-harvesting and root-harvesting equipment no later than the end of May. On the whole the program outlined for preparation of equipment is being fulfilled. The level of readiness is higher than last year. However, in a number of rayons to this very day 20 to 40 percent of tractors remain unserviced and rates for the repair of grain-harvesting combines and root-harvesting equipment are low.

The Ministry of Agriculture, the Ministry of the Fruit and Vegetable Industry, the State Committee for Viticulture and Winemaking and the State Committee for the Supply of Production Equipment for Agriculture and their local organs, and party and soviet organs must take specific steps to eliminate existing shortcomings and insure timely and complete readiness of the vehicle and tractor inventory.

The task of rural workers is to mark this jubilee year of 1982 with record harvests of grain, cotton, grapes, vegetables and all agricultural crops, accelerate growth rates in cattle and poultry productiveness, and pass last year's level for all indicators. (stormy applause)

The republic's construction workers have begun 1982 not badly at all. The 2-month plans for capital investment and construction and installation work have been fulfilled. Most contract organizations worked successfully. Compared with last year the volume of work completed by the Ministry of Rural Construction, the Azerbaijan Regional Administration of Power System Construction and the Azerbaijan Transportation Trust increased substantially. On the whole the plan for capital investments and construction and assembly work was completed for 36 important construction projects nearing completion, as confirmed by the Azerbaijan Communist Party Central Committee Bureau.

This year's crucial tasks dictate the need to reinforce party control over fulfillment of plans for capital construction, raise the level of organizational work at construction sites, focus attention on construction of the most important projects nearing completion, and create all conditions necessary for highly productive work by construction workers. It is our duty to underpin the successes achieved in capital construction last year and to insure stable work in this most important sector. (applause)

Dear comrades. The tasks that we must resolve are large and complex but we are resolving them; and resolve them we must. "...The Soviet people," comrade L.I. Brezhnev said at the 26th CPSU Congress, "look confidently to the morrow. But their optimism is not the self-opiniatedness of a favorite of the fates. Our people know that everything they have has been created through their own labor and defended with their blood. And we are optimists because we believe in the force of labor. Because we believe in our country, in our people. We are optimists because we believe in our party and know that the the road it points out is the only correct one!" (stormy, prolonged applause)

Glory to the valorous workers of Soviet Azerbaijan! (stormy applause)

Long live our great Motherland--the Union of Soviet Socialist Republics! (stormy applause)

Long live the fraternal friendship and unity of the Soviet peoples! (stormy applause)

Honor and glory to the Communist Party of the Soviet Union--the party of the builders of communism! (Stormy, prolonged applause. All stand. Cries of greeting are heard in honor of Red Banner Azerbaijan and its glorious workers, in honor of the fraternity and friendship of the Soviet peoples, and in honor of the party of Lenin and its Central Commiittee led by comrade L.I. Brezhnev)

UZBEK SSR SUPREME SOVIET SESSION ANNOUNCED

[Editorial Report] Tashkent PRAVDA VOSTOKA in Russian on 27 March publishes on page one a 100-word decree of the Uzbek SSR Supreme Soviet Presidium announcing the fifth session of the tenth convocation of the Uzbek SSR Supreme Soviet to be convened on 27 April 1982 in Tashkent. The session will discuss the issues of improving the population's standard of living, the work of the Permanent Commission of the Uzbek SSR Supreme Soviet on Industry and the certification of the Uzbek SSR Supreme Soviet Presidium ukases.

BELORUSSIAN ARTISTS' CONGRESS HELD

[Editorial Report] Minsk SOVETSKAYA BELORUSSIYA in Russian on 19 February carries a 200-word BELTA report on the 11th congress of Belorussian Artists which opened in Minsk on 18 February. About 500 artists, draftsmen, sculptors and masters of decorative-applied art gathered in the Palace of Culture of Trade Unions to discuss artistic creativity of the past 5 years and the fruitful participation of those active in the creative arts of the republic in accordance with the directives set forth by the 26th CPSU Congress.

Taking part in the presidium of the Congress were T.Ya. Kiselev, candidate member of the CPSU Central Committee Politburo and first secretary of the Belorussian CP Central Committee; I.Ye. Polyakov, chairman of the Presidium of the Belorussian Supreme Soviet; A.N. Aksenov, chairman of the Belorussian Council of Ministers; A.T. Kuz'min, secretary of the Belorussian CP Central Committee; N.L. Snezhkova, deputy chairman of the Belorussian Council of Ministers; V.A. Radionov, instructor of the CPSU Central Committee; G.A. Ivanov, USSR deputy minister of Culture; T.T. Salakhov, first secretary of the board of the USSR Union of Artists; and guests from fraternal republics, heads of Belorussian creative unions, noted writers and artists of the republic and representatives of workers collectives.

The delegates of the congress were greeted by T.T. Salakhov, first secretary of the board of the USSR Union of Artists; S.P. Tkachev, chairman of the board of the RSFSR Union of Artists; V.V. Shatalin, first secretary of the board of the Ukrainian Union of Artists; and V.I. Kurlov, RSFSR national artist from Leningrad.

ALIYEV UNVEILS MONUMENT TO AZERI ARTIST

[Editorial Report] Baku BAKINSKIY RABOCHIY in Russian on 24 March carries on pages one and two a 3500-word report of the dedication ceremony of a monument to Dzafar Dzhabarly, writer and dramatist of the end of the 19th and early 20th century. Candidate Member of the CC CPSU Politburo and First Secretary of the Azerbaijan SSR CP Central Committee, G.A. Aliyev, spoke at the festivities. He talked of the talents and accomplishments of Dzhabarly and of his ties to the October Revolution, stating that the writer's works are tied to the "principles of the new revolutionary art" and calling him "one of the founders of socialist realism".

A.C. Ivanov, secretary of the USSR Union of Writers also spoke at the ceremony with praises of Dhabarly, as did Azeri writer Suleyman Rustam, Uzbek dramatist Izzat Sultan, Georgian theatrical artist D.A. Aleksidze and Azeri theatrical artist Sh. B. Badalbeyli.

[Editorial Report] Frunze SOVETSKAYA KIRGIZIYA in Russian on 14 March, page 1, features a 2,000-word report on the award of the Challenge Red Banner of the CPSU Central Committee, AUCCTU and Komsomol to Narynskaya Oblast for its successful completion of the 1981 state economic plan. At the ceremony T.U. Usubaliyev, CPSU Central Committee member and first secretary of the Kirghiz CP Central Committee, addressed party representatives, industry leaders, and representatives of trade-union, Komsomol and agriculture organizations. Usubaliyev noted that the oblast's achievements were the result of "great organizational and mass-political work," and he dwelt in detail on the achievements of the "better rayons, farms and leading workers of the oblast." While citing progress in sheep raising, field culture and feed procurement, Usubaliyev also noted that there were "shortcomings and oversights." Several rayons were criticized for allowing "unused reserves," particularly in livestock and feed production. Usubaliyev concluded by expressing the certainty that those inspired by the high award would apply their greatest efforts in fulfilling the "historic decisions" of the 26th CPSU Congress.

KAZAKHSTAN KOMSOMOL CONGRESS OPENS

Alma-Ata KAZAKHSTANSKAYA PRAVDA in Russian 23 Mar 82 p 2

[Article by S. D'yachenko, second secretary, Kazakhstan Komsomol Central Committee: "Devote Pace-Setting Work by the Youth to the Five-Year Plan Period"]

[Text] The republic's Komsomol members and youths are witnessing a remarkable event: on 23 March the 15th congress of Kazakhstan's Komsomol is beginning its deliberations. Its delegates are to discuss the performance of the republic's Komsomol organization and to outline the ways of increasing the role and activity of our union.

The youths of the republic celebrate their congress with remarkable labor accomplishment, displaying energetic activity and initiative in fulfilling the decisions of the party and preparing to celebrate the 60th anniversary of establishment of the USSR and the 250th anniversary of the voluntary union of Kazakhstan with Russia. The efforts of the youth are directed toward translating into reality the important tasks outlined by the 26th CPSU Congress and the 15th Congress of the Kazakh CP, the tasks of the 11th Five-Year Plan, and the directives of comrade L. I. Brezhnev contained in his speech at the November (1981) Plenum of the CPSU.

We can be rightly proud in that young men and women are successfully laboring on every sector of communist construction. Every third Komsomol member has fulfilled ahead of schedule his personal plans and pledges for the 10th Five-Year Plan. More than 250,000 young men and women and more than 3,000 Komsomol-youth collectives have completed the tasks of the first year of the 11th Five-Year Plan two months ahead of schedule. In the vanguard of socialist labor competition there stride 660,00 young shockworkers of communist labor, and 130,000 young production workers participate in manufacturing products bearing the Quality Brand.

The congress delegates include Il'ya Verigin, smelting worker at the Ust'-Kamenogorsk Lead and Zinc Combine; Aybarshin Zharaspayeva, mechanizer at the Sovkhoz imeni Mayakovski, Kustanayskaya oblast; Sulu Zhaulybayeva, shepherdess at the "Buzachinskiy" Sovkhoz, Mangistauskiy rayon, Mangyshlakskaya oblast; Tat'yana Shapovalova, press operator at the S. M. Kirov Plant in Petropavlovsk; and many others. They all have reported on the fulfillment of the increased pledges adopted in honor of the 15th congress of the republic's Komsomol.

The patriotic movement, "Devote the Pace-Setting Labor, Knowledge, Initiative, and Creativity of the Young to the 11th Five-Year Plan!" is being translated into reality. The Komsomol exercises patronage over capital construction, services and trade.

The pattern of geographical distribution of Komsomol construction projects is wide. It covers 29 all-Union and republic construction sites, plus 250 oblast, city, and rayon sites--all declared to be "shock" projects. Thousands of young men and women are taking part in the construction of the Karaganda Metallurgical Plant, the Shayremskiy Mining and Concentrating Combine, the Chimkent Rubber and Asbestos Combine, the rice-growing engineering systems in Kzyl-Ordinskaya oblast, the Chilisay Phosphorite Ore Mine, and the Irtysh-Karaganda Canal. Hundreds of emissaries from Kazakhstan's Komsomol are working on the construction of BAM [Baykal-Amur Railroad Line], colonization of the Non-Chernozem Zone, and development of the oil and gas deposits of West Siberia.

The Komsomol organizations constantly energize the creative activity of the youth and recruit it for scientific and technical creativity. About 800,000 young men and women are taking an active part in the All-Union Review Contest of the Scientific and Technical Creativity of the Youth.

The Komsomol mobilizes young rural workers for the struggle to elevate the culture of farming and increase the productivity of animal husbandry, and it is concerned with improving the vocational skills of the youth. Some 546,000 Komsomol members come from the countryside. This is a vast force and it should be skillfully utilized. In the past years quite a few valuable undertakings have been conceived within the youth collectives of the farmers.

Supporting the enthusiasm of the young agriculturists, the Kazakhstan Komsomol Central Committee examined the performance of the Komsomol-youth collectives from the standpoint of the slogan:"For the 11th Five-Year Plan--Maximize the Yield per Komsomol Hectare." In the course of that examination there was conceived the effective form of the organization of labor represented by the concept of autonomous cost-effective brigades. The first brigade in this republic to convert to this mode of operation was the brigade of V. Maslikov at the Sevastopol'skiy Sovkhoz, Kustanayskaya oblast, which fulfilled in 4 years its target for the entire past Five-Year Plan.

The Komsomol each year directs more than 17,000 young men and women to work in animal husbandry. Today there operate 1,300 Komsomol-youth sheep-raising brigades, which handle more than 11 percent of the republic's total sheep population. The best indicators in the industrialization of sheep raising were achieved by the young sheep-breeders of Panfilovskiy rayon, Taldy-Kurganskaya oblast. The ranks of the sheep-breeders are being complemented by graduates of a number of schools in the Kzyl-Ordinskaya and Turgayskaya oblasts.

Rural youths are steadily mastering the use of equipment and the skills of mechanizers. The Komsomol organizations of the republic as a whole as well as of the Vostochno-Kazakhstanskaya, Kokchetavskaya, and Severo-Kazakhstanskaya oblasts were declared victors in the All-Union review of the technical training of Komsomol youth during 1980-1981.

Every Komsomol member should be an active political fighter and a conduit for the party's policy. To this goal are subordinated all the forms and means of ideological and political work with the masses, all the elements in the ideological toughening of the young generation. Currently, as pointed out by comrade L. I. Brezhnev at the 26th CPSU Congress, it is necessary to intensify the working, moral, and ideological-political education of youth and to create a living, creative atmosphere within every Komsomol organization rather than to issue countless directives. The study of Marxist-Leninist theory should be organically combined with the practical activities and personal lives of Komsomol members. We rejoice that the curriculum of Komsomol political training has become more purposive and closely related to practice. The quality of the staff of propagandists is improving. The educational role of the Leninesque behest, "Translate Into Reality the Decisions of the 26th CPSU Congress!" has increased.

During the period in between its congresses the republic Komsomol organization has become consolidated and ideologically toughened. Its ranks were complemented with worthy representatives of working and studying youth. More than 40 percent of its members are workers and kolkhoz members. The communists working within the Komsomol are genuine youth leaders.

In our Komsomol work we constantly receive assistance and support from the party organizations, the Kazakhstan CP Central Committee, the republic government, and personally from the Member of the CPSU Central Committee Politburo, first secretary of the Kazakhstan CP Central Committee, comrade D. A. Kunayev.

On self-critically assessing our achievements, we distinctly perceive unsolved problems as well. They will be fundamentally discussed at the congress. The party's behests shall be fulfilled with honor.

From the tribune of the congress we shall once more declare that Kazakhstan's youth, faithful to the deathless behests of Lenin, will consolidate communism on earth and will struggle with yet greater inspiration and enthusiasm for a successful fulfillment of the historic decisions of the 26th CPSU Congress.

TURKMEN FIRST SECRETARY GAPUROV ADDRESSES KOMSOMOL

Ashkhabad TURKMENSKAYA ISKRA in Russian 27 Mar 82 pp 1-2

[Speech by M. G. Gapurov, first secretary of the Turkmen Communist Party Central Committee, to the 27th Turkmen Komsomol Congress on 26 March 1982 in Ashkhabad]

[Text] Dear Comrades! Permit me in the name of and on the instructions of the Turkmen Communist Party Central Committee and in the name of the communists of the republic to cordially and heartily congratulate you -- and in you all the Komsomol members and the young men and women of sunny Turkmenistan -- on the opening of the 27th Turkmen Komsomol Congress and to wish you, the congress delegates, fruitful work.

It is especially pleasant for me, an alumnus of the Leninist Komsomol of the Forties and Fifties, to see you, the best representatives of the present generation and worthy continuers of the great work of communist construction, in this hall.

We, the communists of the older generation, are proud that our youth are growing up ideologically convinced, utterly devoted, ardently loving their great socialist motherland, and infinitely devoted to the legacy of Vladimir Il'ich Lenin.

Comrades! The highest forum of the republic's Komsomol has convened at a wonderful time. A little more than a year separates us from the day when the 26th Congress of the Communist Party of the Soviet Union, which truly had epic-making importance and which entered history as a brilliant landmark on the path of the triumphant procession of communism on our planet, completed its work in the Kremlin.

An entire year has passed, but how much has been done to implement the majestic plan of our party! The economy has become powerful, the defensive capability has become dependable, and the Soviet people's prosperity and cultural standard of living are being confidently raised.

In overcoming certain difficulties which were caused by the complications in the international situation and by the unfavorable weather conditions in a number of the country's rayons, the Soviet people have provided for the successful fulfillment of the plans for the first year of the 11th Five-Year Plan and have laid a reliable foundation for further forward movement.

In these successes, there is a convincing witness to the monolithic solidarity of all generations of Soviet people around the Communist Party, its Central Committee and the Politburo of the CPSU Central Committee; infinite love and trust; and their hearty support of the domestic and foreign policy of our native Communist Party and Soviet government headed by that faithful continuer of the great Leninist work, that outstanding political and state figure of modern times, an individual with whose name all progressive humanity links its hopes for a stable peace and a happy future, that wise mentor of Soviet youth -- Leonid Il'ich Brezhnev who is dear to all of us.

Comrades! The recently concluded 17th congress of the country's trade unions was still another convincing demonstration of this. The speech of Comrade L. I. Brezhnev, the general secretary of the CPSU Central Committee and chairman of the USSR Supreme Soviet Presidium, was the central event of the congress.

Each word and proposition, each thought in the brilliant and inspiring speech of Comrade Leonid Il'ich Brezhnev was permeated with a fatherly concern for the welfare and happiness of the Soviet people and with the desire to preserve and strengthen peace on the earth.

The new peace initiatives, which were put forward by Leonid Il'ich, have truly incalculable importance for the fate of the entire world. They express the good will of our people and are a witness to the immutability of our Communist Party's political course.

This course evokes a sense of legitimate pride in all Soviet people and our friends abroad and enjoys the ever growing support of all progressive humanity.

The awarding and presentation of the World Trade Union Federation's gold medal to him was a new and shining witness to the recognition of Comrade L. I. Brezhnev's outstanding services to the cause of defending peace and strengthening friendship and cooperation between peoples.

Dear Comrades! Permit me in the name of all the participants in the present congress and in the name of the communists, Komsomol members and all the workers of Soviet Turkmenistan to cordially and heartily congratulate dear Leonid Il'ich Brezhnev on the high award and to wish him good health, inexhaustible strength and courage, a lot of energy, and further fruitful work in the name of the Soviet people's happiness and for the sake of peace and the social progress of all humanity.

Comrades! All of us are still under the profound influence of the splendid, deeply interesting, inspiring, and mobilizing speech of Comrade L. I. Brezhnev during the grand meeting on 24 March of this year in Tashkent which was devoted to the presentation of the Order of Lenin to Soviet Uzbekistan.

The large honor of being a participant in the festivities in Tashkent fell to me. I would like in particular to point out that it took the shape of a very splendid demonstration of the monolithic unity of Soviet society and of the life-giving force of the friendship of our country's peoples.

Speaking at the grand meeting, at a meeting in the Uzbek Communist Party Central Committee and in personal conversations, Comrade L. I. Brezhnev posed new large tasks for the successful implementation of the decisions of the 26th CPSU Congress and the plans of the 11th Five-Year Plan.

These tasks impose on the Turkmen Communist Party and all the republic's communists, Komsomol members and workers a large responsibility for the comprehensive development of production forces and for the increase of our contribution to the strengthening of the country's unified national economic complex and the socialist motherland's economic and defensive might and further improving the Soviet people's well-being.

In carrying out these tasks, we firmly rely on the initiative, creativity and active participation of Turkmenistan's 500,000-strong army of Komsomol members.

Dear Comrades! In Tashkent, I repeatedly met with Comrade Leonid Il'ich Brezhnev. In his discussions with me, he inquired about the work of industry and transport, the progress of capital construction, the construction of the Karakumskiy Canal imeni V. I. Lenin, the work of the party organizations, and the life of the republic's workers, kolkhoz members and intelligentsia.

During one of the discussions, I told Comrade L. I. Brezhnev that we would convene a regular plenary congress of the Turkmen Komsomol in a day.

When he found out about this, Leonid Il'ich Brezhnev, who is loved and respected by all of us, asked me to convey to you, the congress delegates, and through you to the 500,000-strong detachment of Komsomol members and to all the young men and women of Soviet Turkmenistan his great greetings, congratulations and best good wishes-- to be worthy builders of a communist society in our country.

Dear Comrade Delegates! Permit me in your name and in the name of all the youth of sunny Turkmenistan to cordially and heartily thank dear Leonid Il'ich Brezhnev for his day-to-day fatherly concern for Soviet youth -- the future builders of communism, and for his warm words of greeting, congratulations and good wishes to the delegates of the present congress, to all Komsomol members and to the young men and women of our republic.

From the bottom of my heart, permit me to wish the great friend and mentor of Soviet youth, dear Leonid Il'ich Brezhnev, good health and new successes in his fruitful work for the good of the Soviet people and all progressive humanity.

Comrades! The Komsomol organization of Turkmenistan arrived at its regular congress grown numerically and strengthened ideologically and organizationally. It has acquired quite a bit of experience in mobilizing youth to carry out the decisions of the 25th and 26th CPSU Congresses and the plenums of the party's Central Committee and in the ability to concentrate the Komsomol member's efforts on the decisive sectors of economic and cultural construction.

Today, it is even difficult to imagine a sector of the economy, science or culture where the energy and creativity of Komsomol members and of our young men and women are not used.

Together with the communists and all the workers of Soviet Turkmenistan, they are working inspiredly and persistently to implement the plans for the republic's social and economic development in the 11th Five-Year Plan.

As you know, its first year plan has basically been fulfilled successfully. The overall volume of industrial production grew by 2.4 percent, and products valued at 56.5 million rubles were sold above the plan. The output of items with the state Seal of Quality increased by 13 percent.

Comrades! The republic's agriculture has been developed further. The state plans for the purchase of grain, meat, milk, vegetables, silkworm cocoons, melons, eggs, wool, and astrakhan have been fulfilled. The plan for the handing over of raw cotton of the fine-fiber types has been overfulfilled.

Our builders are also working somewhat better. The construction and mastery of the first phase of the Maryyskaya GRES [State Regional Electric Power Station] imeni V. I. Lenin have been completed ahead of time. Comrade Leonid Il'ich Brezhnev has warmly congratulated those who participated in its construction.

Science and culture have been developed further. A lot has been done to improve the working and living conditions of the people, including those of the youth, and to improve their education, way of life and leisure.

The report, which Comrade Charyyeva Zhanna Kakabaliyevna, first secretary of the Turkmen Komsomol Central Committee, will present, will talk about the contribution of Komsomol members and youth to the achievement of these frontiers and about their successes in famous causes. I only want to emphasize that the Central Committee of the Turkmen Communist Party highly values the multifaceted and fruitful activity of the republic's Komsomol and sees in it its militant and dependable assistant on whom it is possible to rely with confidence in any matter.

Dear Comrades! For all of this, my great fatherly thanks to you!

From now on let the pure fire of patriotism burn and a noble sense of personal responsibility for the tasks entrusted and for all our plans and obligations live in your hearts.

Comrades! Quite a bit has been done. We have something to be proud of. However, even more complicated and critical tasks are waiting in front of us. It is sufficient to say that during the 11th Five-Year Plan the republic must insure a growth in the production of industrial items of 21-24 percent and of the average annual volume of gross agricultural production -- of 14-16 percent. It is necessary to assimilate about seven billion rubles of capital investments and to insure a further growth in the workers' material and cultural standard of living.

It is completely understandable that in their solution we, the communists, rely with full justification on the active participation of Komsomol members and of all our youth. You are receiving modern knowledge and you are filled with exuberant energy and creative daring. These qualities, augmented by the enormous experience of the communists and the older generations of our people, will undoubtedly provide new and fruitful results in all spheres of public life.

It is comforting to note that the party's appeal -- to make the second year of the 11th Five-Year Plan a year of urgent work -- is finding an ardent response in the hearts of the youth and is receiving concrete embodiment in deeds. A total of 380,000 young men and women of our republic are participating in the wonderful patriotic movement entitled "For the 11th Five-Year Plan -- the Urgent Work, Knowledge, Initiative, and Creativity of the Youth!".

In the republic's Komsomol organizations, the socialist competition on preparing to greet the 60th anniversary of the USSR in a fitting manner is expanding with each day, the movement entitled "For Each Year of the 11th Five-Year Plan -- A Komsomol Greeting!" is gathering strength, and many other valuable initiatives and undertakings are receiving support. The younger generation is growing up and reaching manhood in shock work and the steel of their characters is being forged.

However, there are also deficiencies in this main work. We, your older comrades, see the chief one of them to be the fact that not all Komsomol organizations are succeeding in involving all the youth, without exception, in work activity; work discipline is not being observed everywhere; and high organizational ability and responsibility are not being demonstrated everywhere.

Instances of a careless attitude toward work are still being discussed rarely at Komsomol meetings and the sessions of Komsomol committees, guilty parties are not being held strictly responsible, and cases of tardiness, early departure from work and other violations of work regulations are not being publicized.

A considerable turnover of personnel is being allowed in enterprises. It is necessary to mention that the majority of those who change work are young people less than 30 years old. As an analysis shows, two-thirds of the graduates of schools and professional technical schools are leaving without having worked one year for the republic in general.

We expect from Komsomol committees an uncompromising struggle against losses of work time, idle time and absenteeism; and well thought out measures to involve the youth in production, to improve the work in the labor indoctrination of the younger relief, and to instil love and affection for the profession which has been selected.

The movement for economy and thrift is no less topical. You know how exactingly this question was posed during the 26th party congress. This is because overexpenditures and large losses of fuel,electrical energy, raw materials, and materials are being permitted and cases of mismanagement and squandering have not been overcome in many enterprises, construction projects, kolkhozes, and sovkhozes.

Here is a very wide field of activity for the Komsomol. It is necessary to involve a large detachment of Komsomol searchlight operators and the entire Komsomol activ in the struggle against these negative phenomena. It is necessary to learn to perform the work zealously and to treat each kilogram of metal and fuel and each ruble of state and kolkhoz assets thriftily.

The ever more active involvement of the newer and newer masses of youth in the struggle to create a Komsomol savings fund, in creative scientific research, and in the successful realization of the achievements of science, technology, and progressive practices is being demanded from Komsomol organizations.

Of course, Comrades, the key construction projects and the sponsorship of them must be a subject of the Komsomol's special attention. It is necessary to point out that quite a bit is being done in this direction. During the reporting period, the ranks of the Komsomol builders increased by 2400 individuals. Hundreds of the republic's Komsomol envoys are attending a school of civic and international indoctrination in the ranks of the BAM [Baykal-Amur Trunkline] builders and at projects in the non-Black Earth area and Tyumen'. Student construction detachments are performing quite a bit of useful work.

At the same time, it is necessary to mention that the Komsomol is not always engaged fully and concretely in the affairs of the sponsored construction projects. In two very important and urgent Komsomol construction projects -- the Chardzhouskiy Oil Refinery and the Maryyskiy Nitrate Fertilizer Plant -- alone, more than five million rubles of capital investments were inadequately assimilated last year. Due to the absence of the proper attention toward the creation of good working and living conditions, a large part of the volunteers, who were sent to these construction projects on Komsomol passes, are leaving.

A serious charge for this state of affairs was brought against the leaders of the construction ministries and departments; however, the Central Committee, obkoms, gorkoms, and raykoms of the Komsomol must draw concrete conclusions from this. "Urgent Komsomol Projects-- In Operation Ahead of Time!" -- this must be the Komsomol's contribution to the republic's construction five-year plan.

Comrades! As you know our party has placed the solution of the food problem in the ranks of first priority tasks. The large program for concentrating and specializing agricultural production and for shifting it to a modern industrial base, which is now being carried out, has been directed toward this.

It is understandable that energetic and highly qualified workers, who are armed with modern knowledge and who are capable of providing a solution for these qualitatively new tasks, are needed for this.

That is why we attach fundamental importance to the universal compulsory technical education of rural youth. There are definite changes for the better here. During recent years, thousands of young men and women, using Komsomol passes, have mastered machine-operator specialties and are successfully working in the fields and on the farms. The entire republic knows the names of many of them.

Nevertheless, there is a shortage of machine operators. For example, the availabilty of tractor operators permits us to use the tractor pool only during one shift-- yes and this not everywhere. Every fourth tractor is standing idle awaiting a tractor operator in Geok-Tepinskiy, Bakhardenskiy, Tedzhenskiy, Kushkinskiy, Sakar-Chaginskiy, Bayram-Aliyskiy, Maryyskiy, Karakumskiy, and a number of other rayons. You see, there are quite a few young men and women who do not have a trade, in these rayons. There are Komsomol rayon committees there. However, they evidently lack persistence and militancy in solving these tasks.

This means that it is necessary to change the attitude toward this work, pay more attention to the training of machine operator personnel, assign them to positions, observe the fate of each one of them, and create favorable conditions for their work and leisure.

Or another question. At one time the Turkmen Komsomol Central Committee declared the cultivation of corn for grain an object of Komsomol sponsorship. More than 300 Komsomol youth brigades are engaged in this work. It is comforting that among them are those who make one happy from year to year by the high yields of amber grain, receiving 100 and more quintals of grain per hectare.

However, far from all are working this way. The average yield of corn cultivated for grain fluctuates within 45 quintals per hectare in the republic when the commitment is 70. There is a tendency to lower it in the Chardzhouskaya and Maryyskaya Oblasts, and especially in Ashkhabadskaya Oblast.

In our view, this is occuring because the Komsomol committees are frequently forgetting their sponsorship duties over this important sector of agricultural prdouction. The republic Komsomol Central Committee is not displaying sufficient exactingness towards them, is not concerned about disseminating progressive experience and is not being sufficiently persistent in incorporating progressive technologies for cultivating corn.

Rural Komsomol members have many other concerns also. It is necessary to insure a genuine shock sponsorship over animal husbandry, the very rapid incorporation of progressive technologies and a comprehensive solution to the problems connected with radically improving the cultural and personal services of village workers.

All this has not only economic significance but also enormous social and political importance. It is necessary that the Turkmen Komsomol Central Committee and the republic's Komsomol organizations undertake this important task topically and with even greater force.

Dear Comrades! In the final analysis, the carrying out of all our plans will depend on people, their knowledge, culture and political consciousness.

The general educational and professional training system of the rising generation occupies a very important place now in the formation of these qualities. During this school year, more than 850,000 individuals are studying in schools, professional technical schools and secondary and higher training institutions.

The very first task of the Komsomol is to insure a responsible attitude toward the training of each student, pupil and schoolboy. It goes without saying that quite a bit is being done in this direction; however, in matters pertaining to the quality of training many pedagogical collectives and Komsomol organizations are clearly falling short of their target. The percentage of students who drop out is high like before,the number of pupils remaining for the second year in the same class is great, and little attention is being devoted to the professional orientation of the school children.

Let us say right out that there are still many unsolved problems in this work; however, the Komsomol organizations are investigating them poorly. In particular, they are not making sufficient use of such forms as pupil production brigades, work and rest camps, circles and clubs based on their interests,various reviews, contests, etc.

The work of Komsomol organizations in many training institutions, whose activity is frequently limited to the collection of dues and the conducting of meetings and other measures on a more or less regular basis and in which they forget, as a rule, the specific person because of the mass nature of the measure, needs serious improvement.

Of course, Komsomol members also must hold especially dear to their hearts everything that touches upon the indoctrination of those who today are still in the little Octobrists and the Pioneers and who tomorrow will become Komsomol members and communists and full and equal citizens of our great socialist country. Here -- as nowhere else -- initiative, tactfulness, attention, genuine Komsomol ingenuity, and youthful enthusiasm are needed.

Comrades! There is no doubt that questions concerning the ideological and indoctrinational work of the Komsomol organizations will occupy an important place in your congress.

It is pleasant to note that such outstanding qualities as ideological conviction and steadfastness, a high awareness of public duty, and infinite devotion to our native Communist Party and the socialist motherland, are becoming ever more firmly established in the younger generation.

The younger generation approves with all their heart and soul the wise foreign and domestic policy of the Leninist party and is actively participating in all the affairs of the Soviet people.

Nevertheless, we -- as true internationalists -- must henceforth be politically vigilant and strengthen the ideological and political unity of our society, the fraternal friendship of all the nations and nationalities in our country, and everything that comprises the essence of the Soviet way of life.

You know that our class enemies have now unfolded a slanderous campaign against the forces of peace and progress -- a campaign which is unprecendented in its scope and refinement. Under the false pretenses of opposing the "Sovet military threat and "international terrorism" whose label is being stuck on national liberation movements, the United States and its closest allies are conducting a genuine ideological war against our country and against all the forces of socialism, having formed an alliance in this with the Beijing leadership.

They are not sparing any efforts and resources to loosen the socialist commonwealth, discredit the achievements of real socialism, and sow doubts among the Soviet people -- especially the youth.

Therefore, the very first duty of the Komsomol organization is to unmask the lies and deceits of bourgeois propaganda in a well reasoned manner and to instil political vigilance in the rising generation.

Henceforth, it isnecessary to improve ideological work and political training, to search for a path to the heart of each individual, and to organize the study of Marxist-Leninist theory so that it integrally merges with the practical work of the Komsomol members and with their own life.

This is a very important task, comrades, and we must solve it together, painstakingly, skilfully, and persistently. There is every condition for this in the republic: the very rich literary inheritance of Marxist-Leninist classics; numerous libraries, houses and offices of political enlightenment; and mass publications of political literature and the decisions and materials of party congresses, CPSU Central Committee plenums, and the speeches and presentations of Comrade L. I. Breznev where you will find answers to every question which interests you.

Consequently, it is a matter of concretely organizing the political training of the youth, and of a broad field of activity for Komsomol organizations. We are confident that you will set an example of business-like efficiency and a creative approach in this sector.

Comrades! A powerful factor in the patriotic and international indoctrination of the youth is the fraternal friendship of the peoples of our multinational motherland. The preparations for the 60th anniversary of the formation of the USSR provides a new stimulus for this work.

Everyone well understands that all the material and spiritual valuables and all the wealth and power of our motherland are a result of the great strength of socialist internationalism, the fraternal mutual help of the Soviet peoples, and the wisdom of the Communist Party's Leninist nationality policy. The fraternal peoples owe their rebirth to this, and each republic owes its flowering to this.

We have become accustomed to seeing flowering valleys with well cultivated cotton plantations, gardens and farms; socialist cities; powerful electrical power stations; large industrial enterprises; canals; highways -- everything that surrounds us daily. One can say that this is a graphic and the best memorial to Soviet internationalism. As Comrade L. I. Brezhnev emphasized during his speech in Tashkent, internationalism under the conditions, which exist in our multinational country today, is first of all the honest, conscientious and efficient work of all the peoples in our country for the common good.

All this, comrades, is wonderful material for instilling in our youth a sense of love for our native party and faithfulness to the ideals of socialist internationalism. The Komsomol must use it in the best way in its work.

It is necessary to lovingly transmit to youth that very dear socialist tradition which was bequeathed to us by the great V. I. Lenin, nourished by the party, and held sacred by all of us-- the tradition of friendship and brotherhood to which we owe the happiness of our lives.

Comrades! The high duty of the republic's Leninist Komsomol is to carry out even more purposefully the military patriotic indoctrination of the youth and their preparation for service in the ranks of the armed forces and to instil in them a readiness for a great deed.

The Komsomol card of an 18- year-old lad, a native of Khodzhambasskiy Rayon who died on 16 September of last year in battle while performing the sacred duty of a soldier internationalist, which was pierced by a bullet and covered with blood -- the card of Khodzhanepes Charyyev -- will always remain a symbol of faithfulness to these ideals and an example of an unfading exploit. A son of the Turkmen people and a Komsomol member, he was helping to defend the freedom, independence and social progress of fraternal Afghanistan. Reared on the unfading exploit of the Soviet people and their armed forces Khodzhanepes knew that when the words "Communist -- forward!" sounded in the attacking ranks, the Komsomol members rose up alongside the communists -- he could not act otherwise. This quality of Soviet youth is increasing the heroic glory of the youth of our motherland and does not allow the call "Komsomol card, you are calling for an heroic deed!" to become old.

Komsomol organizations must henceforth actively instil courage, will and determination in youth and must pay the most serious attention to the moral, political, psychological, and military technical preparation of the youth for service in the ranks of the armed forces.

We also expect more from the Komsomol in the task of involving youth, especially children, in physical training classes and sports. You see, it is no secret that sportsare only a spectacle for many young people. Youth, who have not received the necessary athletic training, are at times encountered even among the army replacements.

The republic Committee for Physical Culture and Sports and trade union and Komsomol organizations must draw specific conclusions from this and see to it that each Pioneer, Komsomol member and young person becomes a GTO [Ready To Work for and Defend the USSR] badge holder and engages in physical training, sports and hiking on a regular basis.

How many other important questions are there, comrades, which require the Komsomol's attention! There is the organization of public services and amenities for cities and population centers, the increase of living standards, the overcoming of harmful remnants of the past, and the struggle against drunkenness, hooliganism, transgressions of the law, the squandering and plundering of the peoples property, violations of discipline, and other improper actions which we still have occasion to encounter.

Undertake their solution more boldly, advance against the various negative phenomena more decisively. You will always find party support here.

Dear Comrades! The republic's Komsomol congress is an important political event. The attention not only of young men and women but also of all the workers, party and Komsomol veterans and all the people in the republic has been rivetted on it. You came here with good words of farewell from your comrades and with interesting thoughts which had absorbed the hopes and concerns of all the republic's Komsomol.

We are confident that a fervent, business-like and principled discussion will take place and that the voice of criticism and self-criticism will resound boldly during your congress.

The Turkmen Communist Party Central Committee wishes the congress delegates fruitful work and a successful collective search for more effective ways to solve the tasks imposed by the party.

Dear Comrades! Permit me in your name and in the name of all the republic's young men and women to assure the Leninist CPSU Central Committee, the Central Committee Politburo and Comrade Leonid Il'ich Brezhnev--the general secretary of the CPSU Central Committee -- personally that the Turkmen Komsomol, in preparing to greet the coming USSR Komsomol congress and the 60th anniversary of the USSR in a fitting manner, will henceforth be a faithful and reliable helper for the republic's party organization in carrying out the historic decisions of the 26th CPSU Congress and the 22d Congress of the Turkmen Communist Party.

Allow me, dear Comrades! to deliver the greetings of the Turkmen Communist Party Central Committee to the 27th republic Komsomol congress and from the bottom of our hearts to wish you and all the young men and women of the republic new and outstanding successes and creative achievements.

ALIYEV AT AZERBAIJAN CENTRAL COMMITTEE CONFERENCE

Baku BAKINSKIY RABOCHIY in Russian 26 Mar 82 p 2

[Article: "Let's Assure High Rates and Quality for the Spring Field Operations: Conference at the Central Committee of the Communist Party of Azerbaijan"]

[Text] On 24 March the Central Committee of the Communist Party of Azerbaijan conducted a conference of the first secretaries of the party's rayon committees from the cotton-sowing rayons, with the participation of the managers of the agricultural and a number of other ministries and departments,and responsible workers of the Central Committee of the Communist Party of Azerbaijan and the AzSSR Council of Ministers. There was a discussion of the question of the forthcoming sowing of cotton and other urgent operations in cotton-growing.

An informational report was given by AzSSR Minister of Agriculture M. G. Askerov. The measures to be taken to assure the successful conducting of the sowing were reported by the first secretaries of the party's rayon committees.

The republic's cotton-growers, the speakers at the conference stated, have prepared for the spring field operations at a considerably better rate than last year. A total of 304,500 hectares has been prepared for the planting of cotton. On the entire area set aside for cotton-growing, the autumn plowing had been carried out promptly, including more than 80 percent with double-level plows. A larger amount of phosphorous, potassium, and organic fertilizers was applied than for the 1981 harvest. The plots were given a moisture charge, and leaching was carried out on the salinized plots. The farms were provided with high-grade seeds for elite and reproduction I and II varieties. On most farms the sowing technology brought up to the readiness line and conditions for carrying out the sowing at the best agrotechnical times were created.

Candidate Member of the Politburo of the CPSU Central Committee, First Secretary of the Central Committee of the Communist Party of Azerbaijan, Comrade G. A. Aliyev spoke at the conference.

The purpose of the conference that was convoked by the Central Committee, he said, was to become acquainted with the state of affairs in the rayons, in order to determine a program for the forthcoming operations and to plan the steps for overcoming the shortcomings and difficulties on the path of carrying out the very important tasks that are confronting the cotton-growers.

In 1981 the cotton-growers achieved indicators that cannot fail to gratify all of us. For the first time, more than a million tons of crude cotton were procured. One can say that during a short period of time in that chief branch of our republic's agricultural production a true revolution was carried out, and unprecedented rates in production growth were achieved. The task of the current year consists in consolidating and multiplying the large success that was achieved. A factor that inspires the cotton-growers, like all the rest of the workers in the republic, to work with a complete application of their efforts is the party's appeal -- the marking of the glorious anniversary, the sixtieth anniversary of the creation of our multinational socialistic state, the Union of Soviet Socialist Republics, by new achievements.

Comrade Aliyev emphasized that, with the considerably increased volumes of production of raw cotton, special importance is attached to the problem of the taking of all steps to improve its qualitative indicators. As is well known, that depends upon many factors, but primarily the fate of the harvest is determined by the correct organization of cotton-sowing, which should be carried out at a high agrotechnical level, with optimal time frames, over an 8-10 day period. Sowing schedules should be drawn up with a consideration of the local conditions, and it should be begun with the next few days, as soon as the temperature conditions permit. The strict execution of the schedules, the quality of the sowing, and the carrying out of the sowing at the optimal times require the daily supervision on the part of the Ministry of Agriculture, the party and soviet agencies in the republics, and the farm managers.

It is necessary to check again and again the readiness of the sowing technology and the quality of the seed material -- for every kolkhoz and sovkhoz, and for the rayon as a whole. Something that should be in the center of attention right now is the material-technical support of the subsequent stages of the field operations, particularly the bringing in of all the necessary agricultural technology, especially harvesting equipment. There is complete justification for posing the task of using machinery this year to harvest no less than 350,000 tons of cotton.

A large amount of work will have to be done within the next few days to put into complete order the irrigation system, the cleaning and repairing of the mainline canals and collectors, the hydraulic structures, the sub-Artesian wells, and to accumulate water in reservoirs, both large and small. This work also must be carried out in accordance with a strict schedule. Specific assignments for the cleaning of the interfarm and farm irrigation networks must be provided to each kolkhoz and sovkhoz. In order to accelerate the rates of these important operations, it is necessary to mobilize all the labor and technical resources. It is a matter of honor to the cotton-growers, Comrade Aliyev emphasized, to maintain the high labor enthusiasm in every work sector, to strive for high rates and quality at all stages of cotton growing and harvesting.

Comrade Aliyev then dwelt on the tasks of guaranteeing a large harvest of grain and fodder crops, the taking of all steps to increase the productivity of livestock, and the successful fulfillment of the high socialist pledges that were taken for the current year. He expressed his confidence that the republic's agricultural workers, implementing the decisions of the November 1981 Plenum of the CPSU Central Committee and the instructions of Comrade Leonid Il'ich Brezhnev, will mark the jubilee year with new glorious achievements and will gladden the Motherland with a further increase in the production and procurements of output from the fields and animal farms.

Participants in the work of the conference included Secretary of the Central Committee of the Communist Party of Azerbaijan I. A. Mamedov; and Deputy Chairman of the AzSSR Council of Ministers Sh. A. Rasi-zade.

AZERBAIJAN SSR CP CENTRAL COMMITTEE PLENUM

Baku BAKINSKIY RABOCHIY in Russian 7 Mar 82 p 1

[Text] Work of the Azerbaijan SSR Communist Party Central Committee Plenum continued on March 6, discussing the speech by Candidate Member of the CPSU Central Committee Politburo and First Secretary of the Azerbaijan SSR CP Central Committee, G.A. Aliyev, entitled: "On the Tasks of the Republic Party Organizations for the Further Development of Animal Husbandry and the Strengthening of its Feed Base in Light of the Decisions of the 26th Party Congress of the CPSU and the Statutes and Conclusions Contained in the Speeches of L.I. Brezhnev".

The following persons spoke in the discussion: N.V. Nikitin, chairman of the Ismaillinskiy Rayon kolkhoz imeni Kalinin; T.Kh. Orudzhev, minister of the Fruit and Vegetable Industry; V.K. Onisovets, deputy chief of the CPSU Central Committee Agricultural Department; A.K. Babayev, main livestock specialist at the Asatinskiy Rayon agricultural marketing production association; Kh. G. Kerimov, chairman of the Azerbaijan SSR State Committee for Supply of Production Equipment to Agriculture; M.M. Mamedov, head of "Azglavptitseprom"; M.B. Imamguseynova, milkmaid at the Khachmasskiy Rayon sovkhoz imeni 26 Baku Commissars; V.A. Guseynov, Baku Gorkom first secretary; G.A. Aliyev, director of the Azerbaijan SSR Academy of Sciences Geography Institute and academician of the republic Academy of Sciences; D.M. Asanov, Azerbaijan SSR minister of Agriculture; M.A. Mamedov, Sabirabadskiy raykom first secretary; M. Kh. Mirzoyev, chief shepherd at the Kakhskovyy Rayon kolkhoz imeni Kirov; B.B. Khalilov, director of the Azerbaijan Agricultural Institute imeni S. Agamliogly; D.M. Muslim-zade, first secretary of the Azerbaijan Komsomol; N. Kh. Abbasov, Agdzhabedinskiy raykom first secretary; A.G. Mamedov, Azerbaijan SSR minister of the Meat and Milk Industry; N.A. Aliyev, chairman of the Neftechalinskiy Rayon kolkhoz imeni Shaumyan, S.V. Mamunts, director of the Madakertskiy Rayon grape sovkhoz imeni 22nd Party Congress; I.Sh. Shamiyev, Azerbaijan SSR minister of Procurement; Sh.N. Gasanov, chief of "Glavkolkhozsovkhozstroy"; and A.K. Ibragimov, director of the Scientific Research Institute of Feeds, Meadows and Pastures.

Comrade G.A. Aliyev presented the concluding speech.

An appropriate resolution was adopted on the question under discussion. The plenum approved measures on the intensification of animal husbandry and feed production for 1982-1985 and up to 1990.

USUBALIYEV ADDRESSES FRUNZE AWARD CEREMONY

Frunze SOVETSKAYA KIRGIZIYA in Russian 21 Mar 82 pp 1-2

[Speech by First Secretary of the CC of the Communist Party of Kirghiziya T. U. Usubaliyev: "Shock Labor and Inspiration for the Five-Year Plan"]

[Excerpts] Shock and fruitful labor to increase production efficiency and improve the quality of work and to achieve the best final results has become a glorious tradition of the workers of the republic's capital. The first year of the 11th Five-Year Plan was also marked by a new victory--on the basis of the results of the All-Union Socialist Competition, the city of Frunze has been awarded with the Red Challenge Banner of the CC CPSU, USSR Council of Ministers, AUCCTU, and the CC of the Komsomol for the successful fulfillment of the State Plan for the economic and social development of the USSR for the year 1981.

On 20 March in the city of Frunze, in the Palace imeni V. I. Lenin, a city meeting was held of the party, government, trade union, and Komsomol aktiv together with representatives of workers' collectives which was devoted to the presentation to the city of the high award.

In the Presidium were members of the Bureau of the CC of the Communist Party of Kirghiziya T. U. Usubaliyev, V. A. Makarenko, P. M. Khodos, K. M. Moldobayev, and N. P. Lomov, the candidate member of the Bureau of the CC of the Communist Party of Kirghiziya Dzh. Ch. Tashibekova, the leaders of party, government, and public organizations, and advanced production workers.

The meeting was opened by the first secretary of the Frunze gorkom K. M. Moldobayev.

To the accompaniment of stormy applause the participants of the meeting elected an honorary presidium consisting of the Politburo of the CC CPSU headed by the General Secretary of the CC CPSU and Chairman of the Presidium of the USSR Supreme Soviet, Comrade L. I. Brezhnev.

The floor was given to the member of the CC CPSU and First Secretary of the CC of the Communist Party of Kirghiziya Comrade T. U. Usubaliyev.

--Dear comrades! Today is a big holiday for the workers of the capital of Soviet Kirgizstan,--comrade T. U. Usubaliyev said.--All of us are sincerely, from our hearts, glad that the inspired and selfless labor of the workers of Frunze has been crowned by our homeland's high award--on the basis of the work results for 1981 the city of Frunze has been acknowledged as victor in the All-Union Socialist Competition for the successful fulfillment of the State Plan for economic and social development and has been awarded the Red Challenge Banner of the CC CPSU, USSR Council of Ministers, AUCCTU, and CC of the Komsomol.

It is especially pleasant to note that this great labor victory which has made it possible for the republic's capital to take its place among the country's Red Banner cities for the sixth time in a row has received such a high evaluation from the party and government during this important time for the entire Soviet people--the year of the 60th anniversary of the formation of the Union of Soviet Socialist Republics. This victory is a new and convincing testimony to the selfless devotion of the workers of the capital of Kirgizstan to the great cause of the party and to the sacred and indestructible Leninist friendship of Soviet peoples.

It is with a feeling of enormous joy, dear comrades, that I carry out the commission of conveying to you and to all of the workers of the city on behalf of the General Secretary of the CC CPSU and Chairman of the Presidium of the USSR Supreme Soviet comrade Leonid Il'ich Brezhnev ardent congratulations on your deserved award and heartfelt wishes for good health, happiness, and new successes in your work for the sake of the further prosperity of our multinational Soviet fatherland.

Comrades! A profound and truly ineffacable impression was produced upon us by the vivid and inspired speech of the outstanding leader of the present day and flaming fighter for peace and social progress comrade L. I. Brezhnev at the 17th Congress of USSR Trade Unions. That entire remarkable speech is fully and entirely permeated by a concern for the bright present and future of Soviet people and of all of mankind. The theses and conclusions contained in it direct all of us toward the successful accomplishment of the fundamental tasks of economic and social development which follow from the decisions of the 26th CPSU Congress. The new constructive proposals made by Leonid Il'ich which are aimed at strengthening peace in the world, developing cooperation among peoples, and preventing the threat of nuclear war are of enormous importance.

The republic's workers, kolkhoz workers, and people's intelligentsia welcomed with a feeling of inexpressible joy the award to comrade Leonid Il'ich Brezhnev of the Gold Medal of the World Federation of Trade Unions which was bestowed upon him for his outstanding services, his great personal contribution to the defense of peace and the strengthening of friendship and cooperation among peoples, and for his consistent help in the struggle of the working class for its rights. The entire life and work of Leonid Il'ich, a faithful son of the Soviet people and a staunch Leninist-internationalist, is for each of us a vivid example of selfless service to people of labor and to the cause of the defense of peace and the security of the peoples.

Permit me, comrades, on your behalf and on behalf of all of the workers of Kirgizstan to congratulate our dear Leonid Il'ich on this high award and to wish him good health and continued fruitful work for the sake of the happiness of the Soviet people and for the good of the peace and social progress of all mankind.

A little more than a year has passed since the completion of the work of the 26th CPSU Congress. Time has convincingly confirmed the vitality of the decisions of the congress and of the theses and conclusions in the report by comrade L. I. Brezhnev. Our state's economic and defense might have grown. The moral and political unity and the friendship and solidarity of all of the nations and peoples of the Country of Soviets have grown even stronger. "Perceiving the decisions of the 26th Party Congress as being vitally their own," comrade L. I. Brezhnev said at the 17th Congress of USSR Trade Unions, "Soviet people are going forward with a firm confidence in their strength and with a clear understanding of both the difficulty and the magnificence of the tasks which have to be accomplished. This is determining the country's efficient labor rhythm and is ensuring conscientious work by the workers of our towns and villages."

The economy of our republic has been developing dynamically during the 11th Five-Year Plan. Kirgizstan industry successfully fulfilled its 1981 plan for the sale of industrial output. Labor productivity has increased, and on its basis 84 percent of the increase in industrial output has been obtained. More than 700 products have been produced with the State Token of Quality.

The rates of capital construction have increased. Fixed capital worth 782 million rubles has been put into operation--this is 15 percent more than in 1980. The workers have obtained more than a half million square meters of housing--almost 9 percent more than last year.

A remarkable success has been achieved by the builders of the Kurpsayskaya GES. In 1981 two units, each with a capacity of 200,000 kilowatts, were put into industrial operation. They have already provided the united Central Asian Energy System with 700 million kilowatt-hours of electric energy. The hydro-construction workers are making efforts to put the third unit into operation in advance, for the 112th anniversary of V. I. Lenin's birth.

The workers of the republic's agriculture are working selflessly. The plans and socialist commitments of the first year of the five-year plan for selling the state grain, potatoes, vegetables, fruit, grapes, and other crops have been fulfilled. The volume of grain production came to 1,550,000 tons. This is the first time that the republic has harvested such a large quantity of grain. The plans for procurements of animal husbandry output have also been overfulfilled.

For their successes in the All-Union Socialist Competition Narynskaya Oblast, 2 cities, 3 rayons, and 17 collectives of the republic's associations, enterprises, construction and transportation organizations, institutions, and kolkhozes and sovkhozes have been named victors and awarded the Red Challenge Banners of the CC CPSU, USSR Council of Ministers, AUCCTU, and the CC of the Komsomol: 7 of them have had their names inscribed on the All-Union Honor Board of the Exhibition of the Achievements of the Economy of the USSR.

The city of Frunze has been making the largest contribution to the socio-economic, political, and cultural development of the republic. It produces almost one-half of Kirgizstan's industrial output. Most of the republic's scientific and cultural institutions are also concentrated here. It is the capital of the republic that gave birth to the movement under the motto "All of the Orders of the Fraternal Republics On Time and With Excellent Quality" which has become known to the entire country. This movement which was approved by a plenum of the AUCCTU, the Bureau of the CC of the Communist Party of Kirghiziya, and on the pages of PRAVDA is receiving an increasingly large scope. The city's best labor collectives have been fulfilling orders from the fraternal republics on time and with a high quality level. I believe that during the anniversary year of the USSR not a single enterprise in the city will violate this rule and that all of them will ensure exact deliveries to the country's other economic regions.

The Central Committee of the Communist Party of Kirghiziya notes with great satisfaction that year after year the city's workers have been improving their work and working in a more organized manner and have been confidently increasing the city's production potential. If we take the last 10 years, during this time the city's fixed productive capital increased by 500 million rubles, or by 2.3 times. By the beginning of this year its amount came to 945 million rubles.

The city's appearance has improved. New housing quarters which are supplied with all types of engineering improvements have appeared in the place of the non-earthquake-resistant one-story adobe houses which did not have the elementary conveniences. Such large microrayons as "Vostok-1," "Vostok-6," "Yug-2," "Alamedin," and "Vostok-5" have been built.

The quality of housing construction has been steadily improving: Houses are becoming architecturally more expressive, and apartments more comfortable. The 105th series of large-panel residential houses has been successfully introduced and recognized by tenants. Compared to 1970, the city's housing fund has grown by 2,417,000 square meters and now comes to 6,395,000 square meters. During these years more than 200,000 people have received new apartments or have improved their housing conditions. But there is not enough housing, and the construction which is performed every year is still lagging behind the population's growing needs. Schools with a capacity of 17,952 pupils, children's preschool institutions for 6,220 children, hospitals with 1,760 beds, and polyclinics with a capacity of 2,980 visits have been built.

Last year operations were begun in a new production building of the garment association imeni the Komsomol with an annual capacity of more than 2 million rubles worth of garment products, a splendid bus station was commissioned, as were an automatic telephone exchange for 5,000 numbers, and other facilities.

A large amount of work has been done to improve the operations of municipal services. During the last five-year plan almost 75 million rubles worth of municipal and domestic services were provided, or 12 million rubles more than during the 9th Five-Year Plan. More than 15 million rubles in capital investments were allotted for the development of municipal services and for city improvements.

The workers of Frunze have marked the first year of the 11th Five-Year Plan with new labor achievements. The plan for the sale and production of the most important types of industrial products was fulfilled in advance, on 29 December. More than 12 million rubles worth of above-plan output was sold. The volume of production increased by 4.6 percent instead of the 4 percent called for by the plan. For the first time the entire increase in production was obtained on the basis of a rise in labor productivity. The assignment to decrease output costs was fulfilled.

The production of consumer goods has increased and their quality has improved. This output was produced in the amount of 580 million rubles and, moreover, every third product was produced with the State Token of Quality.

Every year the amount of capital investments increases. In 1981 the city's construction workers utilized 176.7 million rubles of capital investments and commissioned almost 159 million rubles worth of fixed capital.

The collectives of the enterprises of transportation, communications, trade, domestic services, and other branches of the economy are working with great responsibility for the successful fulfillment of the decisions of the 26th CPSU Congress and the assignments of the five-year plan.

The workers of the city have responded ardently to the call by the party to strengthen the regime of economy and to make efficient use of materials and energy resources. In 1981 alone Frunze workers economized 3,400 tons of metal, 10,900 tons of conventional fuel, 27.5 million kilowatt-hours of electric energy, and a large amount of other types of raw materials and materials.

The workers of Pervomayskiy Rayon are rightly considered to be the right flank workers of the socialist competition. The rayon fulfilled its annual plan for output sales ahead of schedule, on 25 December. More than 6 million rubles worth of above-plan output was sold. Compared to 1980, production increased by 6.8 percent. All of the enterprises of the rayon fulfilled their assignments for the first year of the 11th Five-Year Plan. A good start was taken by the labor collectives of Leninskiy Rayon. The rayon fulfilled its annual plan for output sales on 28 December. More than 7 million rubles worth of above-plan output was sold.

The collectives of more than 380 shops, shifts, sections, and teams and 86,000 of the city's workers fulfilled their plans far ahead of schedule, and 91 advanced production workers are already working on the account of the third year of the five-year plan.

Stable work is being done by the collective of the instrument making plant imeni the 50th Anniversary of the Kirghiz SSR. The system of "Progressive Ideas for Production" which was created here has become a reliable means of cultivating creative activeness in the workers and specialists and is helping to make fuller use of production reserves. Year after year the collective of the "40 Years of October" Garment Factory has been increasing its labor glory. Making use of the experience of the Rostov workers, all of the teams, shops, and sections here are working rhythmically. The factory collective fulfilled its annual output sales plan ahead of schedule, on 24 December. Above-plan garment products in the amount of 950,000 rubles were sold. The collective of the "Tyazhelektromash" Plant--one of the initiators of the patriotic movement "All of the Orders of the Fraternal Republics on Time and With Excellent Quality!"--is keeping its word. Last year it was the victor three times in an all-city competition under this motto. Tireless creative searches are being conducted by the collectives of the electronic computer plant imeni the 50th Anniversary of the USSR, the leather plant imeni M. V. Frunze, the "Sel'khozremont" Association, the "First of May" and imeni the Komsomol Garment Associations, and many other enterprises.

The patriotic movement for the advance fulfillment of the plans of the 11th Five-Year Plan has brought forth many remarkable advanced production workers. Among those who have already fulfilled two annual assignments are the Hero of Socialist Labor sewing machine operator at the "First of May" Garment Production Association Muken Sydykova, the member of the CC of the Communist Party of Kirghiziya, deputy to the Supreme Soviet of the Kirghiz SSR, and winder at the Frunze Cotton Spinning Factory imeni the 50th Anniversary of the USSR Satina Kulmatova, the adjuster at the "Kirgizelektrodvigatel'" Plant Yuriy Trofimovich Krivosheyev, the mechanic-assembler at the "Kirgizavtomash" Production Association Ul'yana Aleksandrovna Ivanenko, and others.

Inspired work is being done by the team leaders at the instrument making plant imeni the 50th Anniversary of the Kirghiz SSR Galina Gavrilovna Kovalenko and Svetlana Nikolayevna Biryukova, the electric welder at the agricultural machine building plant imeni M. V. Frunze Barktabas Zhaparov, the spinners at the worsted cloth combine Tursunbyubyu Nurmanbetova and Valentina Pavlovna Soldatova, the seamstresses at the "Forty Years of October" Garment Factory Aynura Zhamaldinova and Yelizaveta Vasil'yevna Solomatina, the winder at the knitted goods association Raila Adyldabekova and the knitter Lidiya Mikhaylovna Yarovaya, the driver team leader at the motor vehicle pool No 1 Boris Vasil'yevich Abrosimov, the pilot at an aviation subdivision Viktor Fedorovich Usenko, the locomotive depot mechanic Vasiliy Ivanovich Osin, and many other advanced production workers and innovators. Their professional mastery glistens with brilliant facets and each one of them is distinguished by a patriotic endeavour to do as much as possible in the name of the good of the people and in the name of our homeland.

Today we speak with pride and respect about the communists of the city who are working at their jobs. With their personal examples they carry non-party people along with them and they are doing everything for patriotic initiatives to become more and more widespread in labor collectives. All of the city's communists who are directly engaged in jobs have successfully fulfilled their 1981 personal plans and socialist commitments.

On behalf of the CC of the Communist Party of Kirghiziya, the Presidium of the Supreme Soviet and the Council of Ministers of the republic comrade T. U. Usubaliyev expressed his profound gratitude to the advanced production workers and to all of the toilers of the city of Frunze who with their selfless labor have achieved high results in the All-Union Socialist Competition and he wished them new accomplishments for the glory of our homeland.

The high evaluation by the party and Soviet government of the achievements of the workers of Frunze, comrade T. U. Usubaliyev continued, gives us immeasurable happiness, is a new source of inspiration and creative fruitful work, and summons us to struggle with even greater energy for the fulfillment of the decisions of the 26th CPSU Congress and of the assignments of the second year of the 11th Five-Year Plan.

The workers of the city have adopted high socialist commitments--to complete the assignment for this year ahead of schedule, by 29 December, and to produce 12.3 million rubles worth of above-plan output, including 3.1 million rubles worth of consumer goods. The successful fulfillment of the plans for two months testifies to the fact that the city's labor collectives are capable of performing this task.

There are reserves at every enterprise in the city. They include a further improvement of the organization of socialist competition which serves as a mighty lever of economic growth. They also include skillful work on counter-plans. And they include the active introduction of advanced experience which is aimed at the efficient use of the latest scientific and technical achievements and at a thorough increase in labor productivity.

Here are some concrete examples. Last year the output sales plan was not fulfilled by five of the city's industrial enterprises, or 5.8 percent of the total number. These are the "Mebel'shchik" Factory, the "Kirgizavtomash" and "Avtoremont" Associations, the worsted cloth combine, and the experimental machinery plant. They failed to sell output worth 9.1 million rubles.

Nine enterprises did not fulfill their plan for increasing labor productivity, 21 did not fulfill their assignment for reducing output costs, 15 failed to do so for profits, and 19 enterprises produced less output than in 1980.

An analysis shows that the reasons for the lagging by the collectives of the above enterprises are contained not only in difficulties with material and technical supply, but also in poor production and labor discipline and in a low level of the organization of work. Under today's conditions, the center of gravity of the work of collectives has to be shifted toward a thorough increase in the yield from production potential and toward a further intensification of the economy. The accomplishment of this difficult task is fully and entirely connected with the introduction of scientific achievements, advanced technologies, and the reequipping of operating enterprises. However, there are still many derelictions in this work. Thus, only 77 percent of the wool fabric production capacities are being used at the worsted cloth combine, 60-78 percent of the capacities for the production of large electrical machinery at the "Tyazelektromash" Plant, 80-84 percent of the agricultural machinery spare parts capacities at the agricultural machinery plant imeni M. V. Frunze, 58-90 percent of the capacities for the production of prefabricated ferroconcrete structures and parts at the Reinforced Concrete Products Plant-2, and 68-78 percent of the motor vehicle spare parts capacities at the "Kirgizavtomash" Association.

Around 40 percent of the workers in the city's industry and around 59 percent in its construction are engaged in manual labor. Practically every second worker is used in unskilled jobs. Scientists and specialists from our scientific research and planning institutes and from the Academy of Sciences KiSSR have the task of making an important contribution to the realization of the program to curtail manual labor.

There are large reserves for increasing production efficiency in an improvement of the use of labor resources. At a number of enterprises labor turnover is great, and losses of working time due to truancies and failures to appear at work with the permission of the administration are being reduced slowly.

Comrades! As you know, the 26th Party Congress proclaimed the slogan "The Economy Must Be Economical." In this connection, the question of economizing material resources and of their use and storage becomes an acute one. At a number of enterprises in the city, raw materials and materials and thermal and electric energy are expended inefficiently, and substantial losses are permitted during the loading, unloading, and storage of physical assets. Poor use is made of secondary raw materials.

The party attributes great importance to progressive forms of the organization of labor. We have enterprises at which a substantial increase in production is achieved without increasing the number of workers. Their experience should be imitated more actively and consistently. Speaking at the 17th Congress of USSR Trade Unions comrade L. I. Brezhnev gave especial emphasis to the role of team methods of labor.

The advantages of teams which work on a single work order are obvious. However, less than half of the workers at the enterprises of the city of Frunze are covered by such teams. This, of course, is very little, in the decree of the CC CPSU and USSR Council of Ministers on improving the economic mechanism and the decisions of the 26th CPSU Congress it is emphasized that the team form of labor organization has to become the basic one during the 11th Five-Year Plan. The efforts of all party and trade union organizations have to be directed toward achieving this.

Concern for improving the working and living conditions of the workers is inseparably connected with the concern for developing the economy. At those enterprises of the city where there are industrial goods and food stores and dry cleaning and shoe repair reception points, where there are the enterprises' own polyclinics and food is well prepared in the dining room, and where there is cleanliness in the shop and on the grounds--at such enterprises cadres are stable and they work with a good mood. The trade union organizations have to be more bold in working on the creation of such conditions.

Comrade T. U. Usubaliyev emphasized the special importance of work to realize the decree of the CC CPSU "On Work By the Party Organizations of Kirghiziya to Expand Production and Improve the Quality of Consumer Goods and to Develop the Sphere of Services." The successful fulfillment of this decree is a matter of honor for every communist and for the entire republic party organization. The party organizations of the city of Frunze must also wage the most active struggle for the accomplishment of the tasks which have been set by the CC CPSU. More attention has to be given to seeking out reserves for increasing production and improving the quality of consumer goods. Their production in the city is engaged in basically by enterprises of the light and food industry which account for 77 percent of this output. As for the enterprises of the machine building, here the proportion of consumer goods continues to be extremely low. In 1981, for example, it came to 1.3 percent at the computer plant, 1.4 percent at the agricultural machinery plant imeni M. V. Frunze, and 4.8 percent at the control and measuring instrument plant.

Comrades! The patriotic initiative of the collectives of the advanced enterprises of the city of Moscow--to hold a communist Saturday on 17 April devoted to the 112th anniversary of the birth of V. I. Lenin--has found an ardent response and wide support in the republic. There is no doubt that the collectives of all of the enterprises, organizations, and institutions, the students and pupils, and all of the inhabitants of the republic's capital will take the most active part in the communist Saturday.

This year is the year of the 60th anniversary of the formation of the Union of Soviet Socialist Republics. "This is a great holiday for our dear homeland, a holiday of the friendship of peoples,"Comrade L. I. Brezhnev said at the 17th Congress of USSR Trade Unions. "It is a triumph of our Leninist nationalities policy. And at the same time, it is a good occasion for summing up results and for defining and refining future tasks. In preparing to celebrate the glorious anniversary, we again and again check our actions against Lenin's program for the construction of the new society."

The Central Committee of our party has directed a call to the communists, Komsomol members, and workers of all of the nations and peoples of our country to celebrate the 60th anniversary of the USSR with new achievements in realizing the historic decisions of the 26th CPSU Congress, in developing our economy, strengthening the country's defense capacity, and elevating the well-being and culture of the Soviet people. The Central Committee of the CPSU has expressed its confidence that Soviet people will unite their ranks even more closely around their Leninist party of communists and will show even greater initiative and creativity, selflessness and stubbornness, and conscious discipline in the struggle to build communism in our country and strengthen peace in the world.

It is now necessary to direct the activities of labor collectives toward the successful realization of the historic decisions of the 26th CPSU Congress and the tasks set forth by comrade L. I. Brezhnev at the November (1981) Plenum of the CC CPSU and in his speech at the trade union congress, and also the decisions of the 17th Congress of the Communist Party of Kirghiziya.

Comrades! In 1984 the Kirghiz SSR and the Communist Party of Kirghiziya will be 60 years old. This is a great holiday in the life of the republic and we have to begin preparing for it today. The chief gift for the republic's anniversary is selfless and inspired labor and the successful fulfillment of the plans and socialist commitments of the 11th Five-Year Plan. To the accompaniment of the stormy and prolonged applause of the participants in the meeting comrade T. U. Usubaliyev presented the representatives of the city of Frunze with the Red Challenge Banner of the CC CPSU, USSR Council of Ministers, AUCCTU, and the CC of the Komsomol.

Comrade T. U. Usubaliyev once more sincerely congratulated all of the workers of the republic's capital on their high award and wished them good health and large new successes in their labor for the good of our socialist homeland.

USUBALIYEV SPEAKS AT OPENING OF NEW KIRGHIZ HYDROELECTRIC UNIT

[Editorial Report] Frunze SOVETSKAYA KIRGIZIYA in Russian on 17 April, pages 1 and 2, reports that T. U. Usubaliyev, first secretary of the Kirghiz CP Central Committee, appeared at the opening ceremony for the 3d unit of the Kurpsayskaya Hydroelectric Station near the city of Kara-Kul'. The new unit has a capacity of 200,000 kilowatts and began operation on 16 April, Lenin's birthday. In a speech delivered to the station's construction workers, Usubaliyev noted that the two units already in operation had produced 780 million kilowatt-hours of electric energy, which resulted in a savings of 265,000 tons of standard fuel units equivalent to 194,000 tons of fuel oil or 440,000 tons of coal. Usubaliyev reminded the workers that they had promised to have a fourth unit operational by the 65th Anniversary of the Great October Revolution.

SHCHERBITSKIY PRESENTS AWARDS TO RURAL WORKERS

Kiev PRAVDA UKRAINY in Russian 24 Mar 82 p 2

[Information Item: "High Awards from the Homeland"]

[Excerpts] A large group of rural workers has been awarded state awards of the country and the republic for the achievement of high results in their fulfillment of their plans and socialist commitments to increase the production and sale to the state of agricultural products in 1981.

On 23 March the high awards were presented by the member of the Politburo of the CC CPSU, member of the Presidium of the USSR Supreme Soviet, and First Secretary of the CC of the Communist Party of the Ukraine V. V. Shcherbitskiy.

In presenting the awards, Comrade V. V. Shcherbitskiy said: "The 26th CPSU Congress set difficult and responsible tasks for agriculture. In order to improve food supplies for the population, the growth rates of the production of cropping and animal husbandry products have to be substantially increased. This is stipulated by the Basic Directions of the economic and social development of the country and our republic for the 11th Five-Year Plan. Concrete measures to realize the food program are now being worked out under the leadership of the CC CPSU.

Last year, as is known, the weather conditions were extremely difficult. And great efforts were demanded from agricultural workers to overcome the consequences of the drought and to produce more output. In the republic as a whole the assignment for the sale to the state of grain was fulfilled with 827 million poods of it procured; that is, approximately the level of the average annual procurements in the 10th Five-Year Plan. The sale to the state of sunflowers, potatoes, fruits, grapes, and a number of other crops increased. Almost 3.5 million tons of meat, more than 12.8 million tons of milk, and around 9 billion eggs were procured. For such a year as last year these are not bad indicators.

Our party and government place a high value upon the selfless labor of Soviet people. The Presidium of the USSR Supreme Soviet has awarded orders and medals of the Soviet Union to 8,000 advanced agricultural workers in the republic who have demonstrated labor valor and achieved high indicators last year in fulfilling the plans and socialist commitments to increase the production and sale to the state of agricultural products. Nine of them who distinguished themselves to the greatest degree and demonstrated labor heroism have been awarded the high title of Hero of Socialist Labor.

For the successful fulfillment of their socialist commitments to grow large corn crops 16 advanced workers have been awarded Testimonials and Certificates of the Presidium of the Supreme Soviet Ukrainian SSR. Four corn farmers have been awarded the honorific title of Honored Agricultural Mechanization Expert of the Ukrainian SSR.

SHORTCOMINGS IN ENERGY USE, CONSUMER GOODS EXPOSED BY SUPREME SOVIET PRESIDIUM

Kiev PRAVDA UKRAINY in Russian 24 Mar 82 p 2

[Information Item: "Meeting of the Presidium of the Supreme Soviet of the UkSSR"]

[Text] On 23 March a regular meeting was held of the Presidium of the Supreme Soviet of the UkSSR under the chairmanship of the member of the Politburo of the CC of the Communist Party of the Ukraine and chairman of the Presidium of the Supreme Soviet of the Ukrainian SSR A. F. Vatchenko.

The meeting considered the work of the Soviets of People's Deputies of Rovenskaya Oblast on executing the laws regarding an economical expenditure of electric and thermal energy. The chairman of the oblispolkom P. K. Prishchepa delivered a communication.

It was noted that in carrying out the decisions of the 26th CPSU Congress and the decree of the Presidium of the Supreme Soviet "On the Work of the Soviets of People's Deputies to Strengthen the Regimen of Economy and a Rational Use of Material Resources," the oblast's Soviets of People's Deputies are effecting measures aimed at ensuring an economical and efficient expenditure of electric and thermal energy and at strengthening legality in the work of enterprises, institutions, and organizations on the utilization of energy resources. This has been fostered to a large extent by the creation of interdepartmental commissions. The questions connected with strengthening the regimen of economy and thriftiness in the use of electric and thermal energy have begun to be examined more often by the ispolkoms of the local Soviets of People's Deputies, the committees for people's control, and by trade union agencies. As a result of the work done, last year 60.3 million kilowatt-hours of electric and 119,300 gigacalories of thermal energy were economized.

At the same time, the oblast's local Soviets of People's Deputies are still not making use of all of their possibilities for strengthening the regimen of economy and are not ensuring the proper execution of the laws regarding the struggle against the squandering of energy resources.

In the materials presented for the examination of the Presidium, and in the addresses of the Deputy Chairman of the Presidium of the Supreme Soviet of the

UkSSR Yu. G. Bakhtin, the members of the Presidium A. A. Baranovskiy and A. S. Statinov, the chairman of the Committee for People's Control of the UkSSR V. S. Kutsevol, the Minister of Power Engineering and Electrification UkSSR A. N. Makukhin, and others it was noted, in particular, that the executive committees of the Soviets of People's Deputies and the interdepartmental commissions are exercising insufficient influence on the fulfillment by industrial enterprises, construction projects, and kolkhozes and sovkhozes of the plans for electric and thermal energy consumption and of the assignments and socialist commitments for economizing them. Last year more than 130 of the oblast's farms overexpended 7.6 million kilowatt-hours of electric energy. The largest overexpenditures were permittted in the city of Rovno and in Dubnovskiy, Zdolbunovskiy, Kostopol'skiy, Rovenskiy, Rokitnovskiy, and Sarnenskiy Rayons. At a number of enterprises energy resources are lost as a result of the systematic underloading or dry running of engines, furnaces, and other electric and thermal equipment. Many economic leaders make formal plans for organizational and technical measures to economize fuel and electric and thermal energy, but frequently do not see to it that they are carried out. As a result of this, last year a planned economy of 13 million kilowatt-hours of electric energy and almost 25,000 gigacalories of thermal energy was not obtained. There are also important omissions in the work of the agencies which have been given the responsibility for carrying out state supervision over the use of energy resources. The "L'vovenergo" Production Association and its oblast energy supervision department have not been doing satisfactory work to carry out the demands of the Ukase of the Presidium of the USSR Supreme Soviet "On the Administrative Responsibility of Officials for the Reckless Expenditure of Electric and Thermal Energy." Insufficient control over the work of subordinate bodies is being exercised by the republic's Ministry of Energy and Ministry of Housing and Municipal Services, and they are providing too little of the needed help in the localities. The agencies of people's control are also doing poor work in the struggle against mismanagement in the use of energy resources, especially in agricultural production.

In summing up the results of the exchange of opinions, A. F. Vatchenko emphasized that an economical and rational use of material and energy resources is acquiring paramount importance today. These issues were emphasized at the 26th CPSU Congress, the November (1981) Plenum of the CC CPSU, and in the speech by Comrade L. I. Brezhnev at the 17th Congress of USSR Trade Unions. Thrift and strict control over the use of resources have to constantly be in the field of vision of party and government agencies. The Soviets of People's Deputies, ministries and departments, and economic leaders have to give more attention to the questions of the organization of production, bring about the development at every enterprise of substantiated organizational and technical measures to decrease the expenditure and losses of all types of energy, and constantly control their fulfillment. In ensuring strict compliance with the laws in effect and the eradication of cases of mismanagement and waste, more effective use has to be made of economic stimuli and of the work experience of advanced collectives and individual workers, and action has to be taken against the leaders of production associations and enterprises and organizations which do not comply with state discipline. There has to be a further strengthening of the interaction between the permanent commissions of the Soviets, the agencies of people's control, and the broad public, and every means must be used to cultivate in the population a sense of thrift and a proprietary attitude toward the use of electric and thermal energy, embracing with this work every labor collective, educational institution, and family, and making wide use of the mass information media.

The Presidium bound the executive committee of the Rovenskaya Oblast Soviet of People's Deputies to eliminate existing shortcomings and to direct organizational and educational work toward the mobilization of the workers for a more economical and efficient use of energy resources and a more solicitous attitude toward socialist property. Concrete assignments for the absolute execution of the law on these matters have been set for the republic's government agencies, ministries, and state committees and departments.

The Presidium heard a report by the chairman of the Zhitomir gorispolkom I. F. Kostruba on the work of the city's Soviets of People's Deputies to carry out the decree of the CC CPSU "On Measures to Further Improve Work with Workers' Letters and Suggestions in the Light of the Decisions of the 26th CPSU Congress."

As was noted at the meeting, the city's soviets are taking measures to improve the examination of letters, to organize the personal reception of citizens, and to better satisfy their needs. However, the study and elimination of the causes which give rise to complaints and the performance of measures to meet the daily needs of the population require substantial improvement in the ispolkoms of the city and rayon soviets and at a number of enterprises, institutions, and organizations. Not everywhere has there been established an exact registration of citizens' solicitations and control over the fulfillment of the decisions which are taken on them. A system of receiving the population at places of work and residence by leading workers of state and economic agencies has not been worked out. Frequently instances of a formal attitude toward the valid complaints of workers give rise to repeat solicitations by citizens and petitions by them to superior agencies on questions which ought to be resolved locally.

Speaking on this question, A. F. Vatchenko emphasized that in providing for the overall economic and social development of their territories, the Soviets of People's Deputies are obliged to give more attention to the everyday needs of the workers--to housing, commerce, the service sphere, transportation, improvements, health care and education, the production of consumer goods--to everything that determines the well-being and feelings of people. The soviets have to be more attentive with respect to the orders of voters and the examination of the letters and suggestions of workers as a most important channel of connection with the masses and for the study and registration of public opinion and the needs of the population. Full use has to be made of the authority which has been granted them with regard to the cooperation of resources, the style, form, and methods of their work have to be decisively improved, and checks, meetings, and conferences which do not influence an improvement of the situation have to be avoided. The permanent commissions, deputy groups, and public population formations have to be enlisted more actively in an examination of citizens' solicitations and in accomplishing all the tasks of economic and social and cultural construction. It is necessary to delve more deeply into the life of production collectives, increase the personal responsibility of leaders and officials for the correct organization of work with the letters, suggestions, and oral addresses of the workers, train them on the basis of the best experience, and create an atmosphere of intolerance toward any manifestations of inattentiveness and formalism with respect to the needs of people.

In the decree which it adopted the Presidium called the attention of the ispolkom of the Zhitomir city Soviet of People's Deputies to the shortcomings and omissions in its work with the letters and proposals of workers, and bound it to take the necessary measures to eliminate them and to establish effective control over the strict execution of the corresponding decisions of party and government agencies.

Consideration was given to the questions regarding awards for mothers with many children, the acceptance into citizenship in the UkSSR, and certain others.

The discussions was participated in by the member of the Politburo of the CC of the Communist Party of the Ukraine and Chairman of the Ukrainian Council of Trade Unions V. A. Sologub, the Deputy Chairman of the Presidium of the Supreme Soviet of the UkSSR V. S. Shevchenko, the members of the Presidium G. I. Gubtovskiy, G. I. Revenko, and N. G. Tokar', the Chairman of the Supreme Court of the UkSSR A. N. Yakimenko, and others.

HUNGARIAN AMBASSADOR VISITS WITH MOLDAVIAN AGRICULTURE OFFICIALS

Kishinev SOVETSKAYA MOLDAVIYA in Russian 13 Mar 82 p 3

[Article by unnamed ATEM correspondent: "Acquaintance with the Republic"]

[Text] M. Szűres, ambassador extraordinary and plenipotentiary of the Hungarian People's Republic completed his visit to Moldavia.

He held discussions with V. A. Ryabchich, chairman of the council of Kolkhozes of the MSSR, M.F. Lupashku, minister of agriculture, and V. N. Bardash, minister of fruit and vegetable growing management of the republic. They informed their guest of the progress in implementing the agrarian policies of the CPSU, the resolutions of the 26th Congress of our party, and told him about the process of concentration and specialization of agricultural products based on interfarm cooperation and agroindustrial integration.

M. Szűres met with activists of the Moldavian Society of Friendship and Cultural Ties with Foreign Countries and the republic's division of the Society of Soviet-Hungarian Friendship. Participants in the discussions were G. A. Stepanov, discussion chairman and first deputy chairman of the Council of Ministers of the MSSR.

The ambassador visited the Exhibition of Achievements in the National Economy of the MSSR; the "Viyerul" and "Dnestr" scientific industrial associations; inspected the "Pamyat' Il'ichu" interkolkhoz orchard in the Slobodzeyskiy rayon; and became acquainted with the system of trickle irrigation in the "Moldova" interkolkhoz orchard in the Grigoriopol'skiy rayon.

He was accompanied on his trip through the republic by P. V. Komendant, minister of foreign affairs.

In a conversation with the ATEM correspondent, M. Szűres said:

"First of all, I would like to express my profound gratitude to the leaders of the MSSR for giving me an opportunity to visit and get acquainted with the republic; for the warm, fraternal greeting, the feeling of true friendship and care which the Moldavian people have for the Hungarian people.

"I was fortunate to come to your rayon during the 60th anniversary of the founding of the USSR. The noteworthy jubilee was duly celebrated by the working classes of the republic with the great successes they achieved within a brief period in history. We rejoice in these successes, evidence of the triumph of wise Leninist national policies and the result of fraternal mutual assistance of all Soviet peoples."

The ambassador noted with satisfaction that during his stay in Moldavia he had a chance to see how fruitfully the republic is cooperating with Hungary within the framework of an intergovernmental program between the Soviet Union and Hungary. "The close ties between our countries," he said, "are being developed in all directions. This concerns industry, agriculture, science and culture. The continuous exchange of experience, delegations of party workers and expert groups enables us to jointly tackle many problems and to increase the efficiency of management and the economy as a whole." There are good prospects for further expansion and deepening of Soviet-Hungarian cooperation, and that of Moldavia and Hungary, and these were discussed with the leadership of the republic. "I am confident that the plans which we have drawn up will be successfully implemented and will benefit our peoples," concluded M. Szűres.

On March 12, the Hungarian ambassador to the USSR took off for Moscow.

KISELEV ADDRESSES BELORUSSIAN KOMSOMOL CONGRESS

Minsk SOVETSKAYA BELORUSSIYA in Russian 27 Mar 82 pp 1-2

[Excerpts] Comrades! Being in the midst of you and listening attentively to the discussion that you have been conducting with a great amount of responsibility and political maturity about your place, your role in the resolution of the tasks of communist construction, one feels a sense of pride in our Komsomol members, our young men and women who have been taking so close to their hearts the deeds and concerns of our beloved party and the entire Soviet nation. The chief landmarks in life, labor, and training for us, as they are for all the rest of the young people in the country, are the immortal behests of Lenin, the ideals of the Great October.

The congress of the twice decorated Komsomol of Belorussia -- one of the combat detachments of the VLKSM [All-Union Komsomol] -- is an important event in the social and political life both of our young contemporary and of many generations of workers in the republic. And that is completely natural. The marchers in the ranks of the republic's Komsomol organization number more than 5 million persons who, in various years, attended this remarkable school of ideological-political, labor, and moral training. One remembers this kind of school forever.

Please allow me, dear comrades, to communicate to you, to all the Komsomol members whom you represent here, a cordial greeting from the Central Committee of the Communist Party of Belorussia and from all the Communists in the republic.

The most important thing in the Komsomol's work is to aid in the development of a generation of people who are politically active, who know the job at hand, who love labor and know how to work, who are always ready to defend our Motherland. That is the task that the 26th CPSU Congress has given the Komsomol. The manner in which that task is being fulfilled by our republic's Komsomol organization was mentioned in detail in the report that was given by Secretary of the LKSMB [Belorussian Komsomol], Comrade Vladimir Pavlovich Shaplyko; in the speech by Secretary of the Central Committee of the VLKSM, Comrade Viktor Maksimovich Mishin; and in the statements made by the delegates representing all segments of the youth -- workers and kolkhoz members, construction workers, technical and creative intellectuals, employees, university students and schoolchildren, Komsomol workers, and servicemen.

Many interesting ideas and thoughts, as well as critical comments, were expressed at the congress. It is necessary to make sure that not a single beneficial proposal or critical comment is left without a proper reaction being taken to it. These include questions both for the Komsomol Central Committee and for the ministries and departments, and yes, even for the republic's party agencies.

It is completely understandable that the questions that are in the center of your attention are those that involve the participation of the Komsomol members and other young people in creative labor for the good of our socialist Motherland. It is precisely in that labor that the best qualities of the young person are confirmed and manifest themselves with the greatest fullness.

At the present time young people up to the age of 30 years constitute 27 percent of the persons employed in the republic's national economy. And it will be no exaggeration to say that they are working everywhere arduously, with a creative spark, with enthusiasm. On the basis of the results of the work of industry during the first year of the five-year plan our republic was awarded the challenge Red Banner of the CPSU Central Committee, the USSR Council of Ministers, the AUCCTU, and the VLKSM Central Committee, and, as a result of the successful fulfillment of the plans and pledges for the sale to the state of the basic types of output of vegetable husbandry and the preterm activation of a number of new capacities in light industry, the workers of Belorussia were warmly congratulated by Comrade L. I. Brezhnev, and in both regards a large amount of the credit goes to your glorious youth.

Many of those whom we see in this auditorium came here both with credentials as congress deputies and with reports concerning victories in the socialist competition. They are the best of the best in that detachment of 120,000 young workers in our republic who completed ahead of schedule their personal plans for the first year of the five-year plan and wrote brilliant pages into the work biography of the Belorussian Komsomol.

I too would like to express to them my heartfelt thanks and to express my profound gratitude to our entire young guard for their inspired labor in the name of the flourishing of, and to the glory of, the Country of Soviets.

May the ranks of the young innovators and advanced workers in production continue to multiply, and may the contribution being made by our republic's Komsomol members to the nationwide property continue to grow!

Because we still have a lot to do, we still have many large and responsible jobs. There are difficulties and shortcomings which have to be overcome. I would like to point out, in particular, to the fact that, although the present year was begun rather well by the republic as a whole, some of the enterprises have not been fulfilling their assignments for the sale of output or for increasing labor productivity. Certain rayons, kolkhozes, and sovkhozes have not been coping with their plans for production and sale to the state of milk and meat, and this is lessening our opportunities to provide for the more complete supplying of foodstuffs to the public. The republic's party and state agencies are undertaking the necessary steps to eliminate the shortcomings that exist and to improve the situation in every sector of the economic front.

I feel that it is necessary to direct your attention to certain socioeconomic and ideological-educational tasks to the practical realization on which the efforts of the Communist Party of Belorussia are currently concentrated.

As you know, our party, being concerned about the creation of a solid basis for guaranteeing the further rise in the standard of living of Soviet citizens, brought before the 26th CPSU Congress as the chief problem in our economic policy the completion of the changeover of the national economy to the chiefly intensive method of development. Putting it another way, it is a matter of having the results of production grow more rapidly than the expenditures for that production, a matter of producing more output of better quality, while using fewer material and labor resources.

The key to success here is in the effectiveness and quality of the work performed by everyone -- and we mean everyone, whether he be a worker or kolkhoz member, a specialist or scientist, a production veteran or a young laborer. The fight for the acceleration of scientific-technical progress opens up a broad vista for a creative search, for the application of the energy and knowledge of youth.

Our young people have everything they need to be in the front-line positions in the struggle to improve technology and technological processes, and to organize labor and production. Young men and women today are entering labor life with a large amount of varied knowledge. Judge for yourselves. Almost 90 percent of the young workers in the republic up to the age of 30 years have higher, incomplete higher, secondary special, or general secondary education. I might note, in passing, that during the years of the First Five-Year Plan the average level of education among the workers was only 2.5 years of primary school.

The Komsomol organizations, as was already mentioned at this congress, have accumulated a large amount of experience in involving young people in scientific-technical creativity. However, it is possible and necessary to do considerably more in this direction. You will agree with me that the fact that among the efficiency experts and inventors in the republic, young production workers constitute only 22 percent gives justification for raising the question in this way.

Consequently, one of the specific tasks of the Komsomol is to guarantee the mass and effective participation of the young workers in the fight for the acceleration of scientific-technical progress, for the taking of all steps to increase labor productivity. This requires the development in them of a lively interest in everything that is new and advanced, a striving to be bold and to create, to get the job done.

In our everyday labor life one sees the constant birth of patriotic undertakings, valuable experience, which deserve the broadest support. At the 17th Congress of Trade Unions Comrade L. I. Brezhnev convincingly spoke about the large importance of the new forms of brigade organization and incentives for labor.

Well-organized comprehensive brigades working on the basis of a single work order, as has been demonstrated by practical life, not only guarantee a considerable increase in the effectiveness of production, but also become for the young people a school in which they can develop their skills and their administrative abilities, a laboratory for their creative initiative. In them one sees the more rapid growth of the modern worker -- a disciplined person, who knows his job, who has a well-developed sense of being the boss in his own enterprise, his own country.

Taking an active part in introducing the brigade contract, as well as other progressive forms and methods of organizing labor, is the primary duty of the Komsomol and all the young workers.

A large number of practical questions for the daily work of the Komsomol organizations also evolve from the party's requirement to make the economy truly economical. It is necessary for this principle to be closely understood by every young person, for him to know that much here depends upon him personally. He is required to be a thrifty manager, he must know how to make efficient use of the raw and other materials to be used in his production sector, he must be able to analyze and compare the final result of the labor and the expenditures to obtain it, he must search for and activate reserves for reducing those expenditures.

One cannot become a true Komsomol member without absorbing a thrifty attitude toward the national property or to the colossal material assets that the country has at its disposal. Under conditions of the present-day scope of production, even a fraction of a percent of defective work, or unjustified waste products, result in heavy losses. It is important to be aware that these are losses both to society and to each individual citizen.

Thriftiness, the quality of output -- these are categories that are not only economic, but also moral. They reflect a person's moral outlook, the features of his character and psychology. It is absolutely necessary to take this into consideration when developing the personality of the young contemporary and worker.

The Komsomol committees and organizations use various forms and methods of participation in the fight against poor business practices, instances of absenteeism, of squandering, and sloppy workmanship. I have in mind, in particular, the carrying out of thriftiness raids, and the activities of the large number of "Komsomol Searchlight" posts and detachments. It is necessary, however, to make sure that all this work is carried out not for the sake of making a hullaballoo, as happens not infrequently, but is always distinguished by its businesslike manner and effectiveness.

The struggle to increase our country's foodstuff resources requires the complete mobilization of the efforts of Communists, Komsomol members, and all the workers in the republic. That is how our party poses the question.

A factor of special importance today is the further development of animal husbandry. A month ago that problem was considered at a plenum of the KPB [Communist Party of Belorussia] Central Committee. Concrete measures were defined to increase the production of meat and milk. A concrete assignment was given to the republic's Komsomol -- guarantee the constant influx of young personnel into animal husbandry.

It must be said that thousands of young men and women have found their vocation in this vitally important branch. The fates of many of them serve as a brilliant example of the great social recognition that we bestow upon a person who takes a highly conscientious attitude to his labor duty, who strives to work on the front line of the fight to carry out the party's policy.

I remembered Konstantin Khlebtsov also because he had expressed a sensible idea at that time. The essence of the idea was that the real work with the new generation should not end with the issuing to young people of Komsomol trip ticket-assignments to animal husbandry, as frequently happens, but, rather, should begin with them.

Has that become a rule? Unfortunately no. During the past four years, 30,000 young men and women were sent to the animal farms. It would seem that that's a rather large number. And yet, at the present time, among the workers in the republic's animal husbandry the Komsomol members and other young people constitute only a small percent. Why is that?

This was stated in this regard at the Minskaya Oblast Komsomol Conference by machine-milking operator at the Rodina Kolkhoz, Kopyl'skiy Rayon, Tamara Goncharik: "They build a farm a little bit bigger and proudly call it a 'complex' and the milkmaids and swineherds 'operators,' but the old problems remain: low level of mechanization, manual labor, lack of 'double-shifters.'" And one must agree with those conclusions.

There are questions here for all our administrative agencies and for the party, trade-union, and Komsomol organizations. The republic has a rather large number of farms to the animal-husbandry shops of which our young people go eagerly. Take, for example, the Progress Kolkhoz, Grodnenskiy Rayon. Ninety-nine milkmaids work here on the dairy-products farms alone. A third of them are young people. What has attracted them? The animal farms here are not new ones. But the labor on them is mechanized. Every worker has her days off. The services provided for the animal husbandrymen include shower rooms and attractive lounges with television receivers and libraries. The party and Komsomol organizations react sensitively to the needs and requests of the farm workers. Therefore they have a good working spirit and they are satisfied with their occupation. In recognition of the high indicators in labor, the Komsomol-youth collective at the Kazimirovskaya animal farm on that kolkhoz was awarded a memorial Red Banner of the VLKSM [All-Union Komsomol] Central Committee.

Consequently, the path to resolving the problem of personnel in animal husbandry, as well as personnel in other agricultural occupations, lies in the creation primarily of good conditions for the everyday life, labor, and recreation, and for their professional growth. This is the point of departure from which it is important for the Komsomol to proceed in its organizer and educational work.

Please allow me to express my assurance that the Komsomol members and the other young men and women in the republic who have taken on sponsorship over animal husbandry will consider it a great honor for themselves to perform shock-type labor on this shock front.

At the present time the vegetable husbandrymen on the kolkhozes and sovkhozes have a lot of urgent things to do. With every passing day there has been an increase in the rates of the field operations. Carrying them out within the optimal periods of time and efficiently, achieving the highly productive use of the technology and every working moment in sowing, constitute an important task for all participants in the spring sowing.

In the direct sense of the word this is a tremendous field of activity for the rural Komsomol organizations and the young mechanizers. And there is no doubt that they will attempt to remain in the front ranks of the competitors for the large harvest in the second year of the five-year plan.

The Komsomol has always been and remains the sponsor of the very large construction projects in the country. Today also, responding ardently to the party call, thousands of young men and women are working on the construction of the BAM [Baykal-Amur Mainline], assimilating the fuel-energy and raw-material riches of Siberia and the North, and transforming the Nonchernozem Zone. As Comrade L. I. Brezhnev emphasized in his speech at recent ceremonies in Tashkent, they are attending there a remarkable school of civilian and international education.

We are all proud of the fact that the young people of Belorussia have been making their contribution to the carrying out of these stupendous statewide programs.

The republic also has projects for which the Komsomol is a sponsor. They include the construction of the Minsk Subway, the remodeling of Gomsel'mash, the construction of new capacities in the Khimvolokno and Azot Associations, and the reclamation of the Poles'ye. It is very important for the announcement of various construction projects as being Komsomol projects to be reinforced by shock work at them, and by the prompt activation of the projects.

More than 140,000 Komsomol members in the republic are working in the service sphere. This is a critically important and troublesome sphere. It is directly linked with the satisfying of people's everyday needs. The zeal and professional efficiency on the part of its workers, and the manner in which they greet and serve a person in the store, dining room, tailor shop, in transportation, or in communal institutions, greatly determine the mood of our people, as well as their work capability.

Most of the young workers employed here are well aware of this and are conscientiously executing their functions. At the same time the public have had a large number of justifiedclaims with regard to the level of services. We must require more from the personnel in the services sphere, and must show more concern about those personnel. I think that this kind of approach will be the correct one.

The circle of daily concerns of the Komsomol organizations is broad and varied. But the very first of them is the complete training of the young generation for their independent life, the bringing of the young people out onto the noble path of faithful service to the cause of the Communist Party and to the interests of the nation.

Labor education, occupational orientation, the development in young people of a sense of deep respect for the working professions -- those are the questions which must be constantly in our field of vision. A responsible role here is also played by the family, as well as the educational collective, and the Komsomol organization at school.

For these purposes it is necessary to increase the importance of the production-training combines. The number of such combines that we have in operation is more than 220. Many of them are working well. But there are also those which have not been completely justifying their existence. This is attested to, in particular, by the fact that only a small number of school graduates are assigned to work in the specialities that they learned at the UPK [production-training combines]. It is necessary to overcome the formalism in the activities of the combines and to guarantee a realistic combination of training and productive labor.

A good forge for training the working shift is our occupational-technical schools. At the present time 146,000 persons are studying 310 occupations in such schools. Their most important concern is to continue to improve the training of qualified personnel for the national economy. Foremen and instructors, and the Komsomol organization in the occupational-technical education system have been called upon to imbue in their students the best features of the working man -- a high level of professional skill, industriousness, adherence to Communist ideology, and moral purity.

A greater and greater influence upon scientific-technical progress and upon the growth of our spiritual wealth is exerted by the republic's higher schools. They graduate annually more than 30,000 specialists who will determine the tomorrow for production, science, and culture.

The task of the Komsomol is to promote the taking of all steps to improve the quality of specialist training and to improve the education of the students. The graduates of institutions of higher learning must have solid ideological-political training, a perfect mastery of their occupation, and an ability to work with people.

Life poses the question of the quality of education just as acutely as it does the question of the quality of labor, because training for the upcoming generation is indeed labor. It is difficult labor that requires people to take the most responsible attitude toward it. Without profound and solid knowledge, without the constant renewing of that knowledge, there cannot be any qualified worker or efficient specialist.

In the report and statements made at the congress, the speakers mentioned the vital importance for every young person to have a creative mastery of Marxism-Leninism. It is in that mastery that we derive the strength of spirit, an understanding of historic perspective, and firm faith in the triumph of Communist ideals. The arming of youth with revolutionary theory, with political knowledge, is a question of daily work both of the party organizations and of the Komsomol organizations. It is necessary to assure that the study of Marxist-Leninist theory develops in the young men and women a Communist conviction, and is closely combined with their practical deeds, with life.

Every Komsomol member must manifest high political vigilance, must be able, from clear-cut class positions, to evaluate the phenomena of social life, must be able to wage an offensive struggle against alien propaganda. That has always been important. It is especially important today, when there has been an aggravation of the international situation, when American imperialism is making impudent statements about its claims to world dominance and is fanning a military psychosis, and when floods of lies and slander are inundating the world of socialism.

As long as imperialism exists, as long as the military threat emanating from it exists, the duty of every young person is to be ready to defend the gains of socialism.

The committees of the Komsomol, the sports associations, and DOSAAF organizations must devote unceasing attention to the physical training of the young people of induction age, to involving them in classes by means of technical and applied-military types of sport. The new replacements for the army and navy must be ideologically trained, morally steadfast, and physically hardy.

As always, we must keep in the center of our attention the education of youth in the spirit of Soviet patriotism and socialist internationalism. It is necessary to reveal in a convincing manner the historic advantages of real-life socialism, the Soviet way of life, the role of the working class and the CPSU in the international consolidation of the workers, and to educate in the young people a sense of pride in the outstanding achievements of our multinational socialist Motherland, and all the fraternal republics, including Soviet Belorussia.

Our best propaganda forces should be involved in giving talks to young people. It is necessary to continue, when working with young people, to rely more broadly upon the aid provided by senior Communists, participants in the revolution, former front-liners, partisans, and members of the underground, and labor veterans. We are profoundly grateful to them that they consider the meetings with young men and women to be their honorable party assignment and execute that assignment with distinction. In turn, the concern about those who, sparing neither their efforts nor their life, fought against the enemies of the Motherland, and by their labor strengthened its might, must be a heartfelt job of the Komsomol and young people as a whole.

The ideological training of the upcoming generation is inseparable from its moral education. The Komsomol has been doing quite a bit of work in this direction. As a whole, our young people are responsibly executing their civil duty, and participating actively in labor and social life. Nevertheless we are disturbed by the fact that among the young people one also encounters those who demonstrate a consumer attitude toward life, who violate the rules of socialist communal life, behave like hooligans, and get drunk. One would think that in this regard the Komsomol organizations ought to operate more energetically and more purposefully, ought to use all forms of their influence, engage more in dealing with questions of education at the place of residence, and organize recreational activities for young people in a more meaningful and more interesting manner.

We might as well admit that, carried away by mass measures, certain Komsomol organizations do not always find the path to the minds and hearts of individual young men and women and let them drop out of their field of vision. It is necessary to work concretely with every concrete person, to know his interests and his mood, it is necessary to be alongside of him, to support him at the needed moment, and to prevent him from stumbling.

I would also like to touch upon such a subject as the attitude of the Komsomol to the young family. Of course this is a delicate question. Nevertheless it cannot remain outside social attention. It is necessary constantly and tactfully to show concern for young families, to help them to grow, to protect young people against hurried, unreliable decisions.

In a word, comrades, it is necessary to assure the constant growth everywhere of the influence of the Komsomol upon young people, upon their ideological and moral world, upon their labor, life, and everyday conditions. And this requires working in a more purposeful manner, working harder, working more effectively. And this pertains to all links in the republic's Komsomol.

The Central Committee, and the city and rayon committees of the LKSMB must take persistent steps to improve the style and methods of their activity, must decisively get rid of everything that is not advantageous to life and the matter at hand. The committee workers must persistently master the art of organizing and ideological-educational work among young people, among the young Leninists -- our Pioneers -- and must teach this art to their entire numerous group of activists.

Special attention should be devoted to increasing the combative spirit of the primary Komsomol organizations. Each of them has been called upon to be an organizing nucleus, the spirit of the youth collective, the center of its gravity. In this we see a task not only for the Komsomol agencies in the republic, but also the party ones.

For the Komsomol, the Communist Party has always been, as Comrade L. I. Brezhnev noted, an older friend, a good counselor, and mentor, and has always taken close to its heart the thoughts, needs, and aspirations of the young generation.

The republic's Communists consider it their duty to communicate their experience to the Komsomol, to develop its initiative and aggressiveness, to show concern that young people march in the front ranks of the builders of the communist society, gain their maturity in labor, and learn how to administer state and public affairs.

The Komsomol members constitute the majority of the new replacements for the ranks of the republic's party organization. And they are good replacements. For the party, the Komsomol has been, is, and will always be a combat assistant, its reliable reserve.

Comrades! The congress is completing its work. Soon you will all be going back home. The everyday work situation in the five-year plan awaits you. For some, it is their beloved plant or construction site. For others it is the kolkhoz field or animal farm. For still others, the scientific laboratory, the student auditorium, or the school classroom. And we hope that, wherever you are, you will be the initiators of good deeds, of patriotic undertakings. May each of you Komsomol members always be distinguished by your conscientiousness and stubbornness in labor, training, and the performance of your military service.

The Central Committee of the Communist Party of Belorussia expresses its assurance that the Komsomol members and the rest of the young people in the republic, marching in the same formation with the Communists, will proceed in the vanguard of the struggle to implement the historic decisions of the 26th Congress of the Communist Party of the Soviet Union.

CREDENTIALS COMMISSION REPORT OF 19TH KOMSOMOL CONGRESS

Tallinn SOVETSKAYA ESTONIYA in Russian 20 Mar 82 p 3

[Article: "From the Credentials Commission Report of the 19th Estonian Komsomol Congress"]

[Text] A total of 664 delegates, representing all the Komsomol members of this republic, were elected to the 19th Estonian Komsomol Congress. Elections of delegates within all the Komsomol organizations were conducted in strict accordance with the Charter of the All-Union Komsomol and the norm of representation as established by the 14th Plenum of the Estonian Komsomol CC. And 198 workers, or 30 percent of the total number of delegates, were elected to the 19th Congress of the Estonian Komsomol. Among them were the following persons: the weaver from the Baltiyskaya manufaktura Combine, a deputy to the USSR Supreme Soviet, winner of the Leninist Komsomol Prize L. Silkina, who reported by the day the congress opened on fulfilling her assigned norms for two years of the 11th Five-Year Plan, the brigade-leader of a Komsomol-youth brigade--one of the initiators of the shock-work shift in honor of the congress--V. Liyv, the mechanization specialist at the support-demonstration Sovkhoz-Tekhnikum imeni Yu. Gagarin, Vil'yandiskiy Rayon, the winner of the republican socialist competition for fodder procurement I. Seydla, and many other leading workers in production.

Ten percent of the delegates consist of agricultural workers, including 19 machine-operators, 11 livestock breeders, 36 agricultural specialists. By their labor achievements, high degree of skills, and heroic labor they have multiplied the glory of our Komsomol. Among them are the following persons: the milkmaid of the Vykhma Kolkhoz, Vil'yandiskiy Rayon, winner of the All-Union competition for those skilled in machine milking, winner of the Leninist Komsomol Prize, deputy to the EsSSR Supreme Soviet A. Kholdblom, the winner of the republican socialist competition for young milkmaids M. Kristmann, from the Pydrangu Sovkhoz, Rakvereskiy Rayon and others.

The credentials commission notes that Komsomol workers and activists were elected to the congress who enjoy great authority within their own Komsomol organizations. Taking part in the congress's work are 13 group komsorgs, 31 secretaries of shop and 151 secretaries of primary Komsomol organizations, 137 party and Komsomol workers.

This year the multi-national family of our Motherland's fraternal peoples will mark the 60th anniversary of the formation of the USSR.

The achievements of our republic's economy, science, and culture have been brought about by the joint labor of all Soviet people, their fraternal mutual assistance. Representatives of 15 nationalities were elected as delegates to the congress.

Many delegates are represented in the state organs and in public organizations. Seven of them are deputies to the USSR Supreme Soviet, 27 are deputies to the EsSSR Supreme Soviet, and 60 are deputies to city, rayon, and village soviets. The following persons were elected as delegates to the congress: deputy to the USSR Supreme Soviet and worker at the Norma Production Association R. Serka, tractor-operator of the Kolkhoz imeni E. Vil'de, Pylvaskiy Rayon, and deputy to the USSR Supreme Soviet K. Vares, and others.

The Motherland highly values the labor and military services of our young people. This is testified to by the fact that 108 of the delegates have won state awards, including 51 who have been awarded orders and medals, while /186 have won awards from the All-Union Komsomol/ /in boldface/.

The credentials commission reports to the congress that 73 of the delegates to the present congress were also delegates to the 18th Estonian Komsomol Congress.

The composition of the delegates indicates that the best and most active representatives of the republican Komsomol organization were elected as delegates to the 19th Congress of the Estonian Komsomol. Full of strength and energy, closely consolidated around the Communist Party, the republic's Komsomol is marching forward to the 19th Congress of the All-Union Komsomol.

INFORMATION REPORT ON 19TH ESTONIAN KOMSOMOL CONGRESS-1

Tallinn SOVETSKAYA ESTONIYA in Russian 19 Mar 82 p 1

[Article: "Information Report on 19th Estonian Komsomol Congress"]

[Text] On 18 March in Tallinn the 19th Estonian Komsomol Congress began its work.

Gathered at their forum were the representatives of the more than 163,000-strong membership of Komsomol members from the republic. They are summing up the results of work for the period under review and outlining tasks for the future.

First Secretary of the Estonian Komsomol Central Committee D. Visnapuu, candidate member of the Estonian CP CC Bureau, opened the congress.

With great animation an honorary presidium was elected, consisting of the CPSU CC Politburo, headed by the general secretary of the CPSU CC and chairman of the Presidium of the USSR Supreme Soviet, Comrade L. I. Brezhnev.

The congress approved the following agenda:

1. Report on the work of the Estonian Komsomol CC and tasks of the Komsomol organization in the light of the decisions made by the 26th CPSU Congress.

2. Report of the auditing commission of the Estonian Komsomol.

3. Election of the Central Committee of the Estonian Komsomol.

4. Election of the auditing commission of the Estonian Komsomol.

5. Election of delegates to the 19th Congress of the All-Union Komsomol.

Greetings from the CP of Estonia CC to the congress were proclaimed and a speech made by member of the CPSU CC and first secretary of the CP of Estonia CC, Vayno.

D. Visnapuu delivered a report entitled "Account of the Work of the Estonian Komsomol CC and the Tasks of the Komsomol Organization in the Light of the Decisions of the 26th CPSU Congress."

The accountability report of the auditing commission of the Estonian Komsomol was delivered by its chairman, E. Bekker.

The following persons took part in discussions of the first two items on the agenda: first secretary of the Tallinn Komsomol Gorkom, Ya. Tanvel'; tractor-operator of the Kolkhoz imeni E. Vil'de, Pylvaskiy Rayon, K. Vares; blaster at the Akhtme Mine of the Estonslanets Production Association, P. Fedorov; pupil of the Khaapsaluskaya First Middle School, R. Altmyae; first secretary of the Rakvereskiy Komsomol Raykom, R. Tyntson; soloist of the EsSSR State Philharmonic, K. Randalu; first secretary of the Paydeskiy Komsomol Raykom, L. Lugna; spinner at the Krengol'mskaya Manufaktura Combine, L. Bocharnikova; editor of the newspaper NOORTE KHYAEL', E. Siymer; USSR pilot-cosmonaut, A. Gubarev; milkmaid at the Bambola Kolkhoz, Vil'yandiyskiy Rayon, L. Sil'd; senior Pioneer leader of the Keylaskaya First Middle School of the Khar'yuskiy Rayon, A. Kuntsel'; student at the Tartu State University, R. Aavisto; first secretary of the Pyanuskiy Komsomol Raykom, E. Ryandla; car inspector at the Tallinn Railroad-Car Depot, N. Nikol'nikov; party and Komsomol veteran, delegate at the First Estonian Komsomol Congress, A. Vaarman; senior assistant captain of a fishing ship of the Khiyu Kalur Fishing Kolkhoz, S. Soop; electrician at the Estremrybflot Production Association, S. Yerichev; senior scientific staff member of the Institute of Economics of the EsSSR Academy of Sciences, P. Tang; and saleslady of the Tallinn House of Trade, Yu. Suurseedi.

The report of the credentials commission was delivered by its chairman, D. Kubyshkin.

The congress was greeted by representatives of the republic's Pioneer organization.

Taking part in the work of the congress are the following: Comrades I. Kebin, V. Klauson, K. Lebedev, O. Merimaa, R. Ristlaan, A. Ryuytel', A.-B. Upsi, M. Pedak, A. Kork, I. Toome, L. Shisnov, deputy chairman of the Presidium of the EsSSR Supreme Soviet M. Vannas, secretary of the Presidium of the EsSSR Supreme Soviet V. Vakht, deputy chairmen of the EsSSR Council of Ministers A. Gren, B. Saul, A. Tregubov, and other leading workers of the republic.

Also here are secretary of the All-Union Komsomol CC A. Zhuganov, and USSR pilot-cosmonaut A. Gubarev.

On 19 March the congress will continue its work.

INFORMATION REPORT ON 19TH ESTONIAN KOMSOMOL CONGRESS-2

Tallinn SOVETSKAYA ESTONIYA in Russian 20 Mar 82 p 1

[Article: "Information Report on 19th Estonian Komsomol Congress"]

[Text] On 19 March the work of the 19th Estonian Komsomol Congress continued in Tallinn.

Participating in the discussions on the first two items on the agenda were the following persons: trainer-coach of the Dinamo Sports Society and European champion in stand shooting, P. Pyakk; first secretary of the Vyruskiy Komsomol Raykom, Kh. Irants; chief of the republican staff of the tour around places of military and labor glory, Retired Major General K. Aru.

A speech was delivered at the congress by the secretary of the All-Union Komsomol CC A. Zhuganov.

The concluding speech was delivered by candidate member of the Bureau of the CP of Estonia CC and first secretary of the Estonian Komsomol CC D. Visnapuu.

The congress recognized as satisfactory the work done by the Estonian Komsomol CC during the period under review. The resolution of the congress was adopted, and the accounting report of the Estonian Komsomol's auditing commission was approved.

New bodies were elected to the Estonian Komsomol CC and the Estonian Komsomol's auditing commission, as well as delegates to the 19th Congress of the All-Union Komsomol.

The congress was greeted by representatives of the soldiers of the Tallinn garrison.

With a great upsurge the congress adopted a letter of greeting to the CPSU CC, to the general secretary of the CPSU CC and chairman of the Presidium of the USSR Supreme Soviet Comrade L. I. Brezhnev.

The 19th Estonian Komsomol Congress was proclaimed to be adjourned. Delegates and guests sang the party anthem, "The Internationale."

UZBEK OFFICIALS RESPOND TO BREZHNEV SPEECH

Syrdarinskiy Obkom First Secretary Speech

Tashkent PRAVDA VOSTOKA in Russian 25 Mar 82 p 3

[Unattributed report on speech by V.A. Khaydurov, first secretary of the Syrdarinskiy Party Obkom]

[Text] Dear Leonid Il'ich. Dear comrades. For us, today is a sunny and happy one. A happy day for our hearts and for all the land of Uzbekistan. The Motherland's highest award has been affixed to the banner of the Uzbek SSR by the hands of dear Leonid Il'ich Brezhnev. This is the highest assessment of the party and government of the heroic labor of the working class, kolkhoz peasantry and Soviet intelligentsia of the republic.

We are well aware that in all the achievements and successes of Soviet Uzbekistan the role of our Leninist party and its nationalities policy and of the consistent activity of the CPSU Central Committee, the Central Committee Politburo and personally of Leonid Il'ich Brezhnev, who is dear to all of us, is immeasurably great.

The award of an Order of Lenin to the republic is convincing confirmation of the correctness of the words of comrade L.I. Brezhnev uttered in his concluding speech at the 26th CPSU Congress: "The strength of the party lies in the unity of the people! The strength of the people lies in unity with the party!"

For Uzbekistan, as for the entire country, the 11th Five-Year Plan has no equal in terms of its scale and accomplishments. The life of our most far-flung regions is being swiftly renewed, and our entire socialist reality is being changed for the better.

One clear confirmation of this is the story of our virgin-land area. It has been, as it were, an embodiment of the great Leninist decree on the irrigation of desert and grassland. Through the will of the party and the efforts of Soviet people the so-called Barren Steppe [pun on Golodnaya step'--ed] has been transformed into a flourishing, dynamically developed region with a multisector, intensive economy.

The party's Leninist course outlined for the transformation of the virgin lands found expression in the CPSU Central Committee May (1966) Plenum, which defined the tasks for the further comprehensive opening up and irrigation and the general upsurge in farming on the new land. Your presence here in 1966 in Golodnaya step', dear Leonid Il'ich, has left a bright, indelible mark in the life of the workers in the oblast. We assign you unforgettable, unusually interesting and impressive meetings with those opening up the virgin lands to the notable pages in the history of the virgin lands of Uzbekistan. Carrying out your advice and instructions, the workers of Golodnaya step' set about the general offensive for the new lands which has brought us to today's victory.

Our Golodnaya step' is a fusion of the art of farming and the modern achievements of science. During these years dozens of new industrial enterprises have grown up, industrial output has quadrupled, and a great social program has been accomplished.

We are happy to report to the CPSU Central Committee, and to you personally, dear Leonid Il'ich, that the party behest to build up cotton production on the virgin land has been implemented.

Last year the oblast sold to the state 427,000 tons of raw cotton, or twice the amount in 1966. Through the introduction of the achievements of scientific and technical progress, the highest production of the "white gold" per worker has been achieved in this important sector and the cotton grown is the least expensive available. The assets invested in the development and opening up of the new lands have long since been recouped.

In the heroic epopee of the transformation of Golodnaya step' the wise policy of our party and the strength of the great and indestructible friendship of the fraternal peoples of the Soviet Union have been strikingly seen. The representatives of more than 100 of the nations and nationalities of our mighty Motherland marched side by side into that offensive, and still they march. More than 6,000 people of Syrdar'ya have been awarded orders and medals for their selfless labor. Some 38 of them have been awarded the title of Hero of Socialist Labor.

The mood of the workers in the oblast is combative and elated in a way that it never has been before. We are filled with the resolve not only to fulfill but also to significantly overfulfill the tasks of the five-year plan. And in this aspiration it is the tireless work of the CPSU Central Committee Politburo, and your personal concern, dear Leonid Il'ich, to maintain peace on our planet, that provide the guarantee for all our achievements.

Soviet people and all progressive mankind know you as a loyal successor in the affairs of Lenin, the most outstanding figure of our age, the universally recognized leader of the party and government, a most persistent warrior of peace. International recognition of your titanic activity in the struggle for peace has been marked by a high award--the Gold Medal of the World Federation of Trade Unions. On this bright and happy day for the workers of Uzbekistan, permit me on behalf of the communists and all the workers of the oblast to congratulate you warmly and sincerely, dear Leonid Il'ich, on this high and noble award and to wish you good health and further successes in your varied and labor-filled activities for the good of the Soviet people and for peace and social progress.

The communists and all the workers of the Order of Lenin Syrdarinskaya Oblast assure the CPSU Central Committee, the Central Committee Politburo, and you personally, dear Leonid Il'ich, that in response to the high award of the Motherland, by the end of the five-year plan they will have brought cotton production up to 500,000 tons, almost doubled the production of livestock farming produce, and reached even higher frontiers in all sectors of the national economy and thus greet in a worthy manner the 60th anniversary of the formationof the USSR. (applause)

Uzbek Academy of Sciences President's Speech

Tashkent PRAVDA VOSTOKA in Russian 25 Mar 82 p 3

[Unattributed report on speech by A.S. Sadykov, president of the Uzbek SSR Academy of Sciences]

[Text] Dear Leonid Il'ich. Dear comrades. In the life of entire peoples, as in the life of the individual person, there are days with a special concentration of meaning. Today is one such that will become for all of us a day of culmination, a memorable day.

And our day today is doubly portentous and festive, because it on this day that with a sense of pride and full hearts we have seen a third Order of Lenin affixed to the banner of Soviet Uzbekistan. And because this highest award of the Motherland was affixed by the hand of a man whose name has become for mankind a symbol of peace, a symbol of life, a symbol of Spring and of progress.

Son of the people, soldier and builder, first among those opening up the vast tracts of lands and the infinities of space, loyal Leninist, stalwart warrior of the just cause of the people, accept, dear Leonid Il'ich, our profound respect, our gratitude, our love!

As you perspicaciously remarked when speaking from the tribune of the 26th CPSU Congress, "No one needs to be convinced of the great significance of science. The party of the communists proceeds from the premise that the building of the new society is simply inconceivable without science."

These words are a program for the lives and activities of Soviet scientists. Our duty is to justify them in deeds, in the practice of the building of communism!

And today we assure you, dear Leonid Il'ich, that in fulfilling the tasks set for science by the historic 26th CPSU Congress, the scientists of our republic will henceforth also multiply their contribution to the development of the Uzbek economy and culture and will successfully combine work on the theoretical problems of the social and natural sciences with solutions to the practical national economic tasks of the 11th Five-Year Plan and the subsequent period.

We see our primary duty to the party and the people in expanding and accelerating the introduction of the achievements of science into production, strengthening the real links between science and life, and improving the economic efficiency of our scientific quests.

At a meeting with the leaders of the academies of sciences of the socialist countries, you noted, dear Leonid Il'ich, that each ruble invested in the development of science should should give a return of the order of five rubles. We are happy to report to you that during the years of the 10th Five-Year Plan and in 1981 our republic's Academy of Sciences successfully met this target. The per-ruble return was more than five rubles.

In a short time the production of radioactive phosphorus-32 and a number of preparations based on it that are superior to foreign examples was accomplished in the Academy of Sciences. This development has made it possible to end imports and to meet demand from 170 scientific research organizations and industrial enterprises in the USSR and the CEMA countries.

Very important results have been achieved in the cultivation of new varieties of cotton, the development of economical standards for irrigation, the development of low-toxic defoliants, expanded utilization of cotton waste, and the development of new drugs.

The work of the "Kibernetika" scientific-production association, set up for the first time within the system of the academies of sciences, has confirmed the great effectiveness of this new research organization.

The Uzbek Academy of Sciences is participating in the development and introduction of the results of 50 all-union and regional comprehensive scientific and technical programs. Research is being conducted in the establishments of the republic's academy by the representatives of 48 of our country's nations and nationalities, working side by side; which is a graphic demonstration of the triumph of the CPSU's Leninist nationalities policy.

Many basic and applied problems of modern science are being worked on in close contact with scientists in the establishments of Moscow and Leningrad, the fraternal union republics and the countries of the socialist community. We express enormous and heartfelt thanks to the Russian scientists, who have always made and continue to make a large contribution to the development of science in Soviet Uzbekistan and to the training of highly qualified national cadres.

Dear Leonid Il'ich. Each of your visits to our region has become a powerful impetus for a new upsurge and flourishing of its economy, science and culture and for an increase in its contribution to the international treasury of the material and spiritual values of communism.

It is the same this time also. Your valuable advice and instructions will promote the practical resolution of many vitally important problems. The high award conferred on the republic in this the year of the 60th anniversary of the formation of the USSR and your brilliant and impressive speech are inspiring the scientists of Uzbekistan to new accomplishments and obliging them to work better today than yesterday, and day after day to augment the general wealth and the might and glory of the USSR. (applause)

SMIRNOV SPEAKS AT UZBEK AWARD CEREMONY

[Editorial Report] Tashkent PRAVDA VOSTOKA in Russian on 13 March 1982 carries on pages 1-2 a 2400 word report of the award ceremony in Tashkent at which Uzbekistan was awarded the CC CPSU Challenge Red Banner for winning the all-union socialist competition. Candidate Member of the CC CPSU Politburo and First Secretary of the Uzbek SSR CP Central Committee, Sh. R. Rashidov, opened the ceremony and then L.V. Smirnov, deputy chairman of the USSR Council of Ministers, spoke. He congratulated the workers of Uzbekistan in the name of the CC CPSU, the Soviet government and L.I. Brezhnev personally for their successes in all sectors of the economy.

Rashidov received the award from Smirnov in the name of the working class, the kolkhoz peasantry, intelligentsia and all workers of the republic. Rashidov spoke with gratitude toward Lenin's party and with pride for Uzbekistan's successes and then said a few words about what needs to be done this year. In speaking of the role of the workers of Uzbekistan he said, "The word of the workers of Uzbekistan will never sway from the matter at hand. It is strong, like our friendship; firm, like our brotherhood; unbreakable, like our unity. We are children of one family and will do everything so that our large home--the great Soviet Union--will be even richer, more powerful and more beautiful." Rashidov then reiterated the need to do everything possible to overcome the shortcomings still present in the economy and emphasized that the workers of Uzbekistan would succeed in this task.

Also present at the ceremony were the members and candidate members of the Uzbek SSR CP Central Committee Buro; G.M. Orlov, deputy chairman of the Uzbek SSR Supreme Soviet Presidium and the dputy ministers of the Uzbek SSR Council of Ministers.

RASHIDOV GREETS CEMA DELEGATION

[Editorial Report] Tashkent PRAVDA VOSTOKA in Russian on 2 April publishes on page one a 400-word report of the meeting between Candidate Member of the CC CPSU Politburo and First Secretary of the Uzbek SSR CP Central Committee, Sh. R. Rashidov, and members of the CEMA Committee for Material and Technical Supply which was in Moscow for its 13th session.

Rashidov talked to the guests about the successes of the Uzbek workers, of the republic's contribution in the development of the all-union economic complex and about L.I. Brezhnev's visit to Uzbekistan. He emphasized the questions tied to finding solutions to the problems brought up by Brezhnev.

V.O. Kulikov, first deputy chairman of the USSR State Committee for Material and Technical Supply, spoke at the meeting, expressing appreciation for the warm reception the committee met in Uzbekistan and mentioning the great work the CEMA committee was doing in conserving material resources in the CEMA countries.

Other members of the Uzbek SSR CP Central Committee Buro were also present at the meeting.

GEORGIAN OFFICIALS MEET ON REPUBLIC ECONOMIC POLICY

Tbilisi ZARYA VOSTOKA in Russian 20 Mar 82 p 1

[Information Item: "In the Interests of the Laboring Man: From a Joint Meeting of the Bureau of the CC CP of Georgia and the Presidium of the Council of Ministers GSSR"]

[Excerpts] "For Words--Content, and for Appraisals--Accuracy"--this demand defined all of the work of the joint meeting at which there was a discussion of the results of the fulfillment of the State Plan for the economic and social development of the GSSR during January-February 1982. Not to be only the recorders of events and phenomena, but to actively manage them--this idea was the main one. It was not stated by accident; it was dictated by the alarming tendency toward a decline which manifested itself in the early months of 1982: For the first time in many years industrial growth rates proved to be lower than the planned levels. Thus, while according to plan the industrial growth rate for 1982 was fixed at 4.8 percent, and socialist commitments were supposed to bring it to 5 percent, in fact it came to 3.7 percent. For a comparison, in January-February of last year it was 5.5 percent. The plan for an increase in labor productivity was on the whole fulfilled. However, it was lowered at 378 enterprises.

A great deal of attention at the meeting was devoted to financial questions. It is well known that a mandatory condition for the stable work of any enterprise is the existence in it of circulating capital. Meanwhile, as of 1 January 1982, the shortage of this capital came to around 200 million rubles. For comparison, whereas in 1965 there was 36.4 kopecks of circulating capital for every ruble expended by the republic's enterprises for production, today there are only 14 kopecks. If this tendency is not overcome, it was noted at the meeting, then in the near future all of the circulating capital in the republic will be borrowed capital, and the predominant part of profits will go to pay bank interest for credit.

The report on the results of the development of the republic's economy during the two months was made by the Second Secretary of the CC CP of Georgia Comrade G. V. Kolbin.

Information on the state of affairs in the different branches of the economy was provided by the chief of the section for planning and financial agencies of the CC CP of Georgia L. Ya. Khaburzaniya, the First Deputy Chairman of the Council of Ministers GSSR N. A. Chitanava, the Deputy Chairmen of the Council of Ministers GSSR O. G. Vardzelashvili and Yu. I. Kedishvili, and other participants in the joint meeting.

Accurate Information is a Condition for Success

The growing complexity of the processes of managing the economy and social construction is advancing to the forefront the problems of information and of active influence on undesirable and destabilizing processes. Today, the participants in the joint meeting noted, it is already not enough to be only a conscientious worker and an energetic leader. It is essential not to establish these shortcomings and deviations, but to make every effort to achieve a high economic result. And this can only be achieved with good information for leaders about the state of affairs in the localities.

The first steps have already been taken in the localities. Thus, in Telavskiy Rayon a special system has been created in which the workers of all of the control agencies inform the first secretary of the party raykom once a week about violations which have been discovered. In addition, concrete proposals are made as to how to react to one or another incident. This kind of information helps to be informed about everything, to make competent decisions, and to prevent large thefts and other crimes.

The chief of the party organizational work section of the CC CP of Georgia S. Ye. Khabeishvili delivered an analysis of the state of the practical information which comes into the party agencies.

Demand is of a Mass Nature. And Supply?

Gradually the discussion touched upon such a burning topic as the connection between commodity turnover and monetary circulation and the production of consumer goods with the satisfaction of the demand of the workers.

If one looks only at the quantitative and value sides of the consumer goods produced in the republic, the picture will be a quite good one. There is practically not a single enterprise whose products do not include products of mass demand. Plants and factories expend a substantial amount of raw materials and materials and labor on the production of goods intended for store shelves.

And these goods do get to the shelves. But frequently they do not leave them. Consumers are not attracted by the appearance and by the functioning of many of the consumer goods produced in the republic. In this way, a scarcity, a shortage of the most essential things is born. The warehouses of our trade facilities are literally coming apart at the seams from their stocks, but the consumer nevertheless spends a great deal of time searching for things which meet his needs.

The participants in the joint meeting defined the chief reasons for this situation.

First, the quality of certain consumer goods cannot withstand any kind of criticism. There are frequent cases when the State Token of Quality--a symbol of good workmanship, beauty, and long service life--is removed from certain products.

The control agencies put up barriers to poor quality output. Last year, for example, all of the checked garment products of the Ochamchirskiy, Tkvarchel'skiy, Gudautskiy, Terzhol'skiy, Tsulukidzevskiy, and Makharadzevskiy Rayon Industrial Goods Combines were removed from sale and returned to the producers.

The quality and ability to compete of the consumer products which are produced in the republic depend upon the awareness by every economic leader of the enormous importance of their production--high quality, rhythmic production. One cannot be serene when only every 10th or 11th household and cultural and domestic product on the shelves of the republic's stores has a Georgian brand name, and then is not always in demand.

Secondly, the question was asked by the participants in the joint meeting whether the consumer goods industry always produces what the population needs. Some industrial enterprises produce unsalable output year after year. Recently in the system of the republic's Ministry of Local Industry alone (minister--M. K. Magradze) the amount of above-norm remainders increased by 2.5 times, while the amount of the production and sale of consumer goods increased by only 5.6 percent. We have here a complete isolation from the demands of the times and the needs of consumers, and a lack of commercial sense.

For many years now door locks, metal adornments, and furniture fixtures have been rusting at the Tbilisi Machinery Plant No. 3 (director--T. I. Zaldastanishvili). Produced in 1960-1978 already at that time this output was hopelessly behind the demands of the time and of buyers; however, even today this has not compelled the leadership of the enterprise to draw the appropriate conclusions: The production of products which are not needed by anyone is continuing here.

The demands upon the quantity, assortment, and quality of consumer goods today must not be lower than upon the production of the basic output of the republic's heavy industry enterprises. The leaders of all ranks should bear responsibility for this.

The problem of producing goods in wide demand is connected in the closest way with the interests of the laboring man. On the other hand, an increase in the production of these goods provides broad opportunities for the accelerated development of the economy and makes it possible to utilize additional production reserves. But, as in the past, the question continues to be an acute one: What should be produced and how? Of 25 types of prime necessity goods for which assignments have been established for the republic, the production of 5 has been unsuccessful. Georgia's industry has failed to give the population underwear for newborn infants and knitted underwear, paper goods and furniture, garden and orchard tools, toys, and many other products. The consumer goods production plan was not fulfilled by the Ministry of Light Industry (minister--G. P. Gamtsemlidze), the Ministry of Local Industry (minister--M. K. Magradze), the Ingurskiy Cellulose and Paper Combine (director--O. A. Patsatsiya), and other enterprises.

Recently quite a few economic management experiments have been carried out in the republic. They have received a high evaluation from the General Secretary of the CC CPSU and Chairman of the Presidium of the USSR Supreme Soviet Comrade L. I. Brezhnev during his stay at the celebrations in Tbilisi. This kind of creative approach is also necessary in solving other problems, particularly, in providing the republic's population with prime necessity goods. There is probably a necessity, it was said at the joint meeting, to work out on the basis of the example of one of the rayons a special program which provides for full supplies of goods and services for the population's effective demand. This kind of program, along with the food program, could produce a substantial effect.

The Chairman of the Republic's Council of Ministers Comrade Z. A. Pataridze spoke at the joint meeting.

The results of the joint meeting of the Bureau of the CC CP of Georgia and the Presidium of the Council of Ministers of the GSSR were summarized by the candidate member of the Politburo of the CC CPSU and First Secretary of the CC of the Communist Party of Georgia Comrade E. A. Shevardnadze.

SHEVARDNADZE SPEECH ON DECLINING GEORGIAN TEA INDUSTRY

[Editorial Report] Tbilisi ZARYA VOSTOKA in Russian on 16 April carries on pages 1-3 a 10,000-word speech by E.A. Shevardnadze, candidate member of the CPSU Central Committee Politburo and first secretary of the Georgian CP Central Committee. The speech, devoted entirely to problem's with Georgia's declining tea industry, was delivered at a republic conference of tea growers and tea-industry workers in Zugdidi on 10 April 1982.

Shevardnadze complained that "to the degree that there has been growth in quantity, the quality has decreased." Tea plantations are left under the control of unqualified tea growers, and factory operators are paying little attention to the quality of raw material. "Agricultural rules for collecting tea leaves and standards of quality exist only formally." He pointed out that "such an approach has led to the ruin of many plantations." Shevardnadze suggested several measures for the problem, including the introduction of new agrotechnology rules, improved personnel training, overcoming the low capacity of tea-production facilities, production of concentrates and new tea products and improving tea strains. In conclusion Shevardnadze said: "We must not, we do not have the right, to concern ourselves only with today. We must think about and care for the future generations, for the future of our country and republic."

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service (NTIS), Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semimonthly by the NTIS, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

Soviet books and journal articles displaying a copyright notice are reproduced and sold by NTIS with permission of the copyright agency of the Soviet Union. Permission for further reproduction must be obtained from copyright owner.

WORK OF SERIALIZED MIDDLE SCHOOL MEETS PARTY CENSURE

[Editorial Report] Baku KOMMUNIST in Azerbaijani 8 December 1981 p 3 carries a 2,700-word report by K. Alakbarov on the discussion at the Absheron raykom on the extremely negative occurrences at the Baku Planning and Accounting Technicum. "Profitable utilization of existing conditions is not being done. The affair has reached such a point that the majority of teachers are frequently violating the rules and regulations, do not follow the curriculum, are causing anarchy and are placing personal interests above the general work of the state." Teachers do not meet regularly with classes, students do not attend classes when held, grades are inflated and state property is sold for private gain. A variety of disciplinary actions has been taken by the raykom and work "will be done" to improve the situation.

RECENT GRADUATES OF NAKHCHYVANSKI SCHOOL INTERVIEWED

[Editorial Report] Baku KOMMUNIST in Azerbaijani 9 December 1981 p 3 carries a 500-word report on statements by three recent Azerbaijani graduates of the Nakhchyvanski school who are continuing their education at the higher military schools. They are students at the Moscow Military Law Institute, the S.M. Kirov Leningrad Military Medicine Academy and the Kiev Higher Radiotechnical Engineers School.

RECOMMENDATIONS MADE TO IMPROVE ANIMAL FEED BASE

[Editorial Report] Baku KOMMUNIST in Azerbaijani 2 December 1981 pp 2-3 carries a 3,500-word article by Academician Hasan Aliyev on ways to expand animal husbandry. It is pointed out that "attention must be given to creating a firm feed base and to the organization of agroindustrial complexes in mountain rayons." The different mountainous and arid areas which can be developed are discussed in detail.

ECONOMIC PRIORITIES FOR 1982 REVIEWED

[Editorial Report] Baku KOMMUNIST in Azerbaijani 13 December 1981 p 1 carries a 1,900-word lead editorial summarizing expected norms, quotas and problem areas from 1982 through the current 5-year plan. "For example, the scope of industrial production will increase by 30 percent, agriculture by a yearly average of 15.2 percent, construction subsidies by 1.4 percent; labor productivity, one of the basic results of intensification, by 23 percent; in agriculture by 12.3 percent and in construction by 16 percent." Problem areas are: "some problems are being lamely resolved in the fuel-energy complex... and certain ministries, chief administrations and institutions are conducting a weak struggle for satisfactory administrative control."

EARLY COMPLETION OF AZERBAIJAN POWER STATION DESCRIBED

[Editorial Report] Baku KOMMUNIST in Azerbaijani 16 December 1981 p 2 carries a 750-word article by Vagif Aliyev, secretary of the Azerbaijan DRES (State Region Electrical Station) Party Committee, describing the completion of the first bloc of the DRES in Mingechevir which is to deliver "300,000 kilowatts to the Caucasus."

ALIYEV ON MILITARY PREP SCHOOL

[Editorial Report] Baku KOMMUNIST in Azerbaijani 11 December 1981 carries a report on Geydar Aliyev's speech on the occasion of the 10th anniversary of the Makhchyvanski Republic Specialized Middle Internat School. He notes that "in the course of 10 years, 540 graduates of the school have entered academies, schools or military institutes. Now they are being trained in 47 higher military schools. Of these, 130 youths have become officers..more than 500 are studying at the internat, 310 of whom were accepted this year." It is pointed out that next year entering classes will more than double "to 650." Among dignitaries present at the speech was Podpolovnik G.I. Golodize, director of the K. Leselidze Georgian Republic Specialized Middle Internat School, which serves the same function in the GSSR.

HISTORY OF NAKHCHYVANSKI SCHOOL REVIEWED BY DIRECTOR

[Editorial Report] Baku KOMMUNIST in Azerbaijani 9 December 1981 p 3 carries a 500-word article by R. Guliyev, director of the J. Nakhchyvanski Republic Specialized Middle Internat School, briefly describing the history of the school. "As of 1977 our school sent students to the Suvorov Military School and the Nakhimov Military Sea School...." Over the last 10 years "hundreds of students have graduated...They entered the ranks of 48 higher military schools."

REPORT PUBLISHED ON EXTENT OF EARTHQUAKE DAMAGE

[Editorial Report] Baku KOMMUNIST in Azerbaijani 8 December 1981 p 1 carries a 1,000-word Azerinform dispatch on the extent of the December earthquake damage in Ismayyly rayon. "According to the first reports more than 2,000 buildings, primarily older structures, were destroyed within a 50 kilometer radius of the earthquake center." Also, "many people were injured."

LIFE OF SOUTHERN AZERBAIJANI BOLSHEVIK ORGANIZER

[Editorial Report] Baku KOMMUNIST in Azerbaijani 8 December 1981 p 4 carries an 850-word memorial article by Zafar Aliyev, scientific worker at the Party Historial Institute under the CC AzCP, on the life of K.J. Aghazade who "was born in Parin village in Ardabil Province (Southern Azerbaijan)." Subsequently, he "became a participant in the Iranian revolution" for which he was imprisoned in 1911. After leaving prison he came to Baku. "In 1912 he entered the Bolshevik party and...conducted revolutionary work among Azerbaijani workers coming from Iran." For taking part in the 1914 Baku uprising he was exiled to Iran. Returning shortly thereafter he "returned to Baku and continued his revolutionary work. At the same period, in order to preserve a relationship with the revolutionary-democratic forces of Iran and organize them, the 'Adalet' organization conducted intensive work under the powerful influence of the Baku Committee of the RSDF(b) P.K. Aghazade was elected a member of the 'Adalet' Central Committee and was a responsible organizer among workers coming to Baku from Southern Azerbaijan." During the time of the "Hummet" government in Azerbaijan he supported the formation of a Soviet Government of Azerbaijan. He was arrested by Azerbaijani authorities in 1919. "At the 1st Congress of the Iran CP in 1920...(he became) a responsible secretary of the Central Committee." He remained in Rasht (Soviet Republic of Gilan) and "joined the military-revolutionary council."

UNITY OF NORTHERN AND SOUTHERN AZERBAIJAN EXPRESSED

[Editorial Report] Baku ADABIYYAT VE INJASANAT in Azerbaijani 11 December 1981 p 7 carries a 900-word letter by Gulu Khalikov commenting on the 'Ozan' folklore performance "which was dedicated to the lexical treasury, oral art and folklore of a large part of our people--our brothers and sisters living in Southern Azerbaijan...It is humanistic and human poetry calling the one southern and northern people to unity."

EMIGRE WRITER PUBLISHES PART OF 'FICTIONAL MEMOIRS'

[Editorial Report] Baku ADABIYYAT VE INJASANAT in Azerbaijani 11 December 1981 p 7 carries a 1,750-fragment of Ali Tuda's "Tales of Memory" dedicated to "Seyid Jafar Pishavari" [former Bolshevik journalist from Baku who served on the Central Committee of the Soviet Republic of Gilan in the early 1920's and became president of the Azerbaijan Democratic Republic, 1945-1946]. The theme of the story is the politicization resulting from the national liberation struggle, "in the struggles for freedom in the fatherland." [Tuda emigrated to Soviet Azerbaijan from Southern Azerbaijan in 1946.]

SOUTHERN AZERBAIJANI POET'S WORKS REVIEWED

[Editorial Report] Baku ADABIYYAT VE INJASANAT in Azerbaijani 11 December 1981 p 7 carries a 1,200-word review by Sohrab Tahir of a bilingual (Farsi-Azerbaijani) edition of Shahriyar's works, published by the 'Ark-i Tabriz' press and edited by Yahya Sheyda. Among the lines cited: "There was Baku, our own red Ka'ba." [The Ka'ba is one of the most sacred monuments of the Islamic world and is located in Mecca.]

POET CONTEMPLATES OTHER SHORE OF ARAZ

[Editorial Report] Baku AZERBAIJAN in Azerbaijani No 9 (September) pp 77-80 carries three poems by Aydyn Ibrahimov. The poems are entitled "A Pomegranate Orchard on the Araz," "Cliffs Above the Araz" and "The Araz Looking Towards Me." The "pomegranate orchard" of the first poem is on the other side of the Araz River, i.e., in Iranian Azerbaijan. The poet looks longingly at the untouchable fruit and contemplates the meaning of the river. The poem ends:

"May your pomegranates be eaten, Araz! [May your word be said, Araz!] May your water be drunk, Araz! [May your bridge be crossed, Araz!]" The other poems reiterate the theme of the first.

CSO: 1830/315

WORK OF KAZAKH FOREIGN FRIENDSHIP SOCIETIES DETAILED

[Editorial Report] Alma-Ata QAZAQSTAN KOMMUNISI in Kazakh No 10, October 1981 carries on pages 45-50 a 2,900-word article by Zh. Qaliev, chairman of the Presidium of the KaSSR Society for Friendship and Cultural Relations with Foreign Countries, outlining the work of his society and its various branches and subdivisions. The Soviet Union is waging a resolute struggle to strengthen peace and reduce international tensions and it has enjoyed considerable success in improving relations between countries and in developing mutually beneficial solidarity in political, economic and cultural areas. The KaSSR Society for Friendship and Cultural Relations with Foreign Countries has played an active role in bringing this about and maintains relations with 97 percent of the world's nations with regular exchanges of printed and other materials, celebration of friendship days and bilateral dispatch of delegations and individuals for various purposes. Galiev then goes on to an area by area review of his society's work starting with the socialist countries, where the role of friendship societies is becoming even more important as the process of socialist integration accelerates, and then discussing relations with other countries of the world including India, the countries of Africa, Afghanistan, the People's Democratic Republic of Yemen and other Arab states and various Western European nations. The United States, only recently visited by a large Kazakh delegation, is conspicuously absent from the list. The article ends with a note on how major changes are taking place in the work of Soviet friendship societies due to new demands being placed upon them and new conditions.

EXISTING RESOURCES INADEQUATE TO SOLVE ZHANGA-DARYA PROBLEMS SAYS PARTY SECRETARY

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 11 December 1981 carries on page 3 an 800-word article by T. Yesetov, first secretary of the Kzyl-Ordinskaya Oblast Party Committee, on the Zhanga-Darya issue. Numerous agencies, he begins, and organizations have responded to S. Dosymov's articles on the need for a new Zhanga-Darya Rayon published in the 5, 12 and 19 June issues of QAZAQ ADEBIETI. Since goals advanced by the CC CPSU and the USSR Council of Ministers with respect to raising 50 million sheep in the KASSR demand resolution of problems connected with the development of animal husbandry Dosymov raises his issues at the right time.

To achieve the new goals all resources and possibilities of every oblast must be taken into consideration and sought out energetically. The key issue in the Zhanga-Darya area is water. A stable fodder base is needed to develop animal husbandry there but the unresolved water issue that prevents its achievement has not been taken into consideration at all.

At present Syr-Darya water is fully allotted and too little is available for the lower reaches of the river in Kzyl-Ordinskaya Oblast and the future of irrigation along the Zhanga-Darya and Quang-Darya has been completely forgotten. A special committee was sent out last October by the USSR State Planning Committee and it saw, from on the spot investigation, that local needs in the area had not been taken into account in distributing water.

Moreover, Yesetov continues, the river system there, with its innumerable manmade and natural offshoots is extraordinarly complex. The efforts of a major planning institution are necessary to solve the problems involved. In fact, it is impossible to do what is needed without such a planning institute. Moreover, although much has been planned and some measures carried out, local resources are simply inadequate to deal with the full scope of problems.

Yesetov ends by calling for the necessary research to be done and concludes that what needs to be done cannot be accomplished under present conditions and with present resources. Only when an adequate planning and resource base has been brought into being will a Zhanga-Darya Rayon be possible.

PARTY PLENUM ADVANCES NEW GOALS FOR KAZAKH FUEL AND ENERGY INDUSTRY

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 13 December 1981 carries on page 2, under the rubric "Energy, the Economic Key," a 1,500-word interview with A.O. Arystanov, first deputy minister of Power and Electrification KaSSR, on the future of the Kazakhstan fuel energy industry in terms of the November 1981 Plenum of the CC CPSU that discussed questions concerned with the orderly development of the Soviet fuel energy complex broadly and sanctioned policies for 1982. Among questions answered by Arystanov were what will be done in the KaSSR in response to the decisions of the plenum, how energy and fuel allotted for specific needs can be economized, what the major unresolved issues and questions are for republic energy development and what the minister expects to be achieved in the future.

In his answers Arystanov notes that energy is developing at a rapid rate in Kazakhstan and that the general capacity of the Ekibastuz Fuel-Energy Complex, the largest in the world, has reached 20 million kilowatt hours while the Shul'ba Electrical Station is now under construction. However, he continues, energy development is complex and this complexity is driving up costs with the result that producing more energy in relation to expended effort is now a major goal. A well-developed program for the conservation of thermal and energy reserves has consequently been prepared for the current five-year plan. This will involve new capacities, renewal of generating equipment and reconstruction. In terms of specific areas of conservation he calls for strict adherence to economic laws and a search for means to conserve at present development levels and reduce waste with plans now in force seeking the savings of 1 gram of fuel for every kilowatt hour of energy produced.

With regard to problem areas Arystanov notes coal production, construction (especially residential construction) and repair with special reference to

Ekibastuz complex where energy blocks three and four have been put to work or are being prepared for operation but where the units of No One State Rayon Electrical System still do not operate regularly due to poor quality equipment and problems in installation and mounting work as a result of a shortage of construction workers. Another problem is that many existing generating stations are inefficient due to outdated equipment, moreover, energy development has out-stripped fuel resources in some areas. On the future he notes that next year the republic will produce 67.8 billion kilowatt hours of electrical energy and 50 million gigacalories of heat.

ELECTRICAL ENERGY DEVELOPMENT IN PAVLODARSKAYA OBLAST DETAILED

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 13 December 1981 carries on page 2 a 1,000-word article, published under the regular rubric "Today at the Pavlodar-Ekibastuz Territorial Production Complex," by O. Qaliev detailing electrical energy development in Pavlodarskaya Oblast with special reference to the growth and present state of the Ekibastuz State Rayon Electrical Station. Major advances are now being made in Pavlodarskaya Oblast and the region is becoming a major KaSSR thermal-energy base due to the establishment of a number of major facilities.

Intensive development began in 1965 with the construction of thermo-electrical centers one, two and three and continued with the establishment of the Ermak State Rayon Electrical System, these facilities having a total capacity of 3 million kilowatts. More than 20,000 kilometers of high tension lines and 3,000 transformers provide a service area of 125,000 square kilometers for this capacity.

More recently the party and the government have devoted major attention to developments at Ekibastuz. Based on the Ekibastuz and Maykobe coal deposits a decision was made some 5 years ago to build 4 great thermo-electrical stations with a total capacity of 16 million kilowatts, and today 12,000 workers are involved in the project which will absorb some 8 billion rubles, an investment equivalent to those for some of the largest all-union projects (e.g., the new trans-Siberian rail links).

The author then goes on to discuss one major aspect of Ekibastuz development in particular, namely the establishment of a system of high tension transmission lines on an unparalleled scale and ends with a discussion of the current situation at Ekibastuz where experimental electrical transmission has now begun and where the first section of No One State Rayon Electrical System is now complete and operating with a present capacity of 2 million kilowatts, equal to the capacity of the older Ermak Station and where plans are now being developed for a series of satellite stations to boost production. Developments at Ekibastuz have resulted in a substantial drop in KaSSR electrical energy costs.

MANGYSHLAKSKAYA MEDICINAL WATERS, SANDS MUST BE USED MORE WIDELY

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 1 December 1981 carries on page 4 a 900-word article by Q. Sydyqov entitled "Medicinal Riches" and published under the regular rubric "Everything for the Individual." The mineral waters of Eraliev Village in Mangyshlakskaya Oblast near Shevchenko City are well-known locally and are used for recreational purposes, along with the sandy shoreline where open bathing is possible much of the year and where the sands themselves have medicinal properties, by area geologists and oil workers.

Scientists think that the area, with its warm sea water, medicinal clays and sands and very high quality mineral waters could be turned into a major treatment center for a variety of ailments. Moreover, the author continues, there are many other, similar medical resources on the Mangyshlak Peninsula as well. These resources must, in Sydyqov's view, be used far more widely than they are now and new facilities built to allow local treatment of individuals otherwise forced to travel great distances.

PEOPLE'S INTERESTS MUST BE SERVED BY WRITERS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 13 December 1981 carries on page 1 a 700-word boldface editorial entitled "The Writer and the Five-Year Plan." All the Soviet people, among them the workers of Kazakhstan, inspired to creative endeavor by the historic resolutions of the 26th Party Congress are completing the first year of the 11th Five-Year Plan with major achievements. Great victories have been gained on the road leading to communism.

The role of cultural creators in inspiring workers to make efforts to carry out the tasks set before them is great, especially in view of the increasingly complex spiritual life of Soviet society. The editorial then goes on to restate the Leninist principle of party thought and party culture and of party guidance of literature in the traditions of socialist realism and to note that a developed socialist society gives rise to new problems. These problems of life, moreover, the editorial continues, are the problems of literature and it is necessary for the writer to understand life deeply and he has a responsibility before the public in this area since the people's interests must be served by him. The editorial castigates deficient products of the Kazakh presses not up to the level of these requirements.

KAZAKH MINISTRY OF INTERNAL AFFAIRS ADDRESSES ALMA-ATA PUBLIC MARKET ISSUE

[Editorial Report] Alma-Ata QAZAQ ABEDIETI in Kazakh 4 December 1981 carries on page 13 a 200-word editorial reproducing a letter written by No Bereshev, chief of the Ministerial Administration of the KaSSR Ministry of Internal Affairs, on behalf of his ministry, in response to the expose of Alma-Ata public market abuses in the 9 October 1981 issue of QAZAQ ADEBIETI. B. Abdullin's article, the letter begins, has been discussed at the Ministry of Internal Affairs and the decision was reached to intensify joint struggle by police workers and representatives of the press against profiteering. Special plans have been made at the ministry for overseeing the operations of trade outlets, carrying out "raids" and investigating the work of industries producing scarce goods. Part of this effort will be correspondents points comprised by police workers and journalists to disseminate the results of the "raids," investigations, etc.

KAZAKH LEGENDS RECALL SEDENTARY WAY OF LIFE OF PAST

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 11 December 1981 carries on page 14 an 1,100-word article by Sayden Zholdasbaev on Kazakh legends of the Karatau region and their association with a sedentary way of life in the past among the Kazakhs and their ancestors. The Karatau area (central Dzhambulskaya Oblast) occupies a special place in the history of the Kazakh people which includes many legends in its oral traditions associated with the region. The archaeological materials that have been recovered from the ancient cities and settlements now beneath the Karatau earth allow us to test the veracity of these legends.

With this purpose in mind, and with the view that, contrary to the theories of many Kazakh historians, many of the groups that gave rise to the modern Kazakh people enjoyed a sedentary way of life. The author then goes on to examine Kazakh oral tradition and archaeological artifacts and sites associated with it to demonstrate the existence of a network of small trading and other settlements in the Karatau area and to show that Kazakh oral tradition refers to them in a meaningful way and thus proves a close connection of the modern Kazakhs with this sedentary past. Although these settlements later declined due to the Dzungar raids, disputes between the Uzbek and Kazakh khans that cut off trade and the rise of a sea route to East Asia that robbed the old Silk Road served by most of the Karatau settlements of its significance, some of the ancient sites have flourished again since the October Socialist Revolution, often with the same names or other names recalling the past.

AQMOLLA PRAISED AS EDUCATOR, DEMOCRATIC POET

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 15 December 1981 carries on page 3 a 1,500-word article by U. Qalizhanov devoted to the life and works of the Bashqurt poet Aqmolla on the occasion of the 150th anniversary of his birth. The birth of the Bashqurt educator and poet Aqmolla (Miftakhitdin) Mukhamediyarov was a major event for the Kazakh, Bashqurt and Tatar peoples and for all Soviet nationalities. Aqmolla lived in the previous century under the social system of that time and mobilized his talents against oppression and ignorance.

Aqmolla was born on 14 December 1831 in the village of Toqsanbay in what is now the Bashqurt AR. His father died when Aqmolla was young and after much difficulty his mother remarried a wealthy Tatar who taught the young Aqmolla to read and write but disliked his inclination to books.

Aqmolla, however, continued his literary pursuits and traveled from city to city seeking learning. His desired destination was Bukhara but his financial circumstances forced him to begin teaching Kazakh children instead, from 1858. His reputation for honesty gained him the popular epithet Aq-molla, "the white (moral) Mullah," and he later used this nickname as a literary style name. He also made powerful enemies during these years with his criticisms of the ruling class.

In 1867 Aqmolla was accused by persons unnamed of being a runaway soldier and thrown into prison where he remained until ransomed by a Kazakh bey in 1871.

He then worked among the Siberian Kazakhs until his assassination in 1895 at the instigation of some tatar bey.

Many changes were taking place in Aqmolla's lifetime and one aspect of these changes was the struggle, led by the Tatar Mardzhan, for a modern educational program for the medrese. Aqmolla squarely allied himself with these forces and wrote a poem of praise for Mardzhan published in 1892. Other books containing his work were published in 1904 and 1907 but it was only after the revolution that true justice was done to his work. A new Kazakh edition appeared this year. Aqmolla's poems also appear in Tatar chrestomathies and anthologies and he is considered the classical writer and founder of Basqurt written literature.

Qalizhanov then follows this biographical sketch with his characterization of Aqmolla's personality and poetry. He notes Aqmolla's great devotion to his people, dedication as an educator, criticism of the established Islam of his time and interest in new poetic, realistic themes close to the lives of his people.

COMMENTATOR WARNS AGAINST CONTAMINATION OF KAZAKH MOTHER TONGUE

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 11 December 1981 carries on page 7 a 1,100-word article by Malik Qaraqulov entitled "This is the Way the Ruining of a Language Begins." It is the duty of us all to honor our mother tongue and keep it free from contamination. With this goal in mind Qaraqulov then goes on to examine misuse of certain words and phrases in the press, media and even conversation. Although not spelled out in each case, it is apparent that much of the problem comes from use of Kazakh words consistently, e.g., Kazakh kurdeli, "complicated, complex, compound, important, significant," to render Russian slozhnyy, "complicated, complex, intricate, involved, difficult, compound," and kapital'nyy, "capital, fundamental," to translate a given Russian usage without precise attention to the actual meaning of a given phrase (thus the "difficult situation in Poland" of Russian texts becomes a "complicated state of affairs" in parallel Kazakh presentations).

COMMENTATOR STRESSES AQMOLLA'S POSITION AS A KAZAKH POET

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 11 December 1981 carries on page 12 a 500-word editorial reporting on a speech given by Sadu Mashaqov at a literature evening convened at the Conference Hall of the Kazakhstan Writers Union to note the 150th Anniversary of the Birth of the Bashqurt Educator and Democratic Poet Aqmolla Mukhamediyarov. Mashaqov's point is that while Aqmolla, who came from a distinguished Bashqurt family and maintained a close connection with the Tatar as well, is unquestionably to be associated with Bashqurt and Tatar literature, he is, Mashaqov stresses, also a figure in Kazakh literature as well since nearly all of his poems are written in Kazakh (they show stylistic relationships with Kazakh literature as well, a point made by M. Auezov as long ago as 1935) and thus Aqmolla also merits great attention in Kazakhstan in connection with the anniversary of his birth. To note the event Mashaqov proposes, in addition to publishing collections of Aqmolla's work, study of his songs by theater and arts institutes students and the composition of new works in the poet's honor.

MODERN KAZAKH MUSIC, PRODUCT OF RUSSIAN FRIENDSHIP, SOVIET INTERNATIONALISM

[Editorial Report] Alma-Ata ZHULDYZ in Kazakh No 10, October 1981 carries on pages 194-201 a 5,100-word article by Boris Erzakovich on the role of Kazakh-Russian and Russian-Kazakh friendship in the development of Kazakh music published under the regular rubric "Art and Science." The 250th Anniversary of the Voluntary Submission of the Kazakhs to Russia is now being celebrated. Kazakh professional music is one manifestation of the relationships of the Kazakh and Russian peoples over the past two and one-half centuries and is a component of Soviet multinational music.

Modern Kazakh music came into being by drinking deeply of the older heritage of Kazakh traditional music and drawing upon the achievements of native music figures and has become a highly developed form in a very short period of time. Mutual relationships between Russians and Kazakhs have assisted in achieving this present high level.

With this introduction in mind Erzakovich then goes on to trade Kazakh-Russian and Russian-Kazakh musical relationships from the very beginnings of contacts between the two peoples noting mutual borrowings of folk materials by the common people of both ethnic groups resident on the steppe, conscious efforts by Abay and others to learn about and adapt Russian music for Kazakh purposes, 19th century efforts to incorporate Kazakh and other Turkic materials into their works by Russian composers and the gradual emergence of a mutually assimilated music from the 1920's on reaching a highpoint in modern Soviet Kazakh music. The present high level of development of Kazakh music, the author concludes, is a victory of socialist realism and of Soviet cultural internationalism. Moreover, Russian composers and musicologists have played elder brother roles during the evolution of modern Kazakh music.

ROLE OF RUSSIAN LANGUAGE IN KAZAKH ASSIMILATION TRACED

[Editorial Report] Alma-Ata RUSSKIY YAZYK V KAZAKHSKOY SHKOLE in Russian No 10, October 1981 carries on pages 2-7 a 1,900-word article by Assistant Professor O. Sultan'yev of the Kokchetav Pedagogical Institute on the importance and role of the Russian language in the Kazakh assimilation published under the rubric "250th Anniversary of the Submission of Kazakhstan to Russia." The voluntary submission of Kazakhstan to Russia was a turning point in its history that resulted in unity and a commonality of fate of the Kazakhs with the Great Russian people and signified an advance for them resulting in the awakening of Kazakh production forces, the emergence of precapitalistic relationships, the appearance of a Kazakhstan proletariat and the strengthening of economic and cultural connections with all the peoples of Russia. The process of submission, moreover, was a struggle between new and old, between the progressive and the conservative and outdated.

Leading Kazakhs actively participated in this struggle, desiring connection with Russia to gain the liberation of their peoples from feudal oppression and the aggression of foreign neighbors. They wanted, however, not just economic but spiritual connections with Russia as well and the spread of leading Russian ideas among the Kazakh people. And, the author goes on, the only way to achieve the assimilation that this goal represented was through the Great Russian Language.

Sultan-yev then continues his discussion by tracing the role of the Russian language, the leading Soviet language and the language of science and culture, through the earlyperiod of the first Kazakh enlighteners, e.g., Ualikhanov, Altynsarin, the first Kazakh teacher of Russia, and Abay Qunanbaev, down to the Soviet period when the Russian language has acquired still more significance as the medium of intercommunication in a multinational, Leninist Soviet state. What the Kazakhs have achieved is a result of their study and mastery of Russia which is the basis for a unified culture of communism.

ENVIRONMENTALLY CONSCIOUS FISHERMEN REAP RICH HARVESTS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 2 December 1981 carries on page 4 a 600-word article by S. Beyisbaev on lake aquaculture at Shelek in Alma-Atinskaya Oblast published under the regular rubric "Man and Nature." The Toghan enterprise is a lake fishing industry comprised largely of former Aral Sea fishermen that has achieved remarkable fish harvests in recent years. From Beyisbaev's article it is clear that this has been accomplished by careful attention to and protection of the local environment and fishing resources. The lakes surrounding the enterprise, for example, are, by and large, unpolluted natural ecosystems and every effort is expended to ensure that they remain so (a specially equipped staff guards the lakes on a full time basis). Also a secret of the enterprise's success is an active aquaculture involving large scale fish seeding, fish feeding and algae fertilization. Environmental regulations have been carefully observed and, the author concludes, the results have been substantial.

YOUNG PEOPLE MAJOR FORCE IN KAZAKH ENVIRONMENTAL PROTECTION

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 11 December 1981 carries on page 1 an 800-word boldface editorial on the role of young people in Kazakh environmentalism. Preservation and proper exploitation of the natural environment and increase of natural resources are of the utmost importance today and for the future, in fact, care for the environment is care for the future itself.

Thus we see the concern of the party and the government, which are taking many active measures in this area, for the environment. Protection of the natural environment, however, is not just the business of agencies and enterprises but also of the broad masses of the people and, within them, of young people in various environmental activities with special reference to the ways in which school work is being combined with practical environmentalism as a means for educating the future constructors of communism.

BOOK BY PARTY CHIEF KUNAYEV EXPOUNDS BENEFITS OF LENINIST NATIONALITIES POLICY

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 31 December 1981 carries on pages 2-3 a 2,600-word review by Zh. Abdildin, corresponding member of the KaSSR Academy of Sciences, of D.A. Kunayev's new book "KPSS Lenindik Ult Sayasatymyng Saltanaty" (The Tradition of the Leninist Nationalities Policy of the CPSU), Qazaqstan Press. Kazakh development has been cosmic and Kazakhstan's present high level of development is an expression of the Leninist nationalities policy of the party and a realization of Leninist ideas. The carrying out of the Leninist nationalities policy of the party and a realization of Leninist ideas. The carrying out of the Leninist nationalities policy in practice, however, the reviewer continues, in the development of a socialist society is a complex process and this process is the subject of a new book, a collection of articles, other writings and speeches, recently published by D.A. Kunayev, member of the Politburo of the CC CPSU and first secretary of the CC of the Kazakhstan CP, who looks at Kazakh development in chronological terms from the point of view of Leninist conceptions and policy. Kunayev repeatedly stresses in his book the specific benefits of the Leninist policy for Kazakhstan at present and in the various periods of its past development.

VIOLATION OF WORKERS RIGHTS COMMON OCCURRENCE IN KAZAKHSTAN

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 17 December 1981 carries on page 1 an 800-word boldface editorial entitled "Management and Labor Law." As L.I. Brezhnev pointed out in his report to the 26th Party Congress: "Soviet society is a society of workers and the party and the government are devoting every effort to making work not only productive but also meaningful, interesting and creative." To achieve this goal and to accomplish the aim of making labor into a spiritual as well as a material necessity, strict adherence to labor law, which sets the rights and duties of management and labor, is of the utmost importance since labor law has an impact upon productivity, quality of output, fulfillment of state plans and the requirements of socialist competition, and its strict fulfillment makes for good organization and good working conditions.

With this view in mind the editorial then examines labor law adherence in the KaSSR, discovering that while many industries are fulfilling labor law requirements and achieving good production results as a consequence, many are not. Among firings, transfers and penalties and failure to follow established guidelines in handling disputes. Causes include unwillingness of local labor unions and other watchdog agencies to respond to abuses, the total lack of such agencies in some cases and management punitiveness when they do assert their prerogatives. The editorial, which implies by its title that management is the real problem, ends by calling for educational and informational efforts to raise the consciousness of management in this area. The problem must be overcome if good working conditions are to be achieved.

OBLAST SOVIETS STRIVE TO MEET CONSUMER, CULTURAL NEEDS

[Editorial Report] Alma-Ata QAZAQSTAN KOMMUNISI in Kazakh No 11, November 1981 carries on pages 38-45 a 3,300-word article by Q. Zhumabekov, chairman of the Executive Committee of the Dzhezkazganskaya Oblast Soviet of People's Deputies, on what his and other local soviets of the oblast are doing to improve consumer and cultural services in their jurisdictions. The 26th Congress of the CPSU pointed out that guaranteeing the further enhancement of the living standards of the Soviet people is one major goal of the 11th Five-Year Plan. Achieving this goal, the author goes on, is, in turn, directly connected with meeting the cultural and domestic services needs of the people as fully as possible. Thus the party congress foresaw improvements in all areas of consumer and cultural services including consumer goods supply, housing, cultural and recreational facilities, etc.

This is a totally logical aim since an individual's work and how he lives are interconnected, that is, how well a worker lives and how well his needs are met are directly related to creativity and productivity on the job. Increased productivity and improved work quality, in turn, make possible more free time and more free time means a better rounded, and thus more capable individual. Local soviets of people's deputies have major roles in these areas with consumer good production a particularly key area.

With this introduction in mind the author then goes on to examine the work of oblast and local soviets in Dzhezkasganskaya Oblast with respect to consumer and cultural services noting the many major achievements in an oblast that is but 8 years old. Problem areas seem to be the construction bottleneck, food supply and food services, communications and transportation. Difficulties in training cultural workers are also underscored.

BARLEY TO PLAY MAJOR ROLE IN MEETING PROTEIN NEEDS OF GROWING SOVIET POPULATION

[Editorial Report] Alma-Ata BILIM ZHANE ENGBEK in Kazakh No 11, November 1981 carries on page 10 an 800-word article by Sozaqbay Sadyqov, research worker at the Kazakh Agricultural Research Institute, published under the regular rubric "Young Scientists Forum" and entitled "Barley and the Protein Problem." According to current estimates the population in the USSR will reach 304 million by 1990. Feeding such a large population will require 7 million tons of protein a year and to meet this need USSR plant protein resources must be expanded and biological fertility increased. The article then goes on to discuss experiments with new varieties of barley, a plant of growing importance in Soviet agriculture, particularly as animal feed. Under investigation are high protein content Swedish (khayproli) and Danish (Rizo)-1,508 varieties. The article emphasizes detailed analyses by Soviet laboratories to determine precise protein, amino acid and other component contents of the cultigens.

KAZAKHS ENCOURAGE ACTIVE PARTICIPATION OF PENSIONERS AND DISABLED

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 25 December 1981 carries on page 4, under the regular rubric "Our Soviet Way of Life," a 1,000-word article by M. Bekenov, vice-chairman of the Executive Committee of the Karagandinskaya Oblast Soviet of People's Deputies, entitled "Care for the Old." Social security provides another source of income in the Soviet Union after wages have ceased to be paid and under refined socialism social security is an all-embracing system comprising all citizens.

With this view in mind Bekenov then reviews the social security system in Karagandinskaya Oblast where 90 million rubles were spent for pensions last year (66 million in 1975) and where 160,000 persons received pensions and other forms of social security assistance in 1980 (compared to 134,000 in 1975), including 95,000 pensioners (65,000 in 1975). The author notes in particular efforts now underway to draw pensioners and disabled persons into socially productive work as called for in measures sanctioned by the CPSU and the USSR Council of Ministers. As a consequence some 48,000 pensioners have begun working in the people's economy again (some 5,000 last year alone), many of them at home with numerous potentialities existing in the oblast for the home employment of pensioners and disabled persons. The author also records considerable attention to the improvement of old age and nursing homes as part of a coordinated effort to meet the needs of the old and increase the work capabilities.

EDITORIAL UNDERSCORES INCREASED IMPORTANCE OF PROFESSIONAL-TECHNICAL EDUCATION

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 27 December 1981 carries on page 1 an 800-word boldface editorial entitled "A Concern for Industrial Education." Particular attention was allotted in the decisions of the 26th Party Congress to the broadest possible improvement of the system for the professional and technical education of workers to meet the enhanced needs of the times. Today two-thirds of young people receive a professional-technical education as compared with only one-third during the 1960's. Some 13 million young received such education during the last five-year plan alone, 890,000 of them in Kazakhstan where nearly 500 professional-technical schools are in operation, 303 of them providing a middle education.

The article then goes on to outline some outstanding achievements, with particular emphasis on successful linking of education and real life, and problem areas. Among the latter are professional-technical school lesson plans not organized to meet current needs, poorly chosen teachers and a lack of certain types of demonstration and training equipment. The editorial ends by calling for a solution to these and other problems and enhanced efforts to strengthen the connection between real life and the school, expand and fortify material and technical bases and use equipment profitably.

MONUMENTS PRESERVATION SOCIETY STRIVES TO SAVE CULTURAL LEGACY OF KAZAKH PAST

[Editorial Report] Alma-Ata ZHULDYZ in Kazakh No 11, November 1981 carries on pages 195-201 a 4,700-word article by Anvar Alimzhanov, chairman of the Central Council of the KaSSR Society for the Protection of Historical and Cultural Monuments, on past achievements and current work of his society published under the regular rubric "Art and Science." We live in difficult times, times when man's very survival is at stake due to the threat of nuclear war. And writers, historians and artists have always devoted great attention to recalling the history, heroism and cultural traditions of their peoples in times of crisis. Part of this effort is the work of the KaSSR Society for the Protection of Historical and Cultural Monuments, work which has received new emphasis as a result of L.I. Brezhnev's call for special attention to history and the cultural legacy of the past in his report to the 26th Party Congress, a favorable evaluation of the society's work at the 15th Congress of the Kazakhstan CP and various resolutions of the KaSSR Council of Ministers on improvement and strengthening of the society's work in accord with an expressed desire to enhance the connection between the past and the present and to promote friendship and national pride.

The author then goes on to review various recent and current activities of his society in archaeology, the opening and expansion of museums and museum collections, discovery and preservation of architectural monuments, propagandization of the past, particularly in the schools, cooperation with other, similar organizations and maintaining archives. Alimzhanov complains of a lack of resources adequate to the size of the society's tasks, particularly in terms of the collection, study and storage of archaeological artifacts. He also decries a lack of attention in Russian schools in Kazakhstan to the Kazakh past, Kazakh cultural heritage and Kazakh language and notes that although special textbooks exist for use in the Russian schools for instruction in these areas they are seldom used. He warns against a worship of technocracy that produces poorly rounded individuals that are "robots" rather than constructive citizens. In this context Alimzahov seems to suggest that constitutional guarantees to national minorities are not being met in the USSR.

Also lamented is the prevalence of disrespect for the monuments of the past in general, "pot hunting" and conscious destruction. The oblasts with a majority Russian population are singled out for castigation in this regard in particular. The author also seems concerned about the collection of manuscripts and similar local documentary materials in the KaSSR by national Soviet (i.e. Russian) organizations when, he seems to suggest, this might be done more properly by his society (and KaSSR historical materials thus retained in Kazakhstan).

Alimzhanov also notes that the legacy of the past can be in environmental terms as well and stresses the cultural importance of the Aral Sea for the Kazakhs and expresses doubt that the Siberian Rivers Project alone will save it. The author ends by condemning Chinese "cartographic" expansionism (i.e., efforts by Chinese archaeologists and their Western allies such as William Watson to show a Chinese cultural dominance in Turkestan and Siberia in ancient times), stressing the indigenous character of south Siberian and Turkestanian culture, and calling for more resources to further the preservational and propagandistic efforts of his society, especially in connection with current interest in the 250th Anniversary of the Voluntary Submission of the Kazakhs to Russia.

KAZAKH NATIONAL GAMES EXPRESS NATIONAL CULTURE

[Editorial Report] Alma-Ata BILIM ZHANE ENGBEK in Kazakh No 11, November 1981, carries on pages 19-20 a 1,700-word article by E. Saghyndyqov, published under the regular rubric "Readers Share Their Thoughts" and entitled "The Educational Significance of National Games." National games are a widespread form of education among the peoples and are a means of imparting desired characteristics and forming moral habits. Among the Kazakhs such games are also closely associated with the past and the Kazakh heroes and leaders of the past and express traditional cultural patterns and values. The author, who quotes numerous Soviet pedagogs and others to support his views, ends by calling for more research into the pedagogical significance of the games from a Marxist-Leninist standpoint and increased effort to use them in Kazakh educational programs.

QOYANDY FAIR CLOSELY ASSOCIATED WITH KAZAKH CULTURAL LIFE, HISTORY

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 18 December 1981 carries on page 10 a 1,300-word article by Tursyn Zhurtbaev published to note the 250th Anniversary of the Voluntary Submission of the Kazakhs to Russia and entitled "Firm Bonds of Friendship." The Qoyandy Fair was one of the institutions of the last century that aided in the social, cultural and economic assimilation of the Kazakhs to Russia. It first came into being as a cattle market organized by the Russian merchant Vaznava Botov on the shores of Qarasor Lake located along the Taldy River east of Qarqaraly.

Subsequently, with the opening of mines in Kazakhstan, an official intention to develop steppe markets, the coming of the railroad and the elimination of duties on Asian goods in 1867 the market assumed a major significance as a great regional fair and the first permanent administrative and other facilities were built on the site. The Kazakhs welcomed the market since they could buy their needs, e.g., silks, rugs, fabrics, samovars, horseshoes and nails etc., there and the trade developed with mutual benefits for both sides.

As time passed, moreover,the fair acquired increased cultural significance as well as a place where Kazakh singers, poets and other popular artists congregated, laying the foundations for a national theater in their interactions. The fair, which continued to exist under the early Soviet regime, acquired still more cultural importance after the revolution until suddenly closed, apparently in the mid-1930's. By that time it had become a major administrative center as well as cultural and economic facility with medical offices, schools, a library and propaganda facilities (also a mosque and a church).

The author recalls the good old days of the fair's flourishing and, although what is past is past, he calls for some form of memorial since many of the great names of recent Kazakh culture, not only traditional personages but other figures such as the actor Serke Qozhamqulov and Mukhtar Auezov, were associated with the cultural side of the fair as well. Moreover, Zhurtbaev continues, the region is exceptionally beautiful with great recreational significance and has historical importance in terms of the more distant Kazakh past as well since the old Silk Route trade has left behind it many artifacts and ruins in the area. Thus, the author concludes, it would be appropriate to establish a large museum-park to recall the great days of the fair and celebrate the region itself and its history, associated as it is with Kazakh-Russian friendship and internationalist solidarity.

ACADEMY OF SCIENCES HEAD EMPHASIZES RUSSIAN ROLE IN KAZAKH SCIENTIFIC DEVELOPMENT

[Editorial Report] Alma-Ata QAZAQSTAN KOMMUNISI in Kazakh No 11, November 1981 carries on pages 57-64 a 3,500-word article by A. Kunayev, president of the KaSSR Academy of Sciences and corresponding member of the USSR Academy of Sciences, published under the regular rubric "250th Anniversary of the Voluntary Submission of Kazakhstan to Russia" and entitled "The Progressive Role of Russian Sciences." Kazakhstan is a window on national development and here the major event was the Voluntary Submission of the Kazakhs that brought an end to foreign assault, feudal disunity and mutual hostility and laid the basis for the overcoming of economic helplessness and regional isolation by bringing Kazakhstan closer into the Russian orbit.

The author then goes on to examine from this point of view one aspect of the changes engendered by union with Russia, namely the beginning of the scientific investigation of Kazakhstan by individual Russian scientists and scientific societies under the Czarist regime and the subsequent emergence of a joint Russian and Kazakh scientific endeavor in Kazakhstan. This endeavor has found its full expression only since the Great October Socialist Revolution.

Throughout the article Kunayev emphasizes the lead assumed by Russian scientists in Kazakhstan and the importance of Russian patronage of local scientific development and the conscious effort on the part of Russian national leaders to develop a high order, local scientific establishment culminating in the creation of a KaSSR Academy of Sciences in 1946 and the present high level of development. Moreover, Kunayev concludes, science is by its very nature internationalist and has become a major force promoting the internationalization of the life of the Soviet people in our time.

BENEFICIAL INFLUENCE OF RUSSIAN, UKRAINIAN INTELLECTUALS IN KAZAKH DEVELOPMENT LAUDED

[Editorial Report] Alma-Ata BILIM ZHANE ENGBEK in Kazakh No 11, November 1981 carries on pages 6-7 a 1,000-word article by Qubyghul Zharyqbaev, chairman of the Psychology Chair of the Kazakh State University, on the beneficial influence of three Russian and Ukrainian intellectuals in Kazakh development published under the regular rubric "250th Anniversary of the Voluntary Submission of Kazakhstan to Russia." Russian and Ukrainian scientists have had a beneficial influence upon the development of the social thought and the spiritual life of Kazakhs. Among them were Vasiliy Nikitich Tatishchev, who devoted much of his efforts while in Orynbor to the investigation of the spiritual life of the Kazakhs, the improvement and expansion of local industry and the opening of new model, secular schools for the children of the Kazakh nobility, Aleksey Inaklievich Levshin (1799-1879), who had a special interest in the customs and way of life of the Kazakhs and who made the first real effort to understand the Kazakh national psychology, and the great Ukrainian poet and intellectual Taras Grigor'evich Shevchenko, who depicted the life of the Kazakh common people and became their spokesman and defender in the face of Czarist colonial oppression.

HISTORICAL CONNECTIONS OF KAZAKHS WITH EGYPT RECALLED

[Editorial Report] Alma-Ata QAZAQ ADEBIETI in Kazakh 18 December 1981 carries on page 13, under the regular rubric "Journey Into the Past," an 800-word article by Ghalyn Akmedov entitled "Kifjaq in Egypt." Akmedov's article is concerned with a recent work by the Egyptian Amin al-Khali devoted to the Mamluq dynasty of Egypt (founded 1260) that stresses the importance of a Kifjaq, i.e. Turkic-speaking element among them and of the connections maintained by the Egyptian Mamluqs with the Kazakh steppe. As a consequence a Turkic culture of sorts flourished in Egypt including many Turkic literary and cultural figures.

Akmedov, noting Amin al-Khali's frequent references to still existing archival materials relating to the Mamluqs, calls for closer study of this Egyptian Turkic culture by Kazakh scholars both in its own terms and in terms of the light that it will shed upon the history of the Kazakhs themselves. The time has come, the author concludes, to look beyond the limited and all but exhausted resources in studying the Kazakh past.

COMMENTATOR STRESSES KAZAKH ISLAMIC CULTURAL CONNECTIONS WITH MIDDLE EAST

[Editorial Report] Alma-Ata ZHULDYZ in Kazakh No 11, November 1981 carries on pages 187-194 a 3,700-word article by Rakhmanqul Berdibaev on Kazakhstan's historical connections with the Islamic culture of the Middle East and present relations with the Syrian Arab Republic. Cultural relations between the peoples of Kazakhstan and Central Asia and the peoples of the Arabic world go back to ancient times. Among the many expressions of the closeness of the relations involved was the use of the Arabic script by the Kazakhs in schools and for literature and for whom knowledge of this script signified learning and culture. Moreover, with the Arabic script came Arabic literature (i.e., "The Thousand and One Nights"), literary forms and conventions while Kazakh writers of the past came to identify with the culture of the Islamic world of the Middle East, some even living most of their lives there and making major contributions to a common Islamic culture.

The author attacks those who deny the importance of the Arabic script for the Kazakhs and of the Kazakh literature written in it and stresses the importance of the many technical and nontechnical loan words in Kazakh from Arabic. A people need not necessarily have, he says, its own script to be literate while the borrowing of words from other languages is an important and desirable linguistic phenomenon. After all, he continues, has not the Russian language itself borrowed from the Turkic peoples just as they have borrowed from the Islamic world. Moreover, Berdibaev goes on, the past connections of Kazakhstan with the Arabs through the Arabic script and Islamic culture are of the utmost importance in terms of present Soviet policy and interest in the Middle East.

Parts two and three of the article deal with the authors own visit to Syria as part of a friendship delegation and the present position of Syria within the Arabic world. The author stresses there the role of the Western Powers as breakers of Arabic unity and of the solidarity and friendship of the Soviet Union and its peoples with the Arabic World.

KAZAKH FORESTS NEED SPECIAL PROTECTION FROM MAN, ELEMENTS

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 23 December 1981 carries on page 4 a 700-word article by S. Shybyqbaev, engineer of the Shelek Forestry Enterprise (Alma-Atinskaya Oblast), published under the regular rubric "Man and Nature." The Shelek Forestry enterprise is located in one of the most beautiful parts of the Altay and comprises more than 110,000 hectares. The purpose of the enterprise is to protect the forest, bird, animal and other natural riches in the area, a job that the enterprise performs in an exemplary manner. The author then goes on to discuss the work of the enterprise in detail, noting the specialization of its various branches, one of which is primarily concerned with raising fruit trees. Among problem areas are illegal firewood gathering that damages slow growing spruce resources, conflict with herdsmen and their animals, which have a negative impact upon the entire forest ecosystem, and fire. In connection with this last problem, however, good planning and modern resources are achieving major successes in preventing fires and limiting the spread of those that do get started.

NEW KAZAKH RESERVE NEEDED TO PROTECT UNIQUE NATURAL ENVIRONMENT

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 23 December 1981 carries on page 4, under the regular rubric "Man and Nature," a 500-word article by P. Avelbekov on the need to establish a new natural reserve along the

Syr-darya in Zhangaqorghan Rayon. There is a strip of land 60-70 versts long by 50-60 versts wide situated on both sides of the Syr-darya in Zhangaqorghan Rayon that should be turned into a natural reserve. This area which, although situated in the Kizilqum, is quite unlike other parts of the desert region, is rich in animal and plant resources, including licorice and reeds, the latter so useful in building yurts and as fodder.

The area, however, needs protection since some of its animals and plants are disappearing or have disappeared, e.g. the bustard, an endangered species, and the sakhsaul bush, once plentiful in the area but now quite rare. The time has come to protect the area, both because of the economic benefits of protection and in terms of aesthetic and human needs. It is easy to violate but difficult to restore, he says. However, the author concludes, since everything cannot be protected this limited reserve should be established.

SUPPLY OF CHRISTMAS TREES A PROBLEM IN LITTLE FORESTED KAZAKHSTAN

[Editorial Report] Alma-Ata SOTSIALISTIK QAZAQSTAN in Kazakh 27 December 1981 carries on page 4 an 800-word article by A. Moldabergenov, responsible secretary of the Presidium of the Central Council of the Kazakh Society for the Protection of the Natural Environment, on the problem presented by the need to provide Christmas trees in little forested Kazakhstan. The evergreen spruce, erected and decorated at New Year's time in many Kazakhstan homes, is a beautiful and symbolic sight and such trees are part of a very old custom reaching back hundreds of years. It seems that New Year's is not New Year's without them.

However, some 150,000 of such trees are needed for Alma-Ata alone and 1-2 million for the whole KaSSR, trees that would require 500 hectares of growing land if all were grown in one place. Since the KaSSR's spruce resources are quite small supplying this number of trees would press heavily upon them. And, in fact, many are imported, an expensive proposition. Others are harvested as part of efforts to clear forests, and there is also an effort underway to produce artificial trees (mostly from natural materials gathered when forests are cleared and trees are trimmed).

All of these sources, however, fail to meet needs and artificial trees are rejected by some. The result is widespread theft of public trees, large numbers within cities themselves and still larger numbers in the wilds. This is harming spruce supplies in the republic and must be halted.

The author then goes on to discuss one possible solution to the problem. Republic Christmas tree plantations, first begun in 1976 and where 4.5 million trees have been planted (3.4 million more will be planted in the next 4 years). These farms will soon be supplying republic needs. However, Moldabergenov continues, since spruce are so slow growing there is a need to carefully reexamine Christmas tree distribution to reduce use even after the tree farms come into production. He also suggests more use of reusable "live" trees.

TURKMEN SSR

CENTRAL ASIAN SHIPPING DIRECTOR ON KARAKUM CANAL

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 18 December 1981 p 4 carries a 700-word interview with K.A. Yesin, director of the Central Asian Shipping Administration, on the commissioning of the ship "Magtymguly," built by the Aral'sk shipyards for use on the Karakum Canal. "The 'Magtymguly' and similar ships operate between Bashsaka and Nichka." This section of the canal was opened to freighter traffic in the spring of 1981.

NAVIGABLE PORTION OF KARAKUM CANAL

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 29 December 1981 p 4 carries a 150-word article on the opening of a department store which operates on a ship along the "better than 450 kilometer navigable part of the canal....In the future an 820 kilometer section of the 1,100 kilometer Karakum Canal will be navigable....Ashkhabad will become a port. Intensive work is being done to widen and deepen the canal."

TURKMEN CHARGES WEST EXPLOITS ISLAMIC REVIVAL

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 18 December 1981 p 2 carries a 1,400-word article by K. Bagdasarov, director of the Philosophy and Law Section for Scientific Communism and Foreign Ideology of the TSSR Academy of Sciences, on "Islam in the Plans of Anticommunism." It is claimed that "using Islam is a component element in the strategy of imperialism.... But the source of revolutionary national liberation democratic movements is not religion, but real economic, political and cultural ideological factors. According to reasons emerging from factors specific to the historical growth of Iran, the fact that the anti-imperialistic movement was led by Muslim clergy is a different question." Among other factors in Iran was the "nonexistence of legal opposition parties under the conditions of a despotic regime." The clergy constituted the only group able to lead the opposition.

PRIMARY PARTY ORGANIZATIONS MUST IMPROVE EDUCATIONAL WORK

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 1 December 1981 p 1 carries a 1,100-word lead editorial on the importance of communist educational work as conducted by primary party organizations. "The goal of party education consists of teaching revolutionary theory, a command of USSR internal and external policy, an implacable view of bourgeois ideology...." Among organizations having major shortcomings in this area are the Chardzhou docks.

CULTURE TRADE UNION HOLDS CONFERENCE

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 6 December 1981 p 3 carries a 1,100-word report by J. Nuryev on the XI Conference of the cultural trade union workers on "work conducted to improve leadership of the cultural workers' trade union over trade union organizations...." There are shortcomings in many sectors: "some theaters, culture houses, clubs and museums are not satisfying the growing demands of the workers." This is "a fault of the trade union organizations" which "inadequately conduct ideological and political education among their members."

LAWS AGAINST CORRUPTION STRENGTHENED

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 11 December 1981 p 2 carries a 2,000-word article by General-Major R. Berdiev, TSSR Minister of Internal Affairs, on the Decree of 20 October 1981 which strengthened Articles 173 and 176 of the TSSR Criminal Code. "It is directed against dishonest people working in stores, food factories, ateliers, shops, technical service stations, medical administrations, ticket offices, hotels and similar places." In the past, the MVD could only write letters to the administrations concerned; now they can institute direct action.

PASSPORT PRIVILEGES CLARIFIED

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 13 December 1981 p 4 carries a 600-word article by A. Kaprielov, deputy chief of the Passport Section of the TSSR MVD, on the importance of possessing a passport. However, "certain citizens, with the goal of getting a new 'clean' document, create situations wherein they intentionally 'lose' their passports." These people are subject to a fine.

SOVIETS MUST EXERT RIGHTS TO ASSURE ECONOMIC GROWTH

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 9 December 1981 p 1 carries a 1,100-word lead editorial on the role of the Soviets of Peoples Deputies in assuring the pace of economic growth. "Industries of the republic have produced more than 11 million rubles above the plan for the first 10 months of this year....However, some local soviets do not make use of their rights and laws in assuring complex growth in their territory." As a result, a number of local soviets "are unable to achieve high results in industrial and agricultural production." It is recommended that they make use of the "great role of Soviet sessions, and joint commissions of Soviets and deputies."

DOCUMENTARY ON KARAKUM CANAL

[Editorial Report] Ashkhabad ADEBIYAT VE SUNGAT in Turkmen 9 December 1981 p 1 carries a 100-word announcement on the documentary film "Captains of the Karakum," directed and produced by Cherkez Shamyradov. It focuses on the shipping route between Bashsaka and Mary.

NEW CANAL EXCAVATION WORK AHEAD OF PLAN

[Editorial Report] Ashkhabad SOVET TURKMENISTANY in Turkmen 8 December 1981 p 1 carries a 200-word report by Sh. Mammedov on excavation work being done in Krasnovodsk Oblast between Gyzylarbat, Garrygala, Gyzyletrek and Asenguly (on the Caspian) by 'Turkmenremvodstroy.' Pumping stations are now being built to supply underground water to kolkhozes and sovkhozes. Work is ahead of schedule.

50TH ANNIVERSARY OF THE TURKMEN STATE ART SCHOOL

[Editorial Report] Ashkhabad ADEBIYAT VE SUNGAT in Turkmen 26 December 1981 p 4 carries a 1,200-word article by Aykhan Nyyazgeldiev, director of the Shota Rusteveli Turkmen State Art School, on the school's 50th anniversary. Beginning under Russian leadership, the school soon acquired a Turkmen character. As is pointed out, under Islam "it was forbidden to depict the human figure." As for the present, art has disentangled itself "from the confusion of the spiderweb of religion." There are now nine departments at the school.

UZBEK SSR

UZBEK ESSAY REVIEWS PARTY COMPOSITION, PRINCIPLES

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 22 December 1981 carries on pages 2-3 a 2,100-word essay by Prof-Dr of History S. Tatiboyev entitled "The CPSU in Conditions of Developed Socialism." The essay deals with the class composition of the party structure of the Soviet Union and of Soviet Uzbekistan. The CPSU recruits from the basic classes and social strata of society, among which the worker class is in the forefront. Workers form 43.4 percent of the CPSU. Kolkhoz workers, who together with industrial workers form the political foundation of Soviet society, now number 2.24 million, or 12.8 percent of the CPSU. Women, whose role in the CPSU and Soviet society continues to grow, now form 26.5 percent of the CPSU. The party places an accent on young members--73 percent of recruits in the last 5 years have been komsomol youths. The composition of the CPSU also reflects the multinational nature of the Soviet state. For example, the Communist Party of Uzbekistan has representatives of 86 nationalities and subnationalities, of whom Uzbeks form 60.9 percent. During 1978-1980, workers formed 51.6 percent of those admitted into ranks of CPUz, farm workers formed 19.6 percent, economic specialists 24.1 percent, and management apparatus workers 3.6 percent. The Politburo of the CPSU also reflects in its composition the multinational nature of the party. The Central Committee of the CPSU always seeks to increase the role and responsibility of republic, regional, oblast and lower party organizations. It adheres to the party principles of "internal democracy," "democratic centralism," and close contacts between center and local organizations. Since the 26 April 1979 decree of the CC CPSU calling for improvement in ideological and political indoctrination work, many sectors and fields of ideological work have been reconstructed, particularly those connected with party study and publicization of party policies. It is especially important now to stress the experience of world socialism and the progress of the world revolution, the history of the international workers movement, the present stage of the general crisis of capitalism, and current international relations. It is also important to focus attention on unfinished work in the field of social sciences, as problems of political economy, social effects of the scientific-technological revolution, and features of political life within society. The essay concludes with the information that the CPSU Program adopted at the 22d Congress in 1961 is undergoing revisions that will be presented at the 27th Congress.

UZBEK EDITORIAL CITES PARTY MEMBERSHIP FIGURES

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 15 December 1981 carries on page 1 a 1,000-word editorial entitled "Great Leader and Leading Force." The editorial notes nearly a generation of the Soviet people has grown up since the construction of a developed socialist society in the USSR. The CPSU, which consists of the finest workers, farmers and intellectuals, has played a major role in this as the leading political force and the militant vanguard of the entire Soviet people. Between the 25th and 26th Party Congresses, the ranks of the CPSU grew by 1.8 million members, and today comprise close to 17.5 million people, of whom 43.4 percent are workers, 12.8 percent are kolkhoz workers, and 43.8 percent are members of the intelligentsia, management apparatus, and military. The membership of the Communist Party of Uzbekistan has also grown in recent years and today comprises 570,000 people, whose leadership is evident in the fact that Uzbekistan is approaching the 6 million tons of cotton mark for the second straight year.

TASHKENT OBKOM DIRECTS PARTKOMS TO HEED NEWSPAPERS, CITIZENS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 10 December 1981 carries on page 2 a 200-word editorial comment under the "They Reply to 'SOVET OZBEKISTONI'" rubric entitled "Attention to Letters Will Increase." The item states that the editorial office received a number of petitions and complaints during 1980-1981 from Yangiyul, Chinaz, Orzhonikidze, Tashkent and Bostanlyk Rayons of Tashkent Oblast, and sent out investigative inquiries to party and soviet organizations in those rayons. However, despite several notifications, these organizations never replied. consequently, the newspaper informed the Tashkent Obkom about the situation and requested that shortcomings in working with citizens' letters be eliminated. Tashkent Obkom Secretary A. Khodzhayev convened a meeting of the Politburo to discuss the matter. It sharply criticized the neglectful organizations, adopted a set of measures, and assigned their execution to city and rayon partkoms and local soviets. The measures were aimed at paying proper attention to the letters, petitions and complaints of citizens, and to the warning signals of the press.

DZHIZAK OBKOM CHIEF ANNOUNCES COTTON HARVEST SUCCESS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 8 December 1981 carries on page 3 a 1,200-word article by T. Boymirov, first secretary of the Dzhizak Obkom, entitled "The Generosity of Steppe Workers." Boymirov announces that workers of Dzhizak Oblast have reached their harvest goal of 360,000 tons of cotton, 80 percent of which was of first grade quality, and 83 percent of which was harvested by machine. Total harvest was 40,000 tons more than in 1980. Boymirov expresses his appreciation to Uzbek Party Chief Sharaf Rashidov, whose valuable counsel and practical assistance was of great benefit to cotton workers. He cites several especially productive rayons: Arnasay Rayon, whose 60,000 tons was 31,000 tons over its 1975 yield, and Dustlik Rayon, which harvested 90 percent of its 80,000 tons by machine, a figure that boosted the oblast into second place in machine harvesting in the republic. Oblast and rayon partorgs carried out all the necessary political and ideological works aimed at accelerating the pace of the harvest.

Labor collectives of Tashkent City helped during the harvest "out of loyalty to Leninist principles of 'Hammer and Sickle' cooperation and friendship, and we are sincerely grateful for their help."

KHOREZM OBKOM CHIEF ANNOUNCES COTTON HARVEST SUCCESS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 10 December 1981 carries on page 3 a 1,300-word article by M. Khudoyberganov, first secretary of the Khorezm Obkom, entitled "Result of Shockwork." Khudoyberganov announces that Khorezm Oblast cotton workers have reached their harvest goal of 420,000 tons, 90 percent of which was of first grade quality. Success was due to peerless courage of farmers, who were supported by the very substantial material and technical help of the party and government and by the organizational work of party, soviet, trade union and komsomol organizations. Success was also due to the decisions of the party and government to intensively develop cotton cultivation and to the precepts of Leonid Brezhnev which served as guidelines to workers. An important role was also played by the "Appeal to Cotton Workers" of the republic party and government which spurred workers on to express their boundless loyalty to their patriotic and internationalist debt at a time when they were confronted by the devastating effects of spring storms. This year, the oblast also took another step toward the realization of the most important task in the republic's economy, that of the complete mechanization of cotton cultivation. The first secretary then acknowledges the "Hammer and Sickle" solidarity between urban and rural workers, and expressly thanks cotton workers of Karakalpak ASSR and Tashauz Oblast of Turkmen SSR for their help during the harvest.

FERGANA OBKOM CHIEF ANNOUNCES COTTON HARVEST SUCCESS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 11 December 1981 carries on page 3 a 1,000-word article by Kh. Umarov, first secretary of the Fergana Obkom, entitled "Year of Great Successes." Umarov announces that Fergana cotton workers have reached their harvest goal of 590,000 tons. He begins the article with a quote from a speech by Brezhnev that stated that every republic in the Soviet Union has its special place in the Soviet economy and that, without lessening the importance of other sectors of its economy, Uzbekistan's special place is in cotton cultivation. Umarov then cites various collective farms that excelled during the harvest, noting that they also excel in other economic areas besides cotton. He praises the contribution of Fergana's specialists and agronomists, and remarks that the number of skilled middle level specialists is growing in rural areas. While a yield of 40 centners per hectare is considered a good mark in the republic, Fergana farms routinely reach this mark and many produce yields of 50-60 centners per hectare. He concludes that workers in Fergana Oblast also fulfill their assignments in other economic sectors with honor.

SURKHANDARYA OBKOM CHIEF ANNOUNCES COTTON HARVEST SUCCESS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 17 December 1981 carries on page 2 a 1,300-word article by A. Karimov, first secretary of the Surkhandarya Obkom, entitled "Generous Harvest." Karimov announces that

Surkhandarya Oblast cotton workers reached their harvest goal of 500,000 tons, including 230,000 tons of fine fiber cotton. The success was also discussed by V. Mikhaylov, second secretary of the Surkhandarya Obkom, in PRAVDA VOSTOKA on 18 December 1981 on page 3. Karimov attributes the successful harvest to the care shown by the party and government, and on an individual basis, to the fatherly concern of Leonid Brezhnev. In addition, success was due to the heroic work of the people and to the activism of party, soviet, trade union and komsomol organizations. A critical factor in the continuing struggle for successful cotton cultivation in the Surkhan valley is the centuries-long shortage of water, but thanks to the initiative of the party and government steps have been taken to construct and expand canals and reservoirs in the area.

UZBEK MINISTRY OF POWER INVESTIGATED BY PROSECUTORS OFFICE

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 18 December 1981 carries on page 3 a 1,100-word article by A. Poplavskiy, UzSSR deputy prosecutor, entitled "Let's Take Care of Material Wealth." Poplavskiy states that republic prosecutor organs have conducted an investigation of how the party and government decree of 30 June 1981 concerning economizing on raw materials, fuel, energy and other material resources is being observed, particularly by enterprises subordinate to the UzSSR Ministry of Power and Electrification. Results of the investigation show that many enterprises are wasting gas, oil products, electricity, and heating fuels. Ministry enterprises consumed 30,400 tons too much of conventional fuels during the first 9 months of 1981. Steps are not being taken to ensure that vehicle fleets consume fuel efficiently, and a great deal of fuel is being stolen or used for unofficial purposes. For example, more than 17,000 rubles worth of fuel was stolen at the Takhiatash GRES, and more than 3,000 liters of gasoline was used for unofficial trips to various cities at the Angren GRES. Prosecutor organs have already brought to justice a number of people for theft or waste of gasoline and diesel fuel this year. For example, Bukharan prosecutors have fined 20 people a total of 3,786 rubles for misuse of fuel. Republic prosecutors have conducted some 350 investigations from January through October of 1981. They have sent more than 120 directives and investigative files to party, soviet and economic organizations, which have resulted in the disciplining of close to 100 people, the fining of 55 people, and the criminal prosecution of 6 people. On 3 December 1981, the republic prosecutors office sent a letter detailing the results of its investigation to the Ministry of Power and Electrification. As a result, five people were disciplined, and the director of the Syrdarya GRES was fired.

MEAT THIEVES DRAW STIFF PRISON TERMS IN UZBEKISTAN

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 29 December 1981 carries on page 4 a 300-word article by newspaper correspondent O. Hakimov entitled "Parasites Punished." The article details the results of the trial of criminals who were arrested following an article that appeared in SOVET OZBEKISTONI on 17 December 1980. A cook named T. Ahmadjonov at a restaurant at the Margilan Railroad Station and a forwarding agent named Gh. Azizov at this station conspired to steal shipments of meat. When caught, 1,342 kilograms of meat were found in a freezer in the home of Ahmadjonov. At an open court session of the Fergana Oblast Court, Deputy Chairman M. Mahmudov sentenced Ahmadjonov to 9 years in a forced labor camp and Azizov to 7 years in prison.

UZBEK DEPUTY MINISTER OF AGRICULTURE INTERVIEWED

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 4 December 1981 carries on page 1 a 700-word interview with Ivan Timofeyevich Steblovskiy, UzSSR deputy minister of agriculture, by a newspaper correspondent entitled "Table Full of Delicacies." In reply to a rhetorical question about 1981 being a year filled with courage and victory, Steblovskiy agrees that Uzbek cotton workers have shown great courage in bringing in a harvest that approaches 6 million tons of cotton in the face of severe weather setbacks. The correspondent then says: "When you say Uzbekistan, you think of cotton. But our republic's production of vegetable, potato, grape and melon produce is increasing each year as well." Steblovskiy replies with figures: 1.68 million tons of vegetables, 171,000 tons of potatoes, 622,000 tons of melons, 339,000 tons of fruit, and 423,000 tons of grapes were grown in 1981. The correspondent asks what measures are being taken to satisfy the growing demand of the growing population for vegetables, melons, fruits and grapes. Steblovskiy answers that a broad program of sovkhozes which will specialize in these products is being implemented, storage and distribution problems are receiving close attention, and yields and quality are increasing thanks to the introduction of advanced agrotechnical methods. However, a considerable amount of work remains to be done in these areas, particularly in raising the volume of raisin production and in the number of citrus trees. Steblovskiy concludes the interview by pointing out that potato growing has increased in recent years. In 1981, around 171,000 tons of potatoes were dug, but by 1985, plans call for 522,000 tons.

UZBEK IRRIGATION, SIBERIAN RIVERS DISCUSSED BY WATER EXPERTS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 31 December 1981 carries on page 2 an 800-word review of the four volume work OZBEKISTON IRRIGATSIYASI [UZBEKISTAN IRRIGATION--title given in Uzbek] (Tashkent: "Fan," 1975-1981) by S. Ziyodullayev, chairman of the Council for the Study of Production Forces of the AS UzSSR, and E. Rahimov, director of the Department for Water Problems of this Council, entitled "Uzbekistan Irrigation." The reviewers cite Lenin's 12 May 1918 decree on the allocation of 50 million rubles for irrigation works in Turkestan, and note that the development of Uzbekistan's agriculture, above all its cotton cultivation, is based on the irrigation and reclamation of land. With this in mind, the Presidium of the Academy of Sciences of the UzSSR assigned the Council for the Study of Production Forces the task of selecting authors and preparing for publication the collective work "Uzbekistan Irrigation," under the general editorship of A. Sadykov, president of the AS UzSSR. A wide range of sources were utilized in the compilation of the work, including specialized monographs, letters from expedition members, technical plans of water projects and report materials of institutes, ministries and other offices. The completed work consists of 4 volumes, contains 60 maps and charts, and some 1,500 photographs and illustrations. It deals with the historical and modern state of water resources and irrigation in Uzbekistan. It is relevant not only to the construction of water works in the Nonchernozem Zone of the RSFSR, but also to the needs of developing countries. The reviewers state that Uzbek Party Chief, who has frequently stressed the importance of water and irrigation for Uzbekistan's economy, also provided great assistance and encouragement in the compilation of the work. They add that "the decisively crucial factor in the socioeconomic development of all of Central Asia and in the fulfillment of the country's food program is the diversion of a portion of the waters of Siberian rivers to Central Asia." In their judgment, the work is "a great event in Soviet science."

KARAKUL BREEDING PROBLEMS FAULT OF FERTILITY SERUM

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 12 December 1981 carries on page 3 a 1,300-word article by newspaper special correspondent Nomoz Sa"dullayev entitled "Stock and Breed." The correspondent examines the current situation of breeding of karakul sheep [a breed whose young have very curly black fleece that is made into hats] in Uzbekistan. While the quality of karakul pelts has improved in recent years, it is still substandard due to the inconsistent application of "SZhK" serum [defined as a serum (syvorotka) prepared from the blood of a mare in foal]. Both scholars and journalists have begun to speak out against the use of "SZhK." Sa"dullayev asked a shepherd from Nurata Rayon in Samarkand Oblast whether he supports its use. The shepherd says that he talked to a specialist who told him that "SZhK" is no longer being used in some countries outside the USSR and even in some Soviet republics because its use leads to smaller and weaker sheep, as well as to many still-born lambs. Moreover, whereas 30-40 years ago a cap (telpak) could be made from one skin, now it takes two skins. So far as the future of karakul breeding is concerned, the shepherd states: "This is the homeland of karakul breeding. It's a question of the honor of our country (yurt)." The correspondent continues to say that substandard karakul pelts form 15-42 percent of those pelts produced on the nearly 90 republic economies engaged in karakul breeding in 1980. Moreover, some of those economies use "SZhK" as though they were afflicted with "alcoholism." The only way to assure high quantity and quality meat and wool is to use the serum incrementally and consistently. Asserting that workers at Samarkand's All-Union Karakul Breeding Scientific Research Institute need help, Sa"dullayev recalls that at the 3d international symposium of karakul breeders held in Sarmarkand in autumn 1975 specialists from Kazakhstan revealed that their karakul economy is entirely mechanized. Sa"dullayev concludes that their methods should be introduced in Uzbekistan.

TASHKENT INSTITUTE SUPPORTS BIOLOGICAL HERBICIDE RESEARCH

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 27 December 1981 carries on page 2 a 1,400-word article by Professor E. Shaykhov, rector of the Tashkent Agricultural Institute, entitled "Research Scale." Shaykhov begins by noting that the Institute has 600 teachers, 26 professors and Drs of Science, and 220 Docents and Candidates of Science, and that the practical application of its research benefits not only Uzbekistan but all the fraternal republics of Central Asia. Its research is focused on cotton cultivation, and includes investigation of biological methods of plant protection. One such project, begun in 1970, is being conducted by Professor R. Olimjonov, corresponding member of the AS UzSSR, and Docent A. Hamroyev. It involves research on integrated control systems for use of herbicides, including the use of a water soluable sulpher powder developed by Hamroyev. The powder has been tested for 6 years in Uzbekistan and Tadzhikistan, and is 92-100 percent effective against spiders and 78-86 percent effective against cotton plant aphis (phylloxera). For every 1 million hectares to which this powder was applied, 10 million rubles could be saved. Shaykhov concludes by saying that the Institute has more than 40 research contracts with a total of 38 organizations, including the Ministries of Agriculture, Fruit and Vegetables, and Forestry Industries, the All-Union Fertilizer Scientific Research Institute, and the Soil Analysis Institute imeni V.V. Dokuchayev.

UZBEKS PLEDGE FURTHER WORK IN NONCHERNOZEM ZONE

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 31 December 1981 carries on page 2 a 1,200-word article by newspaper special correspondent J. Kholqosimov entitled "Virgin Land of Russia." The correspondent, who contributes nearly monthly reports on the Uzbeks working the Ivanovo and Novgorod Oblasts of the RSFSR, begins this last report of 1981 with a comparison between the rich experience that Uzbeks have gained in land reclamation work in the steppe regions of Uzbekistan and in the swampy wastes of the Nonchernozem Zone. He states that Uzbeks have pledged to carry out 150 million rubles worth of contract work in Ivanovo and Novgorod Oblasts during the 11th FYP. In addition, they will clear 65,000 hectares of land, and put up 100,000 square meters of housing. Uzbeks annually expand their work in the Nonchernozem Zone "out of loyalty to traditions of friendship, brotherhood and mutual cooperation." Moreover, the apartment buildings they are constructing in Ivanovo and Novgorod villages "have become as dear to them as our motherland [Uzbekistan]."

REORIENTATION, TRAINING OF UZBEK RURAL LABOR SURPLUS (ADVOCATED)

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 29 December 1981 carries on pages 2 and 3 a 2,200-word essay by Prof Dr of Economics A. Abdughaniyev entitled "Production Potential." The first half of this essay deals with means of expanding production forces and fully utilizing production potential through economizing and higher productivity. These measures will be especially critical in light of the expected decline in the labor force through most of the USSR that will enter production during the 1980's. Abdughaniyev points out that whereas the labor force in the USSR grew by 18 percent in the 1970's, it is expected to grow by only 3.8 percent in the 1980's. Most of this increase will come from the four Central Asian republics, whose populations are growing at a rapid rate. He remarks that "this situation demands a resolution to the problem of the efficient utilization of the labor force in the Central Asian union republics not only from the viewpoint of the best interests of these republics, but also for the sake of more fully assuring the complete development of the single All-Union national economy." He proposes the following ways to deal with this problem in the Uzbek SSR: "There are numerous individuals engaged in work in the home or on private plots, but who are not drawn into social production in Uzbekistan. Most of them are in rural areas. This means that it will be necessary, first of all, to draw these people into social production by building filials of large industrial enterprises in rural areas and in this way bringing about a continuous development of communal and public services for them, and secondly to train many more skilled cadres from among young boys and girls, especially from among rural youths, and in this way draw them into production.

PROBLEMS WITH YOUTH OCCUPATIONAL COUNSELING

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 24 December 1981 carries on page 4 a 300-word unsigned article entitled "Let's Show Concern for Young Cadres." The article reports topics and problems discussed at a meeting of the republic interagency council for occupational counseling of youth. Kh.S. Sultonov, UzSSR deputy minister for the Food Industry, stressed in his report that definite progress had been made by enterprises subordinate to his ministry in the development of an educational program in which more than 4,000 young workers had been put in contact with experienced educators who speak with them about occupations. On the other hand, Sultonov acknowledged the existence of a number of shortcomings in the work of such councils. For one thing, their members do not learn enough about the business of occupational counseling and job placement. Moreover, such councils have been organized in only one-third of the enterprises subordinate to the ministry, and some of these function in name only. Nor do these councils devote enough attention to raising the general educational level of youths, or to filling their free time with worthwhile activities. As a result, the number of truancies is increasing and the loss of work time continues unchecked. Councils of republic ministries and agencies and of the oblasts and Tashkent City have been instructed to increase their supervision over this work.

UZBEK EDITION OF LABOR LAW ENCYCLOPEDIA PUBLISHED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 13 December 1981 carries on page 5 a 200-word notice of the publication of an encyclopedia entitled MEHNAT HUQUQI [LABOR LAW] under the "Books For Your World" rubric. The notice states that economic leaders are aware that labor law problems sometimes arise and can be difficult to resolve. Letters have been sent to the newspaper editorial office asking about various aspects of labor law. Now, the Main Editorial Office of the Uzbek Soviet Encyclopedia has published an encyclopedia called MEHNAT HUQUQI, which is an Uzbek translation and revision of a Russian language work published by "Izdatel'stvo 'Sovetskaya Entsiklopediya.'" The nearly 1,000 articles on labor law and social security incorporate the latest laws, as well as the new USSR Constitution and directives based on materials of the 26th Congress. Some articles were rewritten in the course of the translation to reflect the Uzbek SSR Codex of Labor Law, and the book includes a few articles that deal specifically with the labor law of Uzbekistan.

CONSTRUCTION ENTERPRISES EXHORTED TO MEET 1981 GOALS

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 11 December 1981 carries on page 1 a 900-word lead editorial entitled "Plan Discipline Is Sacred." The editorial notes that not everything that could be done has been done by some republic enterprises, construction and transportation organizations to organize operations, strengthen plan discipline and assure that plan assignments are fulfilled. Weak and irresolute leadership leads to low production volumes among some collectives, a situation that is especially apparent in enterprises of the Ministries of Construction Materials Industry, Installation and Special Construction Work, and Cotton Cleaning Industry. Oblast, rayon and city partkoms must evaluate the actions of leaders of the enterprises that have been consistently violating plan discipline. Finally, the editorial urges the Ministry of Light Industry, the Ministry of Motor Transport, the State Committee for Vocational and Technical Education, the Kashkadarya Obispolkom, and the Tashkent Gorispolkom to speed up construction work on projects under their jurisdiction, since there is still sufficient time left in 1981 to meet their plan assignments.

UZBEK MINISTRY OF MOTOR TRANSPORT CRITICIZED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 3 December 1981 carries on page 2 a 1,000-word article by M. Inoyatov, Inspector in the Transportation Department of the UzSSR People's Control Committee, entitled "Service to Passengers Shall Be Improved." The article notes that despite improvements in the transportation sector, the public transportation needs of the population are still not being satisfied. Numerous bus routes are erratic and too many bus stations are deplorably filthy. Bus drivers collect fares from passengers and keep the money themselves. Drivers of 24 of the 125 buses checked during this investigation kept back fare money for themselves, a total of 212 rubles. An average of 80 buses per day are not sent out on routes. In August 1981 alone, Tashkent routes were short more than 140 buses. Bus services in Tashkent are especially bad--more than 16 percent of Tashkent buses are late by 30 minutes to 2 hours per day. Absenteeism and shirking run high in Tashkent motor garages. In the first 8 months of 1981, 46,800 workdays were lost, which translates to a loss of 195 drivers per day. The UzSSR Ministry of Motor Transport is clearly not taking the necessary steps to assure that such shortcomings are eliminated. Tashkent SOVET OZBEKISTONI in Uzbek 29 December 1981 carries on page 2 a 200-word reply signed by A.F. Gavrilov, minister of motor transport, under the "They Reply to 'SOVET OZBEKISTONI'" rubric. The reply states that the People's Control Committee's materials were discussed at a meeting of the ministry's collegium. Measures were adopted to improve running of buses, to increase number of buses on routes, and to halt breaches of financial and transportation discipline by drivers.

CENTRAL ASIAN ELECTRICAL POWER NETWORK DESCRIBED

[Editorial Report] Tashkent SOVET OZBEKISTONI 8 December 1981 carries on page 2 a 500-word interview with Mikhail Nikolayevich Vasnetsov, chief of the Controller's Office for the Management of the Central Asian Interconnected Power System, by an unidentified UzTAG correspondent entitled "Rivers of Light' Afire." The interview begins with the citation of an UzTAG release stating that energy has begun to flow along a 500 kilovolt power line from Mari GRES in Turkmenistan to Karakul in Uzbekistan. Asked to comment, Vasnetsov confirms that this new line is one of hundreds of kilometers of electric power lines that have been stretched between the republics to meet ever-increasing demands for electric power. For example, a 500 kilovolt power line connects the Nurek GRES in Tadzhikistan with Regar City [TaSSR], and Regar with Guzar [UzSSR], and Guzar with Shirin [UzSSR]. The Mari GRES-Karakul power line is 386 kilometers long, and was installed by workers of the Tashkent "Sredazelektroset'stroy" and the Moscow "Spetsset'stroy." It has great importance for the economy of Central Asia. First of all, the Mari GRES, which is the largest power station in Turkmenistan, is now connected via this line to the Zarafshan Valley where the chemical and mining and metallurgy industries are undergoing intensive development. Secondly, the energy from the Mari GRES will be sent south from Karakul to the Karshi Steppe, where a huge pumping station has been built, and will provide energy for development there. Third, this line makes it possible to considerably improve the operation of the Nurek, Syrdarya, Tuktagul and Tashkent power stations which are combined into the Central Asian mutually interrelated energy system. Vasnetsov concludes with the remark that "fraternal Turkmenistan is contributing to the 'electrical factories' of Tadzhikistan, Uzbekistan and Kirgizia."

HYDROELECTRIC DEVELOPMENT IN UZBEKISTAN SAID TO HAVE BRIGHT FUTURE

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 9 December 1981 carries on page 1 a 1,000-word article by G. Varvarin, chief of the main administration of GESs and electric power plants of the UzSSR Ministry of Power and Electrification, T. Kisenkova, director of the Tashkent GES Network, and E. Khojayev, newspaper correspondent, entitled "Your Home Will Be Filled With Light." The article is published in connection with the upcoming 60th anniversary of the formation of the USSR, and mostly reviews the history of the construction of power works in Uzbekistan since the 1920's. Toward the end of the article, the authors note that the 11th Five-Year Plan calls for peaking of construction work on Angren GRES No 2 and Tallimardzhan GRES, for increased use of the Tuyamuyin and Andizhan GES's, and for moving ahead with the construction of the Mubarak TETs. They conclude with the remark that in the first three quarters of 1981, a total of 25.6 billion kilowatt hours of electric power were generated in the republic, which represents an increase of 5 percent over the same period of 1980.

DIRECTORS OF CENTRAL ASIAN GAS INDUSTRY FILIAL REPRIMANDED

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 3 December 1981 carries on page 2 a 900-word unsigned article under the "At the UzSSR People's Control Committee" rubric entitled "Scientific Findings Are for Production." The article states that the Committee has investigated the way the Central Asian Filial of the All-Union Gas Industry Scientific Research Institute subordinate to the USSR Ministry of the Gas Industry is following instructions to increase the usefulness and to accelerate the introduction into production of its scientific research. Results of the investigation show that the filial has serious deficiencies in the planning, execution and application of its research. Over the past 5 years, only 14 of the filial's 39 research projects (36 percent) have been introduced into production. The other 25 projects have no practical utility at all. The ratio of benefit for every ruble spent on research fell from 1.73 to .53 rubles during the last 5 years. Waste of money, material resources, equipment and transportation has become habitual at the filial. Z. Tolibjonov, the filial's deputy director for science, has neglected his leadership duties, and is far too lenient in cases of waste or theft of money and material resources and of useless research. Because of his fawning over researchers, 27,000 rubles of state money has been spent without any benefit at all. A Samighov, the filial's deputy director for general problems, has also permitted waste and misuse of materials and funds, thanks which 32,000 rubles of state money has been thrown away. V. Ponomaryova, the filial's chief accountant, does not use her authority to put a stop to this, and her account books are in complete disorder. D. Ahmedov, the filial's director, does not get involved in production and economic problems, nor in those of planning and improving research. Having carefully reviewed this situation, the UzSSR People's Control Committee issues a public reprimand to Ahmedov, Tolibjonov, Samighov and Ponomaryova, and others, for permitting numerous deficiencies to take place. The article concludes with the statement: "In order to partially compensate the state for the loss it has incurred, Director D. Ahmedov and Deputy Director A. Samighov have been docked for 3 months pay, and Deputy Director Z. Tolibjonov and Chief Accountant V. Ponomaryova have been docked for 2 months pay."

NEWSPAPER PREVIEWS 1982 COVERAGE FOR UZBEK READERSHIP

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 31 December 1981 carries on page 4 a 1,000-word editorial from the SOVET OZBEKISTONI Editorial Board entitled "To Our Dear Readers." The editorial is an annual end-of-the-year message to readers about what they can expect to read about in 1982. The primary topic of coverage will be the 60th anniversary of the formation of the USSR and the implementation of the Leninist nationality policy: "The great Lenin's party and the great Russian people, loving elder brother of all peoples in our country, have endowed us with our happiness for which we show our sincere gratitude to the glorious Communist Party and the profoundly intelligent Russian people." The editorial also notes that some 26,000 letters and items were received by the editorial office from citizens during 1981, and that approximately 20,000 of them were used in the newspaper. Finally, the editorial provides subscription figures for 1982: Fergana Oblast--91,000 subscribers; Andizhan--88,000; Samarkand--73,000; Namangan--71,000; Tashkent Oblast and city--84,000; Kashkadarya Oblast--57,000; Surkhandarya--53,000; Bukhara--52,000; Khorezm--46,000; Karakalpak ASSR--35,000; Dzhizak Oblast--23,000; Syrdarya--23,000; other republics--35,500; kiosks--46,600 (including 14,000 in Tashkent City). Altogether, SOVET OZBEKISTONI will have a daily run of 778,000 copies in 1982.

TASHKENT TELETOWER TO BROADEN COMMUNICATIONS CAPACITY

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 29 December 1981 carries on page 4 a large photograph of the Tashkent teletower with a 600-word accompanying article by Sh. Mirhabibov and A. Qorjovov entitled "Grand Symbol of Brotherhood." The article begins with the observation that Uzbekistan and the Russian Federation clearly exemplify the friendship and fraternity of the peoples of the USSR. While Uzbeks are at work clearing swamps in the Nonchernozem Zone of the RSFSR, workers of the RSFSR are doing construction work in the UzSSR. For example, the Tashkent TV tower is being erected by workers of Assembly Administration No 26 of the "Spetsstal'konstruktsiya" Trust of Leningrad. This teleradio communications center will make it possible to broadcast 5 programs of television and 4 of radio, which will increase the present capacity of Tashkent communications facilities by 2.5 times. Workers have pledged to deliver the tower for use as planned in the first half of 1982.

KARAKALPAKISTAN CAPITAL FACES WINTER SHORT OF CLEAN WATER, HEAT

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 6 December 1981 carries on page 4 a 500-word article by newspaper correspondent R. Yeshimbetov entitled "Winter Worries." The correspondent acknowledges that striking changes have taken place in Nukus in recent years, including new buildings and institutes, but nonetheless consumer services are pitiably bad and preparations for the winter are poor. He talked with many people at responsible organizations, all of whom pointed the finger of blame in one direction: "The city water problem must be quickly solved. That is the only way to improve sanitation conditions in Nukus and to have a decent winter." Asked about this problem, B. Polvoniyozov, chief engineer of the city "Vodokanal," admitted that the complaint was legitimate. In summer and fall, water won't reach above the third floor of apartment buildings, and sometimes not even above the second floor, because industrial enterprises in the northern part of the city draw off too much water to meet their own needs. Moreover, the city's water filtering station is designed for 24,000 cubic meters of water, which is way below the needs of the population. Construction of another filtering station with a capacity of 50,000 cubic meters of water was begun in 1979, but its pace is lagging behind due to nondelivery of equipment and materials. A. Bobonazarov, first secretary of Nukus Gorkom, and J. Abdumurodov, chairman of the Gorispolkom, sent a telegram to the UzSSR Ministry for Consumer Services, but not a word has been heard from them. Yeshimbetov also talked to city housing officials, who informed him that many buildings were damaged by wind and rain. Not only do they leak, but many are improperly heated, some not since 1969. Part of the problem is that underground water in Nukus impedes the normal functioning of heating lines. "Nukuskommunteploenergo" has begun the task of insulating these lines, but their work lags far behind. Yeshimbetov concludes that urgent measures must be taken by city party, soviet, trade union and komsomol organizations to correct the water and heating problems in the face of winter.

UZBEK WRITERS UNION TARGET OF CRITICISM, NEW APPOINTMENTS

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 4 December 1981 carries on pages 1 and 7 a 1,600-word editorial report entitled "On an Elevating Path." The article reports on the meeting of the Writers Union party organization, at which Writers Union Chairman Sarvar Azimov spoke critically of the state of children's literature, the quality of translation, and subordinate publications. In particular, he stated that there are serious shortcomings in the work of the journals SHARQ YULDUZI and ZVEZDA VOSTOKA and the newspaper OZBEKISTON ADABIYOTI VA SAN"ATI in regard to the education of readers in an internationalist spirit. He also charged that the circle of contributors to these publications was too narrow, and that reviews of works and performances were too often partisan. The meeting elected a party bureau consisting of Sarvar Azimov, Kh. Abdusamatov, Yu. Kovalev, Kh. Niyazov, G. Nurullayeva, B. Parmuzin, S. Salayev, G. Talibov, T. Tola, A. Udalov, and R. Fayzi. Turab Tola was elected first secretary, and Yuriy Kovalev deputy secretary. Barot Boyqobilov, section director of the Culture Department of the CC CPUz, also attended the meeting. Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI 18 December 1981 page 7 also printed a brief report on a plenum held by the Writers Union Board, at which Oktam Usmanov and Jumaniyaz Jabbarov were elected secretaries to the Board, while Narmurad Narzullayev was removed; Aleksander Udalov was confirmed as chief editor of ZVESDA VOSTOKA, while Georgiy Vladimirov was removed from this position "at his own request"; and Erkin Vakhidov was confirmed as chief editor of the new journal YOSHLIK.

ALEKSANDR FADEYEV COMMEMORATED AS FRIEND OF UZBEK LITERATURE

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 24 December 1981 carries on page 3 several articles published in conjunction with the 80th anniversary of the date of birth of Aleksandr Fadeyev, a Russian writer of revolutionary fiction and later chairman of the USSR Union of Writers. The Uzbek writer Mirmuhsin, a 250-word remembrance, says that Fadeyev had befriended Uzbek writers Aybek, Hamid Alimjan, Ghafur Ghulam, Sharaf Rashidov, Kamil Yashin, and that Aybek had introduced Mirmushin to Fadeyev. The Uzbek writer Nazir Safarov, in a 1,000-word article entitled "Example of a Great Human Being," recalls the formation of the Uzbek Writers Union followed the Center example in 1932, when Fadeyev was head of its organizational committee, while Rahmat Majidiy was head of the Uzbek organizational committee. Safarov attended a meeting in Moscow toward the end of World War II chaired by Fadeyev "to discuss nominees for the Stalin Prize." The Uzbek scholar B. Imomov, in a 900-word article entitled "Always in the Ranks," remarks that Aybek was very much influenced by Fadeyev and even accompanied him on a trip to England in 1947. Moreover, Imomov cites an article that appears in SHARQ YULDUZI No 9, 1981, pp 228-229, which contains a passage in which Fadeyev speaks to a young writer named Sharaf Rashidov so: "I will give you some advice as though I were your older brother...." Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 25 December 1981 carries on pages 4 and 5 several more features devoted to Fadeyev, and a commemorative meeting convened by Sarvar Azimov was reported by UzTAG in PRAVDA VOSTOKA 26 December 1981 on page 1.

LINGUISTICS CONFERENCE FOCUSES ON HISTORICAL STUDY OF UZBEK

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 5 December 1981 carries on page 4 a 200-word article by Candidate of Philology R. Qochqortoyeva, senior teacher in the General Linguistics Department of Tashkent State University, entitled "Forum for Linguists." The item states that a conference sponsored by the Pushkin Institute of Language and Literature of the UzSSR and Academy of Sciences and by Tashkent State University was held on 4 December to discuss "The 26th CPSU Congress and Current Problems of Uzbek Linguistics." Among topics discussed were the influence of Russian on Uzbek, the expansion of the social functions and the rapid development of the Uzbek literary language, and a series of phonological and syntactic problems. Speakers at the conference stressed the urgency of research on and publication of university textbooks, reference manuals and study programs on the history of the Uzbek language.

CHARGE OF 'RUSSIAN' REVOLUTION IN TURKESTAN CALLED FALSE

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 10 December 1981 carries on page 2 a 2,000-word essay by Prof Dr of Law A.N. Mikhaylov entitled "Great Turning Point." The essay is published in connection with the upcoming

60th anniversary of the USSR, and specifically addresses the claim of bourgeois ideologists that the first soviets in Turkestan consisted solely of Russians, Mikhaylov states that from the 3d Regional Congress of Turkestan Soviets held on 15 November 1917, the Bolsheviks began to attract representatives of local nationalities to this government. As an example, there were 13 local representatives at the Fergana Oblast Congress of Soviets in December 1917, a pattern that began to develop in other regions. Local nationalities also began to enter the ranks of the Red Army. As of January 1918, there were 3,000 Red Guards in Tashkent, of which 600 were Uzbeks. During the "Ulema counterrevolution" in the old city of Tashkent in 1918, a detachment of 200 Uzbeks fought them. Moreover, 60 percent of the Kokand Red Guards were Uzbeks, Tadzhiks and Kirgiz. The 5th Congress of Turkestan Soviets, which was held in April 1918, adopted the Leninist nationality policy as a platform and also announced the formation of the Turkestan ASSR. Many local nationalities served in the TASSR government. In October 1919, the Turkestan Commission was formed by the RSFSR government and sent to Turkestan to implement Lenin's instructions, which included his admonition that correct relations with the peoples of Turkestan were of enormously great significance to the RSFSR. Armed with this, the Turkkommission cleaned out the chauvinists and nationalists from the TASSR government. In 1920, revolution set the stage for the Bukhara and Khorezm People's Soviet Republics. By 1924, most chauvinists and Basmachis had been liquidated, and conditions were right for national delimitation of Turkestan. Moscow dispatched Mikhail Kalinin to Central Asia to help in the preparations for national delimitation, which was accepted at the first congresses of the CPUz and CPTu in February 1925. In conclusion, Mikhaylov specifies that the establishment of the Turkestan, Bukhara and Khorezm Republics was the first stage, and that national delimitation was the second stage in the formation of statehood for Central Asian peoples.

EUROPEAN THEATER MISSILE REDUCTIONS SUBJECT OF UZBEK COMMENTARY

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 11 December 1981 carries on page 7 a 700-word commentary by F. Shohismoilov under the "Commentator's Pulpit" rubric entitled "In Word and in Deed." The commentary opens with remarks about the historic nature of Brezhnev's visit to West Germany, which was actually a "peace mission" that is of worldwide significance. Subsequently, talks on the limitation of nuclear arms in Europe began between the Soviet Union and the United States in Geneva. The new elements in these talks are the proposals made by Brezhnev during his visit to West Germany which have the basic purpose of averting a nuclear holocaust. In essence, these proposals are: 1) the declaration of a moratorium on the development of new medium range missile in Europe, while, at the same time, the Soviet Union will unilaterally reduce its missiles provided that the Americans observe this moratorium; 2) the insistence that both sides reduce the number of their medium range missiles not by the dozens but by the hundreds; and 3) the declaration of Soviet readiness to negotiate the complete withdrawal of all medium range missiles aimed at targets in Europe by both sides. Since these proposals constitute a practical program that conform to the desires of all peoples, Shohismoilov feels that "now, everything depends on the American side." However, even as the talks in Geneva continue, President Reagan has demanded that the Soviet Union reduce its missiles unilaterally. Shohismoilov claims that "according to American military specialists" NATO already has a one and a half times superiority in nuclear arms over the Warsaw Pact. On top of this, a NATO session in Brussels has recently discussed the issue of stepping up the arms race on the pretext of a "Soviet military threat." The commentator concludes: "All of this shows that the words of U.S. leaders are one thing, and their deeds quite another."

SOVIET-INDIAN TIES SUPPORTED BY MILLIONS, SAYS UZBEK COMMENTATOR

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 12 December 1981 carries on page 3 a 500-word commentary by A. Roziyev under the "Commentator's Pulpit" rubric in the world news section entitled "Tradition of the People." Roziyev recalls that Brezhnev's first visit to India was in December 1961 and his most recent was in December 1980. Consequently, December has become the month in which millions of Indians celebrate Soviet-Indian friendship. Presently, Roziyev states, they are participating in hundreds of meetings, lectures, symposia, photo exhibits, and film festivals devoted to the historical and modern ties between the two countries and to the very large role which Brezhnev is playing in the strengthening of friendship between the two great peoples. The commentator touches on the financial aid provided by the USSR to India and briefly alludes to the fact that Uzbekistan and other fraternal republics do their share in furthering plans for the economic progress of India.

UZBEK ACADEMICIAN RECORDS HIS REACTIONS TO AFGHANISTAN TRIP

[Editorial Report] Tashkent OZBEKISTON ADABIYOTI VA SAN"ATI in Uzbek 4, 11, 18, and 25 December 1981 carry on page 7 a four-part piece comprising 7,500 words by Vohid Zohidov, academician of the AS UzSSR, entitled "Fiery Afghanistan." The work is the result of a trip Zohidov made to Afghanistan in September 1981 as a member of a delegation of Soviet writers invited there by the Afghanistan Writers Union. Most of Part One records his impressions and fleeting thoughts as he flew over the country and landed at Kabul airport. He depicts the capital as calm, and comments on the women who are not wearing veils. Part Two reviews the early history of Soviet-Afghan ties in 1919-1921, accompanied by quotes from the appeal "To All Muslim Workers of Russia and the East," signed by Lenin in November 1917. He then conjures up the image of a liberated Afghan girl martyred during the Revolution. Part Three deals with Sulayman Laiq, an Afghan poet and presently president of the Afghan Academy of Sciences. Part Four is set in Herat, which gives rise to historical associations with great figures in Uzbek cultural history, particularly with Alisher Navai, the 15th century poet laureat of Herat and all of Central Asia, as well as the founder of Classical Uzbek Literature. Zohidov dwells on the recently adopted 10-year program for the study of Navai and his times in Afghanistan, and notes that the decision to do so was "reached through the initiative of Comrade Babrak Karmal." Zohidov also publishes a two-part publicistics piece entitled "Reflection of the Sun in a Drop [of Water]" and comprising 3,500 words in SOVET OZBEKISTONI 30 and 31 December 1981 on page 3. The two installments are roughly equivalent to Part Two of the longer piece, except that numerous passages are inserted, juxtaposed or differently worded in the SOVET OZBEKISTONI version.

TEN-YEAR PROGRAM TO LINK AFGHAN AND UZBEK LITERARY TRADITIONS BEGUN

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 13 December 1981 carries on page 4 a 200-word article by UzTAG correspondent S. Frolova entitled "Navai's Works Being Published." Frolova reports that the Tashkent manuscripts of Navai's works which are to be prepared for publication in Afghanistan have arrived in that country. Their publication is to form a component in the 10-year study program of Navai and his age that was recently adopted by the Afghan government. According to A.P. Qayumov, director of the Institute of Manuscripts of the ASUzSSR, who took part in a recent conference in Kabul devoted to the program, all of Navai's works will be translated into Dariand Pashtu languages, along with scientific monographs devoted to Navai and his age written by scholars all over the world, as well as works written by Navai's contemporaries. This program has already begun with the publication in Pashtu translation of V.V. Barthold's Russian language monograph "Mir Alisher."

AMUDARYA BRIDGE CONSTRUCTION PROGRESS REACHES EIGHTH SPAN

[Editorial Report] Tashkent SOVET OZBEKISTONI in Uzbek 29 December 1981 carries on page 3 a 100-word item entitled "Good News." The item states that the seventh span of the Amudarya bridge which will link Uzbekistan and Afghanistan has been installed by workers from the southern bank of the river. The workers will now begin to install the eighth span from the northern side. They have pledged to deliver the bridge for use in May 1982.

NEW STYLE, LESS LAVISH WEDDINGS ENCOURAGED

[Editorial Report] Tashkent YASH LENINCHI in Uzbek on 9 December 1981 devotes all of p 3 to subject of weddings. One article (600 words) entitled "Beautiful Ceremonies Suit a Beautiful Life" tells of a settlement where lavish weddings have been eliminated, as have several other undesirable practices concerned with weddings. The credit for this is given to a [Wedding] Celebration Commission. There is a wedding palace where the celebrations are held. A few friends of the couple complete preparations for the party by 6:30 in the evening; the party begins at 7:00. At 11 the party is over and everyone goes home. A short article on the same page (200 words) recounts how great a burden lavish wedding parties used to be and how this has changed. Another article (250 words) by a director of a wedding palace tells how convenient and relatively inexpensive wedding parties are today. The wedding palace can accommodate 450-500 guests. Now it is possible to have a magnificent celebration for only 1,000 rubles; it used to cost (before it was possible to use the facilities of the wedding palace) 5,000 to 6,000 rubles. An article by the secretary of a kolkhoz komsomol organization (300 words) reports on weddings at the kolkhoz wedding palace. In contrast to the earlier practice when parties continued all night, they now end at 11 or 11:30 pm. This makes it possible to have the celebrations even at the peak times in the agricultural cycle. Young couples now go to the main square of the village to place flowers at the monuments to Marx, Engels and Lenin.

WHY SOME YOUNG PEOPLE STILL BELIEVE IN ISLAM

[Editorial Report] Tashkent YASH LENINCHI in Uzbek 8 December 1981 carries on p 3 a 1,400-word article by Uyghun Shakirov (Candidate of Philosophical Sciences, Docent) addressing the question of why Islam still has so many adherents among young people and the ways this should be combatted. Shakirov approaches the subject from the perspective of the importance of instilling correct ideology in young people and the way in which antireligious struggle fits into a proper upbringing. On the whole, Shakirov maintains, Islam is losing its influence in soviet Central Asia. He cites as proof of this an observation published in Islam in the Soviet Union (printed in Britain) to the effect that most people attending mosques in the USSR are over 60 years of age and that there are few workers and young people at religious services. Shakirov identifies some of the harmful aspects of religious attitudes, such as passivity and social pessimism. Shakirov divides young people into three categories: 1) confirmed atheists, 2) waverers and 3) religious believers. The first category is comprised of youth who do not believe in Islam, nor do they observe religious ceremonies. The second category is comprised of those who are not firm believers, are not familiar with the Koran and do not know a lot about the origins or performance of religious rituals and customs, but who in some way participate in religious observances. Because of the environment in which they live, these young people participate in some way in the observance of Ramadan, the celebration of the prophet Mohammed's birth, and in circumcision and religious wedding ceremonies. Certain young people use expressions such as "thank God," "God willing," while some say "Amen! God is great" upon finishing a meal. Even if they do not understand the significance of these words, their use of them can make it more difficult to eliminate their religious views. The reasons Shakirov cites that young people take part in Islamic practices include respect for elders and a desire to go along with what their friends are doing. Still others perform religious ceremonies considering they are customs or "national traditions." "They mistakenly feel that they must perform ceremonies [just] because they have been performed for centuries." Among this second group one encounters young people who do not understand the harm of modernized Islam and who look with indifference upon members of their work kollektiv and families who are believers.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service (NTIS), Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semimonthly by the NTIS, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

Soviet books and journal articles displaying a copyright notice are reproduced and sold by NTIS with permission of the copyright agency of the Soviet Union. Permission for further reproduction must be obtained from copyright owner.

KUNAYEV SPEECH AT CC CP KAZAKH FIFTH PLENUM

Alma-Ata KAZAKHSTANSKAYA PRAVDA in Russian 1 Apr 82 p 1

[Speech by D. A. Kunayev, member of the Politburo of the CPSU CC, first secretary of the CP of Kazakhstan CC, at the 5th Plenum of the CP of Kazakhstan CC: "Develop Initiative, Increase Militancy"]

[Text] Comrades!

Our plenum is discussing a question the importance of which is difficult to overestimate. In fact, on how well the republic's primary party organizations operate depends, to a most decisive degree, the practical fulfillment by it of the decisions of the historic 26th CPSU Congress, the 15th CP of Kazakhstan Congress, as well as the advice and directives of Comrade Leonid Il'ich Brezhnev.

The primary party organizations comprise, as Vladimir Il'ich Lenin considered, the main unit of the party, linking it with the people, a unique kind of nucleus within and around which all practical, organization, and economic work is constructed. Speaking in images, these units constitute the living cells of a powerful organism, reflecting the forms and methods of the party's diverse, multi-faceted, and purposive activity with regard to guiding the life of a society of mature socialism on its confident path forward, as outlined by the decisions of the 26th CPSU Congress.

The principal thrust of the republican party organization's multi-form activity, as has already been justly noted at this plenum, must take place through the very basis of the party, which, in accordance with its Charter, is constituted by the primary organizations.

Life irrefutably convinces us of the fact that only through them, their bureaus and partkoms, their party meetings, and their daily activities are we ensured in practice of increasing the vanguard role of the Communists, of implementing the party's policy, of educating the working people in the spirit of communism, and of the determined struggle against shortcomings.

The successes which have been achieved by the republic in all spheres of the economy, science, and culture during the period of the 10th Five-Year Plan and since the beginning of the new, 11th Five-Year Plan, which were mentioned in the report and the speeches, are explained in large degree by the increased militancy of our primary party organizations, by their ability to create their own, let's say directly, difficult and responsible work in strict accordance with the demands of the party, its CC and Politburo, headed up by the outstanding political and state figure of the present day, Comrade Leonid Il'ich Brezhnev.

However, while according its just deserts to what has been achieved, we must acknowledge in all frankness that the level of activity of a number of primary party organizations still does not correspond to the spirit of the times, to the demands of the party.

Most evident herein are the shortcomings of individual rayon, city, and oblast party committees, as well as the corresponding sections of the CP of Kazakhstan CC.

The lowering of the party demands has had a negative effect primarily on a number of sectors of industry, capital construction, and--particularly--on trade, municipal services, health care, and the communal economy.

Last year in the republic not all the industrial enterprises fulfilled the plan with respect to the volume of production output. Included among them were the following: the Yermakovskiy Ferro-Alloy Plant, the synthetic-rubber and rubber-equipment plants in Karaganda, the Aktyubinskiy Chromium-Connections Plant, and a number of enterprises in the Vostochno-Kazakhstanskaya, Severo-Kazakhstanskaya, and Kokchetavskaya Oblasts.

Not everywhere in the republic's chemical, coal industries, or metallurgy is full use being made of existing capacities and functioning equipment; capacities at a number of new and modernized enterprises in the light, meat-and-dairy, and food industries have been poorly assimilated.

The republic's electric-power industry should operate better than it does now. This pertains to those of its facilities which are now in operation as well as those which are being commissioned.

The situation which has taken shape requires the most operative intervention by the party primary organizations, raykoms, and gorkoms, which must profoundly analyze all the lagging enterprises, to render them the necessary aid so that they do not hold back the republic's economy, and, having set operations to right, facilitate the unconditional fulfillment and over-fulfillment of plans with respect to all indicators.

The interests of the new five-year plan require the promulgation of a complete new system in capital construction as well. Top-priority attention must be paid to putting into operation electric-power units at the Ekibastuzskaya GRES-1, the tin workshop at the Karagandinskiy Metallurgical Combine, the Tsentral'naya Mine of the Dzhezdinsk Mining Administration, new capacities at the Novodzhambulskiy Phosphorus Plant, the Aktyubinskiy Reinforced-Concrete-Products Plant, and others, including facilities of the light and foodstuff industries, which have been called upon to sharply increase the production of goods in widespread demand.

There has been frustration in the plans for contractual operations of the Ministry of Construction of Heavy Industry Enterprises and the Ministry of Rural Construction.

Serious demands must also be imposed on the customers. Operations have been held up for a long time because of the lack of the necessary equipment for important facilities of Ust'-Kamenogorsk, Aktyubinsk, and Stepnogorsk.

The builders are considerably behind their duties with regard to the republic's working people's requirements for the turning over of housing, schools, hospitals, cultural-service facilities, and the quality of work. Our builders have lagged substantially behind in perfecting their administration. As before, a three- or even four-unit administrative system has been retained, and the number of low-capacity construction organizations has not been reduced. The Ministry of Rural Construction has a particularly large number of them. Moreover, practical experience has shown that extremely small-scale production is economically burdensome and does not provide the yield which it should. The new forms of brigade organization and labor incentives are being introduced too slowly.

From what has been stated above the party organs must draw the most serious conclusions, abolish superfluous administrative units, consolidate small-scale organizations, concentrate all their efforts on projects which are underway, achieve a sharp reduction in "unfinished work," and improve work quality everywhere.

During the current five-year plan tasks in the sphere of transport and communications are exceptionally responsible. Thus, we are faced with the tasks of putting into operation the Sayak--Aktogay Railroad Mainline, more than 1,100 kilometers of second tracks, and of converting about a thousand kilometers of railroad lines to electric traction.

In determining our chief tasks in the sphere of industry, capital construction, transport and communications, it must be stated that we should work everywhere with the fullest possible yield, observing all the requirements of equipment safety and industrial sanitation, relying on all the best that we have.

The republic's party organizations, along with the party raykoms, gorkoms, and obkoms are obligated to do everything so that the groups at industrial enterprises, construction organizations, transport and communications will fufill the socialist pledges which have been undertaken for this year. It is extremely important to firmly guarantee the planned rate of development for the republic's industry, as required by the party decisions and personally by Comrade Leonid Il'ich Brezhnev.

The acuteness in thus posing the problem is explained by the fact that at the present time, as a result of implementing the decisions of the 23rd, 24th, and 25th CPSU Congresses, the constant concern and attention being rendered to the multifaceted development of our republic by the Leninist CC of the party and its Politburo, Kazakhstan's relative weight in the All-Union industrial production has grown as never before, and any non-fulfillment of the plans and the rate of development of our industry, as established by the 26th CPSU Congress and the 15th CP of Kaazakhstan Congress would have a negative effect on the economis of the other republics, and this in no way can be allowed to happen.

In his recent speeches at the 17th USSR Trade-Union Congress and in Tashkent Leonid Il'ich Brezhnev again emphasized that the central problem of the entire five-year plan on both the economic and the political level is the foodstuff problem.

The basis for solving it is the high rate of agricultural production, further conversion of the sector onto an industrial footing, deepening and improving its ties with industry's servicing enterprises, transport, and trade.

All questions connected with the practical working out of the foodstuff program certainly oblige us to examine from the new point of view our current matters as well as the foreseeable future. What does this mean above all for us the country's largest grain and livestock-raising base? Above all, this means a new, large Kazakhstan grain crop. By the end of the five-year plan we must sell to the state annually more than a billion poods of grain, while at the same time ensuring the republic's needs for seeds and fodder. This is a very responsible matter.

It may seem to some that Kazakhstan can obtain a large grain crop very easily. This, comrades, is far from the case. Grain is always difficult to produce, but our task remains unchanged--we are obliged to provide it to the Motherland every year.

That is why we must strive to see to it that there are no laggards on the grain front in our republic. Last year, though, for various reasons--objective as well as subjective--many of our republic's farms did not fulfill their plans for the sale of grain to the state. Most of them are in Dzhambulskaya, Pavlodarskaya, Semipalatinskaya, Kustanayskaya, Ural'skaya, Tselinogradskaya, and Vostochno-Kazakhstanskaya Oblasts.

At present the southern oblasts are finishing up the sowing of the cereal crops. Everywhere throughout the republic favorable conditions are shaping up for the spring sowing, which must be utilized to the maximum in the struggle for the highest possible harvest so that this year a minimum of 28--29 million tons of grain may be produced.

The party organizations of all the oblasts, rayons, sovkhozes, and kolkhozes of Kazakhstan must determine their own places in solving this complex problem. In recent years the local party, soviet, and agricultural organs have done a great deal to increase the production of vegetables and potatoes. This is gratifying. But the limits have not been reached. It is now fully justifiable to pose the task as follows: beginning with the current year, to fully provide the republic's population with enough potatoes and vegetables of our own production and to overfulfill the plans for cotton, sugar beets, grapes, fruits, and other crops.

The recent decree of the CPSU CC and the USSR Council of Ministers obliges all of us to radically revise our attitudes toward oil-producing crops, to increase the production of soybeans, sunflower seeds, rape, and to improve their quality.

Another no less important sector is livestock breeding. The party has defined as the shock front in the rural areas. Proceeding from this, we must complete the wintering of livestock everywhere in a well-organized manner, conduct a good breeding campaign, and fully retain the young which are born.

The present wintering period has taught a serious lesson to the directors in Pavlodarskaya, Semipalatinskaya, and certain other oblasts. The need to procure hay in neighboring oblasts was pointed out to them in good time. But these comrades dismissed the good advice and now are "riding it out" at the expense of others. It is high time to put an end to this kind of parasitism.

But it is important to fully utilize the aid which is rendered in order not to allow any decline in the growth of production output in livestock-raising.

Moreover, it must be borne in mind that a number of oblasts did not fulfill their plans for delivery of livestock and poultry to the state last year. This indebtedness ought to be eliminated. We must strive with all our efforts to fulfill the plan for two years by the end of this year. We pose such a task because there are all genuine potentials for solving it.

However, certain oblasts are losing the positions which have been attained, decline and non-productive use of livestock are being permitted, weight standards are becoming lower, and--as a result--the quarterly plan for meat procurement has not been fulfilled. It is impossible to conduct matters this way. The party organizations, particularly those of Aktyubinskaya, Vostochno-Kazakhstanskaya, Dzhambulskaya, Kzyl-Ordinskaya, Turgayskaya, Ural'skaya, and Tselinogradskaya, and all oblasts without exception should pay special attention to increasing the head of livestock, eliminate shortcomings in herd reproduction, increase the retention and delivery weight of the livestock, and create the necessary resources to carry out the assignments of the five-year plan.

The Severo-Kazakhstanskaya, Kokchetavskaya, Tselinogradskaya, Pavlodarskaya, and Semipalatinskaya Oblasts must guarantee an ensured increase in milk production and procurements. The southern oblasts should make more widespread use of the experience of the Alma-Atinskiy Sovkhoz, where, by means of crossing the Alatau breed with other breeds of cattle, a noticeable increase in milk yield and fat content has been achieved.

The party committees need to improve the guidance of livestock raising for dairy purposes and increase the responsibilities of managers and specialists for this sector of operations.

I want to speak in particular about sheep raising. You know that Leonid Il'ich Brezhnev has indicated that we need to apply all persistence to bring about an upsurge of this sector in the republic just as we did at one time in developing the Virgin Lands. By a decree of the party and the government large sums have been allocated to Kazakhstan to develop sheep raising, measures have been outlined to train personnel, provide incentives and mechanize the labor of sheep breeders, and to improve their everyday living conditions.

Quite a bit of time has elapsed, but in many places, primarily in Dzhambulskaya, Kzyl-Ordinskaya, Ural'skaya, and Semipalatinskaya Oblasts, people have failed to act in a business-like way in order to carry out this decree.

As was shown by a check-up conducted by the Kazakh SSR People's Control Committee, a number of ministries and departments on whose activities a great deal depends in the development of sheep raising in their plans for the current five-year plan have provided ahead of time for the non-fulfillment of the tasks assigned. Such "far-sightedness" has been manifested by Comrades Alybayev (Ministry of the Meat and Dairy Industry), Goncharov (Glavrissovkhozstroy), and others. The Ministry of Agriculture (Comrade Motoriko), along with the Eastern Division of the VASKhNIL [All-Union Academy of Agricultural Sciences] (Comrade Medeubekov), have fouled up the time periods for working out a general scheme for the comprehensive development of the republic's pasture lands. At the same time, as Comrade Medeubekov himself wrote in IZVESTIYA, in just seven of Kazakhstan's oblasts a quarter million hectares of pasture lands have been deprived of vegetation, while three and a half million hectares have been abandoned by livestock.

It could be said that Ovtseprom has still not been developed to full capacity; it is still gathering data and writing circulars. Serious attempts at a comprehensive solution of the problem of mechanizing manual labor in this sector have so far not met with the necessary support in Gosplan, the Ministry of Agriculture, other ministries and departments.

The CC Bureau has commissioned me to point out in the most insistent way the need for a radical change in the attitude toward sheep raising. In order to straighten out matters drastically in this sector, it is necessary, above all, to ensure the effective coordination of common efforts and the complete assimilation of funds, to eliminate bad management on the farms, to occupy the pasture lands, to strengthen the farms' material and technical centers, and to create the conditions for highly productive labor on the part of the shepherds and all the livestock raisers.

One's word, given to the party, the people, and personally to Leonid Il'ich Brezhnev, must be carried out absolutely.

While developing public livestock raising, one must also not forget about such an important support as the auxiliary farms. We now have about 800 of them. Last year they produced 8,000 tons of meat and 6,000 tons of milk. This work has been placed on a fairly good footing in Aktyubinskaya, Vostochno-Kazakhstanskaya, and Gur'yevskaya Oblasts, as well as in a number of departments and in railroad transport. However, large-scale potentials for auxiliary farms have been neglected within the systems of the ministries of electric power, local industry, municipal services, and Kazglavgaz.

It is also important to give intelligent support to people's private farms, to improve the organization of requisitioning excess goods from them, especially by the organizations of Kazpotrebsoyuz and the Ministry of the Meat and Dairy Industry, which are still operating far below their potentials.

The conclusions, it is thought, are clear to everybody.

Quite a bit of good has been accomplished in livestock raising. We have things which can serve as good examples. By relying on the valuable experience which has been accumulated by the best farms, we are all duty-bound to raise everywhere the indicators of all the branches of livestock raising without exception and, on this basis, to ensure the fulfillment of the national economic plan by each oblast individually and by the republic as a whole.

It is time to set to work in earnest not only for a quantitative but also for a qualitative solution to the problem of feeds for livestock raising. Moreover, it is important to turn our attention to cultivating crops which are abundant in nutritive proteins. For example, in the southern and south-eastern oblasts there are very abundant potentials for obtaining at least 150 quintals of alfalfa hay per hectare. And at present even in Alma-Atinskaya Oblast they obtain only 60 quintals of it per hectare. Many rayons and even oblasts have become deficient in their cultivation of peas and sainfoin, but, of course, these are extremely valuable protein crops.

Worthy praise is due to the inhabitants of Chimkent, who annually make combined sowings of corn and sugar beets and obtain up to 180 quintals of feed units per hectare. Why not apply this useful experience in Dzhambulskaya, Alma-Atinskaya, and Taldy-Kurganskaya Oblasts?

In summing up everything said above, we recommend that the party obkoms give special consideration to the state of affairs in livestock raising so that the most effective changes can be made in each rayon and on each farm to successfully perform the tasks assigned by the 26th CPSU Congress and the 15th Congress of the CP of Kazakhstan with regard to the development of livestock raising.

Comrades! The party emphasizes with particular force that a decisive turn onto the path of intensifying industrial and agricultural production is impossible without a radical re-structuring of the methods of economic work, without perfecting the administrative mechanism and the activity of the supply organs, and with strictly firming up the system of economies and conservation.

Every manager, as Leonid Il'ich Brezhnev has pointed out, should collate any of his own actions with the need for the strictest economies, the preservation and utilization of all resources; this is one of the chief precepts of our economic policy.

Unfortunately, the party's directives on this question have not been reinforced by organizational work everywhere. Judge for yourselves. Last year many of the republic's farms suffered losses. And this was not just a matter of the weather. Analysis has shown that the losses occurred basically because of mis-management, poor utilization of equipment, unproductive expenditures, violation of financial discipline, squandering and embezzlement, and spoilage of goods. Particularly significant losses have been allowed in Semipalatinskaya, Ural'skaya, and Tselinogradskaya Oblasts.

Party committees must provide an acute and principled evaluation of these negative phenomena, achieve an affective utilization of every ruble, ensure a genuinely business-like approach to matters, and defend the general state interests everywhere and in everything.

In the practical implementation of the program outlined by the party for further raising the material and cultural standard of living of the working people special attention is required by questions of improving trade, municipal, and medical services to the public, along with the activities of scientific and cultural institutions, and every unit, on which depend the everyday life and attitude of people.

Leonid Il'ich Brezhnev spoke about this again with great insistence at the 17th Trade-Union Congress.

We do not belittle what has been achieved in these vitally important spheres. The successes, as they say, are at hand. But so are the shortcomings.

All these deficiencies and often even malpractices are prevalent not only because of the passivity of the control services but also because at various places political-educational work has become extremely weak, personal responsibility has been lowered, and criticism and self-criticism have been reduced "to nothing." Precisely such a situation is the case in a number of sub-divisions of the Ministry of Trade and Kazpotrebsoyuz.

To this day thefts have not been reduced at the Alma-Ata Confectionary Plant. How did the Frunzenskiy Party Raykom react to this? There they decided that it was high time to hold a meeting at the factory between the group and the secretary of the party raykom. But instead of a frank conversation, a formal measure was promulgated. Furthermore, on the day of the meeting with the raykom secretary more candy than usual was taken from the factory.

The primary party organizations and the supervisors of the labor groups must be responsible not only for the Communists but also for every member of the trade union, for every Komsomol member, and for every non-party member.

In some places, however, the supervisors put a wall between themselves and the group. Thus, at the Tselinogradskiy Anti-Erosion Equipment Association many workers are not able to name the partkom secretary, the chief engineer, or the deputy directors; they have forgotten when the director himself met with the group.

Hence, comrades, we see once more the profound truth of the words which Leonid Il'ich Brezhnev uttered at the 17th Trade-Union Congress to the effect that we should be in the midst of people rather than in the midst of papers.

Who if not the primary party organizations, possessing extensive rights, along with their commissions for exercising controls over the activity of the administration and the work of the apparatus, should have the duty of ruthlessly cutting short any manifestations of self-conceit, slipshodness, misuse of a service position, or suppression of criticism?

But what is the situation here? Certain supervisors ardently call for savings and conservation, while they themselves thrust their hand into the state pocket as if it were their own.

You know that Vladimir Il'ich Lenin demanded that a person guilty of cutting down one tree be put under arrest. But here there often blooms a liberalism, an all-forgiving spirit; the struggle against laxity, self-seeking, and other anti-social phenomena is relegated exclusively to the militia, the procurator's office, the court, and the people's controls. Of course, they must be constantly on guard. But, it must be said, this struggle would be much more effective if the political-educational work was at the proper level everywhere.

And here one must speak particularly about the increasing role in the press, television, radio, the creative unions, publishing houses, and cultural institutions. If, for example, the republican television has noticeable raised the creative level of broadcasts on economic topics, this, unfortunately, cannot yet be said of the republican radio.

It is high time that the editors of newspapers and radio stations, as well as those of the journal PARTIYNAYA ZHIZN' KAZAKHSTANA, quit using stereotypes and hackneyed phrases and instead take up offensive points of view, not avoid frank conversation, but give a decisive rebuff to various types of false rumors and unreliable ideas.

In sum, it is very important that not only the primary but all the party organizations shift the center of gravity of agitational-propaganda activity directly to the groups, as required by the well-known decree of the CPSU CC, "On Further Improving Political-Educational Work," constantly and competently concern themselves with ideological questions, including the atheistic indoctrination of the public. We cannot close our eyes to the fact that the positions taken by the 15th CP of Kazakhstan Congress on atheistic indoctrination have so far been poorly carried out, in particular, in Karagandinskaya and Alma-Atinskaya Oblasts, and this has led to an increase in the influence of religion, including that on the youth.

Letters from working people require particular care. Any appeal connected with one or another specific problem must be considered promptly and in a business-like manner. This is an axiom, comrades.

Nevertheless, there have recently been frequent, repeated appeals by working people from Chimkentskaya, Dzhambulskaya, and Karagandinskaya Oblasts, and from the city of Alma-Ata. This testifies to the fact that not everywhere is sufficient attention being paid to the signals and requests of the working people, and, of course, this situation must be decisively corrected.

Comrades! In party work there are no, nor can there be, any details which are too petty. We must know the life and the moods of the people everywhere not by hearsay but in all their concreteness and truth; we must be active transmitters into life of the ideas of the great Lenin's party. The solution to any problem of economics, science, culture, or everyday life depends, in the final analysis, on how it is regarded by the Communists and all the working people, on how active or, on the contrary, how passive is the activity of the primary party organizations of the republic, party raykoms, gorkoms, and obkoms, their organizing and guiding roles.

Today not a single Communist can get by without thoughtful study, without a zealous mastery of the components of Marxism--philosophy, political economy, the theory of scientific communism, without a clear understanding of the Leninist party's domestic and foreign policies.

As Vladimir Il'ich Lenin said, the party does not operate in a vacuum but among people and for people. It constantly and justly indicates that people's political and public activities grow immeasurably when their opinions are listened to with sensitivity and concern, and when people know that their practical suggestions will be taken into consideration. All this pertains in full measure to the opinions, proposals, and remarks uttered at this plenum. They must be summarized in a business-like fashion, and then everything must be done to implement them successfully.

It is completely possible that certain aspects, certain facets of the principal question on the agenda have proved to be outside the scope of detailed discussion. And this is not surprising, for the present question, like life itself, is not limited by any sort of framework; it is broad and massive in scale.

But, in any case, it will be correct and true, as constantly demanded by the party and its Leninist Central Committee, to devote constant and ever-increasing attention to improving the activity of the primary party organizations, as well as to develop their creative initiative, and through them--the initiative of all the workers in the republic.

This is particularly important in light of the fact that lying ahead of us are quite a few very responsible and worthwhile matters, connected with carrying out the decisions of the 26th CPSU Congress and the 15th CP of Kazakhstan Congress, positions set forth by Leonid Il'ich Brezhnev at the 17th Trade-Union Congress and in his speech at Tashkent.

This republic must make a very specific contribution to the problems of working out a foodstuff program. It is thought that nobody has to be convinced of the enormous importance of this problem.

This year the republic marks the 250th anniversary of Kazakhstan's voluntary annexation by Russia. In this connection major socio-political and cultural measures are being promulgated in Moscow and Alma-Ata, Ul'yanovsk, Orenburg, and Novosibirsk.

We are all familiar with the decree of the CPSU CC concerning the preparations for the 60th anniversary of the formation of the USSR. The Bureau of the CP of Kazakhstan CC has outlined a series of measures to implement this decree; they obligate the republic's party organizations to intensify political-educational and organizational work along all lines.

In the first place, we must do everything to make the coming All-Union Communist Saturday, dedicated to the 112th birthday of V. I. Lenin, a notable milestone on the road to the 60th anniversary of the USSR, a genuine labor holiday.

In accordance with the tradition which has taken form, every noteworthy date is greeted by new achievements, by the successful fulfillment of plans and socialist pledges. We have at our disposal everything with which to fulfill and over-fulfill them with honor.

Allow me to express my confidence that our party organizations, relying on the Soviets, the trade unions, the Komsomol, on the force and authority of every labor group, will do everything to achieve a further upsurge in the republic's economy, science, and culture, to greet the glorious 60th anniversary of the formation of the USSR with new convincing achievements in all sectors of building communism.

TAJIK AGRICULTURE TO EMPHASIZE FOOD OVER COTTON PRODUCTION

Dushanbe KOMMUNIST TADZHIKISTANA in Russian 20 Apr 82 p 2

[Article by A. Maksumov, deputy chairman of the Council of Ministers, Tajik SSR: "The Republic's Food-Supply Complex: How Should It Develop?"]

[Excerpts] In our republic, the plan for the Eleventh Five-Year Plan has posed for the first time tasks that are linked with the food-supply agrarian-industrial complex. All told, 1.6 billion rubles are being channeled into agriculture; this is 200 million rubles more than during the Tenth Five-Year Plan. With the comparatively low rates of growth of cotton procurements, there has been a substantial increase in the production of corn grain, vegetables, potatoes, fruits and grapes, and all types of output of animal husbandry. In other words, the branches that will receive accelerated development are those that have been called upon to guarantee the fulfillment of the food-supply program. There will be a reinforcing of the fodder base as the basis for the increase in animal husbandry.

Of course, in the union-wide division of labor Tajikistan has been and continues to be one of the basic suppliers of cotton fiber. During the current five-year plan also it will be necessary to increase the production of cotton, primarily of the most valuable varieties. In 1985 the farms must produce no less than 340,000 tons of cotton of fine-staple varieties. That means that the increase in cotton production, the constant concern for improving its quality, will continue to constitute the basic tasks of Tajikistan's agriculture.

At the same time the orientation toward the exclusive development of cotton-growing no longer answers the present-day requirements. In the past, by virtue of a number of reasons, insufficient attention was paid to the development of other branches, and as a result a slight disproportion was created in the structure of agricultural production. The share of the food-supply branches today is only one-fifth of the agricultural output being produced. The republic is forced to use nationwide funds to satisfy part of the public's needs for food products.

At the present time it is completely obvious that the further formation of the republic's agrarian-industrial complex requires fundamental changes in the branch structure of agriculture, and the introduction of a proportionality and balanced situation in the development of the branches. The emphasis in the economic-planning and administrative activities must be shifted in the direction of the food-supply branches with the simultaneously intensification of attention toward the problems of intensifying the cotton-growing.

Special attention must be devoted to the development of animal husbandry. Here it is necessary to ascertain precisely that this branch is an equal partner in the use of the land on the cotton and other complexes. In the interests of animal husbandry it is necessary to re-examine persistently the structure of sown areas and to allocate for the production of fodder the necessary amount of plowland, including irrigated.

In the current five-year period it will be necessary for the most part to complete the formation of the republic's system of industrial fattening of livestock and a well-developed network of specialized enterprises for the breeding of heifers and on that basis to achieve the further development of dairy livestock breeding. It is necessary to continue the work of expanding the capacities of poultry factories and hog complexes as the most effective enterprises that are capable of rapidly satisfying the public's needs for the output of those early-maturing branches of animal husbandry.

Obviously, in the center of all the problems of converting animal husbandry to an industrial basis and increasing the production of output are the questions of the precise organization of fodder production, and the correct storage and preparation of fodders. There is a lot of work here, since we are talking about the quality and preparation for fodder production of several millions of tons of various feeds and fodders -- green, succulent, coarse, and concentrated.

The implementation of the nationwide food-supply program presupposes the most complete satisfying of the public's needs in absolutely all regions of the country. As a result, special attention in the regional food-supply complex should be devoted to the production of those products which cannot be shipped in or which it is more desirable to produce locally. In particular, a question that was not raised previously is that of completely providing for the republic's needs for vegetables and potatoes as a result of the republic's own production. But now that task has indeed been posed.

It is also necessary to take into consideration not only the overall growth of the population, but also the high rates of the republic's industrialization. Consequently, in the areas of concentration of urban population it will be necessary to create a highly intensive suburban vegetable and dairy management. This pertains first of all to the rayons in Gissarskaya Valley, where the republic's capital and very important projects in the rapidly developing South-Tajik Territorial-Production Complex are located, and also pertains to the industrial zones of Kurgan-Tyubinskaya and other oblasts.

The practice of recent years has shown that it is economically advantageous to organize our republic's own potato-growing, which is capable of satisfying a significant part of the needs of the republic's population. In the long-term view, the Garmskaya group of rayons, which produce 300-350 or more quintals of tubers per hectare, can become the principal base for potato-growing in the republic, and this also creates good prerequistes for the socioeconomic development of the farms in that zone. But that, of course, will require time and definite capital investments.

Realizing that in the valley part of the republic there are no sufficiently large-scale reserves that are capable of changing the traditional course of development of agriculture, we must reconsider our attitude toward unirrigated land, which quite recently was considered to be relatively unproductive. A fundamentally new approach in this regard is the course aimed at the powerful development of viticulture in the foothills and orchard-growing in the mountaisn. The first steps have already been taken to convert the foothills and the mountainous zone into the second branch of agricultural specialization of Tajikistan after cotton-growing, and that has found its expression in the union and republic-level directive documents. An example of the practical implementation of this course is provided by the positive results of the economic activities of the unirrigated grape-growing sovkhozes: Fakhrabad, in Kuybyshevskiy Rayon; Sovkhoz imeni Michurin, Leningradskiy Rayon; and Chormagzak, Ordzhonikidzeabadskiy Rayon.

The reserves existing here can be judged if only from the fact that the areas that are suitable for the growing of grapes and fruits considerably exceed the republic's land fund that is currently being irrigated. What is even more important is the fact that, with regard to the capabilities for the intensification of production, viticulture and orchard-growing surpass all the other branches of vegetable husbandry. True, the assimilation of these resources will require considerable expenditures and time. However, the importance of the expected economic and social consequences is tremendous. There will be an increase by a factor of 2 to 3 in the present volume of gross output of agriculture. Fundamental progressive changes will occur in its structure and there will be a considerable increase in the contribution made by the republic to the nationwide food-supply fund. This direction is the general strategy for the development of agriculture of Tajikistan for the long-term view.

An important stage in the implementation of this program must be the current and subsequent five-year plans. Sufficient experience has already been accumulated for organizing industrial grape-growing and orchard-growing enterprises. The Ministry of the Fruit and Vegetable Management has been created, and the production experiment of introduction of unirrigated viticulture and intensive irrigated orchard-growing is being conducted successfully and broadly in the foothill and mountain rayons.

Now it is necessary to begin the massive changeover to the formation of the basic orchard and vineyard zones on a modern industrial basis. The topic under discussion is the carrying out of the complete remodeling of the unique area for growing orchards of fruits with pits in Isfarinskiy, Kanibadamskiy, Khodzhentskiy, and Ashtskiy Rayons; the substantial expansion of the zone of growing grapes for table wine, especially seedless varieties, in Leninabadskaya Oblast; the developing of orchard and vineyard managements in the foothills of Gissarskaya and Yavanskaya Valleys; the accelerating of the development of the major zone of unirrigated viticulture in Kulyabskaya Oblast; the beginning of the assimilation of the slope land in the Garmskaya group of rayons for the growing of orchards of fruits with seeds; and the beginning to develop methods for the industrial growing of subtropical crops and grapes in Kurgan-Tyubinskaya Oblast. It is also necessary to study thoroughly the opportunities for the growing of orchards of nut trees and trees producing fruit with pits in Gorno-Badakhshanskaya Autonomous Oblast.

A special place in this complex must be occupied by citrus-fruit growing. Rich experience in growing lemon trees in trenches, and the high effectiveness of that branch give complete justification for bringing it to the level of republic specialization. In addition, in Kurgan-Tyubinskaya Oblast, the basic zone of citrus-growing, there are many thousands of hectares of currently idle low-foothill land that is suitable for irrigation.

That, in general features, is the food-supply complex that is currently forming in Tajikistan. It has a group of branches (animal husbandry, vegetable growing, and potato growing) which have been called upon to satisfy the bulk of the local needs, and it has branches of republic-level specialization (viticulture, orchard-growing, partially vegetable growing and citrus-fruit growing), which will deliver a considerable part of their output, both in fresh form and in processed form, to the nationwide fund. The planned prospect conforms to the interests of the country and of the country.

The party requires the food-supply complex to develop in such a way that there will not only be an increase in the production of output, but also a better use of it, with all channels of losses being stopped. The success will depend upon the harmonious development of the entire agroindustrial complex, the capacities of the product-storing infrastructure, the overcoming of the bottlenecks in the processing industry, transportation, packaging and packing management, and trade. It is necessary, consequently, to coordinate closely into a single organizational-economic unit the activities of a number of ministries and departments. We do not yet have conformity in the level of development of agriculture, which constitutes the very heart and soul of the complex, with the processing of the output, and we do not have enough warehouses and storage facilities, or enough specialized transportation equipment, or hard-surface roads, or many other things.

It will be necessary to devote more attention also to such a source of agricultural products as the personal plots of the kolkhoz members, sovkhoz workers, and employees. In Tajikistan half of the number of head of cattle and one-third the number of sheep and goats belong to the population. Personal farms are also of substantial importance with regard to the production of fruits, grapes, vegetables, melon crops, and many other types of produce.

The complexity and mass scope of the tasks confronting us bring into the foreground the problems of administration, and its effectiveness. The evaluation of all the concrete current decisions must be strictly subordinated to the long-range special-target tasks for the development of the agroindustrial complex as a whole. Under the new conditions it is important to unite the economic interests of various ministries, departments, and production structures, and to strive for the efficient combining of branch and territorial planning and administration. It will equally be necessary to intensify the role of science in the resolution of the practical tasks and to coordinate more precisely the efforts of the scientists and the scientific institutions which are aimed at the resolution of the problems pertaining to the food-supply complex.

TAJIK CENTRAL COMMITTEE PLENUM 20 APRIL

Information Announcement

Dushanbe KOMMUNIST TADZHIKISTANA in Russian 21 Apr 82 p 2

[Text] On 20 April 1982 the 5th Plenum of the Central Committee of the Communist Party of Tajikistan was held. The plenum participants, by a minute of silence, honored the memory of member of the CPSU Central Committee, deputy to the USSR Supreme Soviet, Hero of Socialist Labor, First Secretary of the Central Committee of the Communist Party of Tajikistan, Dzhbar Rasulovich Rasulov.

The plenum considered the organizational question. Comrade Rakhman Nabiyevich Nabiyev, who had previously worked as Chairman of the TaSSR Council of Ministers, was elected First Secretary of the Central Committee of the Communist Party of Tajikistan.

Then the plenum considered the question "The Status of and Measures for Intensifying the Organizing and Political Work of the Primary Party Organizations and for Increasing the Vanguard Role of the Republic's Communists in Fulfilling the Decisions of the 26th CPSU Congress and the instructions and Recommendations of General Secretary of the CPSU Central Committee, Comrade L. I. Brezhnev." A report was given by Second Secretary of the Central Committee of the Communist Party of Tajikistan, Comrade Yu. I. Polukarov.

In the discussion of the report, the speakers included the following comrades: First Secretary of the Leninabadskaya Oblast Party Committee, R. Khodzhiyev; First Secretary of the Kurgan-Tyubinskaya Oblast Party Committee, G. P. Pallayev; First Secretary of the Dushanbe City Party Committee, Yu. A. Shakarimov; Second Secretary of the Kulyabskaya Oblast Party Committee, K. V. Sarychev; Second Secretary of the Gorno-Badakhshanskaya Oblast Party Committee, V. I. Medvedev; Secretary of the party committee of the Tadzhikskoye Mine Administration, N. Karimov; First Secretary of the Tursunzade City Party Committee, M. S. Tabarov; First Secretary of the Central Committee of the LKSM [Komsomol] of Tajikistan, Sh. M. Sultanov; secretary of a primary party organization in the TaSSR Ministry of Light Industry, L. A. Shchipachev; party group organizer at the second sector of Machine Shop 3, at the Tadzhikgidroagregat Plant, V. G. Gryadkin; and secretary of shop party organization SU-33 of the Tadzhikkhimstroy Trust, Ye. K. Miklashevich.

The concluding speaker at the plenum was First Secretary of the Central Committee of the Communist Party of Tajikistan, Comrade Rakhman Naibyevich Nabiyev.

The plenum adopted a corresponding decree.

Deputy Head of the Section for Party-Organizational Work, CPSU Central Committee, Comrade N. S. Perun took part in the work of the plenum.

Thereupon the plenum of the Central Committee of the Communist Party of Tajikistan completed its work.

Second Secretary Speech

Dushanbe KOMMUNIST TADZHIKISTANA in Russian 21 Apr 82 p 2

[Excerpts] At the Plenum of the Central Committee of the Communist Party of Tajikistan that was held on 20 April, a report "The Status of and Measures for Intensifying the Organizing and Political Work of the Primary Party Organizations and for Increasing the Vanguard Role of the Communists in Fulfilling the Decisions of the 26th CPSU Congress and the Instructions and Recommendations of General Secretary of the CPSU Central Committee, Comrade L. I. Brezhnev" was given by Second Secretary of the Central Committee of the Communist Party of Tajikistan, Comrade Yu. I. Polukarov.

We must, on the basis of an intensification of the political and organizer work, take all steps to maintain and develop that high patriotic enthusiasm among the working masses. More complicated and more important tasks still lie ahead of us, especially with a consideration those high requirements and the instructions which were expressed by Comrade L. I. Brezhnev at the 17th Congress of Soviet Trade Unions and at ceremonies in Uzbekistan.

The practical paths for realizing the principles stated by Leonid Il'ich and for carrying out more effectively the decisions of the 26th CPSU Congress must also be discussed and planned by us at today's plenum.

People frequently talk about a shortage of working hands in production. Actually this is so, but there is also an excess of manpower in the village. The managers of the ministries of the local and light industry should be more persistent in using such an important reserve, as was indicated by Comrade L. I. Brezhnev, as the creation of branches and shops in small cities, rayon centers, and in large villages in the republic where uncommitted labor resources exist.

A serious question for workers in industry and for Communists employed in it continues to be the raising of labor productivity. Many enterprises have not been fulfilling the established assignments with regard to this very important indicator. This is the consequence of the large losses of workers' time, personnel turnover, and the disdainful attitude toward the introduction of advanced experience and progressive technological methods.

In the resolution of tasks in the national economy, an important role is played by transport. The party organizations at enterprises in these branches have a large number of good things to their credit, but, nevertheless, one still encounters instances of the incorrect use of motor transport and the inefficient use of fuels and lubricants. In railroad operations, the turnover rate for the cars is inadequate, the amounts of railroad-care idle time are being reduced slowly, and there is a low level of mechanization of the loading and unloading operations.

It is necessary in a more carefully thought-out and more energetic manner to introduce order into capital construction. Steps are being taken slowly to overcome the recently censured practice of dispersal of efforts and means in numerous projects or to rectify the tardy activation of them and the poor quality of the operations. The level of the organization of construction production itself remains low. There is a critical situation with regard to personnel but, at the same time, there is also the inefficient use of manpower.

We must fundamentally intensify the party influence in this branch, and organize production in such a way as to reveal completely the capabilities of collective labor. It is necessary to increase the role of brigade organization and of incentives paid for labor.

As is well known, a central problem in the economic and political sense, as Comrade L. I. Brezhnev pointed out, is the food-supply program. Its importance was reemphasized by him in his speech at the ceremonies in Tashkent. Comrade L. I. Brezhnev posed as a task of primary importance the considerable increase in the volumes of agricultural production.

Our republic also must make its contribution to this important job. And it is here that the vanguard role of the party organizations, of the Communists, must especially manifest itself.

During recent years much was done in the republic to increase the production of vegetables and potatoes. It will be necessary to continue this work at increasing rates.

In the resolution of the food-supply program, a special role is assigned to the shock front in the rural areas -- animal husbandry. At the ceremonies in Tashkent Comrade L. I. Brezhnev emphasized that it is necessary to imbue in the managers and all the rural workers the very same reponsible and loving attitude toward animal husbandary that is shown to the raising of cotton. This pertains also to many of our organizers of agricultural production.

However, in fodder production we still have many problems. It is necessary to take serious steps with regard to concentrated fodders, and primarily the production of corn raised for grain. The Ministry of Agriculture should study the possibilities for creating on new land specialized corn-growing sovkhozes. On every farm with irrigated agriculture it is necessary to have specialized brigades for the production of corn intended for grain and for silage, which would have at their disposal everything they need for the industrial growing of that crop. Much will also have to be done in the growing of alfalfa.

It is necessary to execute Leonid Il'ich Brezhnev's instruction to the effect that every farm must have livestock, if only for the purpose of satisfying its internal needs. It is necessary to take all steps to maintain and to locate opportunities for creating subsidiary farms at enterprises, to render assistance to the public's personal farms, and to carry out in a skillful manner the procuring of excess produce from them. Tadzhikpotrebsoyuz and Minmyasomolprom have something to think about in this regard, and they must be more energetic in studying this problem.

The labor performed by the vegetable husbandryman and the animal husbandryman is of tremendous public importance. It is necessary to take all steps to propagandize and elevate their noble, complicated, and difficult labor, and to educate people to show all kinds of respect for it.

Then Comrade Yu. I. Polukarov said:

In the age of scientific-technical progress, science is acting in the role of an important productive force. The scientists of Tajikistana are carrying out fundamental and applied research studies that exert an immediate influence upon the development of the republic's productive forces. A factor of great importance is the concluding of contracts with enterprises and organizations for the conducting of joint projects and the introduction of their results into production. However, the effectiveness of certain scientific studies, unfortunately, is still low at times, and the recommendations of science are moving slowly into the national economy. The primary party organizations at the scientific-research institutions -- and we have a rather large number of them -- must increase their demandingness toward the managers and the Communists for the quality and effectiveness of scientific labor.

A large responsibility has been placed on the party organizations of the ministries and departments, where there is a concentration of numerous, highly qualified, and, as a rule, well-experienced specialists. It is the task of the Communists engaged in the sphere of economic administration to confirm that style of management that would be distinguished by its highly businesslike nature and its time-responsiveness, and by well-organized verification of execution.

But, as was shown by an inspection, certain primary party organizations at agencies of administration are still making little use of time-tested forms of intensifying party influence upon the improvement of the style and methods of the work performed by the apparatus, or the right that has been granted by the CPSU Rules to control the activities of the administration.

The growing interrelationship between economic and social progress, an interrelationship that is typical of the developed socialist society, Comrade L. I. Brezhnev said at the November 1981 Plenum of the CPSU Central Committee, determines the leading place that the social program occupies in our plans. This party line is also being carried out consistently in our republic. The party organizations direct their efforts to the more complete satisfying of the growing needs of the public for commodities and services on the basis of the steady increase in material production.

When considering the economic and political problems which the primary party organizations have been called upon to engage in on a daily basis, it is necessary to keep in mind that in the final analysis everything will be resolved by people, by labor collectives. It will be necessary for the party organizations to engage thoroughly in improving people's working, recreational, and everyday living conditions; the improvement in the distribution of and the effective use of public consumption funds and other material incentives; the creation of conditions for the complete development of the individual; and the developmental growth of the new man. Then the personnel turnover will drop, discipline will rise, and things will proceed better. Any beneficial job in the hands of man particularly prospers when it is executed with a sense of love and interest, and an understanding of its state and public importance.

After remarking on a definite improvement in the ideological, political-educational work, the speaker said:

But, nevertheless, not all the party organizations have been able to raise this important work sector to the level of the party's requirements. Certain ideological workers take a one-sided approach toward propagandizing the material blessings that the workers will receive during the Eleventh Five-Year Plan, but say little about the responsibility that everyone bears for the creation of the prerequisites for those blessings. We must completely reject stereotypes. We must occupy offensive positions. We must not avoid frank discussions on critically important topics. We must give a decisive rebuff to any false rumors or erroneous ideas, must uncompromisingly oppose our positions to the ideological subversion perpetrated by the imperialistic forces, must actively unmask anti-Sovietism and anti-communism, and must speak out decisively against any views or mores that are alien to us.

The party organizations must keep in the center of their attention the patriotic and international education of the youth, the propagandizing of the revolutionary, combat, and labor traditions of the party and the people. It is necessary to develop in every young man and woman a conviction concerning the rightness and invincibility of our cause, political vigilance, and the constant readiness to defend the Motherland and the gains of socialism.

The party organizations must, in a more consistent, more energetic, but at the same time, in a tactful manner, carry out athetistic education and decisively overy other pernicious survivals of the past.

The republic's party organization is consistently developing. It is typical that the rates of growth in the number of party cells have been considerably outstripping the growth rates of the ranks of Communists. The specific nature of our republic has predetermined the doubled growth of the network of the primary party organizations in industry, construction, and transport, and the objective process of their consolidation.

We have been given new problems by the organizing of interfarm and agroindustrial associations. For example, in Kurgan-Tyubinskaya Oblast in 1980, rayon interfarm enterprises for the mechanization and electrification of agricultural production were formed. They include specialized departments containing within themselves technology, repair bases, and material resources of the kolkhozes, sovkhozes, and rayon associations of Goskomsel'khoztekhnika, and all the rural mechanizers. For purposes of acculating experience, a single primary party organization was created at a similar interfarm enterprise, the party committee of which organization united 13 shop party organizations, 20 party groups, and approximately 200 Communists. This placement of party forces, which corresponds to the production structure, had a beneficial effect upon the production affairs. At the same time, inasmuch as the experiment of developing an economic scheme for administration is continuing, further work will also have to be done to improve the structure of the party organization.

A factor of great importance is the correct structure of the party organizations at the ministries and departments. An inspection has shown that in individual party organizations there were no shop party organizations or party groups, although all the justifications for having them were present. In a few places, particularly in the party committee of the Ministry of Agriculture, the rolls listed Communists at subordinate, economically independent enterprises. That practice was censured and the situation is being corrected.

A considerable amount of attention must be devoted to the small-sized organizations that operate, as a rule, in the sphere of satisfying the public's social needs. The party committees must render all kinds of aid to them, and must do everything to assure that they become true leaders in those principally small collectives which, however, bear a large responsibility for people's moods.

Today, when a very important task is the taking of all steps to increase the effectiveness and quality of the work in the low-level economic links, there has been an immeasurable increase in the role and importance of the shop party organizations and party groups in the republic. They stand closest to those who are creating material assets, and they exist in every fourth brigade and at every other animal farm. It is typical that in recent years, in shop party organizations and party groups, one has seen the consolidation of the tendency not to limit one's activities to current questions, but, rather, to penetrate more deeply into the economics of production, to be the initiators of the preterm fulfillment of plans. One of the effective forms of intensifying party influence is the temporary party group. In 1981, in gathering in the harvest, approximately 700 such groups, which included every sixth Communist in rural areas, operated successfully. The temporary party groups also demonstrated their worth at construction sites, where they unite the Communists not only of the general contractor and the subcontract specialized enterprises, but also those of the construction-planning organizations and the customer.

At the same time at meetings in certain organizations the questions discussed are of relatively little importance, one and the same speakers make statements, and the adopted decisions do not require anyone to do anything. Putting it simply, there is little sense in having them. The meeting must be such that, after it is over, everyone wants to roll up his sleeves and start working.

Having dwelt on the questions of personnel policy, the speaker emphasized that the party collectives should exert a more active influence upon the selection of personnel. It is necessary to be more persistent in carrying out the line of promoting women to managerial work. One cannot reconcile himself to the manifestation of distrust in the strength of women personnel. We have an extremely insufficient number of them in managerial work even where women's labor predominates. There are few women among the chief specialists at enterprises, the chiefs of departments and shops, brigade leaders, and animal-farm managers.

The primary party organizations must improve the forms and methods of party guidance of the activities of the public organizations, primarily through the Communists who are working in the trade unions, the Komsomol, and the people's control groups and posts, and must take all steps to achieve the broad participation of the workers in the administration of production.

Considering today the activity of the primary party organizations in all its multifaceted aspects, we must give ourselves a clear answer to many questions which have been raised by life itself and to which Comrade L. I. Brezhnev directed our attention.

It is important to analyze why, in individual sectors of our activities, and primarily in the lagging sectors, party influence is not operating properly, and why individual party links have not been entering into an active struggle against shortcomings. And, having analyzed the situation, we must correct the situation, achieving a situation in which, in our ranks, there are no indifferent individuals, in which every primary party organization, every Communist is imbued with a sense of high responsibility for the implementation of the party's policy, for the state of affairs in the collective, for the creation there of a climate in which any shortcomings become intolerable.

After resolving that task -- and it is not one of the easy ones -- we shall activate colossal reserves. The key to success lies primarily in improving the guidance of the low-level party collectives on the part of the rayon, city, and oblast party committees, and the sections of the Central Committee of the Communist Party of Tajikistan.

A special role in the work of the party organizations belongs to the secretaries of the party committees and bureaus. As a rule, these are competent, well-principled, and initiatory people, who enjoy the trust of the Communists and the respect of the labor collectives. At the same time a considerable number of them, especially those who have been elected for the first time, lack sufficient experience. Our task is to help them to become informed, to organize their training, to improve the instruction provided to them.

During the past two years, at seminars and the permanently operating courses to retrain the party and soviet workers, which are held under the Central Committee of the Communist Party of Tajikistan, the persons who have improved their knowledge include secretaries of the party organizations of the ministries and departments, industrial enterprises, construction organizations, kolkhozes, and sovkhozes. We are also instructing the ideological activists. All this has been yielding positive results.

It is very important for all the principles, recommendations, and decisions of the city and rayon party committees to define precisely the tasks of the primary party organizations, to help them in their work, and to teach them how to operate correctly.

In conclusion Comrade Yu. I. Polukarov said:

The plenum of the Central Committee of the Communist Party of Tajikistan has been called upon to define completely and concretely the place and role of the party organizations in the resolution of the tasks advanced by the party both in the area of intraparty life and in economic and ideological activity. This work must also be carried out at the levels of the oblast, city, and rayon party committees, in the primary party organizations, and their low-level links. Speaking figuratively, the transmission mechanism must operate at full capacity, and must charge all the party members with energy and new strength.

USUBALIYEV ADDRESSES KIRGHIZ CENTRAL COMMITTEE PLENUM

Frunze SOVETSKAYA KIRGIZIYA in Russian 9 Apr 82 pp 1-3

[Report by First Secretary of the CC of the Communist Party of Kirghiziya Comrade T. U. Usubaliyev: "On the Tasks of the Republic Party Organization Which Follow From the Speeches by Comrade L. I. Brezhnev at the 17th Congress of USSR Trade Unions and at the Celebrations in Tashkent"]

[Excerpts] Comrades! The communists and workers of our republic, like the entire party and all Soviet people, welcomed the speech by Comrade L. I. Brezhnev at the 17th Congress of USSR Trade Unions and his addresses at the celebrations in Tashkent devoted to the presentation of the Order of Lenin to the Uzbek SSR with enormous attention and profound satisfaction.

Together with the party and with all Soviet people, the communists and workers of Kirghizstan ardently approve of the program aims contained in the addresses by Comrade L. I. Brezhnev and are adopting them for steady guidance and execution. They express to dear Leonid Il'ich their sincere gratitude for his fatherly concern for the man of labor and for strengthening peace in the world and wish him great new successes in his noble work for the good of our great homeland and on behalf of the triumph of communism.

Guiding themselves by the decisions of the 26th CPSU Congress and the instructions of Comrade L. I. Brezhnev, in their work on the communist education of the workers and their mobilization for the fulfillment of the assignments of the 11th Five-Year Plan the CC, obkoms, gorkoms, and raykoms of the Communist Party of Kirghiziya are trying to base themselves more on the trade union organizations which now unite more than 1,380,000 people.

In the republic 23 enterprises did not fulfill their 1981 plan, and they failed to provide 43 million rubles worth of output. At the head of these enterprises are their leaders--communists. But the party committees do not call them to strict party account for their failure to fulfill their assignments. The importance of increasing the personal responsibility of communist-leaders for their work was especially emphasized in Comrade L. I. Brezhnev's conversation with the leaders of the Uzbek SSR.

Party committees and trade union and Komsomol agencies have to seek the thorough development of the creative activeness of the workers so that their attitude toward work is truly optimistic, and socialist competitions are extensive and effective. Greater persistence has to be shown in achieving the best final economic results, increasing the rates of scientific and technological progress, and increasing labor productivity.

A large reserve for increasing labor productivity, Comrade Usubaliyev emphasized, is in the reduction and elimination of labor turnover and the stabilization of labor collectives. Let us take, for example, the republic's textile industry. With respect to its level of labor productivity and equipment, this branch lags substantially behind advanced enterprises and even average union indicators. There is one reason--the poor skills of the workers. At many enterprises up to one-half of the workers are replaced during the course of a year.

I have to say that in 1981 a number of ministries, departments, associations, enterprises, and organizations improved control over labor discipline and obtained a certain decrease in losses of working time, which made it possible to economize more than 20,000 man-days, including almost 10,000 man-days in industry and construction. The level of labor turnover decreased in industry from 25 to 23 percent.

However, a great deal will still have to be done to strengthen labor discipline in order to decrease the damage caused by violations. And here ever increasing importance is being acquired by the team form of the organization and stimulation of labor which was very vividly and convincingly discussed by Comrade L. I. Brezhnev at the trade union congress. Today more than 8,000 teams are working in the republic's industry, construction, and transportation, and many of them have gone over to new forms of the organization and stimulation of labor. In industry every fifth team is using a single order with earnings distributed in accordance with a coefficient of labor participation.

There has to be a universal profound analysis of the state of affairs in every labor collective. The results of work done have to be examined in every ministry, in the Kirghiz Council of Trade Unions, in its republic committees, and also in party committees. The instruction of the 26th CPSU Congress to the effect that the team form of the organization and stimulation of labor has to become the basic one during the 11th Five-Year Plan has to be carried out by every labor collective. Having emphasized the enormous role of motor vehicle transport in the development of the republic's economy, Comrade Usubaliyev called attention to the large shortcomings in the work of this branch. Many leaders have an irresponsible attitude toward the use of motor vehicle transport.

Enormous damage is being done by the upward distortions in reporting which are still continuing in motor vehicle enterprises. At individual motor vehicle bases the distorted amounts are several times in excess of the actual hauls.

The improvement of the work of motor vehicle transport demands the daily attention of the entire republic party organization. Educational work has to be increased in all of the collectives of our motor vehicle transport enterprises, strict party and state punishment has to be exacted for mismanagement and the squandering of fuel and lubricants, while upward distortions and deceptions have to be punished with the full severity of the Soviet laws.

Comrades! In carrying out the broad programs for a further rise in the well-being of the people which have been advanced by the party for the 11th Five-Year Plan and the 1980's, an especial place is occupied by measures to improve consumer goods supplies for the population and, in the first place, food supplies. Both economically and politically, this is the central problem of the entire five-year plan. In order to solve this problem, it is necessary, first of all, to ensure high rates for the development of agricultural production. The republic's agriculture, like that of the entire country, is faced with an exceptionally important task: to improve the efficiency and quality of agricultural production, and to bring about the planned shift of this branch to an industrial basis.

Despite the fact that in recent years we have succeeded in making appreciable progress in the production of all types of feeds, the shortage is still enormous. In his speech in Tashkent, Comrade Leonid Il'ich Brezhnev called especial attention of the aktiv of the Uzbek SSR to the great reserves which exist for increasing the harvests of feed crops. And Uzbekistan's feed procurers are already obtaining 122 quintals of hay and 388 quintals of green corn mash per hectare, while with us the yield of hay is 60 quintals, or half the amount, and green corn mash is 223 quintals, or 1.5 times less than in Uzbekistan.

This kind of relationship to feeds gives rise to alarm. Without an increase in their yields, it is impossible to increase the productivity of animal husbandry. And here it is necessary to employ measures of party responsibility against those who to this day cannot understand the full acuteness and importance of the solution of the feed problem.

In view of the great importance in providing the population with food of the development and improvement of the work of the subsidiary farms of enterprises and organizations,the private farms of kolkhoz and sovkhoz workers, and of collective gardening, every effort must be made to assist in the organization of voluntary societies of gardeners, to provide them with comprehensive help, and to help the population in raising and fattening livestock on their private farms and in purchasing young livestock and feed.

There are many shortcomings in the development of the subsidiary farms of sovkhoz and kolkhoz workers. Recently the CC considered how these issues are being solved on the seed farm imeni the 23rd Party Congress in Alamedinskiy Rayon. It turned out that many of the residents of the seed farm do not produce agricultural output on their private plots, but grow flowers for sale on the market and build cages in which to keep fur-bearing animals. At the same time, they buy meat, milk, vegetables, and other foods in the city of Frunze. Almost the same kind of situation exists on all of the farms located around the city of Frunze. But this abnormal situation is escaping the attention of the party, government, trade union, and Komsomol agencies of Alamedinskiy, Sokulukskiy, and Kantskiy Rayons.

Another important task is to raise the level of instructional and educational work in the higher and secondary specialized educational institutions, to improve the living conditions of students and pupils, and to show concern for getting jobs for graduates and making them permanent at these jobs. Only an inattentive attitude toward diplomaed specialists can explain the fact that many of them do not find permanent employment in their specialties.

At the present time in the republic, 22 percent of our agronomists, veterinarians, and zootechnicians, 37 percent of our economists and bookkeepers, and 57 percent of our agricultural mechanization engineers and technicians are not working on kolkhozes and sovkhozes, but in other branches. An especially large number of graduates of the higher and secondary specialized educational institutions are not working at their specialties in the systems of the Ministry of Trade, Ministry of Procurements, and Gossnab.

The kind of situation has to be achieved everywhere in which the training of specialists and their distribution fully accords with the developmental prospects of our economy and in which all vuz and tekhnikum graduates work at their specialties and in those places where they are needed. This follows from the demands of the CC CPSU and the instructions of Comrade L. I. Brezhnev.

Party, government, and trade union organizations have a large role in the work of improving the well-being of the workers. As Comrade L. I. Brezhnev has observed, the trade unions can and should make a serious contribution to realizing measures to improve payment for labor and to make efficient use of the public consumption funds. Wages have to be closely tied to final results. In other words, if you have done more, you receive more. But he who has worked uncaringly, should receive less. There has to be a resolute struggle against leveling, upward reporting distortions, and undeserved bonuses.

Another very important task of party and trade union organizations is, guiding themselves by the principle of socialism "from each according to his abilities, to each according to his labor," to work jointly with state and economic agencies in exercising constant control over the measure of labor and the measure of consumption, over the use of the wage and material incentives funds, and over the granting of social goods and benefits to workers in direct dependence upon the quality and conscientiousness of their labor. A better combination has to be achieved between the personal interests of workers and the interests of the enterprise and of society as a whole.

It is necessary to make full use of the existing possibilities for creating advantages in material stimulation for collectives and workers who successfully fulfill counter-plans and commitments. There has to be an expansion of the sphere of norm setting for labor and of the application of technically substantiated output norms, and an outstripping growth must steadily be sought here for labor productivity compared to wages.

Concern for the life and health of people and for improving working conditions and labor protection and control over the state of safety rules has to constantly be at the center of the attention of party, trade union, and other public organizations. However, certain trade union committees are still lacking a fighting spirit and a sense of principle in defending the legitimate rights and interests of workers. For this reason, at individual enterprises measures connected with labor protection and safety rules which have been stipulated in the collective agreement are not carried out. As a result, there are quite a few cases of production injuries and sicknesses.

The Kirghiz Council of Trade Unions and the republic trade union committees and their technical inspectorates are still not exercising effective control over the fulfillment of the overall plans for improving working conditions, are not making full use of the rights granted them, have weakened their demands upon economic leaders, and are not showing the necessary persistence and sense of principle in the work of creating healthy and safe working conditions. The network of medical-hygiene units, polyclinics, and health stations at enterprises is extremely limited in the republic.

In a word, party and trade union organizations have to constantly be in the thick of the masses, respond to their needs immediately, create the kind of situation everywhere which excludes the very possibility of a violation of the rights of the working man, and resolutely suppress the manifestations of bureaucratism, insensitivity, and phony showiness.

As is known, the Central Committee of our party is devoting enormous attention to work with workers' letters and oral addresses. There was a precise and clear discussion of this at the 26th CPSU Congress, and Comrade L. I. Brezhnev reminded us of it once again at the Trade Union Congress.

Many party committees, government agencies, and trade union organizations are persistently improving their work with workers' letters. Attributing great importance to this sector, the Bureau of the CC of the Communist Party of Kirghiziya gave special consideration to the question "On the State of Work with Letters and on the Organization of Receptions for Citizens in the Kirghiz Council of Trade Unions, the Oblast Councils of Trade Unions, and the Republic Trade Union Committees in the Light of the Decisions of the 26th CPSU Congress." The same question was discussed at a plenum of the Kirghiz Council of Trade Unions.

At the same time, the ever growing stream of letters shows that far from everywhere are the trade union organizations working with the necessary persistence and faithfulness in considering the issues raised by citizens in their letters. For example, there has been no decrease in the number of letters about various labor disputes, especially complaints about illegal dismissals. An analysis shows that of the letters of this category which are taken under control a substantial number of the requests are resolved favorably.

It has to be noted that most of the cases of invalid dismissals from work are explained by the irresponsible attitude of certain leaders toward the labor laws. Violations are most frequent in those places where the local trade union committees occupy an unprincipled position when they examine worker dismissals at the initiative of the administration. According to the data of the Supreme Court of the Kirghiz SSR, in 1981 60 percent of the people who were returned to work had been dismissed without the agreement of the trade union committees. However, in this matter we still do not feel a firm position from the Kirghiz Council of Trade Unions and its republic trade union committees.

The courts and the procurator's offices rarely bring actions involving material responsibility against officials guilty of illegal dismissals.

Party, government, and trade union agencies have to be more principled in this matter and demand a strict account from those who crudely violate the rights of workers and employees and take a formal attitude to their written and oral addresses.

Leonid Il'ich subjected the paper style of leadership to sharp and unhypocritical criticism. Unfortunately, the flow of paper in our republic from party committees, ministries, and departments containing requests on economic matters is not diminishing. This paper flow is coming basically from the ministries of agriculture, construction, rural construction, construction materials industries, procurements, and a number of others.

It is absolutely obvious that the abundance of documents which are accepted and distributed by certain party, government, and economic agencies creates difficulties for organizational work and for control over their fulfillment. The paper style of leadership has a negative influence on the content of decisions, and distracts the apparatus and the aktiv from vital everyday work and, for this reason, it has to be resolutely rejected.

Comrade L. I. Brezhnev's speech in Tashkent names as an important problem of cadre policy the promotion of women to leading work. This course is of great principled and practical importance. Our reserves for the extensive placement of women in leading positions are truly enormous. Around one-half of the people employed in the republic's economy consists of women, and they make up 57.8 percent of our specialists with higher and secondary specialized education. Women comprise 30.5 percent of the CC, obkoms, gorkoms, and raykoms of the party, and around 13 percent of the responsible workers of the party apparatus. However, not all of the party obkoms, gorkoms, and raykoms and primary party organizations show concern for promoting women to leading work. There are still too few women among the directors of our kolkhozes, sovkhozes, industrial enterprises, and construction and transportation organizations.

Party committees and government and economic agencies have to make fuller use of the increased possibilities for promoting women to responsible posts.

Comrades! Thanks to our Leninist nationalities policy, Soviet Kirghizstan, like the other fraternal republics, has achieved enormous successes in economics, in the social fields, and in culture. It is precisely because Soviet Kirghizstan has been going and continues to go in a single formation with our fraternal peoples of the Soviet Union, and, above all, with the great Russian people and because of their disinterested help and support that it has been able to rise so rapidly from its past backwardness and turn into a comprehensively developed flourishing republic.

Life graphically shows that, despite the slanders of our enemies, socialism not only does not lead to the loss by peoples of their inimitable face and the distinctive characteristics of their culture and tradition, but raises this uniqueness to a new height and makes it the property of other peoples. "And the key to this new flourishing," Comrade L. I. Brezhnev has said, "is by no means national narrow-mindedness, not isolation, and not various kinds of prejudices of the past." On the contrary, it is necessary in the future also to strengthen the unity and fraternity of all of the nations and nationalities of the Country of Soviets, to strengthen internationalism in deeds, and to make joint creative efforts in communist construction.

Comrades! The 26th Party Congress emphasized that all nations have the right to the proper representation in party and state agencies. Of course, given a strict consideration of the practical and ideological-moral qualities of every person.

The CC of the Communist Party of Kirghiziya is doing everything it can to unswervingly comply with this demand by the party. At the present time, among the leading workers who are members of the Central Committee, there are Kirghiz, Russians, Ukrainians, Kazakhs, Uzbeks, Germans, Tatars, Jews, Azerbaijanians, Tajiks, Armenians, Koreans, Bashkirs, and Dungans, in all the representatives of 27 nationalities. The Supreme Soviet, the local Soviets of People's Deputies, and other elected agencies are also multinational.

We shall continue to adhere to this party line and impeccably carry out the behests of Lenin who warned against the slightest infringement upon the rights and specific needs of all nations and nationalities living in the country.

Comrades! In the light of the addresses by Comrade L. I. Brezhnev at the Trade Union Congress and at the celebrations in Tashkent, party, trade union, Komsomol, and other public organizations have to activate their ideological educational work.

Many party, trade union, and Komsomol organizations are still doing poor work on the ideological political, labor, and moral education of the workers, especially the youth. As a result, there are still quite a few cases of an unconscientious attitude toward labor, the theft of public property, an unzealous attitude toward it, drunkennness, and hooliganism. In the struggle against the antipodes of communist morality, poor use is being made of political studies, oral political agitation, the mass information and propaganda media, cultural and educational institutions, and the power of the labor collective.

Permit me, Comrade Usubaliyev said in conclusion, to assure the CC CPSU, its Politburo, and the General Secretary of the CC CPSU and Chairman of the Presidium of the USSR Supreme Soviet Comrade L. I. Brezhnev personally that the communists and all of the workers of Soviet Kirghizistan will employ all of their strength, knowledge, and experience for the successful fulfillment of the decisions of the 26th Party Congress and the concrete instructions and recommendations made by Comrade L. I. Brezhnev at the 17th Trade Union Congress and the celebrations in the city of Tashkent, and will celebrate the 60th anniversary of the formation of the USSR with new labor achievements.

SHCHERBITSKIY VIEWS INTERNATIONAL SITUATION, POLAND

Kiev PRAVDA UKRAINY in Russian 23 Jan 82 pp 1-3

[Speech by First Secretary of the CC of the Communist Party of the Ukraine V. V. Shcherbitskiy at meeting with voters of the Bagleyskiy Election District. (These excerpts did not appear in the domestic radio version of the Shcherbitskiy speech published on pages R2-R7 of the 4 February 1982 issue of the Soviet Union DAILY REPORT.)]

[Excerpts] Industrial Dneprodzerzhinsk is living and working in a single rhythm with the entire country. A socialist competition for the successful implementation of the decisions of the 26th CPSU Congress and the 26th Congress of the Communist Party of the Ukraine has been extensively developed at its enterprises and construction sites, and a persistent search is taking place for reserves for increasing the efficiency of production and improving the quality of all work. The skills and selflessness of the workers of the city which is rich in glorious traditions have been embodied in an advanced achievement by many collectives of the frontiers of the 10th Five-Year Plan and of last year's plan, and in increasing the production of above-plan output. Ardent approval for the domestic and foreign policies of the Communist Party and the Soviet state and the unanimous determination of the Dneprodzerzhinsk workers to apply all of their strength, knowledge, and energy for the accomplishment of their new responsible tasks received a vivid demonstration at a meeting of the deputy to the Supreme Soviet of the UkSSR, member of the Politburo of the CC CPSU, and First Secretary of the CC of the Communist Party of the Ukraine Comrade V. V. Shcherbitskiy with the voters of the Bagleyskiy Election District. It took place on 21 January in the Palace of Culture and of Chemists' Technology. The meeting was opened by the First Secretary of the Bagleyskiy Raykom I. I. Brazhnik. An honorary presidium consisting of the Politburo of the CC CPSU headed by the General Secretary of the CC CPSU and Chairman of the Presidium of the USSR Supreme Soviet Comrade L. I. Brezhnev was elected with great enthusiasm. The floor was given to Comrade V. V. Shcherbitskiy who was given a warm reception by the audience.

Comrades! We have to accomplish the difficult and large-scale tasks of the 11th Five-Year Plan in an unsettled and tense international atsmophere. The policy of imperialism, and, in the first place, of the ruling circles of the United States, carries a direct threat to peace and security and to the very fate of mankind. It is a policy of a reckless arms race, of saber rattling, of the promotion of doctrines of military force, and of flagrant intervention in the affairs of other countries.

As our newspapers recently reported, the Military Publishing House of the USSR Ministry of Defense has published the book "Whence the Threat of War" in which the dangerous aggressive military preparations of the United States and NATO are demonstrated on the basis of rich factual material, and assertions about the existence of a so-called "Soviet military threat" are convincingly refuted. Suffice it to say that at the present time the American military has 336 military bases outside of its own territory. It is not a secret that these bases are being used against the Soviet Union and the countries of the socialist commonwealth, and against the progressive national liberation movements.

Everybody knows that the policies of the United States Administration and of the other imperialist states are built on a crude and patent disdain for the social needs of the people. At the same time, imperialist propaganda spreads lies and fables about real socialism and about our domestic and foreign policies, and is attempting to "erode" the class consciousness of the workers of the socialist countries. Forming a bloc with the Beijing leadership, the United States imperialists are conducting a bitter confrontation with the socialist world and with all of the progressive forces.

Under these circumstances, the foreign policy initiatives of our party to improve the political climate in the world and to preserve and strengthen the process of detente which were advanced by the 26th CPSU Congress and after are of enormous importance. The Soviet Union's proposals are receiving growing support on all of the continents, for they answer the hopes and aspirations of all people.

The visit by Leonid Il'ich Brezhnev to the Federal Republic of Germany was a major political action to carry out the peace-loving foreign policy of our party and state. It has been regarded by international public opinion as a most important contribution to strengthening security. Exceptionally great attention is being paid today in all of the world to the Soviet-American negotiations on a limitation of nuclear weapons in Europe which have begun in Geneva.

The future will show how responsibly and objectively the West's ruling circles treat the new Soviet initiatives. To date, however, the United States and its NATO allies are not showing an endeavour to seek mutually acceptable solutions in the spirit or realism. They continue to think about getting military advantages for themselves and are seeking in fact unilateral disarmament by the USSR. These expectations are in vain. The Soviet Union has repeatedly affirmed the immutability of its position. It consists in compliance with the principle of equality and equal security, the maintenance of strategic military equilibrium, and a comprehensive consideration of the national interests of the states. Under no circumstances will we retreat from this position.

Trying in every way to shake the unity of the countries of the socialist commonwealth, the imperialists are concentrating their subversive actions against Cuba, Vietnam, Cambodia, and Laos.

The Polish People's Republic is being subjected to especially powerful pressure. As you know, in keeping with the decision by the supreme agency of the state and in full accordance with the Constitution of the Polish People's Republic, martial law was introduced there. This decision was dictated by the stern necessity of preventing bloodshed and civil war, protecting the vital interests of the Polish nation, and defending socialism in Poland from a counter-revolutionary threat which was being supported and encouraged by the imperialist circles. But it, of course, contradicted the interests of the United States and its allies and undermined their hopes. As a result of the actions of the Military Council for National Salvation, the situation in the country is normalizing,the protection of legality and of public order is being ensured, and the economy has begun to be removed from its state of crisis. These measures are guaranteeing further progress along the path of socialism, a rise in the material well-being of the workers, and the development of socialist democracy.

Everything that is happening in Poland, including the introduction of martial law, is the purely internal and national affair of the Poles, and no one else has the right and must not intervene in it. The peoples of the world and all progressive forces have resolutely condemned the latest steps by the United States government aimed against the Polish People's Republic and the Soviet Union, aimed, I would say, against common sense. They regard these actions as an attempt to prevent the normalization of the situation and to undermine the socialist foundations of People's Poland, and also as an attempt to turn Poland into a hotbed of tension in Europe. Such actions by the United States into which it is attempting to draw other states, first of all, the members of the aggressive NATO bloc, are especially dangerous in that they undermine the foundations of European cooperation.

There is no doubt that the communists, all of the healthy forces, and the people of the Polish People's Republic, being an important element in the socialist commonwealth and occupying such an important place in the system of European equilibrium and peace, will put their own house in order.

Comrade V. V. Shcherbitskiy then noted that given the incitement of international tension and the ideological diversions of imperialism, ever increasing importance is being acquired by a further strengthening of our state's economic and defense might and of the moral and political unity of our society, of an increase in political vigilance, and the education of the workers in the spirit of the friendship of peoples,Soviet patriotism, and proletarian internationalism.

INFORMATION REPORT ON UKRAINIAN CP CENTRAL COMMITTEE PLENUM

Kiev PRAVDA UKRAINY in Russian 25 Mar 82 p 1

[Information Report]

[Text] On 24 March 1982 there was a Plenum of the Central Committee of the Communist Party of Uzbekistan.

The Plenum considered the question of the organizational and political work of the Donetsk party gorkom and the Nikopol'skiy party raykom of Dnepropetrovskaya Oblast to carry out the decisions of the 26th CPSU Congress and the 26th Congress of the Communist Party of the Ukraine.

Reports were delivered by the First Secretary of the gorkom V. P. Mironov, and the First Secretary of the raykom V. I. Ostapchenko.

The following took part in the discussion: M. G. Perepadya--chief of the heavy industry section of the CC of the Communist Party of the Ukraine; A. D. Kovalenko--chief of the agricultural section of the CC of the Communist Party of the Ukraine; V. I. Podshivalov--first secretary of the Khar'kov party gorkom; A. S. Dolbilov--secretary of the party committee of the Kiev Arsenal Plant imeni V. I. Lenin; V. F. Korzinkin--a steel smelter at the Kommunar Metallurgical Plant in Voroshilovgradskaya Oblast; B. V. Kachura--the first secretary of the Donetskaya obkom; M. V. Khorunzhiy--Minister of Agriculture of the Ukrainian SSR; G. P. Kharchenko--second secretary of the Zaporozhskaya obkom; V. F. Seroshtan--chairman of the kolkhoz imeni the 19th Party Congress in Krasnogvardeyskiy Rayon, Krymskaya Oblast; Ye. T. Antonova--chief of the commodity dairy farm of the kolkhoz imeni Karl Libknecht in Ovidiopol'skiy Rayon, Odesskaya Oblast; Ye. V. Kachalovskiy--first secretary of the Dnepropetrovskaya obkom; N. I. Chepurnoy--first secretary of the Cherkasskiy raykom in Cherkasskaya Oblast; Yu. P. Ivanov--director of the mine imeni M. I. Kalinin of the "Donetskugol'" Production Association; A. N. Adamov--first secretary of the Tashtanskiy raykom in Nikolayevskaya Oblast; A. N. Girenko--first secretary of the Khersonskaya obkom;

The Plenum was addressed by the member of the Politburo of the CC CPSU and First Secretary of the CC of the Communist Party of the Ukraine Comrade V. V. Shcherbitskiy.

The Plenum adopted a decree on the question which had been discussed which will be published.

The Plenum heard information from the member of the Politburo and Second Secretary of the CC of the Communist Party of the Ukraine I. Z. Sokolov about the organizational work of the Politburo and the Secretariat of the CC of the Communist Party of the Ukraine in realizing the criticisms and suggestions made by the delegates to the 26th Congress of the Communist Party of the Ukraine.

The Plenum has ordered the Politburo and the Secretariat of the CC of the Communist Party of the Ukraine to continue in carrying out the decisions of the 26th CPSU Congress and the 26th Congress of the Communist Party of the Ukraine and the tasks advanced by Comrade L. I. Brezhnev at the November (1981) Plenum of the CC CPSU and in his speech at the 17th Congress of USSR Trade Unions, and in realizing the suggestions of the delegates to the 26th Congress of the Communist Party of the Ukraine to devote their chief attention to raising the level of organizational and political work in the obkoms, gorkoms and raykoms of the party, the primary party organizations, ministries and departments, and in government, trade union, and Komsomol agencies, to improve the practice of control and the organization of decision execution, to persistently strengthen party and state discipline, and to increase the personal responsibility of leading cadres for the fulfillment of their tasks.

It has been recommended that the obkoms, gorkoms, and raykoms and the primary party organizations analyze the course of the realization of the criticisms and proposals made at the report and election party meetings and conferences, and examine these questions at plenums of the party committees and at party meetings.

SHCHERBITSKIY SPEECH AT UKRAINIAN CP CENTRAL COMMITTEE PLENUM

Kiev PRAVDA UKRAINY in Russian 26 Mar 82 pp 1-3

[Speech by V. V. Shcherbitskiy at 24 March 1982 Plenum of the CC of the Communist Party of the Ukraine: "Thoroughly Increase the Organizational Role of the Party Rayon and City Committees--The Active Transmitters of the Policies of the CPSU"]

[Text] Comrades!

The exchange of opinions which has taken place has confirmed the usefulness of having posed the question at the Plenum of the CC of a further rise in the level of the organizational and political work of the party rayon and city committees.

One can say that the practical accomplishment of all of the tasks which are being set by the CPSU Central Committee depends to a decisive degree upon the energy and initiative of the raykoms and gorkoms (there are 701 of them in our republic), and upon their ability to include in active work the primary party organizations, government and economic agencies, and public organizations and to correctly select and place cadres. They are the gathering point for all of the threads of the leadership of the life of the city or rayon, the leadership of the economy and of social and cultural construction, and of the work on the communist education of people .

This is why in the program party documents and in the speeches of Comrade L. I. Brezhnev a strengthening of the rayon echelon and a rise in the level of the work of the raykoms and gorkoms as agencies of political leadership are put forward as one of our most important tasks. Today, when our party and the entire Soviet people are persistently working on the fulfillment of the decisions of the 26th CPSU Congress and the social and economic program of the 11th Five-Year Plan, the role and responsibility of the party committees are undergoing especial growth.

A year has passed, Comrade V. V. Shcherbitskiy noted, since the party congress. Despite our difficulties which are known to everybody and despite the complication of the international situation which has been caused by the increased aggressiveness of American imperialism and its allies, our country has taken still another large step on the path of communist construction. Its international prestige has become even stronger. And it can be said with full justification: An enormous merit in this belongs to the CC CPSU, its Politburo, and personally to the General

Secretary of the Central Committee of our party and Chairman of the Presidium of the USSR Supreme Soviet Comrade L. I. Brezhnev all of whose work is marked by a strict observance of the Leninist norms of party life and selfless service to the people.

Our current tasks and the ways of accomplishing them have been concretized in the profoundly rich speech by Leonid Il'ich Brezhnev at the 17th Congress of USSR Trade Unions, a speech which testifies to the party's and government's great concern for the laboring man.

The new Soviet initiatives on instituting a unilateral moratorium of deployment of medium-range nuclear weapons in the European part of the USSR, and also other proposals on restraining the arms race are now at the center of the attention of the world public. They provide a vivid confirmation of the consistency and sense of principle of the foreign policy of our state, and they demonstrate our determination to achieve a decrease in international tensions, about which Leonid Il'ich Brezhnev spoke with such convincingness and logic.

The new proposals aimed at preventing the threat of a new world war which have been advanced by Comrade L. I. Brezhnev have been welcomed by the people of the Ukraine, as they have by all Soviet people, with complete and unanimous approval.

With their hearts and souls and with their practical deeds, the workers of the Soviet Ukraine support the party's policies and are tirelessly strengthening the might of our socialist fatherland. The confirmation of this is the active participation by the republic's ~~workers in~~ the All-Union Socialist Competition for the successful fulfillment of the plans of the 11th Five-Year Plan. Almost 800,000 advanced production workers and production innovators and 35,000 of the Ukraine's labor collectives fulfilled their 1981 plans in advance. On the basis of the competition results, last year 6 oblasts and the city of Kiev, 14 cities and 17 rayons, and 271 labor collectives were awarded the Red Challenge Banners of the CC CPSU, USSR Council of Ministers, AUCCTU, and the CC of the Komsomol. More than 8,000 agricultural workers were awarded high state awards, including the title of Hero of Socialist Labor for 9 people.

The powerful upsurge in the public political activeness of the Soviet people and the wide scope of the socialist competition for a proper celebration of the 60th anniversary of the formation of the Union of Soviet Socialist Republics is also a convincing testimony to the approval by all of the people of the party's policies. There is no doubt that the republic's workers will meet this important anniversary with new successes in economic and cultural construction!

Comrade V. V. Shcherbitskiy continued:

We have heard the rich reports of Comrades V. P. Mironov and V. I. Ostapchenko. The discussion was entered by members and candidate members of the Central Committee who--and this is very important--acquainted themselves on the spot with the work of the party organizations of the city and rayon.

It should also be noted that the sections of the Central Committee of the Communist Party of the Ukraine made a study of the work style and methods of an additional 70 gorkoms and raykoms, and generalized the concrete criticisms and proposals on these issues which were made by many gorkom and raykom first secretaries during their studies in the advanced training courses at the Higher Party School at the CC of the Communist Party of the Ukraine.

The reports of a number of obkoms, gorkoms, and raykoms were examined at meetings of the Politburo and Secretariat of the CC. An analysis was also made of the composition of the republic party organization and of the results of admissions to the party during the past year, of the composition of party and government cadres, and of the organizational work performed by the Politburo and the Secretariat of the CC of the Communist Party of the Ukraine in 1981. An analysis was also performed of work results in all of the oblast party organizations and in the Kiev city party organization during the past year.

All of this makes it possible to draw the conclusion that many party organizations in the republic have accumulated substantial and very valuable experience in the work to carry out the decisions of the 26th CPSU Congress.

What is instructive, for example, in the practice of the Donetsk gorkom and the Nikopol'skiy raykom whose reports are being discussed at the Plenum?

It is, above all, a concentration on the key and fundamental tasks of economic development of, first of all, the leading branches, a creative approach, full of initiative, to their accomplishment, and a constant sight on the future.

It is, further, the ability to reach goals and planned final results, overcoming all difficulties, a healthy Bolshevik dissatisfaction with what has been achieved, and an endeavour to do more and do it better.

It is also a daily concern that the problems of production development be solved in a complex with an improvement of the working, living, and recreational conditions of people and of their education.

It is very important that the gorkom and raykom seek to accomplish their tasks by methods which are characteristic of the agencies of political leadership--by raising the level and increasing the results of the work of party organizations and the vanguard role of communists, by improving organizational and ideological educational work, strengthening performance control and verification, and effectively organizing mass socialist competitions. And, as a result, in the city and the rayon year after year the state plans are fulfilled for the most important indicators, and a steady growth of production and increase in its efficiency is achieved.

In the city of Donetsk, for example, quite good work is done to solve many of the problems upon which the stable work of the mines and the fulfillment of the coal mining plans depend. A large amount of attention is devoted to an acceleration of scientific and technological progress, the reequipping of production, a decrease in manual labor, and an economy of resources. Commissioning plans for production capacities, housing, schools, and preschool institutions are fulfilled. There is quite a bit that is instructive in the organization of trade and public catering, in other sectors of the service sphere, and in the beautification of the city.

Every kind of support is merited by the work being carried out by the Nikopol'skiy Rayon party organization to increase the growth rates of agricultural production on the basis of the use of the labor procedures of science and advanced experience, and to improve the social and cultural conditions of rural workers. The achievement of the goals which have been set--to increase in 1985, compared to the average annual amounts of the 10th Five-Year Plan, the production of grain by one-third, meat by almost 2 times, milk by 30 percent, and eggs by 1.4 times, and to complete the plans of the 11th Five-Year Plan ahead of schedule--this, undoubtedly, is a difficult task, but its accomplishment will do honor to the party organization of the rayon.

The discussion which took place on the eve of the CC Plenum between the secretaries of the CC of the Communist Party of the Ukraine and the members of the bureaus of the Donetsk gorkom and Nikopol'skiy raykom showed that the members of the bureau have a good knowledge of the state of affairs, are correctly evaluating the situation, and see the ways of accomplishing their tasks. This inspires confidence that the difficult tasks facing the party organizations of the city and the rayon in the 11th Five-Year Plan will be successfully accomplished.

I think that we have every justification for making an on-the-whole positive evaluation of the work being performed by the Donetsk gorkom and the Nikopol'skiy raykom and for approving it. The Secretariat of the CC and the organizational party work and propaganda and agitation sections should give thought to how best to demonstrate the experience of these and other party committees, making use, in particular, of the possibilities of the press, radio, and television. Consideration is also merited by the suggestion to publish a series of brochures on the work of a number of the raykoms and gorkoms.

Along with the positive aspects of the work of the party committees, Comrade V. V. Shcherbitskiy then noted, the discussion also reflected characteristic shortcomings in their work which reduce the effectiveness of party influence on the accomplishment of economic and political tasks. Both in the city and in the rayon the use of intensive factors to increase production efficiency remains a bottleneck. In Donetsk industry last year only around 30 percent of the increase in production was obtained through an increase in labor productivity. On account of an increase in costs, 18 million rubles in profit failed to be obtained. On many of the farms in Nikopol'skiy Rayon, as was noted today in the speeches, weight additions, the productivity of the milk herd, and the weight conditions of delivered livestock are low, the milk procurement plans which were established for 1981 were not fulfilled, and the feed base is lagging. Not everything has been done so that all of the decrees will be carried out in full within the established schedules.

A study of the work of the Donetsk gorkom, Nikopol'skiy raykom, and a number of other party bodies has shown that similar shortcomings exist also in the practice of other party committees. If we are to speak about the reasons, then everything in the final analysis comes down to cadres, to the level of their competence, political maturity, and their attitude toward their work. Therefore, the first conclusion from the discussion is that along all lines and at all levels we have to continue to persistently improve the work on the selection and education of cadres, increase exactingness, and strengthen discipline.

As is known, last year there was lagging for a number of indicators in the republic's economy. And it is clear that all of our organizational and political work now has to be directed toward not only coping with the economic plans and social commitments of this year, but also doing everything possible to make up for our indebtedness.

The organizing role of the rayon and city committees has to manifest itself especially in the organization of the workers for the accomplishment of the key tasks of the five-year plan--an increase in production efficiency and in the yield from our already creative production and scientific potential, and a strengthening of the regimen of economy. Unfortunately, in a number of cases these tasks are not being accomplished satisfactorily. Recently the Politburo of the CC of the Communist Party of the Ukraine examined the question of the fulfillment of the plans for the commissioning of new and reconstructed enterprises, and the mastery of their planned capacities. A study of this question has shown that on account of the late commissioning and slow mastery of new capacities, especially at enterprises of the coal, metallurgical, light, petrochemical, and petroleum refining industries, the economy is incurring losses and failing to receive a substantial quantity of very necessary output.

As is shown by an analysis, some of the commissioned enterprises and complexes do not reach their planned level of production on account of shortages of cadres, errors in plans, and defects in production equipment, as a result of unfinished construction work, and also of unsatisfactory supplies of raw materials, materials, and component products. There are cases of irresponsibility and of violations of state planning and financial discipline which cause damage to the economy. For example, the enterprises of the Ministry of Ferrous Metallurgy UkSSR were made by State Arbitration to pay large fines last year for the shipment of metal output without orders. Major violations of fund discipline have been committed in the "Krasnorameyskshaktostroy," "Makeyevshakhtostroy," and "Donetskshakhtostroy" Trusts. At certain construction sites scarce materials are squandered.

Or take such cases. Frequently output is delivered to trade with defects by the Kherson Shoe Factory, the Zaporozhe Shoe Industry Association, and other enterprises of the Ministry of Light Industry UkSSR. Last year quite a few shoes produced by the Voroshilovgrad Association were rejected as defective and reduced in grade.

These shortcomings, of course, are the fault of concrete officials--the workers of the enterprises and organizations of ministries and departments. But frequently this does not cost them anything. They continue to occupy their posts, and receive their wages, although they do not do their work. It is essential to adopt the most resolute measures along all lines in order to prevent such instances in the future. For such serious derelictions in economic management there has to be genuine punishment.

The Politburo of the CC has charged Comrade G. I. Vashchenko and other deputy chairmen of the UkSSR Council of Ministers to make an examination for each branch of cases of the unsatisfactory use of productive capital, the production of obsolete models of products, and the overexpenditure of the wage fund and to take the necessary measures along the line of the ministries and departments. As for the directors of the enterprises and construction projects, with respect to those who are guilty of the above defects measures should be taken by the appropriate rayon, city, and oblast party committees.

Comrade V. V. Shcherbitskiy pointed to the importance of a further improvement of the work of the management apparatus and of reducing its size, and decreasing expenditures for the performance of mass and other measures. What is being talked about is closing all of the chinks for the squandering of public property, an eradication of mismanagement, and the mobilization for a struggle against these defects by party organizations, trade unions, the Komsomol, the press and television and radio, and visual agitation.

As Comrade L. I. Brezhnev emphasized at the Trade Union Congress, control has to be made more effective and not formal and hypocritical, especially in the spheres which are closely connected with the daily needs of people.

It is necessary to get rid of inert, inactive workers who have no initiative, and in those sectors where material values are concentrated--of dishonest people who do not deserve trust.

It is also necessary to seriously increase responsibility, Comrade V. V. Shcherbitskiy said, for the preparation and punctual adoption of decisions and for their qualitative and complete execution, and to resolutely put an end to cases of a lack of discipline and a lack of control and to manifestations of formalism and bureaucracy. And the fact that such things occur is indicated by the following. The five-year plan established quite intense assignments for economizing fuel, electric energy, metal, cement, and other materials. At the previous plenum of the CC of the Communist Party of the Ukraine the leaders of a number of ministries were criticized for shortcomings in carrying them out. After the plenum, these issues were discussed at the boards, the corresponding decisions were made, and assignments were given to enterprises and associations. But many of these "measures" remained on paper. Thus, last year in the Ministry of Energy UkSSR (Minister Comrade A. N. Makukhin) there was a substantial overexpenditure of fuel, in the Ministry of Coal Industry UkSSR (Minister Comrade N. K. Grin'ko) there was an overexpenditure of electric energy. This work was not organized satisfactorily in the Ministry of Construction Materials UkSSR (Minister Comrade A. T. Shevchenko), the Ministry of Industrial Construction UkSSR (Minister Comrade A. N. Shchepetil'nikov), and in Dnepropetrovskaya, Zaporozhskaya, Donetskaya, and Vinnitskaya Oblasts.

Comrade V. V. Shcherbitskiy criticized the Kamenets-Podol'skiy raykom in Khmel'nitskaya Oblast (First Secretary Comrade V. M. Smirnov) and the Bliznyukovskiy raykom in Khar'kovskaya Oblast (First Secretary Comrade Ye. P. Vorob'yev) for paper work, preoccupation with empty meetings, and formalism in their work. This kind of, in essence, formal bureaucratic work style long ago became an anachronism, and it must be resolutely gotten rid of, while those who ignore these instructions must be severely punished.

One more matter of considerable importance. In the practice of certain party committees, there still frequently occurs a replacement of government and economic agencies. The Malinskiy raykom in Zhitomirskaya Oblast was sharply criticized for this. The meetings there considered purely economic measures which are supposed to be the work of the rayispolkom, the agricultural administration, and other organizations. What does this practice by the raykom of the party have in common with a style which is supposed to be characteristic of an agency of political leadership? Meanwhile, many primary party organizations in the rayon are doing poor work, some of the communists are inactive, and there are serious shortcomings in the work with cadres. To one or another extent, such shortcomings are also characteristic of certain other party committees. They also have to be eliminated from the practice of party work.

Comrade V. V. Shcherbitskiy considered the questions of intra-party life and of the strengthening of the party ranks. The Communist Party of the Ukraine now has 2,985,746 communists, 67,468 primary party organizations, 67,176 shop party organizations, and 122,077 party groups. There are party organizations or groups in practically every more or less large collective, and there are communists everywhere where our people live and work.

It is the primary duty of the city and the rayon committees to see to it above all that every party organization is a fighting and vital collective and that the members and candidate members of the party become more active. A great deal is being done in our republic for this purpose. However, at the same time, some of our party organizations are still doing poor work, and are not making full use of the rights which have been given them, and, first of all, the right of control. Among the members and candidate members of the party, there are also people who do not fulfill all of their charter duties and violate party discipline, while individuals even behave themselves in an unworthy manner in daily life. It is clear that this is the result of omissions in the work on selecting and educating cadres, and of the absence in a number of cases of control over their work.

In certain large party organizations, under various pretexts, and sometimes without any justification, with the silent agreement of superior party agencies, general meetings of communists have stopped being held and are replaced by meetings of the party aktiv. This is incorrect.

All of this requires carrying out additional measures to improve the work of the primary party organizations and to strengthen party discipline. Toward this end, better use has to be made of such forms which have justified themselves as conversations with party members and candidate members, the hearing of their reports, and the discussion at meetings of the issues of personal responsibility and of the vanguard role of communists. In Khar'kovskaya Oblast, for example, during the course of discussions more than 2,000 members of the party expressed a desire to transfer to lagging work sectors, and 32,000 communists reviewed the socialist commitments they had adopted in the direction of increasing them.

The state of affairs in a number of rayons and city party organizations requires systematic work by the bureaus and obkom secretaries with the leaders of the raykoms and gorkoms. The work with the secretaries of the primary party organizations which was begun by the obkoms has to be continued. There should also be periodic meetings between the members of the bureaus of the obkoms and the leaders of the Komsomol and trade union agencies and the agencies of people's control.

In every party committee there has to be a regular and detailed analysis of the execution of the decisions of the 26th CPSU Congress and the 26th Congress of the Communist Party of the Ukraine.

As is known, the 26th CPSU Congress set the task of reorganizing many sectors and spheres of ideological and political educational work. The ways of achieving this are concretized in the decrees of the CC CPSU. What is the most important thing here for the rayon and city party committees? Above all, the most serious attention has to be directed toward the training of cadres which are intrusted with agitational and propaganda work both on the rayon level and especially in the primary party organizations. It is necessary to resolutely put an end to the underestimation by certain party workers of the importance of ideological work to create more attention for the ideological tempering of cadres, to cultivate in them a political approach to the accomplishment of their tasks, and to improve the quality of lecture propaganda and agitation.

Especial attention has to be directed toward strengthening ideological educational work in the labor collectives and increasing its role in the formation among our people, and, above all, the youth of a collectivist psychology, public activeness, and intolerance toward manifestations of alien ideologies and morality, particularly consumer aspirations and philistinism. As was shown by a recent discussion in the Politburo of the CC of the Communist Party of the Ukraine of a report by the Ternopol'skaya obkom, in certain party organizations insufficient attention is given to these matters.

Every member of the CC, of an obkom, gorkom, and raykom and every deputy has to systematically perform work in labor collectives, visit dormitories, domestic services enterprises, rest areas, and listen to the opinions of workers, the youth, and war and labor veterans. Moreover, it is the duty of these comrades not only to reveal shortcomings and signal about them, but also to actively influence their elimination, or, even better, their prevention, or make concrete proposals on improving the work of the corresponding agencies.

Comrade V. V. Shcherbitskiy also noted the necessity for strengthening the rapid unmasking of anti-Soviet and nationalistic propaganda, and the ideological diversions of foreign imperialist centers. We have the right to expect greater help in this matter from the Institute of the Social and Economic Problems of Foreign Countries of the Academy of Sciences UkSSR.

We have to carry out a large amount of responsible work in connection with the preparations for the 60th anniversary of the formation of the USSR, and we have to make effective use of it in order to strengthen the ideological political, patriotic and internationalist education of the workers and their class consciousness. This is especially important now in view of the acute exacerbation of the ideological struggle on the world arena.

Comrade V. V. Shcherbitskiy briefly considered certain work results and this year's tasks.

Despite the fact that the plans for the two months for the production of commodity output and for labor productivity have on the whole been fulfilled in the republic's industry and 15 million rubles worth of above-plan output has been sold, the rates which have been attained are lower than the planned ones for this year.

In January-February the plans for the mining of coal and iron and manganese ores were fulfilled. It is important not to permit a worsening of the work of these branches during the spring-summer period.

In February the work of the enterprises of ferrous metallurgy improved somewhat. However, in the branch as a whole there has been lagging since the beginning of the year. The most important thing here is to ensure stable work by all metallurgical enterprises and, especially, coke and chemical plants and enriching combines. It is extremely important to accelerate equipment repairs, particularly at the Avdeyev and Krivoy Rog Plants, and to speed up the construction and reconstruction of capacities at the Zaporozh'ye and Donetsk Plants.

It is also necessary to commission the first stage of the oxygen converter shop at the plant imeni F. E. Dzerzhinskiy and the metal scrap processing capacities within the planned schedules, and to carry out all of the planned work on the reconstruction and modernization of the basic metallurgical units.

It is no less important to ensure the production of good quality consumer goods in their assigned assortment. Our commitments provide this year for the above-plan production of a minimum of 400 million rubles worth of consumer goods. And this must, without fail, be done.

This year we have a large construction program. It is necessary to utilize 18.5 billion rubles. The Politburo of the CC of the Communist Party of the Ukraine recently considered measures to ensure the commissioning by construction ministries of production capacities, housing, and social and cultural objects. Their fulfillment has to be taken under strict control by the deputy chairman of the Council of Ministers UkSSR, the secretaries and sections of the CC, and the party obkoms and gorkoms.

Shortcomings in the work of railroad transport have to be removed more energetically, and the use of maritime and river transport improved.

As never before, it is important this year in agriculture to perform all of the field operations in a model manner, to grow a large harvest of grain, sugar beet, and other crops, to procure a sufficient amount of feeds, increase the productivity of livestock and poultry, and fulfill the production plans for animal husbandry products.

In view of the important role of corn in providing for the planned increase in the gross grain harvests, the Politburo of the CC decided to consider the tasks of party, government, and economic agencies in increasing the production of corn grains at a republican conference-seminar. As is known, a conference-seminar was recently conducted with sugar beet growers and sugar industry workers.

The party committees, ministries and departments, and government and economic agencies have to perform a deep analysis of the first quarter's work results and map out and realize concrete measures to accelerate the economic growth rates in order to fulfill the national economic plans and socialist commitments of this year at all costs.

The most important thing, as Leonid Il'ich Brezhnev has said, is to make 1982 a turning point, and to lay a reliable foundation for the successful accomplishment of the tasks of the 11th Five-Year Plan. All of our organizational and political work and the socialist competition for a worthy celebration of the 60th anniversary of the USSR have to be subordinated to this.

In conclusion, Comrade V. V. Shcherbitskiy said:

Leonid Il'ich Brezhnev called the party committee secretaries faithful and reliable transmitters of the party's policy. On their shoulders is a difficult load of cares. They are responsible for the organization of work literally in all of the spheres of the people's life.

We have every right to say that authoritative and mature communists and capable organizers have been elected as party committee secretaries in our republic. More than 83 percent of the first secretaries of our raykoms and gorkoms have been laboring in party work for more than 5 years, including more than 55 percent who have more than 10 years of experience. All of them are economic specialists, and almost two-thirds have a party political education. Thirty-four raykom and gorkom secretaries have been elected to the CC of the Communist Party of the Ukraine and the Auditing Commission of the Communist Party of the Ukraine, 30--as deputies to the USSR Supreme Soviet and the Supreme Soviet of the UkSSR, and 17 secretaries have been awarded the title of Hero of Socialist Labor. A profound knowledge of their work, demandingness toward themselves and others, an organizational and practical sense--and partiynost' in the most lofty meaning of this word--this is what brings them the respect of communists and of all of our workers. And from he who has been given a lot, a lot is asked.

The party secretary is always visible. People go to him for advice, and he is not forgiven the slightest error or the slightest misstep. And for this reason all of the secretaries and all of our party workers must always fully justify the great trust which is shown them.

Permit me, comrades, to express my confidence that the discussion at the Plenum of the Central Committee of the reports of the Donetsk gorkom and Nikopol'skiy raykom will promote a further rise in the level of the work of the party raykoms, gorkoms, and obkoms and of the entire republic party organization, and the successful realization of the tasks which have been set by the 26th Congress of our Leninist party.

RESOLUTIONS OF UKRAINIAN CP CENTRAL COMMITTEE PLENUM

Kiev PRAVDA UKRAINY in Russian 26 Mar 82 pp 1-3

[Information Item]

[Excerpt] The Plenum of the Central Committee of the Communist Party of the Ukraine decrees:

1. To approve the organizational and political work on mobilizing the workers to carry out the decisions of the 26th CPSU Congress and the 26th Congress of the Communist Party of the Ukraine, the 1982 plans, and the five-year plan as a whole which is being performed by the Donetsk gorkom and the Nikopol'skiy raykom of the party.

To order the gorkom and raykom to bring about a continued improvement of this work, and to thoroughly develop the activeness and creative initiative of the communists and of all the workers of the city and the rayon in increasing the efficiency of the economy. Toward these ends, and in accordance with the decisions of the November (1981) Plenum of the CC CPSU and with the aims set forth in the speech by Comrade L. I. Brezhnev at the 17th Congress of USSR Trade Unions, it is essential to double and triple efforts, to improve the quality of work at every sector of economic and cultural construction, to act with maximum concreteness and practicality, to accelerate the introduction into production of the latest scientific and technical achievements, and to ensure a rational and thrifty expenditure of material and raw material and fuel and energy resources. A large role here should be played by effective socialist competition for the fulfillment of planning assignments by all labor collectives, the achievement of the highest indicators in work, and the full use of the rich traditions and experience of advanced collectives and production innovators which exist here. There should be the widest introduction of the new forms of team organization and labor stimulation.

2. The Donetsk gorkom, the party raykoms, and the primary party organizations to pay especial attention to a fuller use of the powerful industrial potential which has been created in the city. To ensure rhythmic work by the coal mines, ferrous metallurgy enterprises, machine building plants, and construction organizations. To carry out measures to accelerate the construction rates of the "Yuzhno-Donbasskaya" Mine No. 3.

3. A most important task of the Nikopol'skiy raykom is to ensure the fulfillment of the socialist commitments adopted by the rayon workers to increase in 1985 the production of grain compared to the average annual amounts of the 10th Five-Year Plan by one-third, meat--by almost 2 times, milk--by 30 percent, and eggs--by 1.4 times.

In order to decrease to the maximum agriculture's dependence upon unfavorable weather conditions, and to obtain high and stable harvests, to strengthen the work of the more effective use of organic fertilizers, chemicalization means, irrigated lands, and agricultural equipment. To strengthen the feed base more energetically. To bring about the intensification of animal husbandry, especially dairy livestock breeding.

4. The Plenum of the CC of the Communist Party of the Ukraine regards it as a task of paramount importance for the Politburo, Secretariat of the CC, the obkoms and the Kiev gorkom of the Communist Party of the Ukraine to further increase the role of the gorkoms and raykoms in the practical implementation of the decisions of the 26th CPSU Congress, and to improve the style and methods of their work as agencies of political leadership. It is essential to concentrate efforts on improving the selection, placement, and education of cadres, the organization of the fulfillment and control over the execution of decisions, a generalization and dissemination of advanced experience, and the creation at all sectors and in all elements of an atmosphere of high exactingness, organization, enterprisingness, and discipline. To shift, in fact, the center of gravity of all work to the work sites--to labor collectives, and to primary party organizations. And to resolutely eliminate from the practice of party committees the replacement of government and economic agencies, unnecessary paperwork, and excessive meetings.

To carry out additional measures for the organizational and political strengthening of the primary party organizations and party groups and to strengthen their influence on the life and work of labor collectives. To direct especial attention to improving the selection into the party and the education of communists, to carry out individual work with party members and candidate members, to increasing their vanguard role in production and in public life, and to developing principles and practical criticism and self-criticism.

5. Guiding themselves by the decree of the CC CPSU "On the 60th Anniversary of the Formation of the Union of Soviet Socialist Republics," the party obkoms, gorkoms, and raykoms and the primary party organizations are ordered to bring about a closer unity of organizational, political educational, and economic work, subordinating it to the accomplishments of the concrete tasks facing the party organizations and labor collectives.

To make full use of the preparations for the 60th anniversary of the formation of the USSR to strengthen the ideological political, patriotic, and internationalist education of the workers, especially of the youth, and their class tempering, and to increase the effectiveness and aggressiveness of all ideological work.

To be more active in directing the means of ideological educational influence and the force of the law toward a struggle against violations of labor discipline, consumerist aspirations, and amoral manifestations.

6. That the party committees improve their leadership of the Soviets of People's Deputies, the trade unions, and the Komsomol and other public organizations, and increase their role in the accomplishment of all of the tasks of economic and social development. To increase demands upon the workers of government, trade union, and Komsomol agencies and upon economic leaders for ensuring the efficient work of trade, public catering, domestic services, and municipal services enterprises, cultural and educational and medical institutions, and of all organizations whose activities are connected with the creation of the proper conditions for the labor, everyday life, and rest of people and with their education.

7. The Plenum of the CC of the Communist Party of the Ukraine binds the party obkoms, gorkoms, and raykoms to constantly improve their work with party cadres and with the aktivs, and first of all with the party committee and primary party organization secretaries, and to persistently cultivate in them such qualities as initiative, a feeling for the new, a creative attitude toward work, the ability to listen to the opinions of comrades, and a constant endeavour to do more and better today than yesterday and to work more efficiently and with better quality.

8. The editorial boards of the republic and oblast party newspapers, the periodicals KOMMUNIST UKRAINY and POD ZNAMENEM LENINIZMA, the State Committee for Television and Radio UkSSR, and the State Committee for Publishing UkSSR are ordered to develop and realize concrete plans to improve the treatment of the work experience of the party gorkoms and raykoms and primary party organizations.

9. Gosplan UkSSR and Gossnab UkSSR, together with the appropriate ministries and departments, are ordered to examine the issues raised in the reports of the Donetsk gorkom and Nikopol'skiy raykom which concern the development of the city's and rayon's economy, and also the criticisms and suggestions made at the Plenum, and to report to the CC of the Communist Party of the Ukraine and the Council of Ministers UkSSR on the measures they have taken.

The Plenum of the CC of the Communist Party of the Ukraine expresses its confidence in the fact that the party raykoms, gorkoms, and obkoms and the primary party organizations of the republic will raise the level of their organizational and political work to carry out the decisions of the 26th CPSU Congress and the 26th Congress of the Communist Party of the Ukraine, will do everything in their power for the successful fulfillment of the 1982 planning assignments and socialist commitments and those of the 11th Five-Year Plan as a whole, and will celebrate the glorious 60th anniversary of the formation of the Union of Soviet Socialist Republics in a worthy manner.

'IZVESTIYA' HAILS LENINIST FRIENDSHIP OF PEOPLES

PM021543 Moscow IZVESTIYA in Russian 28 Mar 82 Morning Edition p 1

[Editorial: "Indestructible Friendship of the Soviet Peoples"]

[Text] The ceremonial session in Tashkent, devoted to the presentation of the Order of Lenin to the Uzbek SSR, and the profound and meaningful speech delivered at the session by Comrade L.I. Brezhnev, general secretary of the CPSU Central Committee and chairman of the USSR Supreme Soviet Presidium, were a vivid manifestation of the indestructible friendship of the Soviet peoples and of the Leninist principles of the nationalities policy of the CPSU and the Soviet state.

"This year," Leonid Ilich remarked, "is the year of our multinational fatherland's glorious jubilee. The firm, indestructible friendship of all the peoples of our country is a major result of the USSR's 60-year-long path and a main source of our strength."

From sunny Uzbekistan's example it is clear that the outstanding achievements of this and other Soviet republics in the economy, the social sphere and in culture are linked to the steady implementation of the nationalities policy's Leninist principles. It is precisely because Soviet Uzbekistan has marched side by side all the time and in an unbreakable formation with all the USSR's fraternal peoples that it has been able to rise so quickly from its former backwardness and change into a multifariously developed and prosperous republic, into one of the East's most advanced states. It is important to note here that the republic's contribution to the economic and cultural life of the entire vast country and to developing the friendship of the Soviet peoples is very considerable. In particular, the republic is participating actively in implementing the comprehensive program of developing the non-Chernozem zone.

A major feature of our peoples' fraternal community now is their active, inspired socialist competition and the desire to make the greatest contribution to developing the economy and to mark the glorious 60th anniversary of the USSR's formation with remarkable new achievements in industrial and agricultural production and in science and culture. Each day brings glad tidings about the great labor victories of collectives from all our union's fraternal Soviet republics.

What does internationalism mean today under our multinational country's conditions? Primarily, it means the honest, conscientious, thoroughly efficient work of all the peoples for the common good. It is the ability to put general state interests above departmental or local interests and to ensure the precise working of the country's unified national economic complex. It is the prompt and high-quality fulfillment of all interrepublic deliveries, the utmost utilization of one's resources and active participation in resolving those problems on which the development of the economy and the entire people's prosperity depends.

The composition of the population of all our republics is multinational and this is of course reflected in cadre policy. It is necessary to strive, Comrade L.I. Brezhnev has stressed, so that the nations and ethnic groups of each republic have their due representation in its party and state organs--taking strict account, of course, of each individual's professional, ideological and moral qualities. This line corresponds to the instructions of the 26th CPSU Congress and the behests of Lenin who warned against the least injustice or infringement of the rights and specific needs of all the nations and ethnic groups inhabiting the country.

The Soviet peoples' friendship and cohesion in a single union increases their strength, accelerates socioeconomic development and ensures the genuine flowering of their culture.

Life convincingly shows that despite our enemies' slander, not only does socialism not lead to the peoples' loss of their unique personality, cultural features and traditions but actually elevates this originality to new heights and makes it the property of many other peoples. And the key to this new flowering is not at all national narrowmindedness, insularity or the various prejudices of the past. On the contrary, it is thanks to overcoming them that art, theater and cinema have entered our republics' national culture and have genuinely flourished. Spiritual life is now inconceivable without all this.

We are now justly proud that in single formation with working people of all nations of the country the peoples of the former national backwaters, previously doomed to eternal backwardness have stepped confidently into the socialist future, by-passing capitalism, and have scaled the heights of social progress. In the joint struggle for a just new world the great fraternity of working people and the sense of being a united family emerged and the indestructible Leninist friendship of the peoples was formed--the inexhaustible sources of the masses' creativity.

Order-bearing Uzbekistan's inspiring example beckons one to new achievements and outstanding new successes in labor and in social and cultural life. How can one fail to rejoice at the fact, for example, that there are now 43 vuzes operating in Uzbekistan and that in terms of population there is now a higher percentage of students here than in such countries as France, the FRG and Japan. Or just take the increase in working class numbers in the republic. Its rate in the 70's was nearly three times higher than in the country as a whole. In the 11th 5-year plan it is envisaged that about

200 vocational and technical colleges will be organized and 700,000 skilled workers will be trained. This is the exceptionally important work of training the new generation of the working class, the worthy builders of a communist future.

The CPSU Central Committee resolution "on the 60th anniversary of the USSR's formation" notes that all national detachments of the Soviet working class grew in the 70's, especially in those republics where their proportion in the population structure was below the all-union average. The party will continue to pay constant attention to training cadres of indigenous skilled workers. All this helps to broaden the working class' influence on social development and strengthens the social basis of the unity of all classes and groups, nations and ethnic groups.

In the coming years, the Soviet republics will have to scale even loftier heights in a number of decisive areas of economic and social development. The guarantee of new successes lies in the indestructible unity of the USSR's peoples, in their harmonious joint work in the name of a great goal--communist creation--in the CPSU's policy of strengthening peace in the world, the policy of peaceful coexistence with all who want that, of fraternal friendship with the socialist countries and of solidarity with all the forces of social progress.

SIBERIAN RIVER DIVERSION DEBATE HEATS UP

Chief Engineer Supports Project

Moscow LITERATURNAYA GAZETA in Russian 10 Mar 82 p 11

[Interview with I. Gerardi, chief engineer of the Siberian river diversion project, titled "The Calculations Are Convincing," under the heading "Different Views on the 'Project of the Century'"]

[Text] The article by Academician Ye. Fedorov "Nothing Comes Free!" (LITERATURNAYA GAZETA No 47, 1981), a considerable part of which the author devoted to the problem of diverting part of the flow of northern and Siberian rivers to the southern regions of the country, evoked an interested response from readers. This is evidently not fortuitous: the problem of diversion is complex and multifaceted and affects a very extensive list of social, economic and ecological issues.

It is now important for the public to hear the opinion of specialists and have a full grasp of the meaning of the considerable transformation of natural processes. We give the floor to I. Gerardi, chief engineer of the plan to divert part of the flow of Siberian rivers to Kazakhstan and Central Asia, and V. Perevedentsev, candidate of economics.

[Question] Igor' Andreyevich, it is now 15 years since experts embarked on a study of the question of diverting part of the flow of northern and Siberian rivers to our country's southern regions. The idea has stirred the public's very interested attention. Many arguments have arisen. You are the chief engineer of the plan to divert part of the flow of Siberian rivers to Central Asia which is being developed by the "Soyuzgiprovodkhoz" Institute. What is your attitude toward the criticism which has been leveled at the planning organizations and the numerous observations of the participants in various discussions of the plan?

[Answer] Such an interested and lively reaction is natural: the history of mankind has many instances of the unsuccessful invasion of natural processes, and people of course ask: has everything been sufficiently thought out? This is an understandable concern, and one cannot take offense here.

What is bad is something else: the questions connected with the use of, I stress, only a small part of the tremendous flow of water of the Siberian rivers for guaranteed grain production are sometimes discussed without a serious preliminary study of the food problem. Without investigating all its economic and social significance for the country, certain people express their thoughts merely on the basis of emotions or superficial impressions of various discussions.

The slight removal of water from the Siberian rivers is sometimes portrayed as an intention to reverse the Siberian rivers and an attempt to limit the development of irrigable farming in the south of West Siberia. There is also the following "horror scenario": the designers intend to add on reservoirs to the Ob' and Lower Irtysh and thereby unundate or swamp hundreds of thousands of hectares of valuable river bottom land and so forth.

The plan contains nothing of the kind: of the 1,350 cubic kilometers of the average multiyear water flow of the rivers of West Siberia being discharged into the Sea of Karsk basin, it is planned to take for the first stage of the diversion only 25 cubic kilometers and for the second stage 60. It is planned neither to build reservoirs nor inundate the bottom land of the Ob' in its lower and central courses and in the lower course of the Irtysh.

The demand is often heard that the project be thoroughly substantiated ecologically, down to trifling matters. I have the feeling that we are belittling knowledge that has already been accumulated, confusing the problem and burying its tremendous socioeconomic essence under an excess of detail.

And the essence is such: the harvests of cereals cultivated under conditions of their natural moistening fluctuate severely in many areas of the country from natural causes, and the sole rational method of ridding ourselves of such sharp fluctuations is the organization of guaranteed grain production in the Central Asian republics and the southern oblasts of Kazakhstan on new irrigated land. On the basis of the use of a very small part of the water resources of Siberian rivers we can additionally produce annually first 25-30 million tons and subsequently 50-60 million tons of corn grain.

Furthermore, the grain program, of which the diversion is the basis, is not counterposed to the further development of cotton growing in the Central Asian republics, vegetable growing, viticulture and so forth but is being tackled in a single complex with them.

The intelligent comprehensive use of the tremendous water potential of the rivers of Siberia, Kazakhstan and Central Asia and the vacant land of the arid steppe, semidesert and desert parts of the country could feed over 200 million people. Can there be endless discussion of the problem of diverting Siberian water south in disregard of this most important social factor!

[Question] Various versions of the diversion project have surfaced in the discussion process. Which has proved the more promising?

[Answer] We have dwelt on the following plan: water will be taken from the Ob' where the Irtysh flows into it and channeled into the lower reaches of the Syrdar'ya and Amudar'ya along a canal across the Turgay depression. The main canal of this diversion, 2,200 kilometers long, would cut across the arid land of the semidesert and desert of Kazakhstan and the Central Asian republics and give this region new life.

[Question] Here we must return to the doubts which have been expressed in various discussions. Does not a long earth canal mean big losses of water?

[Answer] No, according to calculations, they were found to be considerably less than might have been expected. From 5 to 10 percent of the water volume is usually lost in the major Central Asian trunk canals. Here, however, these losses would be lower. The point being that a great part of the canal would run over clayey ground with slight water permeability. This is the first point. Second, guttering would be installed in the areas with sandy ground and sandy loam on both sides of the canal, and the filtering water would not be lost but would turn into irrigation systems or be returned to the canal by a system of pumping installations.

[Question] But the quality of water in the canal is also causing concern. Will it not be too saturated with salts?

[Answer] According to calculations, the mineralization of the water at the end of the main transfer canal will constitute half a gram of salts per liter. Compare: the waters of the Syrdar'ya and Amudar'ya proper in the lower reaches of these rivers in 1985-1990 will contain 2 grams and more per liter. It turns out that the canal's waters will even essentially freshen up these rivers in their lower reaches.

[Question] The fear has arisen that the removal of water from the Ob' will be reflected in the ocean's ice conditions.

[Answer] Yes, we are sometimes told: "You will dehydrate the Arctic." This is said of an ocean which obtains annually from USSR territory alone an average of over 2,800 cubic kilometers of water; in addition to this the Atlantic brings it 350,000-450,000 cubic kilometers of its own water. As you can see, the magnitude of the influx of water into the Arctic and the planned diversion of water from the Siberian rivers are incommensurable.

Nor will the ocean's temperature and ice conditions be disturbed--this has been specified by calculations of the USSR State Committee for Hydrometeorology and Environmental Control Arctic and Antarctic Institute.

If the removal of the water will be reflected in anything, it will be in the fish. According to calculations of the "Gidrorybproyekt" Institute, we will lose approximately 7,000 tons of fish per year, including only 320 tons of valuable species. However, the same calculations show that there will be an addition in the south of the country: 27,000 tons of fish of valuable herbivorous species which will be produced by the renewed lakes along the path of the canal and also the Syrdar'ya and Amudar'ya deltas.

[Question] Will the Aral' Sea be helped?

[Answer] The Aral' will get nothing from the first stage. Only the second stage may give the shrinking sea some support. Certain measures are now being formulated to maintain the level of the sea and prevent the desert encroachment of the territory surrounding the sea--they need to be described separately. I will give only my personal opinion here: I believe that after the year 2000 part of the Siberian water will need to be channeled into the Aral' Sea in order to preserve it.

[Question] Will not the canal be too costly? Might it not be more economical to channel resources into the modernization of irrigation systems? Specialists express the opinion that before transferring water from far afield we need to bring order to bear in irrigation and not use water in vain.

[Answer] The one cannot be counterposed to the other. We do not intend using Siberian water in technically backward systems. The USSR Ministry of Land Reclamation and Water Resources is working continuously on the modernization and technical improvement of old irrigation systems, and much has been done in this direction. The final completion of this work is scheduled exactly for the time of the arrival of Siberian water in Central Asia, and an irrigation system efficiency of 0.79-0.80 is accepted in all the water-balance calculations of this region, which is roughly equal to that of the Moscow water main.

[Question] Many specialists emphasize the need for the development of economical methods of irrigation like overhead irrigation, drip irrigation and others.

[Answer] Yes, these are important progressive methods. But not a panacea. But this is exactly how they sound in the claims of certain specialists. Overhead irrigation is provided for in the diversion plan 100 percent where it may be applied, in accordance with meliorative conditions. But a transition to drip irrigation on the loamy saline and salinization-prone irrigable land of the Central Asian republics is simply impermissible: this form of irrigation will be applied where it is profitable--in the foothill regions and on sandy soil.

You speak of the canal's expense. But outlays should be recouped in 10 years. In addition, it will be navigable--with a depth of 10-15 meters and a breadth of 200 meters. This is a very important circumstance. The second stage of the canal will be joined with the Caspian: there you have a direct, without transshipment, waterway from Siberia to Europe. And the significance of such a water-transport artery for the country does not, I would assume, need special explanation.

For this reason the 25th and 26th party congresses pointed to the need for the continuation of scientific and planning work.

[Question] Is your ministry--the Ministry of Land Reclamation and Water Resources--ready to begin construction?

[Answer] We could begin construction at the end of the current 5-year plan. The amount of earth work for the first stage is only 5.5 billion cubic meters, and the USSR Ministry of Land Reclamation and Water Resources currently performs earth work of the order of 7.5 billion cubic meters a year. The USSR Ministry of Land Reclamation and Water Resources has strong construction organizations in the Central Asian republics and Kazakhstan.

[Question] Consequently, no longer any doubts?

[Answer] We have worked on the technical-economic substantiation of the transfer for more than 15 years. Over 150 scientific research and planning organizations have participated together with us at different stages of the development of this problem.

Delay in the construction will prevent us, owing to the water insufficiency, making proper use of the industrial and agricultural potential of the Central Asian republics, the southern, central and western oblasts of Kazakhstan and also Orenburgskaya, Chelyabinskaya, Kurganskaya and Tyumenskaya oblasts. Essentially we are losing over R20 billion annually. Every cubic kilometer of water supplied from Siberia for the agrarian-industrial complexes of Uzbekistan alone (calculations of the Uzbek SSR Council for the Study of Production Forces) ensures the production of output in these complexes totaling R500 million annually. The figures speak for themselves. Such is the price of the doubts being expressed with respect to a huge national economic problem!

Demographer Sees Many Problems

Moscow LITERATURNAYA GAZETA in Russian 10 Mar 82 p 11

[Article by V. Perevedentsev; candidate of economics: "The Idea Is Intriguing but..."]

[Text] The idea of linking Siberian waters with Central Asia's land and sun emerged more than 100 years ago. An alluring idea, undoubtedly, but from the idea to embodiment is a tremendous distance, and this distance needs to be traveled in very well-considered fashion. The 25th CPSU Congress recorded in its decisions: "To carry out scientific research and on this basis draw up planning studies connected with the problem of diverting part of the flow of northern and Siberian rivers to Central Asia, Kazakhstan and the Volga River basin." Perfectly clearly put: the planning studies should be based on scientific research.

I have participated on many occasions in recent years in scientific conferences on questions of the diversion of part of the flow of Siberian rivers to Central Asia. The most common feature of these conferences has been the "confrontation" between the planners of the Giprovodkhoz and workers of the Ministry of Land Reclamation and Water Resources on the one hand and scientific workers of other departments on the other. The planners have accused science of complicating the problem, throwing wrenches in the works and impeding the construction and charged them with the fact that the country is incurring tremendous losses because the canal is not being built, that every year the postponement of the construction costs the state tens of billions of rubles in unobtained products and so forth. The scientific workers, for their part, claim that the plans for the canal (there have been many variants) lack a truly scientific foundation, that many questions of fundamental importance are vague, that serious hydrological, ecological and other problems arise and that the "project of the century" lacks economic substantiation.

Research specialists ask the planners serious questions.

Primarily, what proportion of the water taken from the Ob' will reach the areas where it will be used? To what extent will this water be mineralized at the end of a trunk canal more than 2,000 kilometers long--in the lower reaches of the Syrdar'ya and Amudar'ya? How will the flora and fauna of the cold Siberian waters behave in the hot desert climate? What will be the consequences for Siberia of the transfer of the water? What will the final cost of the canal be and when will it be recouped? And so on and so forth.

We sometimes hear the following answers: there will be virtually no loss of water en route ("well, some 5 percent, 10 percent at the most"); virtually as much water will arrive as is diverted from the Ob'; expenditure on the canal will be recouped very quickly; and so forth. And the answers are given, furthermore, in the most general form, as a rule. But it is not laymen who are putting the questions. Hydrologists and hydrogeologists are inquiring about the water losses, hydrochemists about the water mineralization and economists about the canal's recoupability. And it is specialists who are not satisfied with the answers they obtain.

This is because, I believe, "the cart was put before the horse": planning was embarked upon before the essential scientific data for this were obtained. For many individual reasons we now inevitably come across general questions for which there are either no answers at all or which are very approximate. It is becoming more apparent than ever that the decision concerning the transfer must be shorn of any smack of "departmentalism".

I can entirely understand the perplexity of the hydrologists and hydrochemists. Why, say, in a canal more than 2,000 kilometers long will the losses of water constitute a lesser proportion than in the comparatively short canals of Central Asia? The geologists say that hundreds of kilometers of the canal's path lie over places with very severe water absorption, where it will be necessary, as a consequence of this, to concretize the bed. Yet an earth canal is proposed for the entire length. And evaporation will be great.

But let us turn to economics. I hear constantly from the planners that the canal will be very profitable economically and that it will recoup expenditure rapidly. But why, I repeat, have I never heard any serious economic evidence?

Following an all-union conference in Moscow, the planners invited a group of its participants to the "Soyuzgiprovodkhoz" Institute, promising to convince everyone conclusively and irreversibly of the canal's great economic advantageousness. A big table with data on corn and soybean production in the USSR and the United States was hung on the wall. And it was said that much corn could be obtained in Central Asia, but that it could not be cultivated in Siberia; much meat and milk could be obtained on the basis of corn. Those were all the arguments there were. No data on the correlation of expenditure and results--and this alone can be evidence of the economic efficiency of any given project--were provided.

At a meeting in Novosibirsk in the fall of 1979 Academician A.G. Aganbegyan said plainly that the canal had no economic substantiation. As far as I can judge, it still has none.

"Prove the canal's inefficiency," the planners sometimes say to doubters. I would mention that the burden of proof should lie with those who propose, and not the other way about. But inasmuch as they decline this, we must tackle some simple economic computations.

The recoupability of irrigation systems is 5-6 years in the Central Asian republics (at best). Indeed, at best. Considerably longer in other cases. In the planned canal from the Ob' to the Amudar'ya we must add to the outlays which are usual in these cases capital and current expenditure on the trunk canal. How much will this cost? There are various figures. The Giprovodkhoz suggested some time ago R10 billion; Siberian economists no less than R20 billion (inasmuch as, inter alia, the canal bed will, nonetheless, have to be concretized over a large distance); and an expert commission of the USSR Gosplan determined capital investments in the canal of the order of R14 billion. We will dwell on this middle figure.

How much water will reach the fields?

After the regulating Tegizskoye Reservoir the trunk canal is designed for a discharge of 17 cubic kilometers of water a year. In the technically accomplished irrigation systems of Central Asia 75-80 percent of the water taken from the source reaches the field. Let us suppose, for simplicity's sake, that the irrigable fields obtain 14 billion cubic meters of water a year. Then for the canal alone it will be necessary to spend R1 per cubic meter of water.

I have heard many times that expenditure on the diversion of Siberian waters to Central Asia will be recouped in 10 years. Is this possible?

Let us suppose that only 10,000 cubic meters of water will be used per hectare of sown area (it is now considerably more). In other words, with the capital investments in the canal being recouped in 10 years it would be necessary to discharge per hectare of sown area annually water at a cost of R1,000, that is, to obtain, as a minimum, per hectare R1,000 of net product. From 1,000 cubic meters of water R100 of net product. Yet the cotton sovkhozes of Andizhanskaya Oblast (and cotton is more profitable than fodder crops) obtain only R8-R50 of net income per 1,000 cubic meters of water. Even with an income of R50 per 1,000 cubic meters of irrigation water (which is unlikely) expenditure on the canal (only on the canal!) would only be recouped in 20 years. And we are not yet taking into consideration considerable current expenditure on operation of the canal.

Obviously, a minimum of 5 years need to be added to the recovery of expenditure on a local irrigation system and the preparation of the land for irrigation. And, in addition, we need to take into consideration the long freezing of the capital investments of the first years of the canal's construction.

Given the inadequacy of the data, it is impossible to say precisely how long it would take for the diversion of water to Central Asia to pay for itself.

However, it may be accurately asserted that it would not pay for itself in 10 years. It is highly doubtful that it would pay for itself in 30 years even.

I have heard of the great economic advantageousness of the canal on many occasions from Igor' Andreyevich Gerardi, chief engineer of the project. I hope that the project has a chief economist also. And it is his observations concerning the economic aspect of this project that I would like to hear.

Construction of the Ob'-Amudar'ya canal with the indicators available today and at the present level of production would lead to an appreciable decline in the efficiency of capital investments in agriculture and cause the country huge economic losses.

None of this, of course, by any means indicates that such a canal will never be built. The progress of excavating equipment, increased labor productivity in irrigation, the increased value of water, the growth of harvests, the possible discovery of better versions of the canal and so forth—all these could, in time, considerably change the economic indicators of the transfer of Siberian waters to Central Asia.

I believe that this project should be regarded not as something in itself but as part of a goal-oriented comprehensive food program and as a hypothetical version of the accomplishment of certain tasks. I believe that this version is uncompetitive for the present: there are more profitable ways of achieving the same results. I heard of some of them also during discussion of the canal project. Thus a sharp increase in grain production is perfectly possible with the help of the irrigation of vast areas in West Siberia and North Kazakhstan, where the harvests are now small and unstable. Irrigation here should be supplementary to atmospheric irrigation and, for this reason, inexpensive. The soil in Siberia and Kazakhstan is severly lacking in phosphorus. Fertilization of the fields and irrigation could provide for very high and stable cereals' harvests here. Other variants are possible also.

However, can Central Asia develop without the waters of the Ob'?

It is said that all sources of water will have been used up there by 1990 and that the further extension of irrigable land is impossible without long-range assistance.

Yes, if water is used as it has been hitherto, it will soon be exhausted. But can we irrigate in this way in our day?

In many of the old irrigation systems less than half of the water taken from a river or reservoir reaches the field. Some 1.5 times more water is frequently discharged onto the field than is necessary. There is no interyear regulation of the flow in the rivers. Virtually no use is made of ground waters. And so on and so forth. Some specialists claim that the rational use of local Central Asian waters would make it possible to no less than double the irrigated areas.

In the summer of 1980 I visited an experimental area of new irrigation methods of the Tajik branch of the All-Union Scientific Research Institute of Hydroreclamation south of Dushanbe. I was shown many remarkable methods by which land can be irrigated on plains, on steep inclines, on heavily clayey soil and on light sandy soil and how it is possible to greatly economize on water furthermore, and increase harvests and labor productivity. But where have these methods been introduced? On one kolkhoz, it turned out, over an area of 10 hectares. And this is all.

Nor is the Ministry of Land Reclamation and Water Resources displaying much interest in the modernization of the old irrigation systems, in which water is used extremely wastefully. It is evidently more profitable to irrigate new land than to undertake modernization. Yes, this modernization really is very costly. Nonetheless, it will provide water at approximately half the cost of that transferred from Siberia.

A huge reserve of Central Asia is interyear regulation of the flow. It will be possible in the Amudar'ya basin after the construction of the Rogunskaya GES. But the preceding Nurek GES was under construction for two decades, and, to judge by the start, the Rogunskaya will take just as long. There is sense in accelerating hydropower construction on the rivers of Central Asia. Interyear regulation of the flow will enable us to increase it by 20-25 cubic kilometers in dry years, that is, provide the fields with far more moisture than could be brought by the first stage of a canal from the Ob'.

And, of course, significant results would be produced by such an economical method as the introduction of a charge for the water. It is currently free for the kolkhozes and sovkhozes. But this is what they have done in Kirghizia: the state has begun to allocate day-to-day resources for irrigation not to the Ministry of Land Reclamation and Water Resources but to the kolkhozes and sovkhozes, and these have transferred this money to establishments of the Ministry of Land Reclamation and Water Resources as they are supplied with water. But if the farm fails to keep within the set limits, it then pays with its own money. The amounts are small, but this measure also has produced a perceptible saving of irrigation water.

It is striking, but a fact that the biggest cotton harvests are obtained in years with a water shortage. And a survey of many Barren Steppe sovkhozes showed this. On sovkhozes where the water supply was within the limits of 0.9-1 of the norm the cotton yield constituted 22.5 quintals per hectare, the gross product per hectare of sown area was assessed at R843, income per 1,000 cubic meters of water was R94 and 3,900 cubic meters of water were used per ton of raw cotton. But on sovkhozes where the water supply was in excess of 1.1 of the norm the corresponding figures were such: 18.1 quintals per hectare, R757 and R69 and 6,000 cubic meters of water.

Overwatering often causes soil salinization, and this requires its leaching.

As we can see, the possibilities of the further development of the economy of Central Asia on the basis of its own water are still considerable. And, in any event, they should be used before the Siberian rivers get here.

I do not see sufficient grounds for rushing the diversion of Siberian waters to Central Asia. As is known, the 26th CPSU Congress planned "...to continue scientific and planning studies on the diversion of part of the water of Siberian rivers to Central Asia and Kazakhstan." To continue!

One-sided pressure is dangerous for the cause. What is needed is not the confrontation of the scientists and planners but their amicable, joint work, which will enable us to find the optimum solutions.

Uzbek Academician Responds

Tashkent PRAVDA VOSTOKA in Russian 3 Apr 82 p 3

[Article by S. Ziyadullayev, member of the Uzbek SSR Academy of Sciences, and A. Bostanzhoglo and A. Pugachev, irrigators emeritus of the UzSSR: "The 'Project of the Century' Does Not Brook Dilettantism"]

[Text] We read with tremendous interest the purposive page "'Project of the Century' From Different Viewpoints" in issue No 10 of LITERATURNAYA GAZETA for 1982. It was not an idle interest--each of us has devoted his whole life to the development of the production forces and hydroeconomic construction. And we can only rejoice that a very authoritative and popular newspaper has focused the attention of millions of readers on an exceptionally important problem--the plan to divert part of the flow of the Siberian rivers to Central Asia and Kazakhstan.

Under the conditions of irrigated farming, on the basis of which the entire economy of our region, primarily, cotton growing, is developing with giant strides, water resources are of vital importance. The tremendous amount of work on hydroeconomic construction and the development of new virgin land (100,000 hectares are developed annually in Uzbekistan alone) and the conversion of the land of the Barren, Karshi, Dzhizak and other steppe, which had remained barren for millennia, into flourishing oases have led to the water resources of the Syrdar'ya and Amudar'ya diminishing with every passing year, the level of the Aral' Sea falling and an ever increasing water shortage. This development of new land is the basis of the unswerving increase in the production of agricultural products for the fuller satisfaction of the industry of the country's need for raw material and the population's need for food. Skillfully combining the intensification of agricultural production with the expansion of irrigated land, it is for this reason that the UzSSR occupies one of the first places in the country in agricultural product growth rate.

The republic's party organization, which at the ceremonial meeting in Tashkent for the presentation to Uzbekistan of the third Order of Lenin Leonid Il'ich Brezhnev termed a combat detachment of the CPSU, is directing the working people's efforts toward an increase in the rate and scale of growth and the achievement of new heights in agricultural production in order to increase yet further Uzbekistan's contribution to the accomplishment of the country's food program.

However, scientists and specialists have calculated that the water resources of our rivers will be exhausted in the near future. In the 12th and, particularly, the 13th 5-year plans there will be a sharp decline in the growth of irrigated land with all the negative consequences ensuing therefrom. For the purpose of removing the discrepancies between growing requirements and the production of agricultural products in the long term the 25th and 26th CPSU congresses focused attention in their decisions on the need for scientific research and planning studies on the diversion of part of the flow of Siberian rivers to the Central Asia region. This problem had been raised in a number of decisions of the CPSU Central Committee and USSR Council of Mnisters even earlier. At the behest of the USSR State Commitee for Science and Technology approximately 150 of the country's scientific research and planning organiizations have been engaged in this work over the last 15 years. The "Soyuzgiprovodkhoz" completed the development of the technical-economic substantiation (TEO) of the diversion in 1980 on the basis of these studies. Having studied the TEO attentively, our scientists and specialists approved it. And we are in full agreement with the basic propositions of Chief Engineer I. Gerardi's article in LITERATURNAYA GAZETA. The question is clear, it might have seemed.

But in an article carried on the same page in LITERATURNAYA GAZETA Candidate of Economics V. Perevedentsev expresses doubts and not simply doubts but also a negative attitude toward the project, which is evoking astonishment and concern in and categorical objections from scientists and specialists both with respect to the tendentious nature of the judgments and the distortion of the actual situation in the region's water supply.

First, the author informs the reader of some conflict situation that has been created between planners and scientists and even writes that "there is no authentic scientific basis," "many questions of fundamental importance are vague," "serious hydrological, ecological and other problems arise," "there is no economic substantiation of the 'project of the century'" and so forth. The author rejects the TEO compiled by the "Soyuzgiprovodkhoz" and submitted for examination to the USSR Gosplan's State Examination Commission as lacking, he personally believes, the necessary scientific data. The disregard for the 150 scientific research (which include 23 scientific research institutes of the USSR Academy of Sciences) and planning organizations of the country in the preparation of the "Basic Propositions" and TEO, the results of whose research and recommendations were taken into consideration by the "Soyuzgiprovodkhoz," is a matter for this economist's conscience.

Deliberately selecting the opinions of certain organizations whose recommendations were at variance with those adopted in the TEO [Technical-Economic Study], the author draws the conclusion on a manifestly groundless basis of disagreements between the planners and "all of science."

The absurdity of such juggling of the facts is hardly commonsense, we believe.

Second, the author sharply criticized the current use of water in the Central Asian republics: "overwatering by a factor of 1.5 of the norm, water losses of over 50 percent from the diversion and primitive watering methods" and "a lack of interest in the modernization of old irrigation systems," which, the author believes, could provide water at approximately half the cost of the diversion from Siberia.

If he knew just a little of the history of irrigation and the measures adopted by the CPSU Central Committee and Vladimir Il'ich Lenin in the solution of problems of irrigation in our region, the author would not express such baseless judgments.

Hydroeconomic construction has been performed on an extensive scale in Central Asia in the years of Soviet power; trunk canals of great length have been laid, reservoirs and dams have been installed, the water-supply network has been equipped with modern hydraulic works and engineering structures and huge resources are being invested to raise the technical level of the irrigation systems and land reclamation. Plan-based work is being performed on increasing the efficiency of the irrigation systems, which by 1980 had reached 0.6 and higher in places. The quality of the irrigation has improved appreciably, the skill of the irrigators has increased and mechanization in irrigation is increasing constantly. And V. Perevedentsev reduces all this to nothing--all the achievements of the Central Asian republics in the sphere of irrigation and irrigable farming and the selfless labor of millions of people, kolkhoz members, workers, water and agricultural specialists and scientists.

Attempting to prove the opposite, the author makes use of someone's (the names are not given) opinion that the rational use of local Central Asian waters will make it possible to no less than double the irrigated areas. This is an unfounded statement, and the author deemed the opinion of "unknown specialists" sufficient for making it. But behind this facility of the pen is a manifest lack of understanding of the many years' experience of hydroeconomic scientists and practitioners, findings and studies with respect to the diversion problem and the opinions of many authoritative commissions on the inevitability of the exhaustion of the water resources of the Aral' basin, which may be resisted only by the diversion of part of the flow of the Siberian rivers to Central Asia.

Calculations and many years of experience show that given the complete modernization of all the irrigation systems in Uzbekistan it is possible to obtain a saving of water resources of no more than 3-4 cubic kilometers. A detailed study of planning and scientific research material shows that to complete the modernization of the irrigation systems in full and obtain this saving it will be necessary to employ huge capital investments (more than R10 billion for Uzbekistan alone) and unimaginable material resources, and this will take no less than 30 years, moreover. But even then there could be no question of large reserves of water calculated in tens of billions of cubic meters. This colossal expenditure would not provide for a cardinal solution of the question concerning the region's water supply. And the author should have familiarized himself in more detail with the actual state of affairs before expressing unfounded doubts.

Third, how much water diverted from the Ob' will reach the areas where it is to be used? According to the detailed calculations of the country's planning and scientific research institutes, in the year the work is started 2.5 cubic kilometers and in the 20th year 1.5 cubic kilometers, that is, from 6 to 10 percent will be consumed by evaporation, in accordance with the known climatic elements of the route, and seepage (considering the filtering properties of the soil, the depth of the occurrence of ground waters the length of the canal, the dimensions and forms of its cross and lengthwise sections, the speeds of the passage of water and so forth). From 22.5 to 25.5 cubic kilometers will remain for use. And having read a textbook on irrigation a little, it would have been worth taking a look at the TEO, and V. Perevedentsev would have learned that the losses depend not only on the soil (about which he speaks incompetently, incidentally) but on both the level of the ground waters and the flow rate of the canal. If the ground waters are near the water line in the canal, there will be practically no losses from filtration; there will be losses when they are somewhat deeper, but not big losses. And this applies particularly to canals with great flow rates, in which comparative losses are less than in small canals.

How mineralized will this water be at the end of the trunk canal? Two specialized scientific research institutes--the VNIIVO and the Central Asian Scientific Research Institute of Irrigation--have made forecasts on this score. Account was taken in the forecasting of filtration and evaporation from the canal, the influx of mineralized ground waters, surface runoff, aeolian pollution, return water from irrigation, effluent from centers of population and the waste from a small fleet and so forth, that is, everything necessary in accordance with the standards and procedure of the All-Union Scientific Research Institute of Water Supply, Sewer Systems, Hydraulic Engineering Structures and Engineering Hydrogeology. They constitute 485 milligrams per liter, that is, below the permissible norm.

Nor is there any doubt as to the unsubstantiated nature of the author's arguments concerning the time that will be taken for the canal to pay for itself. According to the scientists' and planners' calculations, this will take 8-10 years. And these are entirely correct calculations.

Thus on these questions also V. Perevedentsev's doubts reflect rhetorical skill more than relevance to the matter at hand.

Fourth, what will be the consequences for Siberia of the diversion of the waters? This question was answered precisely and clearly by Academician Ye. Fedorov in the article "Nothing Comes Free," which was published in the same LITERATURNAYA GAZETA (No 47, 1981). He clearly observed that "the studies of many years standing of dozens of research institutes and thousands of specialists have determined that the removal of a small part of the flow of the Ob'...will entail no changes in climate and will not disturb natural features on a global or regional scale."

Furthermore, for those who raise the question of the consequences for Siberia of the removal of part of the flow of its rivers the conclusions reached by the executant of this subject as per the plan of the USSR State Committee for Science and Technology--the USSR Academy of Sciences' Institute of Geography --are not without interest. Its summary report points out that removal of part of the flow of the rivers of West Siberia to Central Asia and Kazakhstan will serve as a factor of the reclamative improvement of this vast, uniquely swamply territory of the USSR and that "under the conditions of removal of part of the flow and the increased anthropogenic impact there will be a sharp improvement in the control of the water conditions of the river bottom land (the most valuable land in West Siberia's agriculture), its artificial watering, irrigation and so forth."

The USSR Academy of Sciences' Institute of Geography finds that the supply of part of the flow of Siberian rivers to Central Asia and Kazakhstan would serve as a powerful factor of the increased productiveness of the natural environment of the Siberian regions themselves. Would it not seem to those interested in ecological problems that the main one is tackled most propitiously by the diversion and that this fact, if the proper demands are made of the economic computations, must appropriately be taken into consideration in the revenue part of the project.

Fifth, a few words about V. Perevedentsev's personal opinion that in the elaboration of the question "the cart was put before the horse," that is, the planning outdistanced the science. This is not borne out by the information adduced above on the number of workers engaged in the science (approximately 150 institutes, of which 23 are academic). It is rather a matter of certain people evidently not reading what has been written in the scientific reports or in the TEO itself even. And there is something to be read. In addition to the ample basic material the TEO alone adduces 10 volumes of appendices containing 40 books (not counting albums and illustrations) based on the reports of the corresponding scientific research institutes.

To resort, like V. Perevedentsev, to allegory, his article prompts one to the belief not that "the cart was put before the horse" but, rather, that there are still passengers who have lost the cart. And in such a situation it is easier to put questions than to answer them.

We do not deny in such a big matter shortcomings and loose ends in a number of the TEO standpoints, which are entirely removable with the help of scientists and specialists. But the main thing is that we must not lose precious time in superfluous and unsubstantiated arguments.

We hope that a most important problem of the century--diversion of part of the flow of Siberian rivers to Central Asia and Kazakhstan--will soon be settled positively and that millions of hectares of the area's now barren virgin land will become a flourishing region and will produce cotton, grain, vegetables, fruit, grapes and animal husbandry products--everything necessary for the solution of the country's food problem.

Turkmen Academician's Reservations

Moscow PRAVDA in Russian 5 Apr 82 p 7

[Article by A. Babayev, president of the Turkmen SSR Academy of Sciences and corresponding member of the USSR Academy of Sciences: "The Desert: Strategy of Development"]

[Text] Many people believe that the desert is a lifeless, sun-scorched expanse of land. Indeed, when one views it from an airplane or train window, one sees only a yellow ocean of

> sand. But its interior contains nonferrous metals, oil, gas and coal. Cities and industrial enterprises have grown up here. We are only just beginning to put the reserves of "dead" land at the service of the national economy. And they are such that the desert today should be considered a viable and even rich sphere with high economic potential.
